Are you red-stamp-happy? Have you forgotten what a good roast tastes like since rationing began? Then relax and let one roast plan a whole week's menus for you as shown in the picture. Lamb is used here but any meat will provide (as shown, clockwise) Roast Shoulder, Meat Vegetable Mix in Corn Bread Ring, Rice-Meat Cutlets and finally Gold Slices for sandwiches. You'll find the recipe for the cutlets elsewhere on this page—you know how to prepare the rest.

Rice-Meat Cutlets

1 Cup ground roast lamb (or other meat)
1 cup cooked rice
1 cup thick white sauce salt and pepper
1-2 teaspoon grated onion
1 teaspoon chopped parsley
1 egg
2 tablespoons water
Dry crumbs
1 bunch scallions
Mint jelly

Combine lamb, rice, and white sauce; season with salt and pepper. Add onion and parsley. Form into cutlets; chill. Beat egg slightly with water. Roll cutlets in crumbs; dip in egg; roll in crumbs. Fry on both sides in small amount of lard until brown. Cook scallions five minutes in boiling water; chop. Serve cutlets with scallions; garnish with mint jelly. Serves four. Remaining recipes if needed!

Meat and Vegetables Mix in Corn Bread Ring

2 cups lamb gravy
1 cup cubed roast lamb
8 small cooked white onions
1 cup cubed carrots
Salt and pepper
Baked corn bread ring

Heat gravy; add lamb, onions and carrots. Season with salt and pepper. Pile in center of corn bread ring (to make: bake your usual corn bread batter in a ring mold.) Serves four.

3 lbs. square cut lamb shoulder
Salt and pepper
1-2 cup boiling water
1-4 cup chopped mint
1-4 cup sugar
3 apples, halved
Mint sprigs

Season lamb shoulder with salt and pepper. Place on rack in uncovered roasting pan. Roast in slow oven (300* F.) two hours. Combine water, mint, and sugar; boil three minutes. During last one-half hour, place apple halves around roast. Baste with mint syrup. Make gravy with drippings in pan. Arrange lamb on serving platter; garnish with apple halves and mint sprigs. Serves four.

Molasses and enriched flour make good food. Molasses, as rich in food iron as in color, is an appetizing companion for precious B-vitamins in enriched flour. Flavorful Molasses Cookies and fluffy Gingerbread are two pleasing results from the uniting of these featured foods, molasses and enriched flour.

Stretching scarcer foods with enriched flour avoids waste during wartime economy. Combining enriched flour with other food essentials saves needed pennies for war stamps. Additional war stamps purchased help Uncle Sam build the Shangri Lr.

Icings on generous round cookies need not be fond memories. Dates, figs, or raisins ground with nut meats and mixed with a trifle lemon juice and hot water, for spreading, make a luscious icing. Children delight in spreading fruit jellies and jams on cookies. Honey drizzled over cookies is another welcome treat.

If there are any left-over cookies, grind or roll them into crumbs. Cookie crumbs used in Date Crumbs Torte or as topping on custards is one of the pleasantest ways imaginable of making every cookie do food duty.

Lunch-boxes marching off to war plants are wisely prepared by Mrs. Homemaker. War workers delight in lunch time if the lunchbox is chockful of tempting foods. Enriched flour and enriched bread make possible interesting food combinations. The clever homemaker takes advantages of their goodness and makes the lunch-box both exciting and nourishing.

ENGLISH TEA CAKE

English Tea Cake in name but all-American in fame is this English Tea Cake.

Tender yeast dough camouflaged under a sparkling topping of sugar, lemon rind, and candied ginger makes a mighty nice welcome to spring. .Its luscious eye appeal marches shoulder-to-shoulder with its tantalizing taste appeal. English Tea Cake marches shoulder to-shoulder, too, with the kitchener's budget and her family health needs. Enriched flour, with its dependable store of B-vitamins and iron and its protein-plus values, thriftily extends the nourishing goodness of other more costly foods.

As a "sulfur and molasses" spring tonic, let generous pieces of English Tea Cake give needed energy for the victory drive ahead. English Tea Cake is good food at breakfast, dinner, or lunch. Its tasty, tangy topping serves well as a delightful spread, and at the same time, saves precious butter or margarine.

English Tea Cake

1 package compressed or dry granular yeast
1-4 cup lukewarm water
1-2 cup milk
1-4 cup shortening
1-4 cup sugar
1-2 teaspoon salt
1 egg or 2 yolks
1 1-2 cups sifted enriched flour.

Soften yeast in lukewarm water. Scald milk. Add shortening, sugar, and salt. Cool to lukewarm and add one cup flour. Beat well. Add beaten egg or yolks, and softened yeast. Add remaining flour to make a rather stiff drop batter. Beat until smooth. Let rise until doubled in bulk. Stir down and fill greased two-inch deep pan one-half full. Sprinkle with topping. Let rise until doubled in bulk. Bake in moderately hot oven (375* F.) 25 to 30 minutes.

Yield one 8x8 inch English Tea Cake.

Topping

1-4 cup sugar
1 1-2 teaspoons grated lemon rind
1 1-2 teaspoon chopped candied ginger.

Mix all ingredients together.

LIGHT BREAD & ROLLS

3 cups Obelisk Enriched Flour
1 tablespoon shortening
1 tablespoon sugar
1 cake yeast
1 teaspoon salt
7-8 cup warm milk

Mix flour, salt and shortening together. Dissolve yeast and sugar in the warm milk and stir into the flour. (Milk must be lukewarm and not hot.) Knead into a smooth dough, adding a little flour to the board if necessary. Cover and set in a warm place to rise for about one hour, or until double in bulk. Knead again and let rise 45 minutes. Knead third time and shape into loaf or rolls, place in greased pan, and let rise until light)approximately 1 hour.) Bake in a hot oven of 350 degrees for 20 to 30 minutes.

BARBECUED SPARERIBS

4 lbs. spareribs
1-2 chopped onion
2 tablespoons fat or salad oil
1-3 cup vinegar
1-2 cup chili sauce
3 tablespoons prepared horseradish
3 tablespoonss worcestershire sauce
1-2 teaspoon salt

Have spareribs cut into serving portions. Place in casserole; cover; bake in moderate oven, 350 degrees F., 30 minutes. Brown onion in fat or salad oil. Add vinegar, sugar, chili sauce, horse-radish, worcestershire sauce and salt. Cook slowly 20 minutes. Place spareribs in baking pan; spread with sauce; bake, uncovered, 1 hour. Serve 8.

FRUIT PUDDING SAUCE

Heat 1 cup syrup from canned fruit to boiling. Add 4 teaspoons cornstarch, which has been dissolved in three tablespoons orange juice and one tablespoon lemon juice. Cook, stirring constantly, until thick and smooth. When thickened, cook five minutes longer. Serve hot or cold. Makes approximately one cup.

FROZEN CUSTARD

To two well-beaten eggs add 1-3 cup sugar and 1 1-2 teaspoons vanilla and beat until mixture is light and lemon-colored. Chill and whip 1 1-3 cups evaporated milk; fold into the egg mixture. Pour into a freezing tray and freeze till firm. For variety, fruit may be added. Makes one quart.

TROPICAL PIE

3 tart apples
4 large bananas
1-4 cup chopped figs
3 tbs. sugar
3 tabs butter
1 recipe plain pastry

Peel, core and slice apples. Peel bananas and cut into 1-4-inch slices. Put figs through food chopper and mix evenly with the apples and bananas. Stir in the sugar and a little lemon juice if the apples are not sufficiently tart.

Line nine-inch pie plate with pastry. Fill with the banana mixture, dot with butter. Cover with pastry and bake in a moderately hot oven 425 degrees F., for about 35 minutes, or until apples are tender. Serve slightly warm.

Sprinkle with a little powdered sugar if liked.

For the "company touch" decorate the cream pie with fruit.

For added flavor, sprinkle grated cheese over chowders.

HELPFUL HINTS

Cotton mattresses should be turned from top to bottom one week and from end to end the next week, so that, they are completely turned every two weeks. They should also be aired in the bedroom at two week intervals.

The onion, a member of the lily family, is represented on Egyptian monuments, and one variety received divine honors.

Nearly 1,200 church bells have been collected by the Germans so far in Belgium alone, and taken to the Reich.

Have you found ready-to-use chopped ripe olives in your grocery store? They come in handy for sandwich spreads, meat and fish dressings, sauces for vegetables and for gravies.

Canada's plant breeders have opened millions of acres to agriculture by development of early maturing grain.

A maple tree owned by Philip Karge of Smithville, N. J., produces both asparagus and honey. Bees have stored their sweets in a hole in the trunk, and from another hole, higher up, asparagus is growing.

CAREFUL LAUNDERING PROLONGS WEAR OF SUIT ACCESSORIES

Vestees and blouses are two popular items in most feminine wardrobes. Provided with a variety of these suit-accessories, a woman can be well-dressed from dawn till dark. Ranging from sheer and fragile to sturdy and durable, and from snow white to brilliant colors, vestees and blouses are purposely created in washable materials so they may give prolonged wear.

The delicate fabrics wash as readily as the sturdier ones, but need a little more care in handling. It is often wise to overcast all seams before the initial laundering. Gentle handling while wet keeps threads from slipping.

For any garment that requires special care the best precaution is to wash before it is heavily soiled Gentle handling is possible then, and the item will last much longer. That is an important matter these days. On vestees and blouses, the best way to determine when washing is needed is to look at the neckline.

To be on the sfae side with colored accessories, always wash each color separately, and quickly, in cool suds. When washing single garments, use a wash basin or small container rather than a big one. That conserves hot water, and serves as a reminder to use soap without waste and only in proportion to the amount of water.

Sheer cotton garments, unless they have a permanent finish, look better if given a light starching. Piques and other heavier fabrics are firm enough without this.

For children's Saturday bicycle trips or hikes, there's nothing like a package of raisins to have handy when healthy appetites simply can not be stayed off any longer.

Lescot Visits Curacao

WILLEMSTAD, CURACAO, DWI, July 13—(ANP)—Elie Lescot, president of Haiti, spent Saturday and Sunday in Willemstad and left for home Monday morning, it was announced.

On Sunday a pontifical high mass was held in the cathedral here, followed by a reception in the officers' mess at Parero. That afternoon he visited the oil settlement of Isla, and in the evening there was a ceremony in the Roxy theatre.

SCHENLEY FIRM AIDS RECRUITING OF COLORED NURSES

By Schenley Distillers Corporation

New York—The makers of Schenley Products are running in this issue, their first of a series of advertisements for Negro Nurse Recruits. This series of advertisements is aimed to getting sufficient Negro Cadet Nurses to help relieve the acute shortage of Negro Nurses now existent.

This sponsor is more than glad to be able to render this National Service as they, and all of us are doing everything possible to put a speedy end to this conflict and case the suffering of war casualties as much as possible.

CADET NURSE CORPS THRILLED

The officials of the U. S. Cadet Nurse Corps and the War Advertising Council are both thrilled at the support given them by SCHENLEY'S in this drive. The enlistment of Negro Nurses will enable many trained and highly essential nurses now engaged in civilian work to become active in the care of wounded soldiers. It is the hope of all of us that an adequate number of prospective cadets will apply as this is one of our most pressing needs of the present.

HOW MUCH FOOD DO WE WASTE?

Garbage analysis studies in 247 cities reveal an average of 300 pounds of waste food per person a year, or more than three-fourths of a pound for each individual every day. Of this food, 225 pounds were edible. This includes wastage from wholesalers, retailers, restaurants, and homes.

Raymond Pearl, statistician and geneticist, estimated a food wastage in the home of 5 percent of protein, 25 percent of fat, and 20 percent of carbohydrates—or an overall waste of 19 percent of the calories.

WHERE FOOD WASTE OCCURS

Food is wasted at every stage of distribution and use—on the farm, in transit, in storage, in the processing plant, at wholesale markets and establishments, in retail stores, in public eating places, and in the home. This squandering of our food adds up to about a fourth of all that we produce. Some waste is unavoidable, but much can be prevented by conservation measures.

Waste on the Farm

Waste on the farm is incalculable. It takes place from planting to harvest. It includes damage done by insects and by rodents. Common plant diseases each year deprive us of several hundred million bushels of grain and other products. Additional quantities are lost when crops remain unharvested because of local labor shortage, transportation difficulties, limited facilities for processing, or because unpredictable weather causes market gluts of seasonal foods. Rough digging and picking, careless preparation for market, and inadequate refrigeration and storage add to the losses.

There is no general cure-all for waste of food on the farm because here, as elsewhere, some losses result from circumstances occasioned by the war—but all efforts to assure that the crop is harvested down to the last bit will help. Voluntary workers and community cooperation where labor shortage exists can save much food. And every effort should be made to see that food which is edible by human beings is channeled to them rather than to livestock.

Waste in Transit

Waste takes place when farm and food products are transported to market. Some of it results from inadequate facilities due to the war situation, but breakage and spoilage commonly occur from improper practices of packing, loading, handling, and ventilating—especially in the shipment of perishables.

When hampers and boxes are packed to the bulging point and then heaped on top of each other, contents are marred and bruised. When delays in transportation are reduced, more of the food value of perishables reaches the table and less waste from spoilage results.

Many pounds of meat are wasted annually through death and crippling of animals in transit and from bruising in general. Three-fourths of the total loss is from bruises, not usually detected until after slaughter. Bruising occurs all along the line: (1) On farms: (2) in transit: (3) at public markets; (4) and to some degree in packing plants. The greatest damage happens in transit, particularly in poorly equipped trucks operated by careless handlers. Projecting nails, splintered boards, sharp-cornered posts, slippery footing, the use of clubs, etc., are a few of the causes.

Waste in the Wholesale Market

To a lesser degree than in homes and retail establishment, certain waste takes place at the wholesale level. Some loss of foods occurs in cold storage and "ripening" rooms. This can be avoided by careful handling and closer attention.

To reduce such losses the wholesaler should carry on a program with the following objectives:

1. Adaptation of good receiving and delivering practices, such as careful handling and stacking on loading platform, to avoid bruising and deterioration from the elements.

2. Confirmation to accepted storage plans prescribing temperature, humidity, ventilation, light, stacking, turning, etc., for the particular commodity.

3. Sanction of progressive merchandising policy calling for adequate packaging, frequent culling, rotating (first in—first out), selling in customary receiving unit, reducing prices to obtain turn-over of foods which may spoil if held longer.

Waste in the Retail Market

There is additional loss in retail handling. Reports of some of the most carefully managed stores show spoilage losses of 3 to 10 percent on fresh fruits and of 3 to 15 percent on fresh vegetables. These are in addition to losses sustained in selling overripe products at reduced prices in order to avoid spoilage. Some waste is caused by new and inexperienced labor. Dropping crates and dragging sacks cause bruises or actual loss. Much waste occurs through storing, displaying, and selling without giving consideration to the keeping quality of the merchandise. Limited studies suggest that such waste alone totaled about $450,000,000 in 1942.

PILOTS OF 99TH BUY BONDS AFTER DOWNING PLANES

WASHINGTON, D. C.—Negro pilots of the 99th Pursuit Squadron, now busy dive-bombing and strafing the fleeing Nazis in the Levante sector of northern Italy, are striking double blows at the enemy, the Treasury Department revealed this week.

In addition to making regular salary allotments for War Bond purchases, the Negro fliers celebrate each air victory by purchasing a $1,000 bond for every enemy plane destroyed by a member of the squadron.

This sidelight on the unit's activities was reported to the Treasury Department this week by Major George S. Roberts, commanding officer of the famous squadron, which completed a year of combat duty in North Africa, Sicily and Italy on the day that Rome fell to the Allies.

Major Roberts, now home on furlough, discussed the squadron's exploits while visiting the Army Air Forces War Bond Show, "Shot from the Sky," on the Monument Grounds in Washington, D. C.

The $1,000-a-plane campaign was instituted by the unit during the Fourth War Loan drive, the commanding officer said, when the 99th Pursuit Squadron was battling German Fockewulf 190s over the Anzio-Nettuno beachhead in Italy. The men met in their self-imposed quotas for several days and then came January 27. On that day, the 99th pilots got their first good crack at the Luftwaffe and shot down 12 enemy planes!

"We were determined to keep our promise of $1,000 in War Bonds for each plane downed," Major Roberts recalled, "even if most of the men in the outfit, including the flying officers as well as ground crew members, already had made heavy allotments for War Bonds out of their monthly pay. Some of them could not really afford to buy more, but practically everybody added something to his already substantial allotment for this special drive. Nobody wanted to be left out.

"It was a tough five-day campaign, but we raised the $12,000."

Prior to the January 27 engagement, Major Roberts had rashly promised to top any contribution made in the unit.

"I had a pretty hard time doing it," he grinned, "but I managed it somehow."

Aerial victories scored by the squadron have served to boost the morale of the outfit considerably, Major Roberts said. The 99th had long been recognized as one of the top outfits in the theatre in such specialized work as dive bombing and strafing and providing close cover for advancing infantry. But this kind of work did not win headlines, and the men wanted a chance to engage in dog fights in order to establish their reputation beyond doubt.

"That big day over the Anzio-Nettuno beachhead was the turning point," Major Roberts continued. "It was a big morale booster not only for us but for thousands of Negro service groups in the theatre. The entire area was agog with our exploits and these Negro service troops were popping buttons off their tunics everywhere you looked.

"They were as proud of us as we were of ourselves. Simply to show up in the streets of some bomb-scarred or shell-pocked village would mean a few guarded looks and then recognition, followed by immediate buzzing and whispering. The gold leaf on my collar attracted attention, too. It caused many double takes among persons who saw it, and that even included the native Italians. When I left the boys they were in tip-top shape and so confident of themselves that they were making plans to invest several more thousand dollars in War Bonds in addition to the $1,000-a-plane."

GOOD TIME TO STAY ANCHORED

The restless turnover of employes in basic industries is one of the greatest handicaps to the war effort, according to the Office of Defense Transportation. It cites that in March alone 60,000 persons left railroad employment. During the same period, the railroads hired some 74,000 new employes.

In urging railroad workers to stay on the job, ODT officials point out that "transportation companies today offer more long-term advantages to employes than many other types of war industries. Today, transportation is packing up where many other war activities are diminishing. The jobs in transportation are vital to the war effort, and the industry remains basic after the war.

"ODT urges every worker in transportation to realize his individual importance to the nation's war effort, and stay on the job and finish it."

92nd Division Gives $4,000 to Colleges

New York— Checks totalling $4,429.33 were sent to the United Negro College Fund from the 92nd Division stationed at Fort Huachuca, it was announced at the headquarters of the fund this week.

Of the entire amount $3,101.83 was collected from the ranks and sent to the Fund by Divisional Chaplain Louis J. Bentley. The station hospital, under command of Colonel M. O. Bousfield, gave $1,110; Colonel E. N. Hardy, Commander of the Post, contributed $5.00; the 335th Station Hospital, under command of Major W. H. Strickland, sent $75; and the headquarters detachment gave $37.50.

PRESERVE LOCAL INDEPENDENCE

The retail stores of the country have been seeking changes in hastily drawn wartime legislation, such as provisions in the Price Control Act, which permit needless oppression. An example is the provision that a merchant can be arbitrarily fined (and is fined) $50 for an obviously unintentional infringement of OPA rulings. And then there is the growing demand for access to regular district courts in appealing from OPA orders, instead of being restricted to an Emergency Court set up under the Price Control Act.

The fact that bureaus resist so stubbornly the slightest limitation of their powers is one of the most compelling reasons why the people should ask Congress to be more critical in its passage of measures that deny court appeals from bureau decrees.

Either we are going whole-hog for centralized government, or we will have to show more interest in preserving local political and court jurisdiction, and in keeping the legislative, judicial and executive functions of our government separate and independent, as was intended by the founders of our nation.

The Atlantic Charter, as we understand it, pledges the right of self-government to all peoples except the little Balts, the Poles and Montgomery Ward—Omaha World Herald.

Collection Plates, Collection Baskets, Arm Bands and Gavels

Wooden Collection Plates, well finished with Plush Bottom, 10 inch Plates $6.00 each

A Wicker Collection Basket, made of best reed obtainable. Size 9 inches. Price $3.00.

USHERS' ARM BANDS

A well made golden Oak finished Gavel

Price $1.00

Stenciled in white made of blue wool felt. 4 inches wide.

Price 50c each

Oval Shaped Usher Arm Band

These Ushers' Arm Bands are very attractive; made of high-grade felt material, in colors red, blue and green, each with white letters, and elastic band to fit around the arm. Size, 6½x4¾ inches. 25 cents each; $3.00 a dozen.

Blue Felt Ushers Arm Band, with sewed white letters of white felt. Very durable and attractive.

Price $1.00 each

Nashville, Tennessee.

The Modern Farmer

Published monthly by the Modern Farmer at Nashville, (3) Tennessee.

Henry Allen Boyd -- ---- Owner
Office, 403 Charlotte Avenue.

Devoted to the interests of the Farmer, Truck Gardner, Livestock and Poultry, Breeder, the Home and the People.

Entered as Second Class Matter. April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 403 Charlotte Ave., Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

OUR PLATFORM

1. **A Unit of the National Federation of Colored Farmers in every community of colored farmers.**
2. **Co-operative buying, producing and marketing.**
3. **Every colored farmer a farm owner.**
4. **Abolition of debt-slavery, injustice and persecution.**
5. **A written contract for every colored farm tenant and sharecropper.**
6. **Better rural churches, schools and homes.**

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

MUST THEY PAY FOR A JOB?

An issue is before the state of Oregon that will be common to each of the 48 states. The voters of the city of Portland have approved postwar projects involving the expenditure of millions of dollars in public improvements which will afford employment and opportunity to the boys returning from the armed services.

The question is now raised, Will the veterans of World War II be forced to join labor organizations and pay for the right to obtain postwar employment on public works jobs financed by taxation? In other words, when the taxpayers authorize a public expenditure, will that mean that a substantial percentage of such money must be allocated to organization dues, rather than to the improvements for which the money was voted?

Veterans who risked their lives to perpetuate individual liberty, may well resent restrictions at home that force them to pay for the right to earn a living.

THE NINTH COMMANDMENT

By Ruth Taylor

"In vain we call old notions fudge,
And bend our conscience to our dealing,
The Ten Commandments will not budge,
And stealing will continue stealling."
—James Russell Lowell

"Thou shalt not bear false witness against Thy neighbor" is still one of the Ten Commandments.

No doubt nine out of ten people questioned would say that, that is one sin they never commit. But, try listening to any conversation, even your own—and see how carelessly, how habitually the Ninth Commandment is broken.

You bear false witness against your neighbor when you judge him not as an individual upon his own merits, but as a part of a group—whether that judgment be praise or censure.

You bear false witness against your neighbor when you impute to him motives for action about which you can know nothing.

You bear false witness against your neighbor when you accuse him of acting only in his own self-interest.

You bear false witness against your neighbor when you pass on unconfirmed rumors about him or the group from which he comes, or when you shade the truth or supply details from your own imagination to make a good story.

You bear false witness against your neighbor when you pre-judge him, when you assume the worst and determine what he will do before he has done it.

You bear false witness against your neighboh when you attribute to him lower aims than your aims, lower ideals than your ideals.

You bear false witness against your neighbor when you think of him as un-American just because his background is different than yours, his family has come from a different nation or because he goes to a different church.

You bear false witness against your neighbor when you refuse to grant him the same privileges you reserve to yourself.

You bear false witness against your neighbor when you bar the gates to understanding, for by so doing you deny the Fatherhood of God and the Brotherhood of all men.

Do you keep the Ninth Commandment?

THE ANCIENT ART OF POTTERY

(Continued from Page 1)

Egypt and among the Swiss lakedwellings.

The third route by which North Africa was connected with Europe was a water route by way of the large Island of Crete. Since this island is only about one hundred and eighty miles from the coast of Africa, it served as a midway station and shortened the voyage across the Mediterranean from Affica to Europe. Sir Arthur Evans, in his excavations in Crete, dug down through the remains of palaces of the ancient Cretan kings, and under them he found the walls of houses containing ground and polished stone axes used by the Late Stone Age men who lived in these houses. In one of the rooms lay a copper axe from Egypt, probably the earliest metal tool ever found in Europe. This copper axe shows very clearly that the Egyptian ships were entering Crete and how the earliest metal reached Europe.5

The fourth possible route to reach Europe would be by the way of the Near East to Constantinople, but this would have been too long, and the pottery might have been changed in accord with Asiatic taste.

From the above facts, we can conclude that Europe has no claim to the old world culture. Of course, it is not our intention to snub Europe, but the authorities have declared it, so we must obey them.

Textiles and pottery are both products of Neolithic culture. If one antedated the other it would be difficult to say which one is the older. Each is admirably adapted to serve both utilitarian and artistic purposes. On account of its fragile nature, pottery requires a more sedentary mode of life, to which it ministers as a containing vessel especially for liquids and for use in the preparation, storing and cooking of foods. It also serves to hold the ashes of the dead or as a repository for offerings to the dead.

The Neolithic potter was no chemist. Fortunately for him, clay often contained materials that serve for tempering. He learned to add tempering materials where these were lacking.

The potter began by shaping a bit of paste into a disk for the base. After placing his base on a flat surface the walls were carried up by adding strips of clay. With the potter's wet hands and the aid of simple finishing tools of wood, horn, bone, shell, etc., the walls were dressed. To the complete body were added handles, spouts, and relief ornament.

Ceramic art received a new impetus with the coming of the potter's wheel, which appeared first in the Orient. It was known in Egypt as early as 3000 B. C., and later spread throughout the Mediterranean region, but did not reach the north Alps until the epoch of La Tene. In parts of Germany most of the pottery continued to be made by hand as late as the Merovingian epoch.

The four prime operations in the making of pottery vessels are (1) the shaping process, (2) drying (3) heating to remove the water of constitution, and (4) baking. Pottery may be baked in the open without a pit or furnace and without any other envelope than the fuel. Pits began to be used before the close of the Neolithic period. The next step came with the use of the oven or furnace.

At Montlingen on the Rhine southeast of St. Gallen, Bessler uncovered an elaborate oven for baking pottery, also tools for making incised decorations on pottery. This oven dates from the Bronze Age.

Although pottery is fragile, pottery fragments are practically imperishable. It is one of the most common products of Neolithic and later prehistoric cultures. For these reasons pottery types have come to serve an important role in prehistoric terminology. We thus speak of the bell-beaker folk, the bellshaped beaker being a well known ceramic form belonging to the latter part of the Neolithic period. Sometimes the terms are derived from the orientation of the vessel rather than the form. There is, for example, the string motif (Schnurkeramik,)and the band motif (Bandkeramik) both occurring in the Neolothic period, Again to a certain type of pottery characteristic of a given culture there is given the name of a typical station where the type is found and form which it might have spread.

Before we pass to an examination of Pueblo pottery, a few words are due the general culture of these people. The Pueblo certainly possessed one of the highest cultures, of all the American Indians north of Mexico. At any rate we find in these two marked parallelisms, not only in language but also in the utilization of stone for buildings (in Zuni mostly adobe, in Hopi stone) the prevalence of agriculture, the high development of pottery, a complex cosmogony connected with an elaborate ceremonialism—in contrast to the pottery of most other North American Indians—but also excellent baskets and weaving. Even though hunting, as usual, played its part in the domestic economy, agriculture constituted the essential material base of life, with the additional feature that men, not women, were the agricultural laborers; women, on the other hand, were the pottery makers. Agricultural technique was characterized by the pressure of a system of irrigation, essential in this arid region. Among the Zuni the clay for the pottery is secured from a rather distant place on the top of Corn Mountain, where a dark grey shale abounds. The access to this spot is difficult, and so a journey for pottery clay becomes quite an expedition accompanied by religious rites. When the clay has been secured it must be crumbled, cleaned, and spread out for a couple of days, before it can be used for tempering. Fragments of broken household pots or shreds lying about the ruins are ground to fine powder with a metate or grinding stone, and mixed with the fresh clay. In mixing the paste, comments Miss Bunzel, the natives are guided by their tactile sense of the proper proportions, developed by experience; they are quite unconscious of what these proportions are in numerical terms.

The texture of the clay used in the Pueblos included in Miss Bunzel's study differs from one Pueblo to the other. Acoma ware was the best. The paste here is light in colour and very hard, and the texture is fine. The surfaces are very smooth and the walls almost as thin as eggshell. In spite of this slightness of build, the vessels are strong and water-tight. Zuni pottery, while good enough for practical purposes, is heavy and coarse. The walls of the vessels are thick, though not as thick as those of the Hopi. The surfaces of the ware, when not slipped are rough. Also the vessels are inconveniently heavy. The paste here is dark brownish. The ware of San Ildefonso is also heavy. In texture it is smoother than the Zuni and is hard and strong. It is, however, not water-tight; as soon as the vessel is filled with water the beautiful black surface becomes dull and streaked, a fault that cannot be remedied. Hopi ware is even worse—the walls are thick, the paste soft and coarse. It is rendered smooth by polishing but it becomes scratched and flaked. The fragile vessels often crumble when first filled with water. The author found that these types of ware, with respect to technique, are definitely localized and constant within each group at any given time although as time passes, changes come about.

The next problem is the moulding of the vessel described by Miss Bunzel, in substance as follows: "First a lump of clay is worked with the hands. By hollowing this out or pressing it flat, a cup, or disk shaped base is formed, which is then placed in a low mould, made either of the bottom of a broken pot or of a saucer or pie tin filled with clay and sprinkled with sand Carefully, the base is pressed into the mould, then rounds of clay are added to build up the walls. The clay is rolled between the hands or on the floor into thin long strips, about an inch in diameter, and from two to three feet long, which are added to the top of the vessel. The strips are always placed inside the finished wall and pressed into place with the fingers. In rolling and pinning care must be exercised not to permit air spaces to remain, for this would cause the vessel to break during the firing. In making small vessels the shaping is begun after the walls have been built up to the full height, except for the neck; in larger vessels, preliminary shaping accompanies the building. All shaping is done from the interior, except when the outer surface is being smoothed. The only tools used are fragments of gourd shell, pieces of different curvature being used for shaping the different parts of the vessel. When a Zuni vessel, usually a large water jar, is built up to a point somewhat below the shoulder, it is set aside for a few hours to become firm enough to support the upper walls. During this time the upper edge must be kept constantly wet. An important additional point is that the upper edge part is moulded. As no corrections are possible after the half-finished vessel has been set aside and dried, it is evident that the entire form must be clearly visualized before this occurs. And here again, as in the case of clay mixing, the final form is not a matter of trial and error, "adding a little there and taking off something here;" on the contrary, the operator is guided by a very definite sense of proportion, no less rigorous because it is unconscious.

The next process is the application of the slip, which is a thin solution of very fine clay containing no tempering. With a smooth cloth it is evenly applied to the surface of the vessel. Three or four coatings are the rule. The color of the slip varies with the Pueblos. At Zuni, Acoma, and Languna it is chalky white. The bases of the pots remain unslipped at Zuni, whereas at Languna and Acoma they are slipped with bright orange red. At Hopi the slipping is done with the same clay that forms the paste for the pot. This clay which is a clear light grey before firing, turns yellow during the process, shading from pale to ivory to a deep buff tinged with rose. A bright red slip is used at San Ildefonso. If the fire is smothered at the right moment, the slip turns to a deep lustrous black.

The last process is polishing, which is begun while the last coating or slip is still damp. The surface is rubbed lightly with a very smooth stone. This use of the polishing stone requires great skill to obtain a high polish without scratching or pebbling the surface; the pressure must be just right. At San Ildefonso, the polish is the chief source of ornament, and it is done with even greater care in other places. After a high polish has been secured with the stone, the surface is further rubbed with a greasy rag. All this requires meticulous care. If a single scratch or irregularity is observed, a fresh coating of clay is applied and the whole process is repeated.

The decorative scheme of the secular pots of the Zuni rests on a considerable number of geometrical pattern units. Of these the author lists and reproduces some 200 which she succeeded in securing from an exceptionally gifted woman informant. These unit designs are frequently combined into more complicated likeness between one pot and another. In the Acoma pots, on the other hand, as we saw, the pot is treated as a unit, the whole surface is covered with a design. Here and there is scarcely anything corresponding to a background, by contrast with the Zuni, among whom a background is deemed essential. Although a sophisticated modern student could readily enough resolve the Acoma designs into a number of pattern units, if not as many as among the Zuni, these units are not distinguished by the Acoma themselves. In the San Ildelfonso ware, finally the main element is the perfection of finish. Here it is felt that the ornament is valuable mainly in so far as it brings out the deep lustre of the polish. While the Acoma are great colourists, the Zuni and Hopi women regard the line of their design as more important than the colour. When these latter women speak of their efforts to reconstruct the ancient designs from diminutive potsherds, they refer to this as getting the line of the design. Instead of the Zuni clarity of conception, emphasis on structural lines, and recognition of the decorative value of white spaces, the author finds among the Acoma what she calls "an almost Gothic exuberance of ornament, filling without break the whole surface of the jar from rim to base." Another contrast between the Acoma and the Zuni is that whereas the latter, as we saw, emphasize line, the Acoma are more concerned with the treatment of surfaces which paves the way for an exuberant use of colour. "We have three kinds of design," said an Acoma informant to the author, "the red, the black, and the striped designs.

After we have seen what the others are doing in this fashion let us now turn to the continent of Africa. First, because we have more material at hand which we can use. It is better for us to begin with Egypt, the country which gave to Europeans this art of pottery.

The prehistoric Egyptian may also fairly be said to have attained greater perfection than other peo-

ples in the Neolithic stage of culture in other arts beside the making of stone tools and weapons. Their pottery is of remarkable perfection. Now that the sites of the Egyptian prehistoric settlements have been so thoroughly explored by competent archaeologists (and unhappily, as thoroughly pillaged by incompetent natives), this prehistoric Egyptian pottery has become extremely well known. In fact, it is so common that good specimens may be bought anywhere in Egypt. A few possess sets of this pottery, of which great quantities have been brought back from Egypt by Prof. Petrie and other explorers.

It is of very great interest, artistically as well as historically. The potter's wheel was not yet invented, and all the vases, even those of the most perfect shape, were built up by hand. The perfection of form attained without the aid of the wheel is truly marvellous.

The commonest type of this pottery is a red polished ware vase with black top, due to its having been baked mouth downward in a fire, the ashes of which, according to Prof. Petrie, deoxidized the haematitic burnishing, and so turned the red colour to black. In good examples the haematitic has not only been reduced to black magnetic oxide, but the black has the highest polish, as seen on fine Greek vases. This is probably due to the formation of carbonyl gas in the smothered fire. This gas acts as a solvent of magnetic oxide, and hence allows it to assume a new surface, like the glassy surface of some marbles subjected to solution in water. This black and red ware appears to be the most ancient prehistoric Egyptian pottery known. Later in date is a red ware and a black ware with rude geometrical incised designs, imitating basketwork, and with the incised lines filled in with white. Later again is a buff ware, either plain or decorated with many lines, concentric circles and elaborated drawings of boats sailing on the Nile, ostriches, fish, men, women, and so on. These designs are in deep red. With this elaborate pottery the Neolithic ceramic art of Egypt reached its highest points in the succeeding period. In the beginning of the historic age there was a decline in workmanship, exhibiting clumsy forms, and bad colour, and it is not until the time of the Fourth Dynasty that good pottery (a fine polished red) is once more found. Meanwhile the invention of **glazed** pottery, which was unknown to the prehistoric Egyptians, had been made, before the beginning of the First Dynasty. The unglazed ware of the first three dynasties was bad, but the new invention of light blue glazed **faience** (not porcelain properly so called) seems to have made great progress, and we discover fine specimens at the beginning of the 1st Dynasty. The prehistoric Egyptians were also proficient in other arts. They carved ivory and they worked gold, which is known to have been almost the first metal worked by men. Certainly in Egypt, it was utilized for ornament even before copper was used for work. We may refer to the illustration of the flint knife with gold handle already given.

The prehistoric pottery is of the greatest value to the archaeologist, for with its help some idea may be obtained of the succession of periods within the late Neolithic-Chalcolithic Age. The number of prehistoric comparisons of the different kinds of pottery found in them is enormous, so that we can arrange them in order according to the pottery they contained. By this means we obtain an idea of the development of different types of pottery, and the sequence of the types. Thus it is that we can say with some degree of confidence that the black and red vase is the most ancient form, and that the buff with red designs is one of the latest forms of prehistoric pottery. Other objects found in the graves can be classified as they occur with different pottery types.

In Uganda the manufacture of pots is in the hands of the **Babumbi.** Men and women have the same chance in this kind of work. The quality of the pottery is largely dependent on the character of the clay used, a refactory clay being essential.

The King has his own potters who belong to a special union and whose sons follow in their footsteps. A potter who makes pots for sale is always attached to one of the chiefs. A man wishing to become a chief's potter makes a pot and takes it to him that he may obtain his permission to be his **Rubumbi.** The King's **Rubumbi** furnishes the royal enclosures with pottery in the same manner as the chief's **Rubumbi.** Some potters pay their taxes in pots. A **Rubumbi** receives land from a chief or the King where he obtains clay, and may even pay rent, or **Busuru,** for this land in pots.

The King's potters are known by various names. The **Bajono** belong to unions called **Kijona.** Those who do the ordinary work are called **Babumbi.** The **Rutugi** is the man who makes milk pots and all small pots. He uses different clay from those who make cooking pots, and the like. The steps in the process are:

1. The mixing of the clay and the introduction of granular tempering materials, sand, crushed rock, etc.
2. Shaping the vessel. This may be done by squeezing masses of clay into the required shape, by coiling rolls of clay spirally, by shaping on a wheel, and by moulding.
3. Smoothing off the surface.
4. Drying.
5. If an ornamented surface is desired, an earthen slip is prepared and spread thinly over the surface; when glaze is desired, the necessary slip is added.
6. If designs are to be in color, these are painted on the surface; they are executed after the pot is shaped, but before it dries.
7. Firing.

Shaping and decorating pottery being a plastic art, it has offered an easy road to expression and to tribal individuality, and so the study of tribal styles and regional patterns in the ceramic art has been carried to great detail.

When an African potter finds his clap in swamps or marsh land it is sticky, and so he mixes with it a light chalky earth. This mixture is moistened and thoroughly kneaded, care being taken to leave no air pockets. After the clay has been put into a hole about four or five feet deep, the **Mubumbi,** or potter, comes, about the beginning of a new moon, to bring the millet and seasame to this pit, where he sprinkles it so as to obtain good luck with the clay. The mixing of the clay with the light chalky earth is to prevent the pots from cracking during burning and polishing.

When starting to make a pot, the **Rubumbi** takes a lump of this clay, mixes it with water until it bevomes **quite soft,** and then adds to it the grit from a piece of broken pot, which he mixes well with the new clay. **Akanyama kabisi kahumbura omukaro,** "A bit of fresh meat livens up the dried meat," or, "A little leaven leaveneth the whole lump." This proverb is applicable to pot making, for the old clay gives life to the new and, when the pots are put out in the sun, prevents them from cracking.

In order that the potter may turn his pot all the way round as he fashions it, a piece of broken pot may be put on a ring for a moveable base, or when he is making a small pot, such as a milk pot, he may use a broken calabash in the same way. He begins his work by forming the base of the pot with a lump of clay and placing it in the bottom of an old pot. Then he rolls out a piece of clay into a long rope-like roll, about two feet long and about one inch thick. The roll is coiled around and around on itself at the edge of the base placed in the broken pot which he uses as his stand, and the coils are smoothed or moulded into one another with a piece of gourd. Coil after coil of the clay is added, being smoothed inside by one hand while the potter supports the outside with his other hand.

The circumference is increased or diminished according to the shape required until the sides are high enough. The potter, when making a jar, takes out with a short pointed stick all traces of the coiled joints on the outside. Then he works on, enlarging the round part of the pot until he passes the bulge, where he narrows it again. The rim is added upon the neck, and it also is fashioned by one of the rolls of clay being coiled around the top, smoothed on the inside and worked into shape with the pointed stick until the lip is in accordance with the potter's taste. The potter does not have a wheel, all his shaping being done with the hands. Five to seven pots is a day's work for a potter.

After shaping, the pot is taken out into a shed to dry. Here the rough places are smoothed off in either of two ways. Commonly a small stone is used, but if the pots belong to the King, the potter rubs them with graphite, or **Kipiripya,** a powder with a bright gloss. There are two methods of using this graphite: (a) Make small balls of the powder mixed with cow-blood and butter, rubbing them on the pot until it shows a bright polish. (b) Mix powder with palm wine, which has luteous properties. This mixture is painted on the pot and left to dry, then rubbed again with a smooth stone until a fine polish appears.

After nine days the pot becomes dry and ready to burn, but in the rainy season eighteen days are required. **Bunyansi** or dry grass, **Ebifunjo,** papyrus stems, **Amabingo** reeds, or fire wood, are used for the fire, but the burning is always done at the new moon. It takes all day and all night, after which the pots are taken out and examined. The potter keeps the broken ones for his own use, takes the best ones to the chief and offers the rest for sale. After the large pots are finished, he works on those small pots like milk vessels and drinking pots which must be glazed before they are taken to the chief or offered for sale.

The pots are then put into the smoker until they become very beautiful with a black glaze. The moist smoke penetrates the pores of the clay. When this glaze hardens it cannot be washed off. When completely black, the pots are rubbed with **Rubugo,** bark cloth, until they shine beautifully.

If it is desired to colour the pots in different designs, these patterns are worked out before the burning. Thus, to get a white pigment the potter goes out in Kiijongo lake or Kisdru river and collects a number of snailshells, grinds them on stone until they become powder, and mixes this powder with palm wine, which he applies to the pots. If he wishes red, he goes to the hillside where iron may be found, and gets a brown clay which he also grinds into powder mixed with wine, and paints on the pot. For black without graphite, he goes to the bank of the river or lake and gets black clay, which after pulverizing he mixes with banana wine and boils into a good mixture which he paints on the pots. To dry the pots, he hangs them on short sticks upside down, after which he polishes them with bark cloth.

The different kinds of pots are milk pots, small pots used for vegetables, another small kind with a tall neck (which are difficult to make) and cooking pots which are the easiest). They are standard sizes about 3 1-2 feet in diameter for the largest and lesser diameters for the other sizes. Water pots are not so hard to make, because they are big and do not have much decoration except a geometrical design on the neck.

All the operations have their respective taboos, which a man must observe while he is performing them, and on some parts a woman may not help her husband for the same reason.

Attention has recently been drawn to the black-topped red ware of Neolithic Egypt and of the Iron Age in the Vedic Era in India. Uganda has a similar ware which is made as follows:

The piece of pottery is first shaped out of clay. Then after it is dried sufficiently, some **Rweju** is smeared inside and outside at the top. Then a thin sheet of clay is laid on below the **Rweju,** and dry grass is packed inside the pot. Some red-hot lumps of charcoal are put in the grass and the pot is quickly inverted, thus enclosing the fire. Dry grass is then packed outside the pot, and a fire is lighted and allowed to burn for twenty-four hours. When the vessel is removed, it is found that a black glaze has formed inside the vessel and round the top. The thin sheet of clay is removed, leaving the pottery with a brown colour below the black top. The protecting clay is put on unevenly, and as it is thin and damp it breaks a certain amount in the fire. Thus the black part and the red are not separated by an even line, but run into each other.

Another method is to repeat the firing after the protecting clay has been removed. This strengthens the pottery and intensifies the colour. Sometimes a black streak occurs on the pottery. This is caused by the cracking of the thin casing of clay and the running down of the **Rweju,** thus making a black stripe.

The interesting thing about African pottery is that every object has different designs and different meanings. Sometimes there are mystical expressions which are obscure to persons who do not understand. Often a design is purely an incidental experience of the potter rather than the original order. If for example, a sudden shower of rain is swept by a gush of wind while the potter is at work the picture appears on the pottery.

—Negro History Bulletin

Navy Gets First Medical Officer

WASHINGTON, July 19—(ANP)—The navy has just appointed its first medical officer, it was learned here Saturday. Dr. A. L. Thompson was sworn in as assistant surgeon with the rank of lieutenant (jg) at Detroit, his home, last Wednesday. Lt. Thompson, who was an instructor at Meharry Medical college when he transferred from the army medical reserve corps to the navy, is the son Dr. and Mrs. W. A. Thompson.

COLORED AMERICAN GIRL CAPTIVATES KING OF GREECE

Elizabeth McDougald With Red Cross, Is Charming Personality

By Rudolph Dunbar

LONDON, July 6—(ANP)—Miss Elizabeth MacDougald is an American lady of the most sparkling personality and outstanding attainments in Britain just now.

I shall never forget the Hotel Savoy scene at the luncheon given in honor of the king of Greece. Among some 400 guests, picturesquely decorated with generals and other high ranking officers, and men and women from high stations in life, Betty MacDougald was the center of attention and stole the whole show.

She was elegant and natural, and looked romantically lovely. Betty had captivated the admiration of the king for his majesty was not reluctant to remark on her grace and charm.

For me it was a triumph to witness such attention directed to a member of my race. That was not all; weeks afterwards people were asking me who was the charming lady I had accompanied to the luncheon in honor of the king of Greece. Once we were walking along a fashionable thoroughfare in London and the attention she created by other pedestrians was an interesting sight. This is not only true of Betty MacDougald but of all colored women in that category.

Miss Elizabeth MacDougald who hails from New York, came to London some 18 months ago to serve with the American Red Cross in the European Theater of Operations. She was assigned to the Duchess Red Cross club in London for a long period, and has served in various other Red Cross clubs all over England. She is now club director of a large Red Cross club somewhere in England. Aside from her Red Cross duties, she has broadcast several times in London, contributed articles for magazines, and lectured all over England on the problems of the Negro.

99TH FLYERS BACK AFTER DIZZY PACE ON BATTLE FRONT

Atlantic City, July 6—(ANP)—The dizzy pace which Capt. Charles Hall and Lt. Jimmie Ashley have been going since their return to the states slackened a trifle when they arrived at Redistribution Station No. 1 here at Atlantic City, last week. Visits to the home folk which for Capt. Hall was at Brazil and Terre Haute, Ind., and for Jimmie Ashley at Sumter, S. C., were sandwiched in between trips to Chicago and New York. Both plan to visit Tuskegee Air field but have not had an opportunity yet.

Here the two fliers are stopping at the Ritz-Carlton where $50 a day for a room was a minimum not so long ago. Known as returned officers they will rest amid the most luxurious surroundings, undergo complete physical examinations and then be re-classified and returned to duty.

The air corps has decreed that after a certain number of missions and sorties fliers must take this complete rest under the most favorable conditions in order to recuperate from the terrific strain under which they have labored and to determine whether they should be returned to the front or assigned here at home.

INEVITABLE COST OF WAR

A cold comparison of figures, appearing in the United States News, shows that clothing, while declining in quality, has risen substantially in price since the beginning of war, notwithstanding price ceilings and a mountain of regulations. According to the News, manufacturers have found they can profitably stop making lower-priced items and switch to those with higher price ceilings. The lower quality of material and workmanship of the abandoned low-priced clothing can be found in the new and more expensive lines.

Cotton dresses that sold for $9.95 before the war, now sell for $12.95 and up. Good quality items of children's clothing, when available, are up 25 to 50 per cent. The rise in men's clothing has been less spectacular—up 10 or 15 per cent, but quality is down. And so it goes with practically everything the consumer buys.

Before the war, this country had developed the most efficient distribution system in the world. Every merchant, whether chain or independent, was on his toes to serve the public. He knew his existence depended on efficiency, reasonable prices and high-grade merchandise. If he sold food he had to sell good food. If he sold clothing, it had to be good clothing—for the money. That was the law of competition. And American merchants knew how to live by that law, just as did the manufacturers who supplied the merchants.

Our elaborate wartime system of production and distribution controls has proved it would be a poor substitute for the free competitive system in peacetime.

REMEMBER YOUR ABC'S

The wise man gets a roof on his house before it rains. Also he lays aside a few dollars to meet unusual expenditures which are bound to occur. Similar practices involving foresight and thrift are essential in the largest corporation as in the smallest home. Thousands of post-war jobs depend on simple ABC lessons in "good housekeeping."

The president of the Missouri Pacific Lines point out that American railroads are carrying the greatest load in history. Wear and tear on tracks, bridges, locomotives, cars and other equipment is terrific. Material and labor for needed maintenance are not obtainable now beyond the minimum necessary for safe continued operation. Money from current revenues should be saved to pay for the needed repairs and replacements when material and labor are available—meanwhile it should be invested in war bonds for war purposes.

But the tax law prevents such savings. If money for needed repairs cannot be spent as it is earned, it is considered "profit" (by the Federal Treasury) and practically taxed away. But it isn't profit. It is the lifeblood of the railroads. Without repairs and replacements, railroads cease to run.

Congress has been asked to recognize these facts and permit the railroads to put aside sufficient revenue in war bonds to replace the things that are worn out in earning that revenue. Favorable action would mean thousands of jobs for returning fighting men in the task of restoring railroads, and in the mills, mines and forests that will furnish material for the work. It would mean strong post-war railroads.

To tax this "repair money" as profit because the work cannot be done now, threatens the backbone of American transportation.

PAUL ROBESON TO TOUR IN "OTHELLO"; SEATING CHANGED

New York, July 6—(ANP)—Through a clause in the agreement which the Theatre Guild has made with the theatres in each town where the Shakespearean drama "Othello" will be presented on its road tour next season, a certain number of first floor seats are to be set aside for the use of Negroes.

It is said this is being done at at insistence of Paul Robeson who plays the starring role. In most cities colored patrons are by-passed when seeking to buy orchestra row or first floor seats, the balcony apparently being regarded as nearer their economic level. New York is the same as the rest of the country in this respect except that at the Shubert, the ban was lifted with the coming of Othello. Negro patronage on the first floor has been exceptional.

BE YOUR OWN BOSS

The people are urged by the Solid Fuels Adminstrator to not depend upon government coal stockpiling, now under consideration. It will not relieve consumers of the necessity of building their own storage of coal as far as supplies permit. "No governmental stockpiling program can give the consumer the protection he will secure by having his own coal in storage," says Deputy Solid Fuels Administrator Charles J. Potter. "The retail dealer or the industrial consumer who relies upon purchases of coal by the government to see him through next winter not only will be taking a long chance of getting the coal he wants, but can expect to pay a higher price because of stockpiling and handling costs incurred by the government."

As usual, the thrifty person will provide for himself instead of becoming part of that minority that always waits for the government or somebody else to take care of him.

REPUBLICANS TO PROBE RAW DEAL TO NEGRO TROOPS

CHICAGO, July 6—(ANP)—Immediate congressional investigation of "the extent" of discrimination against Negroes in the armed forces, and the adoption of "corrective legislation," was promised minority groups in the Republican party platform adopted last week.

The GOP devoted about 100 words in its 14-page platform to the four issues which the party hopes will ween the Negro votes away from the Democrats and thereby swing those northern states which are pivotal and in which Negroes hold a balance of power.

The party pledged itself further to:

1. A permanent Fair Employment Practice committee.
2. Elimination of the poll tax through a constitutional amendment.
3. Statutory legislation against the lynching evil.

The so-called "Negro plank" was among the last to be adopted although it was reportedly brought here Sunday when the New York delegation arrived. The week before, however, pre-convention hearings were held during which a number of Negro spokesmen appeared before the full resolutions committee and presented what turned out to be a united front on the part of Negroes as to just which their ills and complaints comprised.

The resolutions committee, headed by Sen. Robert Taft of Ohio, then was broken up into sub-committees, each given a particular phase of the platform to handle. No formal sub-committee was set up to consider the Negro plank.

Contributions to this plank were made by Justice Francis E. Rivers of New York; Harold Burton, a New York district leader and delegate to the convention; publisher C. E. Powell of New York; Lloyd Kerford, delegate from Kansas; and Roy A. Vitousek, delegate from Hawai. Vitousek was chairman of the informal committee that was never "appointed but recognized" by the full committee. Later their finished product was submitted to Ted Berry and Lawrence Payne of Ohio; S. R. Anderson of West Virginia; and Oliver Randolph of New Jersey who approved.

The group met last Sunday quietly and went to work. A member of the group, answering an Associated Negro Press question regarding the poll tax clause, said that the group chose that approach because of the "influence in the organization rather than the propaganda" that could be gotten behind the proposal. Sen. Taft said later that "there was some debate" on the proposals. "The only difficulty," he said, "was on the anti-lynching bill. The objection there was a constitutional basis." He explained that Col. Bullington of Texas had raised the question as to whether a statutory measure might not violate the constitution. The committee thought not.

The only motion made in the committee was to take out the anti-lynching item, he said, but that was defeated.

The resolutions committee spokesman did not say so but the language adopted by them was substantially that recommended by the informal group. The more significant charge, the ANP learned, was the deletion from the final draft of the words "with power to enforce its orders," in that section dealing with the establishment of a permanent FEPC.

RIGHT ON THE BUTTON

The public, the industries and the retailers of the nation, have tried to cooperate with the OPA to control the rising cost of living. But OPA's latest announcement on the "highest price line limitation," involving further delay in settling this issue of major importance in low-cost distribution, and its claims advanced in defense of the limitation, leave retailers "dumbfounded," says Robert A. Seidel, controller of the W. T. Grant Company.

Mr. Seidel declares that "it's high time that the American public found out that the Office of Price Administration, by limiting and eliminating the competition of low-cost distributors, has forced the American housewife to pay an extra dollar, or 33 per cent more, or a $2.98 dress, and from $3 to $5 more for a $20 coat.

"The highest price line limitation has not controlled prices, as evidenced by the latest figures of the National Industrial Conference Board. During the last 12 months prices of goods covered by this ridiculous provision have increased almost four times as much as the prices of other lines; the disappearance of women's and children's low-cost outer wear has been more pronounced than is the case in other lines.

"We repeat the suggestion made hundreds of times during the last 19 months: Permit free competition on available goods. Permit low-cost distributors to sell goods at prices lower than those now legally permitted to be charged by speculators and profiteers.

"Perhaps we should repeat the proposal made to Congress: 'Allocate 1,000,000 yards of 68 to 72 prints to us and we will have $1.59 dresses on sale in all of our 493 stores within 60 days.'"

KEEP THE HORSE BEFORE THE CART

Recently a business man accosted a friend who said: "Well, Doctor, I see where they are going to socialize your business under the Federal Social Security Act."

The Doctor, who had spent his life helping the ill and afflicted in his community, regardless of their financial circumstances, said: "Oh no, my friend, they are going to socialize you. When the Federal government takes six per cent of your earnings and six per cent from your employer on wages paid you up to a specified amount, tells you what doctor to go to, when, and where, you will be getting the benefits of socialism, not me. When that day comes I will go back to pipe fitting, which is just working with a different kind of pipes than those in a human."

Yes, it's the public, not the doctors that would suffer from politically appointed physicians. There would no longer be incentive for the better doctors to carry on. An independent pipe fitter would have more future than a socialized doctor.

JUSTICE, OPPORTUNITY EQUALITY

One of the leading oil companies of the United States that has conquered many problems of oil production, refining and transportation, and along with other American companies, has helped serve the world's greatest fleet of automobiles, and finally, the world's greatest war, offers some sound suggestions on how to assure the continued discovery and sufficient use of petroleum.

It proposes that the United States and Great Britain adopt a "comprehensive and enlightened world oil policy" as a first step toward peace and prosperity.

Based on the principles of international cooperation, free enterprise and equality of all nations, it suggests an international agreement, through which the authority of no nation need be abridged and adherence to a world policy could be obtained voluntarily.

Comparing the successful development of the oil resources in the United States "in a climate of ree enterprise" with the less favorable results in countries having state monopolies, restraints and discriminations, the company stated that freedom of enterprise should be encouraged to stimulate finding and testing of possible oil resources.

"Equality of access by all nations to this vital raw material_____can be attained only in a free international economy. The surplus oil of the producing countries must be available to each and every consuming country. Our government can contribute directly to the establishment and continuance of such an economy by giving the support of its diplomacy to those of its citizens who seek to engage in legitimate business throughout the world."

INSURANCE HEADS END 24TH SESSION IN LOUISVILLE, KY.

Louisville, July 6—(ANP)—An address by Julius A. Thomas, Director of Industrial Relations, National Urban League on Friday, closed the final session of the 24th Annual Convention of the National Negro Insurance Association. Thomas' address provoked lengthy applause as he declared that the days of "typical Negro jobs and white men's jobs are over."

The Convention endorsed the FEPC and implored the congress to provide the necessary funds for its effective operation.

The following officers were elected:

Charles W. Green, Atlanta, president; J. M. Lewis, Jacksonville, Fla., first vice president; M. C. Clarke, Cleveland, second vice president; Wendell Erwin, Washington, third vice; Dr. Ernest Cherrie, New Orleans, fourth vice; A. M. Carter, Augusta, treasurer; A. P Bentley, Columbus, O., secretary; A. Victor Williams, New Orleans, assistant secretary; the Rev. E. E. Boughton, New Orleans, chaplain; Mrs. Mamie Hickerson Morris, Chicago, statistician; A. Maceo Walker, Memphis, actuary; M. S. Stuart, Memphis, historian; J. Leonard Lewis, Jacksonville, Fla., general counsel; J. A. McKensie, Philadelphia, seargeant-at-arms. Executive Committee: B. T. Bradshaw, Richmond; A. T. Spaulding, Durham; C. L. Townes, Richmond; Leonard J. Livingston, Chicago; W. L. Sanders, Louisville and H. Christaphe, New Orleans.

PROGRESS WITHOUT COMPULSION

It will be welcome news to hundreds of thousands of fathers and mothers whose sons are in service in tropical countries to read the statement of Rear Admiral Luther Sheldon, Jr., Assistant Chief of the Navy Bureau of Medicine and Surgery, to the effect that "the danger of tropical diseases for our armed forces has been overcome to a large extent." The Navy medical officers "feel that they "have the problem licked."

Admiral Sheldon said that he was not now at liberty to give details on the conquest of the tropical diseases, but to medical men who have heard his statement on the subject, it meant the equivalent of a major victory on the battlefield.

The progress that has been made in medicine, even during the present war, is far beyond the understanding of the average citizen who will reap the benefits. It is the result of the tireless efforts of individual doctors and institutions, free from the hampering influences of a politically-dominated medical profession such as is being proposed now on a national scale. Socialized medicine would subject an estimated 80 per cent of our citizens to ironclad rules and taxes for a compulsory, health insurance program

Compulsion in medicine does not bring progress. Nothing is more personal than the relationship between an individual and his doctor, and nothing should be farther from political domination.

NO SUBSTTUTE REQUIRED

Neither the largest war industry nor the smallest domestic user of electricity has been rationed or inconvenienced by a power shortage.

This remarkable electric service is furnished by hundreds of large and small electric companies in every section of the nation. They were developed with the savings of hundreds of thousands of private citizens and are privately operated, subject to state and Federal regulation and taxation.

The power plants ot these companies are scattered in a thousand different places, thus providing a power system virtually bomb proof, for by interconnected lines, power can be immediately transferred from one area to another.

This private industry was ready for war when it came. It picked up the load and expanded when necessary to meet the most unusual demands.

Remember this record when tax-exempt government ownership of any industry is offered as a substitute for American private enterprise.

Secretary of Late Dr. L. K. Williams to Be Dean Here

CHICAGO, July 6—(ANP)—To accept the position of dean at the National Baptist Theological Seminary, Nashville, Mrs. Ella B. Bohannon last week resigned from the secretarial staff of Olivet Baptist Church where she had been employed for the past 24 years. A graduate of the Baptist Missionary Training School here, Mrs. Bohannon was private secretary to the late Dr. L. K. Williams, Sr., president of the National Baptist Convention, Inc., until his death in 1940. Since that time she has worked as employment bureau manager and a secretary in Olivet's administrative office.

INJURED WOMAN OF CHICAGO INVESTS $2,000 IN BONDS

CHICAGO—Mary Williams, a Negro war worker in Chicago, planked down $2,000 at a War Bond sales window the other day and told the salesman:

"Don't bother about change. Just give me bonds."

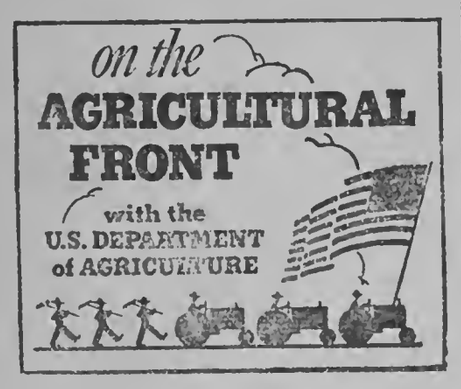
Miss Williams was awarded $3,201 by the Illinois Industrial Commission for the loss of a hand while saving the life of another woman worker in a war plant accident. She deposited $1,100 toward the purchase of a house and then went to get her bonds.

"I don't figure I'm so badly off," she told reporters. "We got men in France and Italy and a lot of other places who will never see home or their loved ones again. Maybe this money I put in Bonds may help to buy a tank or some other weapon which may help to save the lives of some of them.

Miss Williams is taking training on occupational therapy and expects soon to be working again with an artificial hand.

Arrangements have been completed for a War Bond rally to be held in conjunction with the colored major league baseball doubleheader between the Homestead Grays and the Newark Eagles in Newark, on July 2.

Students at Randall Junior High School, in Washington, D. C., have subscribed $2,000 of a self-made quota of $4,000 which they hope will be their contribution to the $2,000,000 bond drive being staged by the National Council of Negro Women to defray the cost of the SS Harriet Tubman, the first Liberty Ship to be named after a distinguished Negro woman. The SS Harriet Tubman was launched in South Portland, Maine, on June 3.



COUNT ON BAHAMIANS TO SAVE WAR CROPS

North Carolina farmers are counting on Bahamians playing an important part in harvesting their food crops this year, according to reports received this week by the U. S. Department of Agriculture.

Already 227 Bahamian farm workers are in the state harvesting potatoes, tomatoes, and beans. The N. C. labor program calls for 500 Bahamians at the peak of the truck harvesting season. Later on in the summer the islanders will move into the peanut farming areas to help get in this important oil crop.

Nationally there are 5,100 Bahamians, 5,250 Jamacians working on farms in this country. About 900 Barbadians are expected to arrive this month, and some 20,000 Jamaicans, and 1,000 Bahamians are expected to arrive here by the time of peak truck farm harvesting.

GROUND SERVICE UNDERLIES AIR CARGOES

Rapid expansion of air shipping after the war will produce a great stimulus to business and industry, without seriously affecting other mediums of transportation. The high speed which modern airplanes make possible is keyed to the American way of doing business.

Commodities to be carried by air transport after the war will differ little in character from those flown by air express before Pearl Harbor, such as machine and vehicle parts, printed matter, films, valuables, drugs, and serums, radio parts, transcriptions, etc. To these will be added, an increasing amounts, samples of all kinds. Introducing a new product and dramatizing it by flying samples to dealers, is going to develop new traffic for all types of transportation, says K. N. Merritt, of the Railway Express Agency. This will open new markets, new areas of distribution to the manfacturer, the merchant and the farmer. After the samples have been rapidly distributed—perhaps even the first few orders—the market opened up and the demand established, all other forms of transport, rail, truck, forwarder, and waterways, will share in the haul of regular consignments necessary to keep customers supplied.

That promises to be one of air transport's most constructive tasks in the coming air age. But it can be brought to the greatest usefulness to the public only by orderly development, based on experience, and a well coordinated ground service to provide shippers with a swift and flexible round-the-clock delivery to and from airports.

THE LOAVES AND THE FISHES

The American people have become so used to "official" predictions of oil "shortages," that it does them good to hear a constructive statement about oil production from an expert in the oil industry.

"Since 1918, the cumulative production of oil has totaled 23.5 billion barrels," says Robert E. Wilson, President, Pan-American Petroleum & Transport Company. "And yet we had at the end of this 25-year period, really proven reserves in excess of 20 billion barrells of crude oil. The miracle of feeding the multitude with five loaves and two fishes, with 12 baskets left over, seems to have a modern counterpart. Small wonder that geologists have ceased trying to estimate any limit on the amount of oil which may yet be discovered. During the same period, our proven reserves of natural gas increased approximately seven fold. In 1943, this country produced more than four times as much crude oil, more than seven times as much gasoline, 13 times as much natural gasoline, and five times as much natural gas as in 1918_____

"With such a record of achievement, why should we today revert to pessimism similar to that of 25 years ago? Let us rather analyze what has happened since 1918 to bring about these results, and offset the fact that the total physical quantity underlying our country has necessarily been decreasing.

"The dynamic factor which made these achievements possible was improved technology resulting from research and its application to every branch of our industry. This technology has_____in effect, multiplied many fold our available petroleum resources."

TOO MANY CONVENTIONS

With the war approaching a critical phase, it becomes more than ever imperative to heed the warning of railroad officials and government agencies to stay off the trains. The movement of troops, supplies and civilians who have legitimate cause to travel, should not be hampered by thoughtless vacationists and "business-as-usual" individuals. Conventions are one of the worst unnecessary burdens on the railroads at the present time. Colonel J. Monroe Johnson, Director of the Office of Defense Transportation, says: "We are obliged to report that even with the prospect of invasion and the resulting need to keep transportation lines clear, unnecessary trade shows and conventions continue to be planned. The governing officials of these organizations have neglected to take into consideration the harm these conventions inflict on war transportation efficiency."

Pacific Coast Regional ODT officials have estimated that during 1944 approximately 48,900 persons will attend about 142 conventions in only four major cities on the Pacific Coast. Convention planning is continuing in spite of the fact that ODT has said that this type of travel is especially disruptive to transportation facilities. The resulting traffic congestion is far beyond what might be expected from the small percentage of passengers that conventions add to the total number carried.

The traveling public has cooperated generously with the railroads. In return, the railroads have performed a transportation job the like of which the world has never seen. Everyone should join in his cooperative effort to get first things first on the nation's railroads—and that goes for the convention promoters.

YOU ARE LUCKY

Schemes for the socialization of medicine permit gambling with a large number of votes from people who are of necessity uninformed on the scientific issues involved. Medicine and health should never be a political issue. Medical science and progress know no political limitations.

The American Medical Association will hold its 94th Annual Session in Chicago in June. The progress that has been made in unregimented American medicine has been phenomenal. Reading over the titles of papers to be presented, one is astounded at the number of life-saving names and medical practices that are now familiar to all citizens, which were never dreamed of a short generation ago.

Yes, indeed, American medicine is not only keeping abreast of the time, but ahead of the times in its discoveries and techniques, and in its plans to cooperate in making them available to all the people.

If you still live in the United States, or are in its armed services, you are lucky, for you have access to the world's best medical resources.

Caustic Critic: You have a lot of bum jokes in this issue.

Editor: Oh, I dont know, I put a bunch of them in the stove and the fire just roared.

YOU ARE YOUR OWN SANTA CLAUS

According to Business Week, revenues from income and excess-profits taxes will decrease. Profits of large industrial corporations after taxes, as compiled by the Federal Reserve, hit top in 1941. The overall return for 1943, on much greater volume, was close to 20 per cent below 1941. There will be no more "rich to soak," so more of the money to cover all waste, extravagance, and incursions of government into the field of business will come out of the small taxpayer. Uncle Sam isn't Santa Claus. He is just the tax bill collector from 135,000,000 little Santa Clauses.

Preacher Cussed Out for Wanting to Vote in Georgia

SYLVANIA, Ga., July 13—(ANP)—The effort of the youthful Rev. Amos O. Holmes to vote in the statewide Democratic primary on Tuesday met with not only failure, but curse words as well, he reported to newspapermen. The cursing, he said, was performed by the chairman of the Screvens county Democratic committee, who also happens to be judge of the city court. Six out of every ten persons in Screvens county are Negroes.

Rev. Holmes, who pastors the St. Andrews Methodist church here, said he, accompanied by J. Spencer, local businessman, and Horace Roberts presented themselves at the polls early Tuesday.

As they started upstairs to the polling quarters, they were met by Sheriff J. M. Crumley, who asked where they were going. When they said they were going to vote, the sheriff replied, "I suggest you don't go up there." Rev. Holmes explained that their action was to lay the foundation for legal action. The sheriff countered with the idea that the attempt would only cause trouble, to which the minister replied that no trouble would be caused unless it came from somebody else, that they were not there for trouble.

The sheriff was quoted then as saying that he was a friend to the Negro and asking Holmes where he was from. The minister told the officer that he was born right over in Ailey, Ga., reared in Georgia and the south and educated in Atlanta schools. The sheriff then suggested that Holmes was leading his people the wrong way and was told that Negroes had their likes and dislikes as well as other people and that he wanted to participate in those things that concerned him and his living.

At this point, the sheriff is said to have said bluntly that he wasn't going to let Rev. Holmes and his party go upstairs. The young minister then told the officer that since legal action was going to be instituted he did not want the sheriff, as a friend of the Negroes, to be a defendant. This apparently softened up the sheriff for he is then said to have told them to go on upstairs.

In the meantime, somebody had gone upstairs and secured Judge J. Henry Howard, county chairman of the Democratic committee, a lawyer, and judge of the city court. The judge came downstairs, approached the party and asked where the group was going. Informed they planned to vote, Judge Howard is said to have fumed and declared that they would "get along a damn sight better if you'd go agitating something else. You damn sure are not going to vote."

The Holmes party then left the place quietly, having been prevented from getting to the polling place by the county Democratic chairman.

Sixty per cent of Screvens county's 20,503 population is Negro, or roughly 13,000. Less than 2,500 persons are qualified to vote in the county, only 62 being Negroes. In the election preceding the last primary a vote of 1,662 was cast in the county. Negroes in all walks of life have recently expressed feeling of the need to vote for their government officials. It was from this section that the last of the Negro representatives in the Georgia state legislature were elected.

Very stout man (to motorist who has bumped into him): "Couldn't you have gone around me?"

Motorist (sweetly): "I wasn't sure that I had enough gasoline."

I will let no man drag me down so low as to make me hate him.
—Booker T. Washington

MISSION BUTTONS

Beautiful in Color, Convenient in Size, Artistic in Design

Price Most Reasonable

ORDER NOW

Young Women's Auxiliary Buttons. Blue background, white letters. Price 10c each, $1.00 per doz.

Woman's Home and Foreign Mission Buttons. White, with black letters. Price 10c, $1.00 per doz.

Star Light Band Buttons. Attractive size for small children. Price 5c each, 60c per doz.

Junior Mission Buttons, beautiful in pink, with green letters. Price 10c each. $1.00 per doz.

Mother's Union Buttons. Purple with white letters. Price 10c each, $1.00 per doz.

Girls' Auxiliary Buttons. Worded "The Miss in Missions." Gold and blue. Price 10c each, $1.00 per doz.

Shepherd Boys League Buttons. Worded "The Good Shepherd." Price 10c each, $1.00 per doz.

FOOD FOR AFRICA

(Continued from Page 1.)

ucts; fruit and vegetable products; fats and oils; canned and dried fish; rice; dried eggs and flour. All of this food was purchased by the War Food Administration which also buys for other agencies.

Among the millions of pounds of food shipped to Africa, Martinique, the Virgin Islands, and Puerto Rico were 5,104,150 pounds of cheese, 83,543,881 pounds of evaporated milk, 50,631,868 pounds of cheese, 76,974,410 pounds of dried beans, 482,636,148 pounds of flour, and 433,-207,688 pounds of rice.

FOUNDATION OF OUR WAR EFFORT

It is refreshing to pick up a copy of Food Marketing, published by the First National Stores of Somerville, Massachusetts, and see pictures of blooming apple orchards, the packaging of eggs, flat cabbage and lettuce plants, and fruit trees being sprayed. It makes one realize that in spite of the war and its destructive forces, they are being counteracted by the reproductive process of the earth.

The war factory that makes a record in production is given tokens of recognition, but the "war effort" of all of them rests on what is done on the land and in the stores to produce and distribute food. If the food production industry used the tactics employed by some labor and political leaders to accomplish their ends, the war effort would collapse.

The record of production and distribution of food, as shown in Food Marketing, impresses one with the fact that every war activity depends on the land. We would be helpless if American farm production and distribution ever faltered. But the trees bloom, the soil produces, the farmers work and the stores distribute, in spite of every handicap placed upon them.

First Communist: "Nice weather we're having."

Second Communist (grudgingly): "Yes, but the rich are having, it too."—Wichita, Kansas, Democrat.

While dreams are not always fully realized, where one seeks the impossible, such dreams do mean that you think a lot about your hair. If you crave hair that behaves, a normally, healthy scalp, why worry? Why fret and have nightmares? If your hair is dull and drab and needs special care, do something. Dreaming is wishing, plus care. Enjoy giving yourself this treatment. Costs you less than 8c a week. Your pleasure is worth it. Enjoy seeing improvement right before your own eyes. Do what hundreds of women now do every day. Start now. Do this. See what Medalo can do for your hair.

Try it! If it doesn't help, you lose nothing. Write your name and address on a penny postal card and send it to me. Don't mail any money now. Pay when you get all the goods. In a few days, you will get a six-month size supply of Medalogro Scalp Formula, Medalo Hot Oil, Cream Oil, Shampoo, Medalo Pressing Oil, full directions plus free samples of Medalo Face Powder and Perfume and the Medalo Booklet. Pay the postman only $1.98, plus few cents postage. Use as directed and if not absolutely delighted, your money back. Written Guarantee comes with all your goods. Write now.

NUNS ENCOURAGE WHITE SOLDIERS TO GET AGITATOR

St. Paul. Minn., July 6—(ANP)—The sympathetic attitude of two Catholic nuns and their timely whispering to a white soldier was instrumental last week in putting down a Negro baiting white soldier on a Missouri Pacific train out of Omaha to Atchinson, Kans.

The story came to me from Mrs. J. M. Gaylord, a resident of this city, who said that she, her husband and four colored citizens were on the train. She named the others as Pvt. Sherman W. Orsweather, stationed at Ft. Cook, Neb; a Mr. Jackson of Omaha and two unidentified women. "One of those women was a nice looking, intelligent young woman, who was going to Mississippi to visit her soldier husband," Mrs. Gaylord said.

After the train left Union City, Neb., a white soldier, who was evidently a southerner by action, with a long drawl, yelled out to the other white soldiers who had just about filled the car: "are you with me?" The reply was yes. "Let's put these d——— n———s out of this car." he yelled. "They have no business riding in here with us."

He walked up and down the car talking and using profane language, Mrs. Gaylord said. Two Catholic nuns were seated near the Gaylords and they began to pray. Every once in a while they would look over at the Negro passengers and smile, indicating they were sympathetic toward them, Mrs. Gaylord reports, adding that by this time she was a nervous wreck.

Trouble seemed imminent and all was tense as the agitator continued to hold sway. Then, the Catholic Sisters leaned over and talked to a white soldier Mrs. Gaylord continued, who was sitting near one of the colored passengers, a Mr. Jackson. Suddenly, the white soldier arose and challenged the agitator, who semed to think he was a member of the Confederate army. "I am not with you here," declared the challenging soldier, "but I will be when we get back to camp. I am going to report you." Other white soldiers joined him for fair treatment of the Negro passengers and helped put the race agitator out of the coach and thus averted bloodshed.

Incidents of this kind indicate that while many whites favor the continuation of abusive injustices to the Negro, more are joining the calvacade that favor fair and equal treatment to all, including the Negro, and are willing to put their thoughts into action to give full citizenship rights.

FARM WORKERS' MAY BE USED

(Continued from Page 1)

the production and harvesting of agricultural commodities during the period specified.

Processors employing these workers (many of whom may be Negroes) will be required to assume responsibilities similar to those required of agricultural employers, including compliance with international agreements when foreign workers are used, to sign contracts covering the period of use, and to pay the wages prevailing for similar agricultural processing work.

NEGRO FARMERS AT WORK

(Continued from Page 1.)

organisms harmless, so they won't "work" in the food and make it spoil; (5) follow up-to-date directions and time-tables, backed up by scientific research; (6) make sure jars are sealed airtight to keep spoilage organisms outside; and (7) store canned foods in cool, dark, dry place.

A free copy of the bulletin may be obtained by dropping a card to Home Canning, U. S. Department of Agriculture, Washington, 25, D. C.

PERFORMANCE VS SPECULATION

Shortly after the last World War dire predictions of an oil scarcity flooded the country. Experts claimed the oil resources of the United States were dangerously near depletion, and proposed stringent hoarding measures. If their proposals had been adopted, World War II would probably have caught the country disastrously short of pepetroleum.

Luckily, prohibitions against expansion of the oil industry were not established 25 years ago. The story of oil production since that time is ably described by John A. Brown, president of the Socony-Vacuum Oil Company: "____No industry is more competitive. There are thousands of aggressive companies and individuals engaged in it, and no one company (according to prewar figures) sells quite ten per cent of the branded gasoline distributed to the public of the United States. The industry made possible the winning of the former World War. It is assuring victory in this war, which uses petroleum in quantities unimagined by Army and Navy men as little as three years ago.____

"The record is one of marvelous achievement by private industry. Since the former war, we have quadrupled our crude oil producing capacity, found and put to use enormous volumes of gas, increased our yield of gasoline from a barrel of crude oil by 75 per cent, built 100,000 miles of pipelines, not only quadrupled refinery capacity, but changed refinery technology to an amazing degree.

"During the twenty-three years, 1919 through 1941, we drilled 551,676 wells in the United States____ In 1918, technical men of the industry estimated the crude oil of the United States, both 'proved' and 'to be discovered' at only 7,000,000,000 barrels, and the automobile industry feared that oil shortage would hamper its growth. Since then, our private oil industry has produced 23,-000,000,000 barrels of oil and still has 'proved' reserves of 20 billion barrels while we continue to discover new fields."

In the face of this, a move is again underway to "hoard" petroleum resources, thus threatening further development of the American oil industry. And the "experts" are again crying that the government must become the dominant figure in the oil business, although governments are notable failures as oil producers. Their record is the strongest argument for keeping government out of the United States oil industry.

Too Much Jim Crow in Tuscon, Ariz.

TUSCON, Ariz., July 6—(ANP)—There is much room for improvement here in connection with race relations if Negroes are to exercise their civil rights, according to the families of men and women in the armed forces of the United States who have come here from Chicago and other points to be near their relatives. According to reports, Negroes are seated only in the balconies of all theatres and there is scarcely a store in the downtown area where Negroes may be courteously served.

Many Negroes here have beautiful homes and are making substantial progress otherwise despite the drawbacks relating to the exercising of their full civil rights. Members of the armed forces at Fort Huachuca visit the city in large numbers for week-end recreation.

James C. Leveye Completes Course

AMARILLO, TEXAS—James C. Leveye, son of James W. Leveye of Detroit, has completed his course of studies as an aviation mechanic of the Army Air Forces School here, it was announced this week. He is now fitted for airplane maintenance and will be sent to an Air Base, where he will help keep American Flying Fortresses in the air for the duration.

DETROIT PRIMARY TO AFFORD TEST OF CIO STRENGTH

By Robert Crump

Detroit, July 6—(ANP)— Local politics, as far as the state and county are concerned, swung into definite action here as the July 11 primaries approach and the growing political strength of the CIO was shown a few days ago when the Wayne County Political Action committee made a deal with the Democratic candidates by the WCPAC. Candidates for public office were endorsed by that party in exchange for the endorsement of nine Democratic candidates by the WCPAC.

The Wayne County committee is doing a splendid job if for no other reason than that it has been instrumental in getting thousands of Negroes, members of the various union locals to register and vote.

Two Negroes, Hodges Mason and Atty. C. Lebron Simmons, are among the candidates endorsed and supported by the WCPAC who also received the endorsement of the Democratic party. Mason is opposing Sen. Charles C. Diggs in the 3rd district who is running on both the Democratic and Republican tickets for a fourth term. Simmons seeks election to the House of Representatives at large. The CIO and other organizations who formerly supported Diggs failed to do so this time because of the reported indictment of Sen. Diggs by a state grand jury on a charge of bribery and graft. Sen. Diggs, according to reports, awaits trial along with 37 others.

In spite of this the little belicose senator can not be counted completely out of the running for there are many voters who still swear by Diggs because of the many fine things he has accomplished in the senate and they know he has the ability to do even more. Many hope and some even believe Diggs will be proven innocent of the charges.

The "strange bedfellow" angle which usually crops up in politics flared up several weeks ago when the Michigan Federated Democratic clubs ousted Sen. Diggs from its ranks on the grounds that he had desserted the party when he filed petitions to run for office as a Republican. The MFDC was organized by Diggs who presided over that body for years and it was held in the Democratic party ranks only through Diggs' influence.

BISHOP DAVIS SIMS TELLS REPUBLICANS WHAT NEGRO SEEKS

Chicago, July 6—(ANP)— Delegates and visitors to the Republican Convention heard Bishop David Simms of the A. M. E. Church deliver an impassioned yet logical plea last Tuesday, telling the Republicans in no uncertain terms just what the Negro expected of the party and what the party could do toward alleviating the many grievances Negroes suffer.

"The ghastly ghost of mob violence, terroism and such makes the insecurity of one of America's most loyal groups, said the noted prelate in the midst of Negroes' vicarious suffering in the land of democracy's greatest heritage, he is loyal to a fault. This potential loyal, progressive, minority group of Americans requests the Republican party here assembled to give some specific and dynamic assurance new or else tomorrow may be too late for rescue and restoration. If the party will eliminate the poll tax, mob violence, discriminations in job opportunity, unfair employment practices in labor and industry, this will be a demonstration to the world in general and to the Negro in particular that we are placing the welfare of the whole American country above that of any special section of it."

Bishop Simms, who is from Philadelphia, declared that the New Deal has failed miserably in its promises to the Negro. He blamed the Bilboas, Connallys and Rankins in the Democratic party for nauseating the Negro.

"It has given the Negro trinkets," continued the Bishop, "when he needs protection and a sense of significance. It presented him dole when he needs security. A changing world has produced a changed Negro. The party and the Negro have a mutual need."

During his address, the bishop also pointed out the discriminations existing in the armed forces.

ROTTEN FRUIT SPREADS FAST

Promoters of government ownership of electric power production in the Pacific Northwest, as elsewhere, have enjoyed a measure of success because of their ability to picture the power controversy as a struggle between liberals carrying the general welfare standard, and the private power companies. The fundamental principle of private ownership of property, as contrasted to socialism, has been seldom discussed, apparently in the [illegible] a little taint of socialism would benefit rather than hurt the country. But the farmers in the state of Washington are discovering something they should have known all along. Rotten fruit spreads fast.

For years Washington farm organizations have encouraged the bureaucratic growth of socialized electricity in their state, on the assumption that the government's Columbia River power projects would provide abundant cheap electricity and elaborate irrigation systems at the expense of the general taxpayer. But lo, the bureaus are now reaching out to control farm markets—and the farmers—in large areas in Washington, and the farmers don't like it. The Washington State Grange, loud supporter of socialized power, has gone on record as opposed to any scheme that might enable the national government to tell farmers when, what, and how to plant, and how much they would get for their toil. It does not mind putting the power company out of business, but it does mind very much when it is suggested that the farmer be put out of business as an independent individual. Why? Food is a lot more important than electricity. If the taxpayers must furnish the money to irrigate and electrify the state of Washington for the farmers, why shouldn't the farmers of Washington produce food at cost for the taxpayers?

Yes! Rotten fruit spreads fast, lost independence is the fruit of state socialism.

PREVENT DISASTER

"The war it not over," says the National Board of Fire Underwriters. It points out that while the immediate danger of bombing may have passed, the need for new and effective apparatus in the fire departments of cities and towns is just as great as ever.

A destructive fire in a war plant is equally disastrous, whether it resulted from lack of efficient fire-fighting equipment or from a block

Modern apparatus must be used to save the lives of people crowded into hotels, apartments, tenements and houses, and those in industries working under less than normal safe conditions. Much old fire-fighting equipment is becoming obsolete, and few cities have had the desirable amount of reserve apparatus.

To forestall disastrous fire losses, public officials charged with the protection of life and property, should urge that public budgets include liberal allowances for fire-fighting and salvage equipment.

We should always remember that a Cocoanut Grove tragedy or a fire-gutted war plant is of maximum aid to our enemies, for such destruction involves no effort or expense on their part.

Jamaican Sends Specialist To U. S. To Study War-Time 4-H Club Program

MISSES IVY E. LEWIS AND INEZ V. GRAY TO SPEND 3 MOS. HERE

Washington, D. C. —As a step toward further helping Jamaican farm youths make a larger contribution to the Allied war effort, the Jamaican government has sent Misses Ivy E. Lewis, and Inez V. Gray, 4-H specialists. here for a three-month study of wartime development in the U. S. Department of Agriculture's 4-H club program.

With British and American ships now busy transporting troops and supplies in war zones, the work of Jamaican 4-H Clubs is becoming increasingly important as a means of increasing food production for home use so that it will not be necessary for England or the United States to divert ships from the war to carry food to the island. Although the 4-Hers are already enlarging their gardens and increasing their goat herds for meat and milk, the visiting specialists hope to discover other production methods here which may be adapted to Jamaican agriculture.

Anxious to get first-hand information on 4-H Club work in the

(Continued on Page 8. Column 1.)

DAIRYMEN FEEL BUREAUCRATIC TQUCH

Charles W. Holman, Secretary of the National Cooperative Milk Producers Federation, advocates the passage of legislation to curb abuses by government agencies of the regulatory powers they administer. He said: "These abuses are corrupting even the little bureaucrats in Washington and transforming them into super-bureaucrats. By means of government by regulation, the long tenuous lines of Federal control reach into every rural community anl every agricultural trade, from production through processing to distribution."

DISTRICT OF COLUMBIA BOYS

Colored Youths Join V. F. V. to Help Wartime Harvest

Washington, D. C.— One hundred and twenty Washington, D. C., colored boys will have a triple-treat vacation this summer. Having enlisted as Victory Farm Volunteers to help harvest a 21,000-acre vegetable crop in Dorchester county, Maryland, the youngsters will not only lend a hand toward the winning of the war, and make some extra money, besides, but they will also enjoy a real summer outing.

Shouldering duffel bags, or suitcases with one hand, and carrying their ration books in the other, 60 of the VFV's loaded into two

(Continued on Page 8, Column 2.)

FARM WORKERS NEEDED

A labor force of 12 million full-time workers is required to handle our wartime crops, according to the U. S. Department of Agriculture. Well, there are only eight million in the regular farm labor force. These consist of the farmers and their families, and the year-round hired workers.

The remaining four million must be recruited from our cities, towns, villages, and from foreign areas. It is estimated that 1,200,000 youngsters, about 800,000 women, including the Women's Land Army Mexicans, and other foreign groups, and some 1,900,000 men, mostly older men, will pitch in this year to help assure ample food and fiber supplies for our fighting men.

In addition to Negro farmers and their families who number over three million, about 800,000 of the volunteer recruits will be colored townspeople.

FIFTY THOUSAND DOLLARS APPROPRIATED

Negro School Children to Enjoy Nutritious Food

Negro children will again enjoy nutritious school lunches this coming year following Congressional approval of $50,000,000 for the programs's continuation by the War Food Administration.

During the 1943-44school year more than a million Negro children in 15,661 schools in 30 states the diet of American youngsters, the school lunch program will help move abundant foods and give farmers and food distributors additional outlets for these commodities.

The school lunch program is designed to operate under local sponsorship of school boards or other school organizations, parent-teacher groups, civic groups and other nonprofit organizations.

WFA will reimburse local sponsors for their purchases of food up to a maximum amount determined by the type of program undertaken by the local sponsor. WFA also will distribute directly to schools suitable foods which are purchased through its price-support programs.

(Continued on Page 8, Col. 2).

CARELESSNESS WORSE THAN FIRE

Ships, men and planes who live to fight another day can often thank the behind-the-scenes work of civilian fire prevention engineers for their second chance. These engineers, loaned by the fire insurance industry to the government, have given effective help in teaching methods of fighting airplane crash fires. They have also cooperated with the Navy and the Coast Guard in fighting fire on shipboard. However, these are but highlights of the far flung activities of the fire prevention engineers.

Since September, 1940, when the first $1-a-year contract for fire prevention engineering service was signed with the War Department, advisory fire protection engineers have been assigned to 665 War Department projects and have rendered 2,250 reports. For more than a year engineers have been making complete fire protection surveys on the more important War Department establishments, posts, stations, hospitals and depots.

When the war is over, the fire prevention engineers now lending their talents to the government will be back in offices, laboratories, and in the field, carrying on the ceaseless battle against fire. They will undoubtedly bring with them new devices, learned from the war, that will make homes and factories, places of amusement, and every other man-made structure a little safer from fire.

With modern scientific methods of preventing fires, the annual fire loss for the nation should be drastically reduced. Nine fires out of ten are brought about by carelessness. Carelessness is almost worse than fire itself from the standpoint of the engineer. He has learned how to combat fire, but public carelessness baffles him.

NEW MACHINES FOR HARVEST

Peanut Diggers Get Mechanical Equipment This Year

The development of better mechanical equipment: peanut diggers, diggershakers, and the adapted combined peanut harvester may speed the harvesting of this year's 4,000,000-acre wartime crop and relieve Negro volunteers to turn their hands to other war jobs, according to Research Administration engineers of the U. S. Department of Agriculture.

When Japanese aggression cut off our supply of vital vegetable oils in the Far East, Southern farmers (white and colored) got out their equipment, such as it was and began planting almost twice as many peanuts as before the war. But when harvesting came they were up against it. The peanuts had to be dug, shook, stacked to dry, and then later the nuts had to be picked from the vines. It took a lots of hands, and well, there just weren't enough there on the farm. Appeals for volunteers brought hundreds of townspeople, mostly colored, who turned out to help. In Georgia, Alabama, and Texas, largest peanut growing States, they saved the day.

However, all along Department engineers were quietly working in laboratories trying to devise mechanical equipment to help the farmers with their peanut crops. Already new diggers have been manufactured in large numbers. The diggershakers and the adapted combine are in the experimental stage. When all of these devices are put to work, the need for harvest labor will be cut to about a tenth of present requirements.

NEGRO FARMER SETS RECORD FOR HIGH QUALITY EGGS

John Brown of Jones county, N. C., has set a record this year with one hatchery by supplying it with eggs of a higher percentage of hatchability than any other flock owner furnishing eggs to this hatchery, according to reports received by the U. S. Department of Agriculture.

Farmer Brown is one of a group of poultry growers who were notified a few weeks ago that hatcheries were not in market for any more hatching eggs. Caught with nearly 2,000 eggs on hand, the farmer turned to Negro County Agent W. N. Payton, Jr., for help. He arranged for them to have their eggs hatched on a custom basis. When they sold the chicks instead of getting 40 to 50 cents a dozen as they would have received for the unhatched eggs, they got 84.6 cents a dozen as their share of the returns for the baby chicks.

All of the flocks had been blood tested for pullorum disease and the eggs were of high quality as shown by the 78 percent hatch. Of the 1,796 eggs delivered to the hatchery, 1,40 chicks hatched out, and were sold for $166.50. Farmer Browns' eggs proved of highest hatchability of any of the farmers in the group, or of any farmer who brought eggs to the hatchery this year

TEXAS 4-H'S PRAISED

Negro Boys Commended In Radio Talks Recently

Washington, D. C. M. V. Brown, administrative assistant to Dr. E. B. Evans, director of Negro Agricultural Extension work in Texas, paid a high tribute to the colored 4-H Club members of that State in a recent broadcast from Texas A. and M. college.

Said Mr. Brown, "Negro 4-H Club boys of Texas are doing their part in the production of essential food and feed products for home consumption, and for total victory on the war fronts."

Pointing out that 50 Negro county agents are assisting 4-H Club members with their victory garden, swine, and poultry projects, Mr. Brown said that 180 boys, stimulated by the war, are raising purebred registered pigs for the first time. Aware of the feed situation. these boys are developing pastures, and growing corn, and other feed crops.

County agents in some areas have been able to secure the full support of local business people for the 4-H pig projects. In many instances the local banks are lending the boys money to buy purebred swine.

Mr. Brown also dscribed poultry demonstration projects which some of the Club members are carrying out. In one county alone 24 boys have large flocks from which they are collecting several dozens of eggs every day.

Through these demonsstration projects the farm youngsters are becoming somewhat specialized. They are learning more and more about the care of swine ond poultry, and the county agents are teaching them how to control some diseases which attack their animals.

133 NEGRO SCHOOL BOYS HELP SAVE ALABAMA'S POTATO CROP

Washington, D. C.,—One-hundred and thirty-three Negro nigh school boys with good scholastic records put down their books a few weeks ago and went into the Baldwin County, Alabama, Irish potato area to help save this year's crop.

Anxious to help assure food supplies for our fighing men, the boys followed in the wake of the digging machines, picking up and loading potatoes over hundreds of acres. Although none of the boys was experienced in farm work, it is said that they did an excellent job of helping to harvest the crop.

The school authorities in several counties surrounding Baldwin, arranged for such high school boys, white and colored, as were well up with their school work to spend two weeks in the fields helping with the emergency wartime harvest.

Next week 120 Washington, D. C,. youngsters will take jobs as Victory Farm Volunteers on nearby Maryland farms, helping to harvest important truck crops.

N. C. 4—H'ERS

A total of 30,607 colored boys and girls in 42 counties of North Carolina are engaged in 4-H work, according to R. E. Jones, Negro State Agent, and 4-H Club specialist Records show that 1,202 of these youngsters have projects which should produce enough food each to feed a fighting man.

NEGRO 4-H CLUBBERS ON NETWORK

Broadcasting from Washington D. C., on the Blue network's National Farm and Home Hour recently, three Maryland 4-H club youths described what they are doing to help increase wartime food production. Left to right, they they are: George W. Queene, 18, who produced enough food last year to feed three fighting men; Martha Duckett, 17, who raised 600 broilers in 1943 and is raising 800 this year; Fredrick Mason, 17, who in addition to his pig and poultry projects, collected a ton of scrap metal last year, and supervised five Victory Farm Volunteers. Others on the program were Charles A. Bond of the USDA radio section, John W. Metchell, Federal Extension field agent, and Martin G. Bailey, Maryland county agent.—USDA photo by Hunton.

WOMAN'S PAGE

TRY THIS BOX LUNCH THE GATE INSPECTOR WILL ENVY THIS ONE

Lunchboxes are no longer a dark secret—more than eight million are being carried every day. Plan lunchbox menus carefully and the same one can serve all members of the family whether they go to defense plants or school. Add an extra sandwich for adults, coffee instead of milk if they prefer, but aside from that the same lunch can serve everyone if the menu's right. Newest occupants of lunchboxes are the peanut butter bread and the raisin-nut torte squares in this article. How to make them without a speck of precious shortening is told elsewhere on this page.

Let Your Oven Fill Lunchbox.

Home-made breads and cake are welcome occupants of the lunchbox brigade—and welcome news are these recipes for same that don't use a speck of shortening. Extra amounts of all phosphate baking powder make it so since it leaves no after taste often disguised by shortening in recipes. Here are the ways to make peanut butter bread raisin-filled torte squares without shortening. The recipes have been tested as given:

Peanut Butter Loaf Bread

2 cups flour
3 teaspoons all-phosphate baking powder
1 teaspoon salt
1-4 cup sugar
1 cup peanut butter
2 eggs
1 1-4 cups milk

Sift together flour, all-phosphate baking powder, salt and sugar. Cut in peanut butter with two knives or pastry blender. Beat eggs; add milk. Add to peanut butter mixture, mixing only until ingredients are moistened. Pour batter into greased loaf pan about 4 by 9 inches. Bake in moderate oven (350 degrees F.) 1 hour and 10 minutes. Cool on wire rack.

Raisin-Nut Torte Squares

2 egg whites
1-2 cup sugar
1-2 cup coarse graham cracker crumbs
1 teaspoon all-phosphate baking powder
1-4 teaspoon salt
1 cup chopped raisins
1-2 cup chopped nuts
1-2 teaspoon vanilla

Beat egg whites stiff; add sugar gradually, beating constantly. Mix crumbs, all-phosphate baking powder and salt. Fold into egg whites mixture with raisins and nuts; add vanilla. Spread in greased 8 inch square pan. Bake in moderate oven (350 degrees F.) 35 minutes. Cool; cut in squares. (May also be served hot with light cream as a dessert).

EXTEND MEAT WITH FRESH GRAPEFRUIT

Lengthen meat-short meals with fresh grapefruit sections in a tangy main-course salad such as the one in this article. Cubed leftover meat is combined with raw cabbage and fresh Florida grapefruit sections; add cream of pea soup, hot muffins and a cake crumb pudding and you have a thrifty, nutritious entire meal. Here's how to set up the salad:

Grapefruit Meat Slaw

1 cup salad oil
1-3 cup vinegar
1 teaspoon salt
1 teaspoon dry mustard
1 teaspoon paprika
1-2 teaspoon Worcestershire sauce
Few grains sugar
Few grains pepper
1 teaspoon grated onion
1-2 cup chopped raisins
2 cups cubed cooked meat
4 cups shredded cabbage
2 cups Florida grapefruit sections
Watercress

Combine salad oil, vinegar, salt, mustard, paprika, Worcestershire sauce, sugar, pepper, and onion; beat with rotary beater until well mixed. Chill 15 minutes. Pour dressing over meat; chill 15 minutes. Drain meat, reserving dressing. Combine dressing with cabbage. Pile cabbage in salad bowl. Arrange meat in center on cabbage; around edge of bowl arrange Florida grapefruit sections and watercress. Serve 6.

NUTRITION NOTES

The 1944 food slogan is: "Go light on food and clean the plate cleaner." Plan meals more carefully to make them better balanced, but remember that uneaten food left on plates or wasted in the kitchen is a form of sabotage.

Radishes are a spring dish. Use yours for garnish or in salads. Better still, serve whole with watercress and French dressing.

Never throw away the liquid drained from canned foods, as it contains food elements that definitely must not be wasted. This liquid may be served with the food from the can or saved to use in soups and sauces. If it is fruit juice, save and use it in a fruit beverage.

Dandelion greens and shirred eggs make a twosome that's a real treat. These greens are especially rich in Vitamin "A" and minerals. Cook them until tender and chop. Add bacon or salt pork and onions fried until brown, stir and turn into shallow baking dish. Break eggs on top, leaving yolks whole, and cover with bread crumbs. Bake in moderate oven until eggs are well done as desired.

Eggs are plentiful now. Use them often in omelets, cakes, or custards. Poached or boiled and mixed with gravies is a tricky way, too, or boil and serve in salads.

OLIVE RELISH SALAD MOLD

1 package lemon gelatin
1 2-3 cups boiling water
1 cup chopped cabbage
1-3 cup diced cucumbers
1-2 cup chopped olives, ripe or green
1 tablespoon salad dressing
2 tablespoons chopped sweet red peppers
1-4 teaspoon salt
1-8 teaspoon paprika

Dissolve gelatin in water. Cool and add rest of ingredients. Pour into loaf pan and chill until firm. Unmold, serve in slices on lettuce. Top with more dressing.

BRAN PRUNE SQUARES

1 cup flour
2-3 cup bran
1-4 cup sugar
1-8 teaspoon salt
1 teaspoon soda
1-2 teaspoon baking powder
1 egg, beaten (or 2 yolks)
1-2 cup chopped prunes
1-2 cup buttermilk or sour milk
1-4 cup prune juice
2 tablespoons shortening, melted.

Lightly mix ingredients and pour into greased shallow pan. Bake 20 minutes in moderate oven.

VEGETABLE PATTIES

Make very thick white sauce, using 1 3-4 cups milk. Add 1-2 teaspoon marjoram and 1 1-3 cups each of cooked or canned peas, carrots, and corn: spread in two 8x8x2-inch pans; chill. Cut in triangles or squares. Roll in dry crumbs; dip in beaten egg; roll again in crumbs. Saute in small amount of fat or salad oil. Serves 8.

GREEN BEAN SALAD

Use 1 pint of fresh-cooked string beans cut in 1-inch lengths. Dice 2 hard-cooked eggs and add with 2 tablespoons chopped sweet pepper, 2 tablespoons of diced onion, and 1-2 teaspoon of salt. Put 2 tablespoons of sugar in 2-3 cup of sour cream and whip until thick, then pour over the other ingredients.

PERK UP BATHROOM

Tired of the bathroom color scheme? Then dye your curtains a royal blue, perhaps, or a deep rose. A bath mat or rag rug can be dyed to match; or, if you prefer, use a contrasting color. Maybe you have some colored towels that have faded or white ones that have become gray through time and hard water. These can be dyed to match the curtains. Wine is another smart color for a bathroom, and a combination of brown and beige-beige curtains banded in brown, brown rug, and towels in both brown and beige hung alternately —will lend distinction to an otherwise commonplace room..

White Scholar Looks at Negro World

By Emmet Phillips For ANP

Catholics And Negroes Due To Face Additional Troubles

While we were participating in World War No. I "optimistic" Catholics prophesied that Catholics in this country would receive better treatment after the war due to the fact that non-Catholic soldiers were mixing with Catholic soldiers on the battlefield, seeing them sacrifice and in many instances give their lives for their country. Catholics were proving themselves to be good Americans; they were O. K. even if they did believe in the infallibility of the Pope.

But not long after the armistice the KKK came to the fore and proved that the "optimistic" Catholics were better optimists than prophets. A wave of anti-Catholicism swept the country and reached its high point in 1928 when the solid (in the head and stony in the heart) south deserted the Democratic party rather than support Catholic Al Smith for the Presidency.

The Negroes, unlike the Catholics, only HOPED for better treatment as a result of the Negro soldiers' sacrifices on the battlefield. They suspected that the status quo would prevail despite the fact that Negroes had fought and died for democracy. That their suspicions were justified was proven by an increase of segregation, lynchings, etc., from armistice day on.

Now in the midst of World War No. II "optimistic" Catholics again proclaim better days to come for American Catholics as the result of Catholic soldiers fighting and sacrificing side by side with their non-Catholic fellow Americans on the field of battle. Will these "optimistic" Catholics ever learn?

But American Negroes have learned not to place much hope for a better deal on the basis of appreciation from white American soldiers in this, or any other wars.

Just to show the way the wind is blowing let me tell you what a soldier acquaintance of mine who has just returned from the Cassino front had to say. He told of going to church services (Protestant) in Italy and listening to the minister who spoke English. This minister claimed that Mussolini wouldn't allow him to conduct Protestant services but now, thanks to the allies, freedom or religion in Italy is assured. My soldier friend seemed much impressed by this minister, never stopping to ascertain how much of what the minister said was true. The aforementioned soldier said that Catholic soldiers were made to feel at home in Italy, but Protestant ones like himself were not so welcome.

Steering clear of Italian affairs, because I didn't know much about them, I replied that if Protestants were rudely treated in Italy then their plight might well be compared to that of a Catholic or a Negro in our own southland. Whereupon my soldier acquaintance made the following statement: "I've been in Africa, Ireland and England in addition to Italy and I didn't like the way white girls in those countries acted. Why they would go out with American Negro soldiers instead of going out with us! I'm afraid that when those Negro soldiers come back to America they will want to go out with and marry American white girls."

My comeback was that no one is forced to go with or marry another, that such relationships are a matter of choice. He instantly dropped the subject for one on local topics.

Now I maintain that this white non-Catholic American soldier is typical of too many in our armed forces. While we are supposed to be fighting a war for the betterment of persecuted people everywhere our own American soldiers of a certain type are building a hatred for Catholics and Negroes which awaits only another armistice to make its evil effects felt throughout our land.

What can be done to avert this future persecution? Catholics must prove their right to the term Catholic which means universal, or the church for all people. Catholics take pride in the universality of their church; they insist that Jesus Christ died for all regardless of color. So it's up to them to initiate unity with the Negro. As for the Negro, let him no longer be deceived by white Protestantisms hatred for Catholics and Cotholicism. In other words, Catholics and Negroes must mass their combined strength to beat off another KKK era.

NEGRO WAC BAND INACTIVATED: ASK CITIZENS TO PROTEST TO PRESIDENT

FT. DES MOINES, Ia.—(ANP)—Negroes throughout the nation have been asked to join in protest to President Roosevelt in an effort to have the recently inactivated Negro WAC band re-organized. After nine months of intensive training, followed by numerous appearances in parades and concerts, these 26 young women representing every section of the country and many Negro colleges and universities, are now being scattered into various training groups.

The members of the disbanded WAC band in Des Moines ask that the citizens everywhere busy themselves by voicing their protests to the President.

FEPC Gets Out New Pamphlets

WASHINGTON— (ANP) — The Fair Employment Practice Committee has just gotten out a pamphlet titled "FEPC—How It Operates," the agency announced last week. It was prepared by the division of review and analysis headed by John A. Davis, formerly with the Governor's Committee on Discrimination of New York.

The pamphlet tells of the establishment of FEPC, its duties and jurisdiction, and procedure. Something of the agency's record to date is also included as well as a reproduction of Executive Orders 8802 and 9346.

STARTLING BUT TRUE

The National Safety Council, in making the Safety Awards to the commercial airlines recently, brought out some startling figures as to the safety records of the airlines of the United States during 1943.

During the past year, of the 17 domestic airlines listed in the Councils Air Transportation Safety Awards, 16 operated one billion two hundred and twenty-five million passenger miles without a passenger fatality. This is equivalent to picking up at their home airports every man, woman and child in the cities of Birminghan, Little Rock, Beverly Hills, Denver, Hartford, Tampa, Des Moines, Louisville, Baltimore, Dayton and the two Portlands, plus all the people in Nevada, Wyoming and Vermont and flying all of them to points 200 miles away and bringing them safely home. Unbelievable—but true.

The record stands as the second best in safe air transportation in more than 17 years of operation, and his under the critical conditions of 1943 with more than half their aircraft in military service and many of their crews flying to the far corners of the world. Only for the 17 months from March, 1939, to August, 1940, when the airlines operated without a passenger fatality, was the year's record surpassed.

In addition to these statistics of the flying on regular schedhule in this country, there are the hundreds of millions of miles flown by many of our airlines in operations for the Army and Navy with thousands of safe trans-oceanic flights monthly. For military reasons these figures cannot be divulged, but when the ban is lifted, the American people will be justly proud of the safety and progress of their air transports.

HANDOUTS OR FREEDOM

The farmers of this country rank among the most abundant food producers in the world, and they are noted for their independence. They have developed cooperative marketing organizations that "talk" for them in matters of distribution, while they concentrate on production. These farmer-owned business organizations reflect the view of farmers.

Recently, Ernest C. Strobeck, Secretary of the Dairymen's League Cooperative Association, said of sudsidies: "An understanding of food subsidies requires at the outset a determination of the kind of government that we want. Do we want a government supported by its citizens—a government of, for and by the people? Or, do we want a government to which every one looks for handouts and detailed regulations of their everyday lives?"

Farmers have been forced to accept subsidies, although they continue to oppose them in principle as a threat to the independence of everyone. They are frank in their belief that higher prices for farm products when necessary are preferable to living at the whim of government authorities. The country is fortunate to have that kind of farmers.

AND SOME WOULD CHANGE OUR SYSTEM

In reviewing the record of production reported by the War Production Board up to May 25, last, the world has evidence of an industrial miracle wrought in the United States. B. M. Baruch puts the heart of the story in thirty-three words: "The war has been a crucible for all the economic systems of the world, for our own, for Communism, Fascism, Nazism—all the others. And the American system has outproduced the world."

SOMETHING TO KNOW

A good many people unacquainted with the situation wonder why thousands of men like to work in coal mines.

For one thing, coal miners are well paid; their average earnings being higher than the average for all industrial workers. Thousands of coal miners make $300, $400 and some even $500 a month.

Their work surroundings are not unpleasant by any means. Mine temperatures range between 62 and 72 degrees, with fresh air circulating continuously.

That miners like their work is shown by the fact that mining has a lower labor turnover than the average of all the manufacturing industries. Many who do leave the mines return to them.

EFFICIENT RETAILING STABILIZES PRODUCTION

In no other nation in the world has the average citizen been as well served with the necessities of life, and even luxuries, during this present terrible war, as in the United States. There is a reason for this—no nation in the world has had as many free and independent business men seeking to supply the needs of the people, as has the United States.

War restrictions on production and distribution were inevitable. Hastily drawn as they were, many of them have been confusing and some actually damaging to maximum production and distribution. Nevertheless, American business adjusted itself to the rules and regulations and kept the supply stream going to consumers.

This never could have been done, nor would government rationing and price control have been successful, except for the efficient retailing system this nation enjoys. Chain stores played a tremendous part in results that have been secured. They have been a stabilizing influence in maintaining production and distribution on an even keel.

Such stores were built up on the basic idea of a minimum profit on each sale, in order to create a maximum turnover. That policy is probably doing more to stabilize prices than any man-made legislation can accomplish in the face of rising wages and material costs.

In the postwar period, the nation will depend even more on efficient mass merchandising practices to readjust to a peacetime economy and get the ten thousand and one articles of peacetime commerce into the hands of the consuming public, thereby giving the most rapid and elastic outlet for form and factory production.

Ralph Metcalf Now Lieutenant

NEW ORLEANS.—(A. N. P.)—Ralph Metcalfe, famous sprinter who ran for Uncle Sam in both the 1932 and 1936 Olympics, is now a lieutenant. He has just been commissioned after graduation from the army officers transportation base here.

After starring in Tilden Tech high school in Chicago and at Marquette university, Milwaukee, in addition to his Olympic running, Metcalfe coached five years at Xavier university here before obtaining a leave of absence to serve with the Catholic Servicemen's organization prior to his induction into the army in Los Angeles.

A HOPEFUL SIGN

Twelve hundred members of the Dairymen's League Cooperative Association have gone on record against the principle of subsidies. They viewed with alarm "trends in government tending to impair the economic, political and social security of the nation, as well as to destroy the system of private enterprise."

It is a hopeful sign when farmers seek independence from political restrictions.

Red Cross Gives U. S. Soldiers Birthday Party

INDIA,—(A. N. P.)— Though 15,000 miles away from home, our American soldiers still hear the strains of "Happy Birthday," receive a colorful birthday card on their birthday, and cut the proverbial cake. At the Cosmos club of the American Red Cross, each month, a birthday party is given for Negro soldiers who have added another year to their life.

The party is arranged for the last Friday fo the month. The master of ceremonies announces those with anniversaries and they receive a piece of cake and their greetings.

The latest such party included a real cowboy band. Everyone stayed until "lights out" with some playing the radio and others gathering about the piano for an impromptu community sing.

Surinam Natives Progress, Report Shows

WASHINGTON, D. C.—(ANP)—In the course of 80 years of freedom the Negro and mulatto population of Surinam (Dutch Guiana) have made huge progress, in spite of the undeniable impediments, engendered by their past. This is the viewpoint of an article called "Jungle Harmony" appearing in the Canada-West Indies magazine and written by J. H. Boas.

Surinam might suitably be described as a patch-work quilt. Like the United States, its population is composed of many different races, but whereas in the great republic of the north the different racial elements have intermingled to produce a new breed of men, the article says, the different peoples of Surinam have largely retained their separate individualities, living together in good harmony and fellowship under the Netherlands flag.

KKK and Bund Linked in Trial

WASHINGTON, —(A. N. P.)—The Ku Klux Klan and the German-American bund are closely connected, witnesses declared as they presented documents and pictures at the mass sedition trial last week. President Roosevelt is of Jewish ancestry, some of the witnesses claimed.

According to William Luedtke, former national secretary of the bund, the two groups had met in joint session at a bund camp in New Jersey. He said he could recognize pictures of at least two Klan leaders in photographs of the meeting. The meeting, Luedtke said, was held at Camp Nordland, N. Y., in 1940.

The joint session, he declared, was arranged by Edward James Smythe and August Klapprott, both defendants. Klapprott, is a former bund leader.

The defendants are being tried for their connection with an alleged conspiracy to undermine the morale of the armed forces.

New Youth Group Formed in Chicago

CHICAGO— (A. N. P.)— The Chicago Youth League, a recently organized youth movement was formed by a group of civic-minded leaders with the idea of aiding youth in the Negro areas of Chicago. Acting Capt. Harry B. Deas of the Stanton Police station together with Chief John Pendergast of the uniformed Chicago police organized a league. which pledges itself to "help youth map its future."

The group elected Capt. Deas as its president and E. L. Graham, general chairman of the Pullman Porters' association, was named a vice-president along with Robert C. Weaver, member of Mayor Kelly's race relations committee and A. N. Fields of the Pittsburgh Courier.

Sgt. Roy Boston Finds 13 Lucky

Tuskegee Army Air Field, Alabama, July 13. If you are superstitious you should meet Sergeant Roy C. Boston of Chicago, Illinois, an airplane mechanic at this field. He is one for Ripley. Entering Hampton Institute, Virginia, on June 13th he stayed for 3 years, leaving on September 13, 1939. He took his army pre-induction examination August 13, 1942. Entered the Army October 13, 1942. His army number ends in 13. He was sent to the 313th Aviation Squadron at a camp in Louisiana, and assigned to barrack 13-19. He was file clerk in Room 13-13, where he remained number 31 on the roster until Mar. 13th. After finishing mechanics school he went on furlough but was re-called in time to report to this post on May 13th. On February 13th he was transferred to his present section. Is that enough?_____ No?_____Well, on June 13th, 1944 a bolt of lightening struck the plane he was working on! He was uninjured, but the plane was a mass of wreckage. Guess number 13 is his lucky number after all. But wait____This story was brought to our attention by a GI who came from a family of 13; who was married on August 31 (13 in reverse); separated December 26th (twice 13) and divorced September 26th (also twice 13);____ Wow! Take 'em away!____All they need are black cats for pets.

NEW MAGAZINE FOR CALIFORNIA

SAN FRANCISCO, CALIF.—(ANP)—A new magazine, Sepia Highlights, devoted to pictures and features, has made its appearance here.

It is published monthly by Albert White, former newspaper man of Houston and St. Louis, who is managing editor of the San Francisco Reporter, rapidly growing weekly of this section which was started 13 months ago after the Negro population of San Francisco jumped from 4,000 to 20,000.

Mr. White is a well known journalist, being a former field editor of the St. Louis Call, and the first full-time reporter for a white paper in Texas, the Houston Chronicle. Editorial office here is at 1740 Post Street.

W. Indian Regiment Takes Active Duty

BRIDGETOWN, BARBADOES (ANP)—Word has been received that the First Caribbean regiment is enroute to acitve duty. This regiment, trained in the United States, was composed of W. Indians from Trinidad, which had the largest percentage of the volunteers, 22 per cent; Jamaica, Barbados, British Guiana, Bermuda, Windward Islands, Leeward Islands, British Honduras and the Bahamas. Lt. Col. Hugh Wilkin is the commander.

All-Colored "GI" Show Makes Hit

SOMEWHERE IN ENGLAND, (ANP)—"Shoot The Works," the first all-Negro stage show presented by U. S. Forces in England, of all-soldiers, is currently touring in the southern part of England where it is on special duty with a base section, headquarters while the 36 members of the cast spread good cheer among army units in the base section, both white and colored.

The show was written and staged by M. Sgt. Julius Buddy Phillips, of Brooklyn, a former member of the cast of "The Hot Mikado" and "Cabin In The Sky" and is directed by M. Sgt. James E. Wall, also of Brooklyn.

Windsors Attend Dance Given by Bahamas

NASSAU, BAHAMAS—(ANP)—The Duke and Duchess of Windsor were in attendance at the Red Cross benefit dance last week at Silver Slipper gardens. The affair was the annual formal dance given by the staff of Government house and honored the 50th birthday anniversary of the governor, the Duke of Windsor. The royal party included also the lord bishop of Nassau, Rudy Williams orchestra was on hand to supply the music.

Collection Plates, Collection Baskets, Arm Bands and Gavels

Wooden Collection Plates, well finished with Plush Bottom, 10 inch Plates $6.00 each

A Wicker Collection Basket, made of best reed obtainable. Size 9 inches. Price $3.00.

A well made golden Oak finished Gavel

Price $1.00

USHERS' ARM BANDS

Stenciled in white made of blue wool felt. 4 inches wide.

Price 50c each

Oval Shaped Usher Arm Band

These Ushers' Arm Bands are very attractive; made of high-grade felt material, in colors red, blue and green, each with white letters, and elastic band to fit around the arm. Size, 6½x4¾ inches. **25 cents** each; $3.00 a dozen.

Blue Felt Ushers Arm Band, with sewed white letters of white felt. Very durable and attractive.

Price $1.00 each

Henry Allen Boyd ---- Owner
Office, 403 Charlotte Avenue.

Devoted to the interests of the Farmer, Truck Gardner, Livestock and Poultry, Breeder, the Home and the People.

Entered as Second Class Matter. April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 403 Charlotte Ave., Nashville. Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year. 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

OUR PLATFORM

1. **A Unit of the National Federation of Colored Farmers in every community of colored farmers.**
2. **Co-operative buying, producing and marketing.**
3. **Every colored farmer a farm owner.**
4. **Abolition of debt-slavery, injustice and persecution.**
5. **A written contract for every colored farm tenant and sharecropper.**
6. **Better rural churches, schools and homes.**

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

VEGETABLE SEEDS GO TO WAR TOO

When planting time came this year in war-torn Russia, in Africa, England, the West Indies, and in the liberated countries, including Ethiopia, many of the farmers and gardeners in these areas received packages of seeds labeled, "Gift of the USA." Last year the War Food Administration shipped a total of 18 million pounds of seeds to our allies, and to liberated areas.

These seeds are made available through WFA's seed allocation program. Last week WFA announced 1944-45 seed allocations. Of the 302 million pounds which will go to all claimants, United States farmers, victory gardeners will receive 277 million pounds. The remainder will go to United States military services, our allies, to liberated areas, and for commercial export. Some of the seeds which are likely to be plentiful are: Beans, cabbage, carrots, cauliflower, eggplant, kale, mustard, okra, peas, spinach, squash, and turnips.

DO YOU KNOW THE ANSWERS?

By Ruth Taylor

How often do you wake up in the middle of the night and think, "If I had only thought of that sooner, I could have answered you on that. I am sure all of us have had that experience. I know I have. We just aren't quick enough on the trigger and our second thoughts lag far behind our first.

One of the troubles with us who take democracy for granted is that we don't know the answers. We don't doubt for a minute the strength of our own institutions the endurance of the democratic way of life—but we can't always say why we feel as we do. What would you give for not one but four or five answers for any kind of an argument on Democracy?

My friends say I am always ready with the answers. Here's one of the reasons why. There's a little series of booklets which you may have seen for they have been widely distributed. These Joe Doakes booklets belong in every man's pocket, in every woman's purse, for they do express what most of us really believe, but don't always know how to say.

I have all three of the books on my desk as I write, for I like their tone. For instance, let me quote from one. "I am not an Optimist, I am not a Pessimist. I have no use for bunk, particularly foreign bunk. No one is going to make me hate the fellow who lives in the same block as I do." Now that's what I call American. Not hate at the beok and call of an outsider—but making up one's own mind according to the individual and the facts.

Far be it from me to suggest that like the Nazis and Communists, we should have a line, but it's a good thing to read the answers as someone who has given a lot of thought to it has worked them out. We can then adapt them to our needs.

I have often used a quote from one of the booklets. "When someone keeps criticizing the way things are going, I tell him I never saw a ball game won by the noisy fellow in the bleachers who's yelling at the umpire and razzing the players. Games are won by the men in the field and the coaches and captains who stand back of them." That's plain common sense.

If you want to get copies of these booklets, send in to Joe Doakes, Room 707, 2 West 43rd Street, New York City, and they will be sent to you without cost. I recommend them because I believe they will help you as they have helped me to speak up for democracy and defend your faith as an American.

KEEPING THEIR HANDS OFF SOLDIERS' MESS TABLE

V. C. Turner, --Negro State 4-H Club leader for Alabama, reports that it isn't unusual to hear farm people get up in their community meetings and say, "We are keeping our hands off the soldiers table."

By that, according to Mr. Turner, they mean that they are eating vegetables right out of their own gardens, or from their home-canned supply, meat out of the smokehouse, or off the pantry shelves where they put it last year during the meat canning season, that they are eating eggs out of their hen-houses, and chicken right out of their poultry yards. In other words, they are eating food grown at home rather than buying it off the grocer's shelves, and thereby making supplies short for our fighting men, and for war workers, and city folks.

And some Negro farmers, Department of Agriculture officials report, are not only making the exeellent contribution of keeping their hands off the soldiers' table, but in addition to growing cotton for uniforms, for tents, and ammunition, they are also passing ham and eggs, butter and milk, steak and chicken right off their farms on to our soldiers' mess table.

EXPENSIVE CANDY

Government publicity experts have been doing an impressive job of outlining the vast benefits which the people may expect to derive after the war from the Federal government's hydro-electric power. projects. However, before discounting the investor-owned electric industry as archaic junk, the other side of the story should be told.

The steam plants of the private power industry produce most of the electric power in the United States. The industry has found that steam-produced electric power is often cheaper than hydro-electric power. An electric power plant which uses coal costs only about one-third as much to build as hydro-electric plant having the same capacity. A ton of water would have to drop a mile to generate the same amount of energy as there is in a pound of coal properly burned. In most parts of the country it is usually more economical to carry coal from the mine to the place where it is needed to make electric power, than it is to transmit equal electric energy from a power dam. These are a few of the reasons why the private electric industry can face the future with confidence.

But there are others. The prirate power companies can point with pride to their contributions to the maintenance of government. Nearly twenty-five cents out of every dollar of gross income goes to the public treasury in taxes. In war these taxes help to buy planes and guns. In peaee, as in war, they help to maintain schools, police and fire protection and other public services. Government power dams are tax exempt.

And finally, the private power companies are not ashamed of the principles they represent and espouse, namely, private ownership of property under constitutional government. Their frankness is in sharp contrast with the evasiveness of government ownership promoters who studiously avoid the word socialism, while holding forth the candy of "eheap" power at the taxpayers' expense.

COLORED GIRL IN CANADIAN WAC UNIT

Private First Class Gloria Michael Holland, whose parents live in Washington has been a member of the Canadian Women's Army Corps for some time now, and she is the only member of the race in her company.

She completed her basic training which she took at Camp Kitchner, Ontario, and now is awaiting assignment to some branch of the medical corps. Private Holland, who is the only daughter of Mr. and Mrs. George Holland, Washington, D. C., decided some time back that she wanted to belong to some branch of the armed forees, but she did not want to belong to a segregated outfit. Her parents were born in Canada, but they gained their citizenship through their parents who were naturalized when Gloria's parents were very young.

Gloria was born in Buffalo, New York, and came to Washington at an early age. She was graduated from Dunbar High School two years ago at the age of seventeen. Then she took a job at the Office of Procurement and was advancing rapidly. She was in line for promotion when she decided to join the CWAC as the auxiliary is popularly known.

She went to the Canadian Legation in Washington and asked if she would be accepted, and she was told that if she passed the very rigid mental and physical tests that she would be aecepted, but they also tried to advise her not to enlist because she would be lonely since there were no other colored girls in the outfit. Not daunted in the least, Gloria took the tests and passed them both with an almost perfect score. She is not lonely rather she is one of the most popular girls in the company. Since she is the youngest in the outfit, the company takes particular interest in her.

—The Washington Tribune.

ROBERTS RETURNS TO POST

Thomas N. Roberts, special assistant to the personnel direetor of the U. S. Department of Agriculture, has returned to his post after being away ill since December. Department employees weleomed him back on July 1 with a huge bouquet of flowers.

Roberts has been a member of the personnel director's staff since 1941 during which time he has been an important factor in helping to reeruit eompetent workers, and in maintaining morale among colored employees at a high level. Before eoming into the Offiee of Personnel, Roberts directed a 10.000 acre land utilization project in Alabama.

BLIND GROW FOOD FOR WAR EFFORT

Two colored farmers of North Carolina are not even letting blindness stop them from growing food to help win the war. U. S. Department of Agriculture officials report.

Howard Barrett, blind farmer of Wilson County, has worn out a grubbing hoe during the last three years working his garden. And what a garden! Why, he is growing 18 different kinds of vegetables in it and still has time to raise 52 chickens, two pigs, pick cotton, help prime tobacco, and serve as a neighborhood leader.

Douse Hawkins, who lost his sight in 1929, is also growing a garden whieh he has entered into the Elizabeth City, North Carolina, garden contest. And County Agent John Harris says he has a good ehance of being a winner.

Although he is growing 12 different kinds of vegetables, Vietory Gardener Hawkins can tell them from the weeds by touch. In weeding his garden, he first takes hold of a vegetable plant and then works out the weeds. The county agent says he doesn't miss a single blade of grass.

The need for growing and canning more vegetables was emphasized by WFA Director of Distribution Lee Marshall in an address before commercial canners recently. He pointed out that government reguirements of canned fruits and vegetables will be 86 million cases this year, or 71 percent more than in 1943. In addition the government is asking canners to hold 10 million cases of canned vegetables in reserve for possible changes in war needs. In terms of the major vegetables, the civilian supply for next year will be about 20 percent less than for the present year.

THE END OF THE ROAD

The U. S. News, after analyzing the effect of current tax laws on business, concludes that neither individuals nor corporations can be expected to risk money, increase production and provide jobs until tax rates are lowered. The rewards, in general, are too small for the chances to be taken." It adds, however that "any plan to reduce taxes bumps up against the hard fact that the Treasury must have revenue—and vast amounts of it—to pay interest on the national debt, to care for veterans, to maintain an army and navy, and, finally, to operate the regular government departments."

For years the trend has been toward higher and higher taxes against productive enterprise. The war has hastened the trend until at last the end of the road has been reached. It is useless to ery for higher taxes against industry. The money isn't there.

From now on the bills of the Federal government will be paid by a majority of the people instead of a minority. And that goes for the debt too. Whenever a politician announces that the government is going to do this or that for the people, he really means that the government is going to tax the people to do it. The government is not Santa Claus, it is merely the tax collector, and the people are beginning to realize it.

DR. PATTERSON SAYS FARM ACCIDENTS MAY DELAY VICTORY, AND COST EXTRA LIVES

Washington, D. C.—Endorsing National Farm Safety Week which is to be observed July 23-29, Dr. F. D. Patterson, president of Tuskegee and special assistant to the Seeretary of Agriculture, urged colored farmers and farm workers this week to guard against accidents.

Pointing out that two million farm people were injured last year, 20,000 of them fatally, Dr Patterson said that accidents may seriously hamper our wartime productive effort, delay victory and cost extra lives. Said he, "The slogan "Be Careful' is a simple and effective guide to the avoidance of accidents."

"Most injuries," he said "are caused by carelessness: stepping on broken glass or nails, chopping wood or cotton without care, walking up behind a horse or a mule, going to and from the field in trucks or wagons with your legs and arms hanging over sides, wearing overalls with loose straps or open sleeves that may eatch in maehinery, and adjusting and repairing machinery while it is still moving."

Dr. Patterson also pointed out that accidents in the rural home take a heavy toll; injuries from falls, burns, fire-arms, and poisons lead the list. Said he, "Repairing the steps, and guarding against fire hazards will substantially reduce the number of injuries."

Looking at last year's losses, Dr. Patterson said that farm accidents have an important bearing on the lives of city folks. To each person in the United States, the loss of manpower caused by injuries in 1943 was equivalent to the loss of four and a half days' food supply.

SOLOMON'S JUDGMENT

By Max Meredith

"Bring me a sword!" cried the king. And they brought a sword before the throne.

"Divide the living child in two," the king commanded, "and give half to the one, and half to the other."

By this renowned test of true motherhood, in one of the most dramatic scenes in the Bible, King Solomon decided two women's dispute about a child, and wisely did judgment.

Last summer another Solomon—a New York City magistrate of that name—similarly did judgment, almost as wisely. He decided a dispute between a cobbler and another man concerning the ownership of a Pomeranian puppy.

After listening to the testimony, the judge addressed the two litigants kindly. "You two people go sit down over there for a while," he said, "while I hear some other cases. Until I get back to you, just let the dog wander around the courtroom."

First the puppy ran from the girl sitting with her father, and crossed the room to the other man, to sit by his legs and wag his tail. Then the girl called to him and the puppy ran across to her, but soon the tiny dog left her and returned to the cobbler's side, where he leisurely laid himself down and calmly watched the court proceedings.

Calling the case again, the judge demanded some proof of the cobbler that the dog was really his, as alleged. The Pomeranian knew some tricks, ventured the claimant, hopefully. Promptly the man on the bench asked to see them performed.

The cobbler spoke a command and the puppy stood on its hind legs. It stuck out its paw to shake hands Then it stood on its head. Convinced by the results of these tests of true ownership the modern wise Solomon awarded the dog to the cobbler.

GOVERNMENT RELEASES RICE, TOMATO PASTE

Quantities of food held as government stocks for war need are gradually being released by the War Food Adminstration for civilian and industrial uses. When inventory checks reveal stocks on hand which are not needed to meet requirements of our military forces and allies, such surpluses are being released to civilians.

Recently 55,000,000 pounds of rice, —550,000 "pockets" of 100-pound bags were released to civilians, with the first allotments going particularly to Southern areas where rice is a major food item.

When an inventory check showed that this quantity of rice would not be needed for government requirements to meet allied and other war needs, it was released for civilian use. However, none can be exported.

Also released from government owned stocks are approximately 30,000 cases of tomato puree and about 4500 cases of tomato paste. These items are being sold to fish packers who are engaged in filling government contracts.

Approximately 300,000 cases of evaporated milk, packed in 14 1-2 ounce cans are being sold for industrial uses only.

Other foods held in government stocks, are being released to civilians as war needs change.

An orderly distribution of surplus food stocks through recognized channels is being followed by WFA to prevent "dumping" and disrupting of established market patterns.

IT'S TIME TO CAN

The return of ration points to three canned vegetables—tomatoes, peas, and asparagus not only augurs the advantage of home canning, but it also serves to remind housewives, the U. S. Department of Agriculture points out, that now is the time to can.

Well, the farm people of Caddo parish, Louisiana, are ready to do their canning. They have just dedicated a new, modern canning center at Lucas. Equipped with boiler, retorts, steam kettles, blanching sinks, and cooling vats, the new center will serve more than 1,000 farm families in the area, according to Negro County Agent B. D. Harrison.

"SOAK THE RICH" MEANS YOU

The average citizen had little concern over taxes five years ago. "Soak the rich" was the stock method of raising increased public revenue. Even up until two or three years ago, it seemed as if the so-called rich could always be assessed through business or death taxes to raise public revenue. But we have had a shock—"soaking the rich" will no longer pay the tax bills. From now on, the tax collector must "soak" everybody.

Labor, for example, has found in deductions from its pay checks, what taxation means. In other words, industry and labor are at last in the same boat.

Gross earnings and gross wages mean nothing. Jobs must be created out of net earnings. Homes must be built out of net wages—the money remaining after tax deductions.

The only hope of workmen and industry to increase their net incomes after the war, is to see that government gets out of every non-essential, money-spending activity and tax-exempt government business project that destroys taxpaying private enterprise.

From postwar program to put government into business competition with its private citizens, takes money out of the pockets of industry and the worker. There is no Santa Claus except the man and the business that dig up for the tax collector.

RESOURCES OF $681,807 REPORTED BY CITIZENS BANK AND TRUST CO.

Officials Acknowledge Latest Statement Shows Best Record Institution Has Ever Made; Expect to Go to "Million-Dollar Mark" Soon

An unprecedented report in growth of the Citizens Savings Bank and Trust Company of this city was reported to the Executive Committee by the Cashier, Mr. A. G. Price, and the President, Henry A. Boyd, at a meeting of the committee held in the Directors' Room of the Bank at noon Friday, Aug. 11. The report shows that the bank had loans and discounts of $181,-284.20; it holds and owns in United States Bonds, $480,710; it has invested in state bonds, $34,950.00; its furniture and fixtures, with all depreciations marked off, is $6,500.-00, and the cash on hand was $158,-363.59, making the total resources $861,807.79. The liabilities reflected in the statement were, capital paid in, non-assessable, all sold to persons living in this city, state, and twenty-two other states, $60,000.00; surplus, $3,554.32; profits, $5,062.29; preferred stock retirement fund, $3,078.52; deposits, $790,112.00, making its liabilities reach the grand total of $861,807.79.

In commenting upon this report, the President said, just before leaving the city for a trip East, that it is the largest report made in the history of the bank and that if this growth continues the bank will be able to step up into the one-million-dollar class by the time it reaches its forty-first anniversary in January of 1945. Copies of the report were sent to the members of the Board of Directors and to more than five thousand depositors. President Boyd also takes pride in making the statement that it is the oldest Negro bank in the United States and that it has had continuous banking service, and that it was a member of the Federal Deposit Insurance Corporation, so that every deposit in this bank up to $5,000.00 is insured by the government, making it, said he, as safe as any bank in the United States. In addition to this, it is a depository for the state of Tennessee and Davidson county. It has enjoyed the confidence of the people of Nashville for all of these years. It has stood, said the President, as it were, as the Rock of Gibraltar. Plans are underway even now, declared the President, not only to increase the efficient service rendered to the community, but to develop other departments as time and conditions will warrant. Some of the largest institutions in the race here in Nashville use the Citizens Savings Bank as their depository, while many people use the safe deposit boxes, which are fire and burglar proof, for their private use. The Christmas Savings Club in the bank, it is understood, has already passed the twenty-thousand mark for this coming December; while the regular commercial department is enjoying a patronage unprecedented in the history of the institution.

The Board of Directors of the institution has been increased. Several new names were added recently The following are the directors as of this date: Henry A. Boyd, C. D. Gordon, Miss S. B. Wilson, D. W. Crutcher, W. J. Hale, S. H. Simpson, C. W. Flint, I. L. Moore, Mrs. Preston Taylor, W. C. Sheffield, W. S. Walker, A. G. Price, E. L. Price, J. T. Patton, Wm. D. Laws, Flem Otey and J. F. Lane.

The President declared that at the next stockholders' meeting, which will be held the second Monday in January, he would make some recommendations to the stockholders that he thought would put the Citizens Savings Bank in the national class. When asked if he expected to secure a charter for a national bank, he stated that this would be a matter that would have to be handled by the stockholders and directors.

JAMAICA'S WAR CONTRIBUTION

By Josephine Kamm

Jamaica, it was learned recently, is to receive the largest single grant yet to be made under the Colonial Development .and welfare Act of 1940. This is a sum of $2,100,000 which, over a period of five years, is to be devoted to schemes for agricultural development in the island.

The schemes to be undertaken include the checking of soil erosion, improving land fertility, increasing production, and the adoption of mixed farming methods, and they will play an important part in the development of a sound and healthy economic life. Meanwhile, the production of food stuffs, much of which was formerly imported, has been greatly increased since the war. This means that Jamaica is making an important wartime contribution by saving valuable shipping space. It also means that she is helping to solve one of her most serious economic problems, for when the war is over the continued growth of fruit, grain, and vegetables for home consumption will add to the value of the ordinary diet of the people.

A government subsidy of Jamaica's banana and sugar crops is already helping to finance these food production schemes. They are not confined entirely to food grown for home consumption. A unique offering to Allied food supplies—and a useful export product to Jamaica—is Jamaican food—yeast manufactured commercially on the island from locally grown sugar. Live cultures have been sent to the United States Department of Agriculture to be used for further experiments in the Western Hemisphere. The yeast, the high food quality of which was recently discovered by scientists working in Britain, will be invaluable in helping to feed the peoples of devastated Europe after the war.

It is towards an all-round improvement in the standard of living of the people that these and other schemes must lead. The means employed vary from the provision of 2,800 school lunches (free or at a very low price) to the children of Kingston, the capital, to the running of model rural health services. A health unit, which has been started in one district and is to be duplicated in the other twelve, is now responsible for maternity and child welfare, school medical work, the control and prevention of the diseases endemic in the West Indies, and—most important of all—to prove to the people by practical demonstration that dietetics, hygiene in food production and cookery, etc., form an essential part of the building up of their health. A special training school for health workers has been established with the help of a government grant, and it is anticipated that this scchool will become the official health center for the whole of the West Indies.

In the successful application of all health and social schemes the interest and cooperation of the people themselves must play a vital part. Jamaica Welfare Limited, an organization which came into existence in 1937, has done much to make this possible. Its activities include the provision of educational films for children, a campaign for building better villages, the creation of community centers, the development of cooperative societies and citizens' associations. The help which the growing boy and girl can give in the home, on the farm, and above all, to the community is recognized in the formation of special clubs.

The growth of community consciousness is apparent in another social plan. In 1938, the Jamaica Lands Department was reconstituted. Within four years, at a cost of $3,200,000, it had placed 16,000 members of the native population on the land as small-holders, to cultivate between them some 80,000 acres. Among the settlers are ex-soldiers, unemployed, people from over-crowded urban districts and others whose homes had been destroyed by floods. Arrangements for cooperative marketing are being made, and during the early period when the land is not fully productive, supplementary work is provided in the construction of rods and water supplies. Centers have been established for the promotion of health, welfare and education which have quickly become the pivot of the social and economic life of each settlement, and an understanding among the settlers of the value of united action on common problems, has imbued them with a sense of the importance of the community.

In these social and economic developments Jamaica is the pioneer among the West Indian islands. It is, therefore, fitting that her people should be pioneers in political development also.

In February 1943 the Secretary of State for the Colonies submitted to Jamaica proposals for a reform of the Constitution. Under the Constitution, which has been accepted unanimously by Jamaica's Legislative Council, the island will have a House of Assembly of not fewer than twenty-four members elected on the basis of universal adult suffrage; a Legislative Committee, five of whose ten members will be selected by the House of Assembly.

In addition, the establishment of a number of advisory committees drawn from members of the Assembly to consider social and economic welfare, is to be considered. In practice the governor will normally be guided by the advice of an Executive Council which reflects the will of the elected chamber. That in essence is the British system of government by ministers responsible to the legislature and it is thus a very long step towards internal self-government.

The people of Jamaica are to assume a very real share in their own administration. The new constitution is a milestone in their progress towards complete self-government, the achievement of which is their own aim and the desire of the people of Britain.

The new constitution will probably be introduced this year. In the meantime, the people of Jamaica are playing a full and vigorous part in the Allied war effort. Jamaicans are serving with the Allied armies in Britain and with the North Caribbean Force, with the Royal Air Force and the British Merchant Navy. Jamaican women have joined the Auxiliary Territorial Service.

Hundreds of Jamaican technicians have come to Britain to help make munitions in Merseyside factories. At home, they have their own Infantry Volunteers, Home Guard and Air Training Corps Units. The Jamaicans, who have given nobly to the war chest, were the first of the colonial peoples to launch a fund for the purchase of aircraft. Today a R. A. F. bomber squadron bears the island's name.

The leasing to the United States of naval and air bases on the island forms a notable contribution not simply to the defense of Jamaica, but to the smooth working of United Nation's strategy in the Caribbean area which is vital for the defense of the Panama Canal.

This action was followed by the setting-up of the Anglo-American Caribbean Commission which advises the British and American Governments on social and economic problems affecting the whole Caribbean area . The Commission's recently published report forecasts, amongst other things, the opening in March of a series of advisory conferences to discuss social and economic questions. Rspresentatives of the West Indian communities were present.

WORLD TRADE AND EMPLOYMENT

That leaders of business in the United States are fully awake to the part American industry must play in postwar employment, is made evident by the formation of the Committee on International Economic Policy, 18 Pine Street, New York 5, N. Y.

Fifty-four outstanding men in industrial. educational and religious groups at present compose the Committee which will seek "to further the serious and competent consideration of the issues which confront all the free peoples of the world and which imply their useful cooperation in reconstructing their economy after the victory of the United Nations."

To that end the Committee will welcome the cooperation of organizations and individuals, and will be happy to receive the comments and suggestions which it hopes that the publication of a series of papers from its Advisory Committee on Economics may call forth.

The Committee seeks an exchange of views with other committees engaged in postwar studies, and states: "Employment is more than a national problem.. It is an international question, the solution of which can be found only in the expansion of world trade and economic cooperation—The traffic must be two-way. Trade is a two-way street—A fair adjustment of trade barriers is essential to promote balanced trade development.

This is the kind of program in which we must interest ourselves if we hope to do our part in building a sound postwar foundation for industrial progress and employment.

AMERICA'S UNDER-GROUND ARMY

America has an underground army. Its weapons are electricity, compressed air, picks and shovels. Its G. I. is the coal miner. He has not fully realized the essential character of his work or he would not have sanctioned work stoppages.

Without coal we would be reduced to fighting this war with bows and arrows. The four most important war chemicals (phenol, toluene, ammonia, naphthalene) are possible only because of the work of the coal miner. All high explosives depend upon coal. Every ton of coal a miner mines produces enough steel to make a 2,000-pound bomb. Fifty-five per cent of all mechanical energy used in the United States is produced by coal, because 55 per cent of all electric power in the United States is produced by coal. The energy contained in the coal mined daily in the United States is equal to the energy of 500 Niagara Falls. Ninety-five per cent of railroad locomotives are powered by coal. The equivalent of 1 1-2 billion tons was hauled between New York and San Francisco by coal burning locomotives in 1942. And this is not all. Eighty-five per cent of all war plastics that go into such items as bomber noses, gas masks, shell noses, radio apparatus, telephones, pontoons, propellers, skis, life rafts, and lacquers require processed bituminous coal as a base. Finally, two-thirds of America's homes are heated by coal or coke.

America could not win the war without its underground army of coal miners.

CORRECTION AT LAST—MAYBE!

At long last the Office of Price Administration has admitted that the Highest Price Line Limitation order is responsible for the disappearance of low-priced clothing from retail shelves. The OPA Administrator says frankly that much of the shortage could have been eliminated, "if we in the OPA and other agencies had been on our toes"

Congressional, public and distributor demands are finally forcing reconsideration of obviously unworkable price rules. Meanwhile, consumers have been conscious of dwindling supplies of low-priced wearing apparel. Moreover, according to the OPA Consumer Advisory Committee, "the quality of many items is so low as to be waste ful of manpower and materials."

The public can forgive mistakes in as gigantic an undertaking as rationing and price control, but it will not forever excuse stubborn refusal to make corrections.

The magazine Newsweek observes that "even if more low-priced clothes are made available, they are bound to cost more than the same item did before the war, despite the OPA's struggle to hold prices down. Labor and material costs have gone up and these cannot be absorbed by the manufacturers of ... merchants."

It now remains to be seen whether OPA will actually get action, or whether relief will continue to be stymied in bureaucratic red tape.

LABOR LEADER IS WAGING FIGHT ON BIASED AFL UNION

CHICAGO—(ANP)—An effort to save the jobs of 59 American-Japanese employes of the Illinois Central railroad was made last week by Willard Townsend, head of the United Transport Service (CIO), when he wired a protest to J. L. Bivens, president of the Illinois Central Railroad, against discharging the American Japanese workers as demanded by a strike ultimatum submitted to the railroad company by the Brotherhood of Maintenance of Way Employes (AFL).

Known as one of the labor unions that still maintains a jimcrow policy against Negro workers, the BMWE is composed of railroad track workers. It has threatened to strike and tie up the railroads, declared an ultimatum, served on the IC by Frank L. Neakes, general chairman of the IC division, unless the 59 American-Japanese are discharged.

Charging that BMWE was extending its "white supremacy" policy" Townsend urged company officials to stick to their guns and support the newly hired workers whom G. L. Willingham, general manager of the IC said have performed "exceptionally well" so far and will be returned. Townsend said the policy of the BMWE did not represent the sentiment of the rank and file of railroad laborers. These laborers, most of whom are recent immigrants—Italians, Greeks, Poles, Mexicans—have no prejudice against Negroes or Japanese except that handed down by their leaders.

RETAILERS CARRY ON

The Hon. Alexander Wiley of Wisconsin, in discussing problems that the retail stores of the nation face in supplying the consumer under a mulitude of restrictions, said:

"I believe there is no other group of Americans more concerned with the future of America than are the retail merchants. The retailers believe in the equality of opportunity, in justice administered impartially. They want to live and let live in an atmosphere of freedom... The retailers of America will spare no effort to win the war and to restore and reassert the principles and the philosophy of life and government that have made America great."

Congressman Wiley pointed out that difficult as has been the experience of retailers under the OPA, they have upheld continuation of the Price Control Act as a war necessity. "However, it could have been better administered.....as soon as the war ceases, and probably before, government restrictions and interference must be reduced to a minimum."

South African Hits Segregation

CAPE TOWN, SOUTH AFRICA—(ANP)—Opposition to the establishment of the Colored Advisory council flared into open debate when Dr. D. F. Malan, leader of the opposition to the council, attacked the government's stand against compulsory segregation of the colored peoples. The debate occurred during a session in the house of assembly when the question of the social welfare vote was being discussed.

Dr. Malan advocated treatment of South Africa's colored population similar to the treatment of Negroes in the southern states of America, with all the social, political and economic inequalities, jimcrow and discrimination included. He thought Australia's black code, was befitting the aboringines and should be applied to the colored peoples of South Africa.

In stating the Australian code, he said: "Australia's non-Europeans could be employed only under permit and sexual relations between white and non-white were punishable."

H. Lawrence, minister of welfare and demobilization, defended the government's stand on forming the Colored Advisory council and opposed as against the best interest of both races forcible segregation.

Wrestler Claims He Was Fouled

LOS ANGELES—(ANP)— Carrying out its policy of fairness to all nationalities, the state athletic commission ordered an early re-match between Seelie Samara, only Negro wrestler in the west, and the Masked Cougar, white.

The decision by the athletic body came as the result of Seelie Samara's protest filed on the match last week at the Olympic auditorium with the Masked Cougar. A re-match was ordered this week. Samara charged that Count Rossi, manager of the Cougar, held him out of the ring, in fact, pulled him down the chute and kept him out of the ring for over 20 seconds.

Many ringsiders claimed to have seen this action and reported it to the commission which ordered the re-match.

BOOK ON NORTH CAROLINA NEGROES TO BE WRITTEN

RALEIGH, N. C., July 27—(ANP) "The Negro in North Carolina," a publication which will concern itself with the progress in schools, churches, recreation, insurance, housing and military achievement, is the proposed work of C. A. Irvin, public relations director of the Agricultural and Technical College of North Carolina at Greensboro. The project has been approved by Gov. J. Melville Broughton who declares that the Negroes in the state have made a "wonderful response" to every challenge in this critical period.

The book which will serve as a source of authentic information with regard to North Carolina Negroes, will give a unique account of the state's five leading Negro colleges, the nation's A-1 insurance company (the North Carolina Mutual Life Insurance Co., Durham), and will review the recent action of the North Carolina Board of Education which is the first to equalize Negro teachers' salaries.

GREAT PREACHERS

By Gordon B. Hancock for ANP

Dr. Truett of Dallas is dead. He was without doubt the outstanding Baptist preacher of the white race. Yet in the last analysis he was merely a white man who preached like a Negro. When white preachers learn to preach like Negroes they are invariably styled "great preachers". Negroes have something as preachers that makes them tremendously effective. The great danger is that they will try to get away from the very thing that makes them effective and that is fervor and earnestness.

No American preacher of the last two generations could equal the late Dr. C. T. Walker of Augusta, Ga. The police of his day heard more preaching than ever they have heard since. Policemen always had to follow Dr. Walker and surround him to prevent stampedes as mobs fought to hear him preach. Before the day of loudspeakers he could make himself heard in any auditorium. Always while he was preaching mobs were fighting at the doors to get in. He returned from the Holy Land via London and stopped one morning to hear the famous Spurgeon in the world-famed Tabernacle. The story goes that Spurgeon saw him in the audience and invited him to offer the closing prayer. Dr. Walker forthwith arose and clasped his hands as his custom was and slowly began. He prayed 20 minutes and at the conclusion 5,000 Britons were on their feet looking with astonished gaze on Dr. Walker who was literally transfigured in prayer.

Spurgeon announced that Dr. Walker would preach at the evening services and three hours before time policemen were beating the mobs from the door of the great tabernacle. Wherever Dr. Walker preached policemen had to battle the mobs in the interest of the public safety. The great Dr. Truett in many ways was a "white C. T. Walker." Next to Dr. Walker was the late W. H. Moses. While Dr. Moses' pulling power was not quite as great his preaching and holding power was phenomenal. Moses was a cross between C. T. Walker and Billy Sunday. I have heard him preach three hours and at the conclusion people were crying for more. His holding power was unbelievable. The Negro race needs more great preachers in this crisis.

Mansion Converted Into Kitchenettes

CHICAGO, July 27—(ANP)—Negroes were sprawled out on the porch, more than 12 of them enjoying the hot summer day when Miss Lorraine W. Wooster, white educator, lawyer and school-book author returned to her 18-room mansion Saturday. The nationally known writer stood speechless when she observed that more than 40 families were occupying, in kitchenette style, her once beautiful homestead.

In Miss Wooster's absence from the city her white stone mansion became numbered among many other south side housing relics made such by the ever-increasing lack of housing space for Chicago Negroes.

"What are you doing here?" Miss Wooster asked, as she stood eyeing the group with amazement.

"Lady we live here," came a reply from one of the tenants who was equally as indignant and inclined to be saucy over the intruder's query.

Before Judge McCarthy, the vice-president of the National Women's Bar association and author of Wooster arithmetic books and Wooster Readers refuted the explanation by a realtor that taxes on the place were in arrears and denied having been away for the past eight years. She admitted, however, that she had not slept in the place for two years, but said that from time to time she dropped in to observe how the old house was holding up and once used it as an office.

William Jarvis, the real estate man, said that he bought a tax deed for the place for $1,000.

Discovery of the fact that the bank, supposedly handling Miss Wooster's affairs during her recent trip over 41 states for book data, had forgot to pay taxes on the old mansion, prompted Judge McCarthy to rule that the 40 families vacate within 15 days.

NEGRO DEMOCRATS OF ARKANSAS NOT TAKEN INTO PARTY

LITTLE ROCK, Ark., July 27—(ANP)—Dr. J. M. Robinson, president of the Arkansas Negro Democratic association waged a stubborn, but unsuccessful fight Saturday to avert the exclusion of Negroes from the July 25 and August 8 state Democratic primary elections by the Arkansas Democratic Executive committee.

Declaring that "qualified Negroes who wish to be affiliated and comply with the rules of the Democratic party should not be denied the privilege," Robinson made a valiant plea to the patriotism and sense of justice of state committee members.

The committee amended two party rules as a temporary expedient and left permanent action to insure a white Democratic party in Arkansas to the legislature which will meet next January.

The new rules stress "good faith" of prospective voters in adhering to the party and multiply the grounds upon which Negroes can be denied a vote for reasons other than color. The new rules are supposed to protect the election judges and allow them to challenge Negroes on the ground that "know nothing about the principles and policies of the Democratic party" and that they only want a voice in the affairs of the dominant political party" without violating the letter of the recent United States Supreme Court decision in the Texas primary case.

Ft. Huachuca Gets First Negro Army Nurses Training Center

Washington, July 27—(ANP)—The U. S. Army last week opened the first basic training center for Negro Army Nurse at Ft. Huachuca, the war department announced. Also the establishment of a medical training center for Negro WACs is located at Huachuca, and is under the command of Col. Midian O. Bousefield of Chicago. The latter course will lead to commissions.

Study NAACP Fight, Made for Japanese On West Coast

LOS ANGELES, July 27—(ANP) Launchinng of a fight for evacuated Japanese Americans by the NAACP local branch has caused much comment pro and con by local colored citizens. Many of them, outstanding civic figures, declare that the Negro race itself has too many vital problems that must be solved before the war ends to by-pass and side-track them while detouring in the interest of a group that has never offered support to suppressed and struggling traditionally loyal Negroes during peace time

Action by the local branch has already gone into legal stages. Last week the Los Angeles NAACP branch through its chairman, Thomas L. Griffith, Jr., local attorney, joined counsel of the American Civil Liberties union in an injunciton suit, filed in superior court here, challenging the constitutionality of military orders excluding all Japanese-Americans from the west coast evacuated areas.

The suit was filed last week by three Nisoi, one of them the widow of a California soldier killed in action in Italy. Maj. Gen. Charles H. Benesteel, who recently assumed command of the western defense area, is one of the defendants.

The suit was filed under sponsorship of the ACLU and seeks to enjoin Gen. Benesteel and other military officials from interferring with the return of the three plaintiffs to their homes in California. If won, the action will serve as a precedent for the return of other Japanese to the evacuated area.

5 Consignees of the Bakers and Cooks' School No. 2 Received Promotion

Fort Benning, Ga.—In recognition of their service and diligence to duty, five assignees of the Bakers and Cooks School No. 2, Fort Benning, Ga., last week received promotions in rank, according to announcement made by Major Abraham A. Pfefer, assistant commandant of the school. They were Sgt. Robert M. Gaines, of Nashville, Tenn., to Staff Sergeant; Corporal Howard E. Baker, of Jacksonville, Fla., to Technician Fourth Grade; Private George H. Clark, of Tuskegee Institute, Ala., Private Jerry Jackson, West Palm Beach, Fla.; and Private Ulysses Wilhoite, of Nashville, all three to Private First Class.

Sergeant Roscoe L. Dunlap, of Thomasville, Ga., acting First Sergeant, said that all the men promoted had entered the service with some practical experience as cooks. However, they later took the Army course at B. and C. Schools. There is an assigned personnel of twenty men, ranging in rank from private up to Technical Sergeant.

Staff Sgt. Gaines, prior to entering the Army, served as manager of A. and I. State Collgee cafeteria, Nashville, and later as cook for the L. and N. Railroad. He is a graduate of A. and I. State College.

T-4 Baker, in civilian life, was a soda jerker and short order man in Jacksonville. Corporal Clark, inducted this year, was employed as cook at Lawson General Hospital, Atlanta, Ga. He was one of the first graduates from the Commercial Dietetics course at Tuskegee Institute.

Pfc. Jackson, graduate of West Palm Beach High School, specialized in preparation of sea foods as a civilian. Pfc. Wilhoite, formerly a USO employee at Nashville, did social service work among soldiers in the Tennessee capital. Technical Sergeant Dennis Newsome has immediate supervision of the enlisted personnel of the school.

L. & N. Trains Move To New Home

Louisville, Ky.—A major job of "moving" was successfully completed by the L. & N. Railroad on June 5, reports the July 1944 issue of the L. & N. Magazine, which states that on that date trains commenced operation over a 10.13-mile stretch of re-located trackage between Big Sandy and Porters, Tenn. The relocation of this trackage and another stretch between McKinnon and Faxon, Tenn., 7.15 miles, previously placed in service, was made necessary by the future impounding of the TVA's Kentucky Reservoir, whose waters will cover much of the old trackage between the points mentioned. Also involved in the removal project, the article states, was the raising of the L. & N.s bridge across the Tennessee River at Danville, Tenn., by 18.57 feet. This bridge was placed back in service on the morning of February 24, 1944, the work being rushed to completion following the washing away of the temporary trestle on February 19.

The article states that the relocation was commenced in the latter part of 1942 and that the work of removing the old track will be completed some time during the latter part of July. The re-location has shortened the distance between limits of the work—McKinnon and Porters—by 1.05 miles.

POST-WAR FARMING

"Agriculture offers favorable opportunities for young men who are qualified by experience and training to farm and who know that they like farm life," says a report just released by the U. S. Department of Agriculture's Interbureau Committee on Post-War Programs.

However, the report adds that it would be unwise to crowd more families into agriculture than it can be made to support at an adequate level of living, because few farmers can overcome the handicaps of unresponsive soil and too few acres.

As for the number of people who may look to the farm for a living after the war, the committee indicates that more than a million and a half veterans with farm background and experience will be demobilized after V Day. Many of these will return to the farms, in addition, thousands of non-farm veterans and a good part of the 3,000,000 war workers who left the farm will also be returning. Then there are the youths who are growing up on farms, looking forward to having a place in agriculture; and the small farmers who are now operating uneconomic sized farms will need additional land.

Well, as things now stand, most of the good agriculture land is already in farms, however, some new land can be brought into culitvation as needed through irrigation, drainage, and clearing. Probably as many as 350,000 adequate family sized farms will become available for all types of farmers through intensification, improvement, and further development in productive land areas during the first five years following the war.

If economic conditions warrant additional farm units, 30 to 40 million acres, or about 300,000 family farms could be developed through irrigation, drainage, and clearing. The committee suggests that portions of land suitable for farming which is now in military use would be made available as soon as the Army and Navy have no further need for it. This area would amount to between three and four million acres, enough to provide farms for from 8,000 to 10,000 families.

The post-war placement program, the committee is agreed, should be directed toward farm ownership. Extension of credit should be conditioned by the fact that a farm is a place to live as well as make a living. However, purchase of farms at inflated values should be avoided.

Cab Controversy In Fort Worth, Texas, Adjusted

FORT WORTH, TEX.—(ANP)—Driven away from the Texas and Pacific Railway station by police officers in charge who declared that the Yellow Cab Co., had a monopoly on all cab space and in-coming passengers at the station, the Negro cab companies, represented by Claude Tell, recently appealed to the NAACP for action.

The organization, in a letter to J. L. Lancaster, president of the railway company, advised concerning "the embarrassing predicament the local Negro population will be placed in if the proposed action is taken to discontinue the services of the Negro cab drivers."

Upon the receipt of the letter to Lancaster, a railway representative was sent to confer with NAACP officials, with the result that the cab services remained unchanged.

Justice Dep't Mum on Iberia

WASHINGTON, D. C.—(ANP)—The justice department was not prepared to discuss last week the violation of civil liberties in New Iberia, La., where three NAACP officials were run out of town in June. The next regular grand jury for the U. S. district which includes New Iberia begins its next term in November.

PVT. BEAU JACK PROMOTED TO SECOND GRADE AT CAMP

FORT BENNING, GA.—(ANP)—"You can just about lick anything you train hard enough for. I learned this as a fighter."

It was in these words that Pvt. Sidney Walker, known to ring fans as Beau Jack, sized up his six weeks of army life in the special training unit of Fort Benning's Reception center. He had specific reference to his studies in reading, writing, and arithmetic, and other subjects his Uncle Sam is teaching him in the largest "little red school" for elementary education the world has ever witnessed—the special training unit at Fort Benning.

You see, Beau Jack could neither read nor write when he entered the U. S. Armed forces during the first of June, but within 12 weeks, or possibly less, the ex-champ of the lightweight division expects to leave the special training unit with a fourth grade education. He's already been promoted to the second section, the equivalent to the second grade in a civilian school. He's been promoted fast, because "I prepare and train for my lessons like I would a ring fight," as Beau Jack himself would answer.

Attached unassigned to the 2nd company, 1st battalion, of the STU Beau Jack has gained the respect of his commanding officer, and fellow-soldiers. Maj. A. B. Cottrell, commanding officer of the 2nd battalion said that he has let nothing interfere with Beau's studies and military training since he was sent over here.

"You know this schooling he's getting will do him lots of good after the war," the major added. "And he seems to be very grateful for it."

Entering the special training unit June 6, Beau Jack was recommended by his instructor for a test three weeks later. He successfully passed the Section 1 test with a score of 32 points out of a possible 35. He's looking forward to promotion to the third section.

T-S. Augustus Dickinson, one of his instructors, said "Beau Jack is sincere and takes all of his instructions very seriously. There is no wonder he was champ."

Lts. Burleigh E. Barker, and Herbert Gruber, company officers, added that the little battler has a big heart, and shows the right attitude toward the other men. "He's cooperative and loyal."

Beau Jack, since entering the Special Training Unit, has organized a boxing team composed of trainees in the STU. Majority of these boys have had little, if any experience as fighters, but are showing enthusiasm for boxing under guidance of the sensational Beau.

SIDNEY WILLIAMS QUITS RED CROSS FOR URBAN LEAGUE

WASHINGTON, D. C.—(ANP)—Returned from North Africa and Italy after 20 months as a club director for the America Red Cross, Sidney Williams, former executive secretary of the Cleveland Urban League, will resume his old position about September 1, he revealed last week. Williams arrived in New York from Naples on July 21, and came directly to Washington.

Jesse O. Thomas, racial relations officer with the ARC, announced Thursday that Williams had resigned. He said that the National Urban League had requested the release to meet a "difficult situation" that had developed and which threatened the very existence of the Cleveland Urban League.

The Urban leaguer was one of several persons from that organization who had accepted positions with the Red Cross. For a period he operated the club at Casablanca and later moved on to Naples as the lines advanced.

Williams is of the opinion that wartime conditions and the experience up near the front lines have been a great boon to the improvement of racial understanding. This is a viewpoint that has been repeatedly expressed by returning Red Cross workers. He said that there is hardly any discrimination in overseas theatres. He pointed out that about 60 per cent of those who frequented his club were whites.

He believes too that much of this new understanding will be retained by the men who return to the states, and will be a lever for good.

Williams also observed that many Negroes, perhaps for the first time, had lost their uneasiness in the presence of whites. Many have learned also that "every white man is not a natural enemy of the Negro."

He looks forth with zeal to continuing the work he had left.

Golfer Who Beat Joe Louis Wins

LOS ANGELES—(ANP)— Shooting with the same finesse that scored a win over the heavyweight kingpin Joe Louis, Judson Grant of the famous Grant brothers link aces won the Low Gross All-Club championship trophy of the Pacific Town club's golf tournament last week.

FIRE PREVENTION LOWERS INSURANCE RATES

The city of Hartford, Connecticut, in winning the 1943 fire waste contest of the Chamber of Commerce of the United States, sets an example for all cities producing implements of war. The prize is a cup offered by the National Board of Fire Underwriters.

In wartime the honor of winning this contest even greater than in peacetime dut to the importance of maintaining production for the Armed Forces, which would be seriously interrupted by any major fire in one of our huge war plants.

In presenting the award, Peter J. Berry, Secretary of the National Board, says that organization has worked for many years with groups and individuals throughout the country in their efforts to reduce fire losses, "so that lives will be saved, property damage reduced and insurance costs lowered.

"That fire prevention work definitely has contributed to reducing fire insurance costs is shown by the record. Thirty years ago the average cost, countrywide, of $100 worth of fire insurance protection, was $1.15. Today, the same amount of protection, on the average, costs 61 cents."

From these figures, it can be readily seen that while the honor of winning an award is sweet, the greatest satisfaction to any community that reduces its fire losses comes from the knowledge that in so doing it is contributing not only to the saving of life and property, but to the steady downward trend in fire insurance rates. This is of direct financial benefit to virtually every family in the land.

The greater the interest in fire prevention, the greater the return to the public.

ROCKING THE BOAT IN WARTIME

Never before in the history of the United States Supreme Court has it been so freely and scathingly criticized by lawyers, judges, editors and individuals as since its recent four or three decision holding that insurance is "interstate commerce," hereby upsetting precedents of 75 years' standing which held that the regulation of insurance was the function of the various states, and not the Federal government. From now on, there is only one way any business in the United States can be saved from being declared "interstate commerce" by the "ingenious vocabularies" (as David Lawrence calls them) of a few Supreme Court Justices, and that is by Congress granting specific exemptions.

A family in Wisconsin habitually paid 50 cents to an Indian for a pail of blueberries. But one day last summer he upped the price to $1.00. "Why they asked. "Hell of a big war some place", was his laconic reply.—Wichita (Kas.) Democrat.

MISSION BUTTONS

Beautiful in Color, Convenient in Size, Artistic in Design

Price Most Reasonable

ORDER NOW

Young Women's Auxiliary Buttons. Blue background, white letters. Price 10c each, $1.00 per doz.

Woman's Home and Foreign Mission Buttons. White, with black letters. Price 10c, $1.00 per doz.

MISSES IVY E. LEWIS AND INEZ V. GRAY

(Continued from Page 1)

United States, the specialists are spending part of their time in the Department of Agriculture conferring with 4-H officials, and part in the field with Extension Service county agents, visiting farm families where they see club members in action . Already they have visited rural areas in Virginia, and New York State.

Miss Lewis, who is assistant secretary of the Central Managing Committee for Jamaican 4-H Clubs, is making a special study of the administrative aspects of the work, while Miss Gray, a 4-H organizer, is interested especially in club activities. Impressed with our victory captain system, they plan to adopt this leadership idea as part of the Jamaican 4-H program.

Four years ago a Jamaican agriculturist made a complete study of our 4-H work, then returned to for Jamaican farm youngsters, who readily pledged their "Heads" to clearer thinking, their "Hearts" to greater loyalty, their "Hands" to larger service and their "Health" to better living. To date there are 192 clubs on the island with a total membership in excess of 4,000.

The Jamaican 4-H program is similar to ours in almost every respect. They have short courses, and camps; they observe Mobilization Week, and Achievement Week; and they take part in demonstration projects, and fat stock—shows.

Miss Lewis and Miss Gray expect to return to Jamaica the latter part of this summer.

UPHOLD AMERICAN TRADITIONS AT HOME

The Hon. John R. McCarl, for fifteen years Comptroller General of the United States, says: "Send strong men to Congress. A weak Congress imperils the nation. A strong Congress, sustained by an informed, interested and alert citizenry, protects freedom and is vital to national safety."

While dreams are not always fully realized, where one seeks the impossible, such dreams do mean that you think a lot about your hair. If you crave hair that behaves, a normally, healthy scalp, why worry? Why fret and have nightmares? If your hair is dull and drab and needs special care, do something. Dreaming is wishing, plus care. Enjoy giving yourself this treatment. Costs you less than 8c a week. Your pleasure is worth it. Enjoy seeing improvement right before your own eyes. Do what hundreds of women now do every day. Start now. Do this. See what Medalo can do for your hair.

Try it! If it doesn't help, you lose nothing. Write your name and address on a penny postal card and send it to mo. Don't mail any money now. Pay when you get all the goods. In a few days, you will get a six-month size supply of Medalogro Scalp Formula, Medalo Hot Oil, Cream Oil, Shampoo, Medalo Pressing Oil, full directions plus free samples of Medalo Face Powder and Perfume and the Medalo Booklet. Pay the postman only $1.98, plus few cents postage. Use as directed and if not absolutely delighted, your money back. Written Guarantee comes with all your goods. Write now.

FIFTY THOUSAND DOLLARS APPROPRIATED

(Continued from Page 1.)

WFA expenditures in any State for this program can not exceed the total amount spent by the local sponsor, including the value of donated services and supplies furnished by the sponsoring agency for the program.

The program was created to safeguard the health of the Nation's children by assuring them at least one-third of their daily nutritive requirements. It also aims to develop good food habits among children and to introduce them to a wide variety of nutritious and abundant foods. Meals are provided free of charge to children unable to pay for them.

Full details of the program operations can be obtained from the regional offices of WFA's Office of Distribution, located in New York City, Atlanta, Dallas, San Francisco, and Chicago.

DISTRICT OF COLUMBIA BOYS

(Continued from Page 1.)

school buses Wednesday and headed for Cambridge, Md. to help harvest 1,600 acres of string beans. The remaining 60 boys left for the Maryland bean patch Sunday. Within three weeks they expect to have the bean crop well in hand, then they will return to the tomato harvest.

These VFV's are filling an important gap in Maryland's labor supply. While there are several hundred Jamaican and Bahamian farm warkers in the area, there is still need for additional help. These youngsters are helping to meet that need. Nation-wide, 1,200,000 boys and girls, white and colored, will be needed this year to help get in the crops, the War Food Administration estimates. In thousands of areas, youngsters, like the Washington boys, are pitching in to help.

It won't be all work and no play for the VFV's. After a six-hour day in the fields, the D. C. youngsters will knock off and go swimming, fishing, hiking, or camping, or they will play softball and other games. Recreational directors from local schools will direct the play activities.

Camp Director Roscoe G. Robinson, a local teacher says that the chef will see to it that the boys have good meals. Each boy is taking his ration book along. That, plus a good day's work, will assure every boy a place at mess. It is reported that every boy who joined the VFV's in the Washington area last summer put on some pounds during the harvest-outing.

LABOR'S TURN NOW

A few years ago when industrial empires were crumbling in the depression, the ears of management rang with the accusations of extremists who charged in effect that every corporation was out to mulct the public. The sensible retort that the misdeeds of a few promoters did not warrant general condemnation of industry, fell on deaf ears. Punitive laws and tax measures were enacted that still handicap many businesses.

The stupidity of a generalized attack on any segment of American life is again emphasized in the recent complaint of a labor spokesman who cried "We have seen American newspapers, as a class, build prejudice against labor unions, not by seeking out and dealing with the real sins in some of them, but by treating the one-quarter of one per cent of time lost through wildcat strikes as if these microscopic work stoppages represented general sabotage of the war effort."

Generalized attacks on labor are wrong—but then so are generalized attacks against industry, to say nothing of attacking the press as a prejudiced class. Labor is now getting a dose of the same bitter medicine that it helped dish out.

NEGRO FARM AGENTS PLAN SAFETY WEEK PROGRAMS

A two pronged drive against farm accidents will be launched by Negro county agents, and the newly appointed emergency war food production and preservation assistants during the National Farm Safety Week which is to be observed July 23-29, according to U. S. Department of Agriculture officials.

One prong of the pincer will be spearheaded by county farm agents who in some areas will conduct demonstrations in safety on the farm: harnessing the mules, driving the tractor, loading cotton and hay, and cutting wood, while the home agents will launch the other prong through demonstrations on safety in the home.

Both Secretary of Agriculture Claude R. Wickard, and War Food Administrator Marvin Jones have heartily endorsed the observance of National Farm Safety Week. They point out that farm accidents are a threat to city folks as well as to rural people, because they rob our nation and the war effort of valuable man-hours which reduce our total supply of food and fiber for the folks in the cities and the boys on the beachheads.

Last year two million farm people were injured, 20,000 of them fatally. To every person in the United States this loss meant the equivalent of manpower to produce 15 bushels of wheat, 313 pounds of pork, or 202 pounds of beef. Or putting it another way, these accidents meant the loss of four and half days' food supply for every person in the nation.

FARMERS SAVE $500 BY REPAIRING OWN TOOLS

Thirty colored farmers of Colbert County, Alabama, are $500 to the good because they took advantage of a special vocational instruction school recently and repaired their own wagons, plows, and other pieces of equipment totalling 225 implements. The only costs involved were for parts. Paint, brushes, and tools were furnished free.

Although the farmers had only eight days in the school,, through their interest and strict attendance they were able to repair all of their implements. Said the instructor: "This is the best class I've ever conducted." County Agent A. M. Foster was responsible for colored farmers attending the special instruction school.

SAVE EVERY MILKWEED

The lowly milkweed has gone to war. When packed into life jackets, and life belts, the fiber of floss in the milkweed seed pod will keep a man afloat exactly as well as kopak, the material formerly imported from Java for use in life jackets.

The U. S. Department of Agriculture has been requested by the War Production Board to collect 1,500,000 pounds of milkweed floss this year to meet requirements of the armed forces. The supply must come from wild plants, those that farmers used to take pride in pulling up.

It"s up to the boys and girls in every county to harvest all the milkweed pods in their neighborhoods so that not a single life will be lost for lack of buoyant life jackets. State 4-H Club leaders, Future Farmers of America, Scout troops, and Camp Fire Girls, and other youth groups are cooperating in this war job. State milkweed leaders, through the state superintendent of schools, will arrange for a quantity of bags to be sent to each county superintendent who will in turn distribute them to the schools.

The milkweed collection campaign is to be conducted in 29 States. Those in which a large number of colored farm people reside are: Arkansas, Missouri, Oklahoma, Tennessee, Virginia, and West Virginia.

CAN MORE IN '44

If your Victory Garden was successful, then you are probably in the midst of your summer canning. Home canners put up more food last year than ever before, but in view of the vast need of our troops at home and overseas, our slogan should be: "Can More In '44."

To help assure success for home canners the U. S. Department of Agriculture has prepared a new bulletin called, "Home Canning of Fruits and Vegetables."

One of the important features in the bulletin is a list of helps. Here they are: (1) Can only fresh food in tip top condition, (2) have food, jars, everything used in canning thoroughly clean, (3) work quickly so as to can "freshness," (4) heat food hot enough and long enough to make bacteria and other organisms harmless, so they won't work in the food and make it spoil, (5) follow up-to-date directions and timetables backed up by scientific research, (6) make sure jars are sealed airtight, (7) store canned foods in a cool, dark, dry place.

Also among the helps is a list of things to avoid; (1) Don't can in an oven. Oven canning has resulted in shattered jars, and cuts and burns. (2) Dont can by open kettle method. It's wasteful for fruits and tomatoes, because spoilage germs may get in when jars are filled, and there's no further heating to kill them; and for non-acid vegetables open kettle canning is dangerous, because they never become hot enough to destroy the bacteria. (3) If using lids edged with scaling compound, screw the metal band or cap over metal lid firmly before canning, but not so hard that you cut through the compound, for then the jar won't seal. Don't tighten this lid further after canning. Tightening breaks the seal (4) Take special cares in adjusting a three-piece lid, the kind with glass top, small rubber ring, and metal screw band. Before canning, screw band down, then turn it back a quarter-turn, or so jar and band just mesh together. It must be loose, or the jar may break in canning. After canning, screw it down firmly (5) To make wartime rubber jar rings pliable and to help remove odor add this to canning routine. Scrub rings with hot soapy water, and rinse. Then boil each dozen rings in one quart of water with one tablespoon of baking soda ten minutes, a fresh lot for each dozen. (6) Remember, there are two sizes of rubber rings. The smaller size fits collarwise on the glass top of a three-piece lid. Don't try to force it over the jar itself. (7) A steam pressure-canner dial gauge should be tested each year. Contact your home demonstration agent or the manufacturer. (8) Don't blame "too little sugar" for spoiled jars of fruit. Fruit canned just right will keep with no sugar. (9) Time to take screw bands off is the day after canning. Forcing a band that sticks will break the seal, but wrapping a hot damp cloth over it is sure to help. Write for a free copy of the bulletin. Address your correspondence to: Home Canning, Washington, 25, D C.

HOUSEWIVES SAVE EGG SITUATION

Two weeks ago, 1,400 carloads of eggs, a total of 25 million dozeu, stood on sidings waiting for storage facilities which existed only in refrigerators of America's millions of housewives. All other storage facilities, and the egg drying plants were jammed to capacity. So, the War Food Administration made an appeal to the housewives to buy an extra dozen eggs and "salt" them away. The response was magnificent, and the threat of serious egg losses was overcome.

Last week War Food Administrator Marvin Jones said, "I am happy to report that the help of the nation's housewives, and of the trade has made it possible to save all of the 25 million dozen of eggs that were in danger of spoilage and that our emergency egg-storage problem has been solved."

ARK. NEGRO 4-H CLUBBERS GROW FOOD FOR OWN SOLDIERS

Washington, D. C.,—Negro 4-H youths of Arkansas. like the 4-H-ers in most other states, are not taking any chance on other folks growing enough food for Arkansas's GI Joe. Ho no, they are making sure by growing it themselves. In most of the counties a survey has been made to determine the number of men from the county who are in the Armed Forces. And now the 4-H clubbers are setting about to grow enough food to feed these men. You see, the average fighting man eats about 2,-100 pounds of food a year, not including 30 dozen eggs.

So, 4-H club youngsters are keeping pretty busy growing the tons of food that are needed. For example, Negro County Agent C. D. McKindra of Jefferson county, Ark. (Pine Bluff, county seat) reports that members of 33 clubs in his county, with a total of 1,410 members, plan to produce enough food this year for the 625 fighting men from the county who are in the Armed Forces.

The Jefferson county 4-H boys and girls have pledged to produce 43,890 quarts of canned foods, 21,254 pounds of fresh poultry, 65,-765 pounds of pork, 48,961 pounds of beef, 76,275 pounds of sweet potatoes, 58,891 pounds of Irish potatoes, 37,783 pounds of peanuts, 20,219 pounds of soybeans, 73,-062 gallons of milk, 70,714 pounds of fresh vegetables, and 29,825 dozen eggs. In addition, these youngsters will produce 14,588 acres of cotton, and do various farm chores to help relieve the farm labor shortage. This effort is called "Feed A Fighter," and it is being carried on in most states.

BLACK WIDOW IS DRAFTED

A Newark, New Jersey, newspaper of recent date tells of the gift to the city's museum of a "dangerous lady." The lady proved to be none other than the dreaded black widow spider. The donor had heard that the threads a spider spins may be used in bomb sights and other precision instruments. He thought that the little lady could be transported to some government laboratory and she could be persuaded to spin for Uncle Sam. He was told that the government only chooses certain species of spiders and that it is against the law to send poisonous insects through the mails.

The latter is without doubt true, and it is also true that formerly the common variety of garden spider has furnished the silken threads for these instruments. But in this war emergency the "dangerous" black widow has redeemed herself. She has been definitely drafted into the service of her country. She is now spinning for Uncle Sam. She looks very much like the ordinary spider except that she is smooth black, instead of mottled brown, and bears a scarlet hourglass on her under side. Although some naturalists say her bite is not poisonous and certainly not fatal, yet she can be a real nuisance in the South where she is numerous.

But now she has redeemed herself and is being rounded up at Ft. Knox, Ky., and sent to Columbus, Ohio, to the Quartermaster Depot. She is rationed also, being allowed only two flies per week. She extrudes a fine strong thread about a fifth of the diameter of a human hair, and tougher than steel or platinum wire of the same size. She will spin from one hundred to one hundred and eighty feet of spider silk in a week. This web is exactly right in color and texture for the cross hairs in telescopes, microscopes, surveyor's transits and range finders.

Women handle the spiders with pinchers and seldom get bitten. As the spider spins her fine thread the women wind it onto reels of strong wire.

So the dangerous black widow spider joins our armed forces against a more dangerous enemy.

—Edith C. Pitcher

THE MODERN FARMER

TURKEYS FOR SOLDIERS

Millions of Pounds Will Be Used This Year

Uncle Sam's Boys Will Be Well Fed During Holidays

Washington, D. C.,—Millions of pounds of turkey will be needed this year to furnish holiday dinners for Uncle Sam's Negro fighting men scattered all over the world. The War Food Administration issued an order recently which is designed to help the U. S. Army Quartermaster Corps to obtain this supply as well as the over-all quantity necessary to provide about 4 1-2 pounds for everyone in the armed forces.

The new order requires that turkeys marketed and processed in designated States and areas be set aside and held for sale to the QMC until the necessary quantity has been obtained. The total need for all of the armed forces will exceed that of last year due to the increase in the size of our fighting forces.

According to early season estimates, this year's turkey crop will exceed that of last year, but because of the increased military demands, civilians will receive an average of about 3 pounds of turkey per capita as compared with last years' 3 1-4 pounds

Military leaders recognize the value of traditional American holiday dinners as morale builders. After military needs for turkey dinners on Thanksgiving, Christmas and New Years' Day have been supplied, turkey will be available for civilian use.

ALL NEGRO ASSOCIATION AMONG FIRST CREDIT CO-OPS ORGANIZED

SOUTH CAROLINA FARMERS SHOW WHAT CAN BE DONE

Twenty-five years ago Negro farmers in the vicinity of Sumter, South Carolina, organized a cooperative credit association which is still actively engaged in supplying the long-term credit needs of the colored farmers of Sumter, Lee, and Clarendon Counties, South Carolina.

Negro farmers in these three counties have over $70,000 outstanding in loans from the Salem National Farm Loan Association as it is presently known. Loans have been made for enabling farmers to refinance their farm indebtedness; to buy land for agricultural purposes; to provide buildings, and for the improvement of the farm land; to buy equipment, fertilizer, and livestock necessary for proper operation of the farm unit; and for certain other agricultural purposes.

Like many similar organizations, this credit cooperative was born at a time when farmers were laboring under serious difficulties in meeting their needs for farm mortgage credit. Interest rates were high and commissions were often required of borrowers. In addition loans were usually made on a short-term basis which required frequent renewals. It was during this period that Congress created the Farm Loan System under which farmers could organize cooperative credit associations known as national farm loan associations.

In the Sumter area eighteen Negro farmers got together and organized the Pee Dee National Farm Loan Association. At the height of the depression, loans out-

FOOD PRODUCTION INCREASED

F. S. A. Borrowers Work to Produce More

Record Set By More Than Thirteen Per Cent of Farm Families

WASHINGTON, D. C.,—1944,—A survey of the 1943 food production record of Farm Security Administration borrowers, of whom more than 40,000 or about 13 percent are colored, showed that these families are keeping pace with the rising tempo of offensive military and naval operations by making significant increases in the production of war foods comparable to increases made in 1942 over 1941, the War Food Administration announced recently.

The survey represented 311,880 active standard rehabilitation borrowers of the Farm Security Administration who operated farms both in 1942 and 1943. They constitute about 5.1 percent of all farmers.

In the four Southern Regions* where approximately 90 percent of the Negro FSA borrowers are concentrated, their 1943 production of direct food and oil crops over 1942 contributed immeasurably to the total increased production of all FSA borrowers in these Regionc as follows:

Milk, from 2 to 34 percent, chickens, 29 to 134 percent; eggs, 30 to 38 percent; dry beans and blackeyed peas, 6 to 80 percent; Irish potatoes, 34 to 79 percent; sweet potatoes, 5 to 19 percent; total pounds meat (dressed weight) sold, 32 to 56 percent; total pounds hogs (liveweight) sold, 15 to 62 percent, soybeans, 15 to 19 percent.

*(Editor's note: The four Southern Regions are, Region IV—Kentucky, North Carolina, Tennessee, Virginia and West Virginia; Region V—Alabama, Florida, Georgia and South Carolina; Region VI—Arkansas, Louisiana and Mississippi; Region VIII—Texas and Oklahoma).

These important increases in food production by FSA borrowers—Negro and white—resulted from, in general: (1) better farm management practices, (2) increased livestock, (3) increased feed production, and (4) farm enlargement (more acres in crops and more working capital.) These factors were aided, of course, by practical guidance and financial assistance provided to operators of low-income farms through the Farm Security program.

All FSA borrowers sold more than 49 percent more meat (liveweight) in 1943 than in 1942, and chalked up increases ranging from 14 to 65 percent in the production of five war-essential food and oil crops. Total production in 1943 and the percentage increases over 1942 in the principal war-needed food and oil crops were:

Soybeans, 5,049,200 bushels, 37 percent increase.

Peanuts, 156,776,400 pounds, 22 percent increase.

Dry beans and blackeyed peas, 84,185,000 pounds, 15 percent.

Irish potatoes, 20,996,800 bushels, 65 percent.

Sweet poatoes, 5,972,700 bushels, 14 percent.

These FSA families in 1943 sold enough milk to provide a year's supply for 8,739,000 active men; enough eggs for 7,515,200 men; pork for 4,437,000 men; mutton and lamb for 3,153,200; beef and veal for 2,694,000. Their 1943 sale increases alone provided enough eggs for 1,789,300 active men, enough

EXTENSION SERVICE HELPS

Farmers Grow Bigger And Better Crops Now

Survey Shows That This Service Improves and Helps Tillers of Soil

Washington, D. C.,—Negro farmers are growing better peaches, finer milk cows, and more hogs because of Extension teachings, report members of the North Carolina Extension Service.

John Palmer of Caswell County, N. C., has marketed 120 bushels of peaches from a well sprayed young home orchard at three dollars a bushel, Negro County Agent Dewey Williamson reports. Fertilizer applied to the trees last fall and again in the spring played a big part in the production, says the agent.

County Agent H. L. Mitchell reports that the 80 high grade cows which were placed with colored farm families last year in an effort to provide more families with a home milk supply now have fine calves for distribution to other families.

Joseph Jones finds that the suggestion made by Extension Service regarding grazing crops for hogs has enabled him to produce pork at lower costs. Farmer Jones has provided his hogs with four temporary grazing crops: rape in the early spring followed by soybeans, then lespedeza, and peanuts.

A LESSON IN CONTRASTS

From liberated areas of Europe and Italy have come stories of shocking contrasts in the living standards of the people. While some groups enjoy luxury and plenty, others slowly starve in utter degradation. According to news reports, the former are members of a small minority with enough money to secure comforts in the black market. Perhaps this is the inevitable aftermath of war and economic collapse in which civilization gives way before the brutal law of dog eat dog. Whatever it is, Americans, who have been raised in a nation where the emphasis has been on an ever wider distribution of necessities and luxuries, will shudder with compassion and thank God they are here and not there.

It is not an accident that this nation is the best fed and housed in the world. That is the result of free markets and unrestricted competition. For example, a few years ago retail merchants developed the chain store idea of merchandising because they realized that expanded low-cost service to consumers was the only answer to the demands of competition. In meeting those demands, they helped introduce healthier living standards. Today the retail industry is keyed to the needs of the masses. The same is true of other industry in the United States. Never before have the productive activities of a nation been directed so exclusively toward benefiting all the people. The tragic fate of Europe's peoples has brought this fact into bold relief as nothing else could.

Irrespective of temporary risks or theories, the United States must reestablish free markets and unrestricted competition after the war or the American people will not continue to reap the full benefits of mass production and distribution.

CELEBRATES FIRST BIRTHDAY

Negro Curb Market Proud of Its Record

Annual Sales Total More Than Five Thousand Dollars in N. C.

WASHINGTON., D. C.,—1944—Rounding out annual sales totaling over $5,000, the Tarboro, N. C., Negro farm and home curb market celebrated its first birthday during July. Proud of the achievement of this market which not only provides a new outlet for farm products but which also establishes a reliable source of fresh fruits and vegetables for the townspeople, the the city of Tarboro sent men, trucks, tractors, mowing machines and other implements to spruce up the building and grounds as a birthday present.

Even rain failed to dampen the enthusiasm of farmers and city folks for the anniversary observance. Eleven of the 15 curb marketeers came loaded down with fruits, vegetables, poultry, eggs. butter, and cured meats. Products were displayed in every available space when the townspople came to buy. By evening the market was bare and the farmers went home with $181.42 in their collective pockets.

Delivering the principal anniversary address, John Goodman, assistant director of North Carolina Extension Service, paid high tribute to F. D. Wharton, Negro county agent, and Mrs. Hazel S. Parker, colored home agent for the part they played in helping the farmers to get the market started.

INDEPENDENCE VS. HAND-OUTS, DESIRED

Stating that "subsidies are now firmly fixed upon our economic life as a national policy," Fred H. Sexauer, President of the Dairymen's League Cooperative Association, said:

"We as farmers can still oppose them as a national policy and work to change that policy. But in formulating plans to obtain adequate returns, subsidies, now being a national policy, must be considered part of such return. This does not mean that subsidies are a sound national policy. We know the bad effect of subsidies upon the milk industry, but until they are abolished we must use them."

Most farmers believe that goods and services, including farm products, should be paid for at a fair price by consumers, and agricultural subsidies avoided in order to maintain a high national income, amortize the war debt and reduce taxes.

LIVING UP TO TRADITION

Except for American medicine which was ready, willing and able to act when the war started, the unprecedented health services available to our armed forces would have been impossible. American doctors played an indispensable role. They provided the government with the finest medical system and personnel in the world. American doctors have examined and passed judgment on more than 13,000,000 military registrants.

This medical data is now being subjected to analysis. Both in quality (medical procedure and judgment) and quantity (number involved) this material far surpasses any other survey ever made in the history of our nation. In conjunction with this record-breaking examination job, American doctors have given our armed forces an unequaled medical service.

This is but one more proof of the fact that free private enterprise can achieve greater results in a shorter space of time than can regimented legions of the dictators.

GOING TO BUY A FARM?

If So, Get Some Facts From Dept. of Agriculture

With Better Prices Being Paid for Produce Farmers Will Be Able to Buy Land

Washington, D. C.,—When the United States entered the war in 1941 about 500,000 of the nation's 680,000 Negro farmers were tenants and sharecroppers. In fact 300,000 were sharecroppers, according to census figures. Well, with farmers getting better prices for their crops, and with a few of them going to industrial centers taking war jobs there is a natural tendency to fulfill a desire of long standing to own a piece of land. In some areas farmers have taken their industrial earning and bought one, two three, and some times five acres and paid cash for it. In other parts they have gone into debt buying a larger acreage.

However, the Farm Credit Administration issues a word of caution about buying a farm under war conditions in circular E-29, "About That Farm You're Going to Buy," published by the U. S. Department of Agriculture. The circular points out that the test of a good buy is the size debt the farm will carry comfortably, not at present prices of farm commodities, but at prices likely to prevail after the war.

Says the circular: "It would be a different story if you could buy a farm and agree to pay for it with about eighty 200-pound hogs a year. That's about what it would take if pork was worth $6.82 a hundred and you had a $10,000 Federal Land Bank Loan at 4-percent for 34 1-2 years.

"Unfortunately, you don't borrow hogs to buy a farm—you borrow dollars, and you pay back dollars. When pork is selling for $13.10 a hundredweight as it has this year, it would take about 41 hogs to meet mortgage payments, but when pork sells for $4 a hundred, as it did during the depression, it would take 135 hogs to meet payment on a $10,000 mortgage."

A warning paragraph reviews "What Happened Last Time." "From 1913 to 1920, prices of farm products rose 107 percent, while farm land prices rose 70 percent. Hundreds of thousands of farmers went into debt to buy land. In 1920-21 prices of farm commodities broke. They fell 52 percent within just a few months. Farmers who had gone into debt, expecting to pay for their farms on the basis of wartime commodity prices, found that it took more than twice as many hogs, nearly twice as many pounds of beef, twice as many bushels of wheat, twice as many bales of cotton, and half again as many pounds of butterfat or tobacco to meet the payments on their mortgages or contracts."

Perhaps if you are not sure about that farm you are going to buy, it might be a good idea to put your cash in War Bonds until you are sure you have a good buy.

WOMAN'S PAGE

BROILER MEALS ARE QUICK AND EASY

Quick meals—easy meals—one-dish meals—these are topics which interest busy homemakers. A few suggestions by Jessie Alice Cline, home economist, include some recommendations for broiler meals.

Contrary to popular belief broiler meals can be quick, easy and "one-dish,"says Miss Cline. They are quick, because the tender cuts of meat suitable for broiling are those which cook in a few minutes.

So long as the meat is broiled far enough away from the heat this cookery method is easy also. There is no burning or spattering of fat and the meat needs to be turned only once.

The meal featuring broiled meat may be made "one-dish"by heating cooked vegetables, such as rice or hominy, in the bottom of the broiler pan while the meat is cooking. If there is room on the broiler rack next to the meat, bread may be toasted at the same time or halves of tomatoes may be broiled in this space.

An English grill is a hearty broiler meal that is very popular. Cooked vegetables may be heated in the bottom of the broiler pan in this case too. For each person to be served, provide one thick lamb chop, one lamb kidney, one slice of tomato. Put lamb chops on to broil first. When nicely browned and about half done,turn chops and add tomato slices sprinkled with bread crumbs, and kidneys which have been split. Put bacon on about five minutes before chops are done. Serve with baked potato.

ADD EYE APPEAL

Try to plan a vegetable platter so that it looks as good as it tastes. For example, steamed cauliflower, beets, parsley, potatoes, string beans, and carrots provide a pleasing contrast in color, as well as taste. A contrast in texture, also, "does something" for a vegetable dinner. This can be accomplished by adding a few slices of crisp, crunchy cucumber.

VEAL ROLL-UPS

2 slices veal cut 1-4 inch thick (1 pound)
4 carrots
3 tablespoons shortening
4 tablespoons chopped celery
3 tablespoons diced green pepper
3 tablespoons chopped onion
1 1-2 cups tomato juice
1 small bay leaf
1 1-2 teaspoons salt
1-8 teaspoon black pepper
1-2 teaspoon rosemary
4 medium-sized potatoes

Cut each slice of veal in half and roll each piece around a carrot. Fasten with toothpicks. Melt shortening in skillet, place over medium flame, and brown veal rolls. Add celery, green pepper, onion, tomato juice, seasonings and potatoes. Cover, turn heat to low flame, and simmer for about 35 minutes.

PEANUT BUTTER FROSTING

Peanut butter frosting is something new. Thin 3 tablespoons peanut butter with 2 tablespoons hot coffee (leftover) or cream. Add enough confectioner's sugar to thicken. Let stand 5 minutes and then beat thoroughly. More liquid may be needed if the frosting has stiffened too much to spread easily. Spread on top cakes or cookies. Smooth the top with a knife or spatula dipped in warm water. This uncooked frosting will not have a "raw" taste if allowed to stand awhile before icing the food.

MAKE MEAT STEWS ATTRACTIVE

The attractiveness of a meat stew depends not only upon cooking the meat and vegetables properly, but also upon the way it is served. This, too, is another way of getting variety into the meal. Meat and vegetables may be arranged on a platter with some thought to color and design. The appearance may be improved by cooking peas or green beans separately and using them to garnish the white vegetables. Chopped parsley or watercress may be used as garnish. For another variation the stew may be cooked in casserole with dumplings or biscuits on top.

COOKERY SHORT CUT

Even little short cuts are important in wartime cookery. A few minutes saved each time a job is done may count up to many hours in the course of months.

In a household where baking powder biscuits and cookies are baked often, time may be saved by cutting them square instead of round. After the dough is rolled out, criss-crossing with a knife and then lifting the squares onto the baking pan is much faster than first cutting with a cookie cutter, then gathering the scraps together, and again rolling out and cutting, as is usually done.

In these days when many families send cookies to members away in the armed services, the square cut has another advantage. It makes cookies pack more compactly and travel with less breakage.

Drop biscuits and cookies are even quicker to make than square cut cookies, but their texture and appearance is less smooth and they do not pack as well.

CANTALOUPE RICH IN VITAMIN C

Consider the cantaloupe, unheralded and unsung for its vitamin C, yet as rich a source as oranges and grapefruit, and even richer than tomatoes, advises the government experiment station in Arizona.

The man who sits down to a half cantaloupe for breakfast on a summer morning probably never thinks of its nutritive value, yet may get from it enough Vitamin C for his full day's need. Tests at the Arizona Station show that half a cantaloupe of average size (4½ to 5 inches in diameter) is equal in C to a tumbler of orange or grapfruit juice, a whole grapefruit of average size, two small oranges, 4 medium-sized tomatoes, or two tumblers of canned tomato juice.

Cantaloupe is markedly superior in C to most of the other common fruits—apples, apricots, peaches, pears, grapes or plums. Strawberries, the exception to the rule, are richer.

In choosing fruits for family meals the housewife is wise to consider their C value. Because fruits are acid and often eaten raw, they hold their C better and lose less in cooking than vegetables. Many vegetables are naturally rich in this vitamin, but before they are served at meals, have lost much in keeping and cooking.

CUCUMBER ENTREE

1 package of lemon-flavored gelatin
1½ cups hot water
2 tablespoons chopped green pepper
½ cup mayonnaise
Dash of pepper
1-8 teaspoon paprika
1 tablespoon vinegar

Dissolve gelatin in hot water. Chill until slightly thickened. Combine remaining ingredients and fold at once into slightly thickened gelatin. Turn into loaf pan. Chill until firm. Unmold. Cut in 2-inch squares. Garnish each square with a tiny sprig of parsley. Serve on crisp lettuce. Garnish with additional mayonnaise and slices of hard-cooked egg, if desired. Makes 6 servings.

ORANGE COOKIES

Orange cookies are delicate in flavor and texture and they also will carry well with good packing. Cream ½ cup fat with ½ cup sugar, 1 egg, 2 tablespoons orange juice, 1 tablespoon each orange and lemon extracts, ½ teaspoon salt, ¼ teaspoon nutmeg, 1 tablespoon grated orange rind, 1-3 cup honey and ½ cup chopped nuts (almonds, walnuts or pecans). Stir in 2 cups flour and 2 teaspoons baking powder. Chill dough and drop portions from tip of spoon onto greased baking sheep. Flatten each cooky and top with small piece of candied orange peel. Bake 10 minutes in moderate oven.

SUMMER FRUIT PUNCH

1½ cups boiling water
2 tea bags
Juice of 2 lemons and 1 orange (1 cup)
1¼ cups pineapple juice
3 tablespoons sugar
½ teaspoon grated lemon rind
1 cup ginger ale
Maraschino cherries
Fresh mint

Pour boling water over tea bags and allow to stand for 5 minutes. Stir, remove bags and allow to cool. Add the juices, sugar and rind and stir until sugar is dissolved. Add ginger ale. Immediately pour over ice cubes in glasses, add a cherry, a bit of mint, and serve at once. Makes 5 cups.

POTATO-MEAT PATTIES

1 pound ground beef
2 cups grated new potatoes
¼ cup grated onion
1½ teaspoon salt
¼ teaspoon pepper

Scrub potatoes well and grate without peeling. Combined with beef, onion and seasonings and form into patties. Place on broiler rack three inches from the heat. Broil on one side until browned (about ten minutes), turn and brown other side.

POTATO SALAD WITH SOUR CREAM

2¼ cups freshly boiled potatoes, cubed
¼ cup sliced green onion
2 tablespoons silvered radishes
¼ cup coarsely shredded carrot
2 hard-boiled eggs, chopped
¼ cup mayonnaise
¼ cup sour cream
2 tablespoons vinegar
¼ teaspoon sugar
1 teaspoon salt

Combine first five ingredients, Blend remaining ingredients and mix lightly, but thoroughly, with potato mixture. Cover, let stand at least half an hour. Four servings.

GOURMET'S PIE

Add ½ cup chopped cooked meat to biscuit dough, using 2 cups flour. Shape into biscuits of regular size. Mix together 2 cups savory white sauce, 1 cup cooked peas, beans or asparagus, ½ cup diced cooked celery, 1 hard-boiled egg, sliced, and 1 tablespoon each chopped onions and parsley. Pour into a buttered, shallow baking pan, cover with the biscuits and bake 20 minutes in moderate oven. A cup of gravy can replace one of the cups of milk in the sauce.

HELPFUL HOUSEHOLD HINTS

CLEAN COMB IMPORTANT

Much has been said about the need for a clean brush, but the comb is part of the team which also needs constant attention. The little grooves between the teeth hold scalp-scales and oil tenaciously. Remove this accumulation daily, if possible; surely three times a week. When the clogging soil has been loosened with a brush, wash the comb thoroughly in lukewarm suds. Rinse and dry.

Never iron over buttons, hooks, zippers or buckles. Place these right side down on a soft cloth—several thicknesses of worn out turkish towel is excellent. Then press on the wrong side with a moderately warm iron.

For extra protection of mattress and bedspring, place an old quilt, blanket or comforter between them. This prevents any possibility of coils working up and getting caught in the mattress.

Honey in milk and on bread contains a great amount of nourishment and is good at any time.

Warm water for dampening lessens the time required for clothes to stand before ironing.

Digging the nails into a cake of soap before beginning to work is a good plan for gardeners since it will keep grit from getting under nails.

When cut flowers are brought into the house from the garden, spray the bouquet lightly with insecticide to get rid of garden aphids and small flying insetcs.

CHILDREN NEED FIRM SLEEPING FOUNDATIONS

Regular restful sleep plays a large part in the growth and development of every child, and the stage can easily be set with parental help and supervision.

Mothers should be sure that their youngsters have the correct sleep foundation. Young bodies need bedsprings and mattresses that provide firm, even support to maintain good posture. Bedding that may be permissable for an adult may not be suitable for a child who is still growing and might be the unnecessary cause of round shoulders and a lazy slouch.

Consequently, the utmost care should be used in selecting children's bedding, from the crib stage on up. A satisfactory crib is usually equipped with link fabric springs and solid filled mattress. The links in the bedspring are tied together with small helical coils. When a child graduates to junior-size bed, the equipment should be the same firm type, only larger, with special emphasis on sagless springs and depressionless mattresses.

When he reaches the ripe age of six or seven, he should have an adult-size bed and, perhaps, a coil bed spring without too much "give" to it. A firm, well-made mattress is essential during growing years, as softer mattresses do not hold the child's weight firmly or allow proper formation of his skeletal structure.

Frequent check-ups should be made on children's bedding as well as adults' and any defects should be repaired as soon as possible. Correct sleeping equipment is just as important to the child's health as a balanced diet and shoes that fit.

BATHING SUIT CARE

Cotton swim suits are popular this year and they come in a ravishing variety of colors and designs. To keep them looking trig, however, requires a little extra care. It pays to give them a soap and vinegar wash after each wearing to remove sand and smears of suntan lotions.

Use moderately warm suds, and rinse in several clear cool waters. If the suits cannot be washed as soon as they are brought home, be sure to hang them to dry anyhow. If they are left in a heap, mildew may set in and ruin the looks of the garment. It is almost impossible to remove mildew stains, but easy to avoid them.

"We never realize the full value of anything until we lose it," said the vicar, consolingly.

"No, sir," replied the widow. "'e wern't insured."

COMMON SENSE AT CIRCUSES

Adherence to basic fire prevention rules will eliminate greatest fire dangers in circuses, says George W. Booth, Chief Engineer of the National Board of Fire Underwriters.

Most cities permit circuses and carnivals to operate in tents without requiring them to meet the regulations for safety to life found in their building codes, ordinances, and other local legislation. This is probably due to the temporary nature of such exhibitions. But the fact remains that the combustible nature of the tents, poles, seats shavings, hay and straw used in connection with circuses and carnivals, adds for stringent enforcement of fire prevention measures. No license or occupancy permit should be issued for any circus or shown that the fundamentals of safety to life, as prescribed for places of assembly, have been met to the most practicable degree possible.

Fire appliances should be distributed throughout all tents, and operating personel made familiar with exits and fire fighting equipment. should be made over loud speakers, and patrons should be required to discard lighted cigars and cigarettes at the entrance. Crowding should be avoided and facilities provided for calling the fire department, which should be made familiar with the show after it is set up.

"Safety at circuses and carnivals is largely a matter of fire prevention and quick action to extinguish a small fire, says Mr. Booth. "The danger of panic is outstanding, and ample exit-ways must be assured."

PANIC

That word has an ominous sound: In nearly all congregations of people where fire occurs, panic ensues. In discussing this subject from the standpoint of loss of life, the National Board of Fire Underwriters says that panic cannot be eliminated. Therefore it is important to reduce the causes of panic to the greatest possible extent.

History is a record of catastrophies which cause death and injury from panic. Whole armies have fled in disorder when panic mastered a few and then was transmitted to the mass.

Fire panic hazards exist in many places, including theaters, night clubs, cabarets, schools, factories, stores, churches, hotels and apartments.

Adequate exits, well placed, will go far toward giving a sense of security to crowds and will lessen the panic hazard. But toxic gases caused by fire, can kill people before they have a chance to move, where the gases can sweep upward through open stairways.

The answer to the danger of panic, says the National Board, is to "provide security of mind, which means make it visible to the eye or repeat it in print or otherwise until it is a subconsious reality, that the place is of good and preferably fireproof type of construction; that there is little quick burning material; that where these conditions do not exist, the place is protected by automatic sprinklers; that adequate, well marked exits exist; and last, but not least, that these exits are usable."

Public cooperation is indispensable in avoiding panics which destroy life.

25'000 WEST INDIANS PUSH U. S. PRODUCTION

Nearly 25,000 Jamaicans, Bahamians, and Barbadians are in this country helping to harvest important war crops all the way from Florida to Minnesota. Brought here by the War Food Administration to help relieve the farm labor shortage, the islands are under contract with WFA which guarantees them minimum wages, minimum standards of housing, and also the assurance of work for at least three-fourths of the contract period.

Largest of the West Indian groups here are the Jamaicans, 17-453, second largest group, the Bahamians, 5,762, and Barbadians workers number 908. About 4,000 of these islanders are in Florida, 3,000 in New York, 2,000 in Connecticut, 1,800 in Maryland, 1,700 in New Jersey, 1,700 in Wisconsin, 1,500 in Michigan, 1,000 in Illinois, and 7,000 in Ohio. There are smaller numbers in other states.

The number of West Indian workers may increase to 28,000 by the latter part of August when the peak of the food crop harvesting season is reached. However, temporarily the importation of island workers is being suspended by WEA.

The Bureau of Agricultural Economics has just issued an overall farm-labor report which shows that on July 1 farm employment was lower than a year ago, but wages were the highest on record.

The report estimates that 11,355,-000 persons were working on farms the first of July. This was three percent less than a year ago and nine percent less than the 1935-39 average. However, wages were 20 percent higher than a year ago and 275 percent higher than in the 1935-39 period.

ANTS WITH DAIRY FARMS

By John H. Spicer

Many kinds of ants were in the dairy business long before humans ever thought of keeping cows or other domestic animals. The ant herds are made up of insects and mealy bugs who yield honey dew instead of milk but otherwise there is little difference. The ants care for their cows, put them out in the best pasture, even build stables for them and also shelter their eggs over winter in their nests.

These ant cattle all have much the same habits whether they be scale insects, mealy bugs or the familiar green plant lice. They gather on the more tender shoots and leaves of growing plants where they pierce holes with their beaks and suck the sap. They digest what they need from it and excrete the rest from their bodies as honeydew. During the digestion some of the constituents have also been changed into sugar so that the honeydew is sweeter than the original sap. The ants are extremely fond of this sweet liquid and greedily lick it up from where it falls on the leaves or, as many ants have learned to do, milk it from the insects themselves by stroking or tickling them. Thus wherever one finds colonies of plant lice, one can nearly always find ants, too.

Many species of ants have gone farther and care for these insects just as we do our own domesticated animals. They watch over the colonies, ready to fight off any trespassers with a taste for honeydew or predatory insects who might devour them. They move them from one pasture to another where they find better feeding just as the farmer does his cows. Some ants even build stables, little shelters to protect them from the weather. In some cases their eggs are actually collected in the fall and sheltered in the ant nest over winter. Then in the spring the hatching young are carried out and placed on the tender shoots of the growing plants. Not all of these ant cattle are put to feed on the stems and leaves as some species keep their cows in underground burrows where they pasture on the roots instead. Thus one of the common garden ants has been reported guilty of distributing planting lice on corn roots.

This dairy business is carried on all over the world wherever ants are found. No doubt it is good business for the thrifty, industrious ants, but from our human point of view it is one of the most harmful of their activities as this habit of distributing plant lice often causes considerable damage to cultivated plants and crops. It doesn't matter to the ants if their chosen pasture happens to be something we carefully planted. On the contrary, a carefully nourished garden plant is apt to be a lot more tender and juicy than a wild one.

NO TIME FOR INCOMPETENCE

Another cut in the octane rating means that your car will knock a little louder on hills and hard pulls. blamed for this. The better gasoline has gone overseas to fight the war. American oil companies are supplying the bulk of the oil for the Allies.

It is due to no fault of the oil industry that there is an oil shortage at home. It is a miracle that the shortage has not been greater. The industry could most certainly get more oil in this country with a little more steel and manpower, and if independent producers and wildcatters were not discouraged in their hunt for oil by arbitrarily low prices.

No one resents oil shortages and lower octane rating imposed by war necessity. But they do resent any national oil policy or price fixing that prevents or discourages companies from seeking new oil reserves which would increase production.

AGRICULTURE DEPENDS ON MARKETING PROGRAM

It has always been taken for granted that the small farm—the ownership of land by millions of individuals —was the great safeguard of independence in this nation.

Postwar prosperity of American industries will depend largely on the ability of small farmers to buy the products of our factories.

With world markets made more accessible for buying and selling than ever before, success for the small farmer will depend on his ability not to produce, but to market his crops in competition with the world.

As farmers learn how to better utilize marketing cooperatives to handle their production and sales on a group basis, a major economic handicap that American agriculture has faced, will be removed.

A NEW DAY FOR COAL

No industry, including its employees and owners, has been more maligned, and less appreciated, from the standpoint of its importance to every home in the land, than has coal. It is an activity which is so important that it has been virtually taken for granted by a nation which depends on coal as unconsciously as it does on air and water.

In order to remedy this condition, the bituminous coal mine operators a year ago started to make available facts about coal. Through advertising columns, its story has been told to an audience exceeding 350,000,000 readers during the past year. An improvement in industry morale has resulted. It helps any man or any industry to read that he is doing a good job, instead of continually hearing how backward and incompetent he is.

The public is interested in a progressive industry—in improvements in operating methods and advantages to employes. As the public understands an industry and its problems, it will be more able to help solve difficulties fairly when they arise.

Bituminous coal is doing a fine job in making known the important part coal and the coal miner play in the national economy. This record speaks well for the future of coal and its ability to supply the needs of the nation.

British Boxer Thinks Joe Is Through as Champ

By Marine Corp. Ernie Harwell, 789 Clifton Road, Atlanta, Ga.

Camp Lejeune, N. C.—A British Empire heavyweight boxing champion now in the United States Marine Corps believes that Joe Louis' war-enforced layoff will ruin his chances to retain the heavyweight title and that some unknown will emerge from the armed forces to take the crown.

That man is Private Thomas Martin with the Negro detachment here. Martin, English-born pugilist, is qualified to make such a statement. Literally, he has fought his way around the world, having boxed in England, France, Italy, Australia, New Zealand, India, South America and the United States.

Martin fought for 10 months in this country in 1940. He beat Bob Nestell, the California slugger, who kayoed Bob Paster, and won decisions over Junior Munsell, Buddy Knox and Johnny Hanschen. In his last bout here, he dropped a close decision to Turkey Thompson.

Before the war, Martin was England's outstanding heavyweight. He won the British Empire title with a victory over Eddie Phillips who had whipped former champion Tommy Farr twice.

Martin joined the Marine Corps in California in December, 1943. Before that he served with the Royal Air Force and the British Merchant Navy. He was on an anti-aircraft gun during the London blitz but was discharged because of an ankle injury. He immediately joined the Navy but, on a convoy to Malta, suffered a head concussion which affected his eyesight.

After spending months in a Canadian hospital, he was discharged and went to California.

Martin has two brothers in the British Army, one in the RAF, a sister in the WRENS and another sister in the WAAFS. His father was killed in the early bombings of London and his mother, recently was bombed from her home by one of the German robots.

The former pugilist is not planning to return to boxing after the war because he feels that if he boxes again he might aggravate the eye injury.

ICE CREAM HOLIDAY OVER

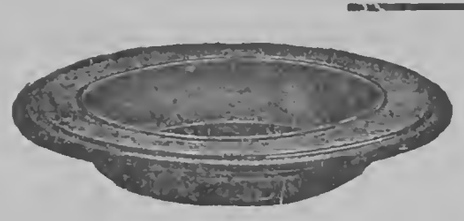
With milk production declining seasonally, accompanied by increased war demands for milk and milk products, the War Food Administration ended the summer "ice cream holiday" on August 1.

Ice cream manufacturers are again limited to the quotas of milk solids which prevailed from December 1942 to May 1944. Shorter quotas will conserve milk and butterfat for use in butter, milk powder and other essentials.

As for the food situation generally, the Bureau of Agricultural Economics of the U. S. Department of Agriculture reports that civilian food consumption this year is expected to equal that of 1943. Going further, BAE points out that when allowances are made for town and city Victory Gardens, consumption in both 1943-44 will reach the peak 1941 level which was eight percent above the 1935-39 average. Food supplies as a whole will be relatively plentiful this fall and winter, the somewhat smaller supplies of meat being offset by larger supplies of fresh fruits and vegetables, and cereal products.

The civilian supply is being maintained at this high level despite large war requirements, because farmers have increased their food production tremendously since the beginning of the war. Colored farmers, by growing their own food and sometimes extra supplies for our fighting men and war workers, have made a big contribution to the food production program.

Collection Plates, Collection Baskets, Arm Bands and Gavels



Wooden Collection Plates, well finished with Plush Bottom, 10 inch Plates $6.00 each

A Wicker Collection Basket, made of best reed obtainable. Size 9 inches. Price $3.00.

USHERS' ARM BANDS

A well made golden Oak finished Gavel

Price $1.00

Stenciled in white made of blue wool felt. 4 inches wide.

Price 50c each

Oval Shaped Usher Arm Band

These Ushers' Arm Bands are very attractive; made of high-grade felt material, in colors red, blue and green, each with white letters, and elastic band to fit around the arm. Size, 6½x4¾ inches. **25 cents** each; $3.00 a dozen.

Blue Felt Ushers Arm Band, with sewed white letters of white felt. Very durable and attractive.

Price $1.00 each

The Modern Farmer

Published monthly by the Modern Farmer at Nashville, (3) Tennessee.

Henry Allen Boyd _____ Owner
Office, 403 Charlotte Avenue.

Devoted to the interests of the Farmer, Truck Gardner, Livestock and Poultry, Breeder, the Home and the People.

Entered as Second Class Matter. April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 403 Charlotte Ave., Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

OUR PLATFORM

1. **A Unit of the National Federation of Colored Farmers in every community of colored farmers.**
2. **Co-operative buying, producing and marketing.**
3. **Every colored farmer a farm owner.**
4. **Abolition of debt-slavery, injustice and persecution.**
5. **A written contract for every colored farm tenant and sharecropper.**
6. **Better rural churches, schools and homes.**

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

HAITIAN AGRICULTURE DOES DOUBLE-BARRELED WAR JOB

WASHINGTON, D. C., —1944 —Agriculture in the Americas, a U. S. Department of Agriculture publication, points out in its July number that Haitian agriculture is doing a double-barreled war job; growing enough food to meet domestic needs, and growing important crops like coffee, rice, sugar, molasses, and cocoa to ship to the Allies.

In addition to these crops, Haiti is engaged in the production of two important industrial crops, rubber and sisal. Within a few years the country expects to help meet U. S. rubber needs.

In discussing Haitian agriculture. the magazine indicates that even before the war the little country was growing almost all of the foodstuff consumed by its population which is approaching three million. In fact, the total annual food imports at that time (mostly wheat flour) amounted to only about 50 cents worth per person. Among the food crops grown in Haiti are corn, livestock, beans, yams, plantains, coconuts, and fruits.

LAW-ABIDING FREEDOM

By Ruth Taylor

The impatient who wants the end before the beginning are leveling criticism against our government, decrying the fact that we deal with established governments only, that we do not deal with governments set up by "liberals" if they do not have the backing of the laws and people of their own country. We are called reactionary. We are condemned for not standing for **"freedom"** which they interpret to mean the right to do as **they** please.

Freedom of itself is a beautiful word - but freedom without law to back it, is anarchy. Just as men must have freedom to think and speak in order to progress and indeed survive, so must they have self-made laws regulating that freedom.

History has proven this again and again. The Roman Empire was great as long as it was composed of disciplined men. To be a Roman citizen then meant to be a free man all over the known world. The Romans conquered not merely by force of arms, but by force of concerted, intelligent action. But when liberty degenerated into license, they fell a prey to the barbaric Germanic invaders.

As the historian, James Truslow Adams, wrote: "Without a vision men shall die. It is no less true that without hard practical sense, they shall also die." This has been the secret back of our country's greatness. America started from a vision of freedom for all mankind, but it was backed up by laws that insured the keeping of that freedom. Freedom alone is not enough. Nor will arbitrary laws suffice. But freedom, backed by laws, conceived and legislated by those to whom they must apply, is invincible.

We cannot safeguard the freedom that is democracy by undemocratic means. Democracy, the rule of the majority, implies an acquiescence to self-government, a willing obedience to the laws of the majority, plus a realization by the majority that minorities not only have rights, too, but are entitled to equal consideration and cannot be trammelled or imposed upon. Rights which we demand for ourselves we must grant to others. That is why free speech and freedom of religion are basic to our American democracy.

"Only freedom which is under strong law to which men consent because it preserves freedom, can endure", Walter Lippmann wrote recently. It is up to each of us who desire freedom, who believe in democracy, who want to preserve our American way of life, to obey our own laws - whether or not we like them—and to accord the same privileges to others. That is the democratic way. That is the way to successful freedom.

TOMORROW'S FARMERS

As farming becomes daily more intricate from the standpoint of production and marketing, which includes the knowledge of what to plant, how to plant, when to plant and where and how to sell the crop, it is important that young people who will be our future food producers, have a wider knowledge of these subjects than ever before.

With these thoughts in mind, the "Young Cooperators" of the Dairymens League Co-operative Association, was started in 1940 in Cattaragus County, New York. Part of their pledge is to help preserve the freedom of agriculture, to help produce clean, wholesome milk with greater efficiency, to take pride in their occupation, and to be ever conscious of its importance to our nation's cause.

In training these young people in the fundamentals of their future business, the Dairymen's League has set an example which more industries might follow with profit.

EDUCATION PLANK OF DEMOCRATS IS CALLED "UNFAIR"

New York,—"If the platform plank on education adopted unanimously by the Democratic National Convention were in force today, chances for fuller educational opportunities for the Negro, especially in the South, would be almost completely blotted out, "Dr. C. B. Powell, Assistant Director of Publicity of the Republican National Campaign Committee declared Friday in a press interview at his head quarters in the Roosevelt Hotel

"The Democrats said at Chicago," he continued "we favor Federal aid to education administrated by the states without interference by the Federal Government."

"The Democrats plan to get control of government funds for educational purposes," said Dr. Powell "and then parcel money out to the states, allowing them to spend it any way they desire insofar as discriminating against Negroes is concerned."

The National Selective Service Act turned the spotlight on the kind of school management that operates in the states with separate schools, Dr. Powell said, pointing out that serious educational and health deficiencies were revealed among Southern Negro draftees resulting in many being rejected for service in the Armed Forces. He said that the average expenditure in the 17 states with separate schools was 38 per cent of the money spent on white pupils.

"While these states might well be satisfied with a handicapped Negro," Dr. Powell said, "the nation as a whole is to suffer as is the Negro race itself."

In the 17 states which have separate schools, he pointed out, states' rights have operated to the disadvantage of Negroes. Prominent educators and leaders of both races, he revealed, contend that the only way the problem can be solved, if the states are given their pro rata share. is for the states to be made strictly responsible to the Federal Government and made to equalize the per capita expenditure of educational funds for Negro as well as white children.

He further said, state school funds in nine of the 17 states with separate schools are divided as follows: In Alabama $850,000 is set aside for white schools and $20,000 for Negroes. The white average per capita is $137 and the per capita average for Negro students is $22. Texas spends $2,100,000 for education for whites and the per capita average is $161. Texas spends $650,000 for Negroes which means $75 is spent for the education of each Negro child per year. Virginia spends $2,-000,000 a year for education for whites and $286 for each white child as against $116,000 for Negroes and $38 for each Negro child. Tennessee allots $757,000 for whites, $80 for each white pupil, $110,000 for Negroes and $55 for each colored child.

In Arkansas $716,000 goes for white education with $143 spent on each white child against $46,000 for Negroes and $15 for each Negro pupil. Mississippi earmarks $730,-000 for whites, $243 for white children, and $59,000 for Negroes and $54 for each Negro child. Georgia spends $611,000 on educating its white population with $203 as the per capita figure. Georgia spends $89,000 on Negro education with $36 spent on the Negro child. North Carolina spends $900,000 on white education, with $112 going to each white pupil; it spents $58,000 on Negro education with the per capita figure at $29.

Negroes in Missouri, home state of Vice Presidential Nominee Harry S. Truman, get their proportionate share of only one of the various federal funds allotted. The states get $31,888,845 by the Morrill, Smith-Lever, Bankhead-Jones and other acts. The $7,149 Negroes get annually from the Morrill fund, along with the other funds, is entrusted to the University of Missouri, white, to pay out. However, the Morrill fund alone has writtes into the the act the requirement of "just and equitable distribution." The University of Missouri in handling the Bankhead-Jones fund and the others gives Negroes nothing, an outstanding example of class discrimination in the use of public monies.

Negroes are 6.8 per cent of Missouri'e population. They get only $7,149 out of a total of $1,233,928 a year, or less than 1 per cent of the money.

They'll Let a Few Cast Ballots in Birmingham, Ala.

BIRMINGHAM, —(A. N. P.)—Charges that the Jefferson County of Registrars was seeking to limit the registration of Negroes to a stipulated quota were made by the Birmingham branch of the NAACP Wednesday in a letter to Dr. J. E. Hines, chairman of the board.

The letter alleged that Mrs. L. S. Gaillard, college graduate, property owner and taxpayer as well as president of the Alabama State Federation of Colored Women's clubs; Miss Sallie Mae Williams, newspaperwoman and J. B. Sims, honorably discharged veteran of World War II and former high school teacher, were refused registration and assertedly told to "come back in August."

Calling attention to a conference held by the branch with the registrars on June 23, the letter said it understood a member of the board to say, "We don't exactly turn them down. We just tell them to come back."

To that statement, the letter replied, "Telling one to come back is inflexibly refusing them registration."

The letter claimed that the branch had 5,000 membership which "has requested us as officers to take whatever steps necessary to bring about a change in this discriminatory practice."

It was signed by Emory O. Jackson, secretary of the branch.

Deny Fighting in Progressive Democratic Ranks

COLUMBIA, S. C.,—(A. N. P.) Wishful thinking on the part of the anti-Negro Charleston News-Courier that there was a "fight within the ranks" of the Progressive Democratic party was rudely shattered Tuesday by John H. McCray, state chairman, who in a letter to the editor of the paper denied a split as related in a story published in the Courier.

"I am sorry to break up a good news story, but we have no fights within our ranks," wrote Mr. McCray. The Courier, seeking to prove that Negroes could not successfully run an organization without white leadership, based its story on a remark by the Rev. H. H. Butler of Hartsville, advising his members not to join the party.

Mr. McCray said that criticism against Butler's action was not a "party affair", but in the interest of all Negro programs. Butler, he said, was not yet a member of the Progressive Democratic party. The chairman went on to say: "I do hope, however, that we can develop a few good fights. The white party is always fighting. Why their last convention was such a big tussle that they split into two camps. If we can have a few party battles," he continued, "we will be able to say much louder, 'we are as true Democrats as ever graced South Carolina.'"

A family in Wisconsin habitually paid 50 cents to an Indian for a pail of blueberries. But one day last summer he upped the price to $1.00. "Why they asked. "Hell of a big war some place", was his laconic reply.—Wichita (Kas.) Democrat.

What's the Answer?

By W. Douglas Brown for (ANP)

(Q) Of the first ten highest paid opera and concert stars for the 1941-1942 season, three were Negroes. Who were they?

(Q) Who was the first Negro to be elected captain of the Boston university rowing crew?

(Q) What is the capital of Abyssinia?

(Q) Who were the stars of the original musical, "Shuffle Along?"

(Q) When was the Afro-American Sons and Daughters organized?

(Q) Who wrote, "Negro Membership in American Labor Unions?

(Q) Who is the founder of Modern Sunday Schools in New York

(Answers on page 5.)

Fort Benning Names Diamond for Soldier

FORT BENNING, GEORGIA—(ANP)—Fort Benning's Reception Center baseball field has been officially named "George Watson Field" in honor of the first colored inductee to pass through the reception center and win the Distinguished Service Cross.

Truman Gibson, civilian aide to the secretary of war, highlighted the dedication program with a talk in which he told more than 5,000 colored soldiers that they were stationed at the "best training center in the army."

Mrs. Emma Gaines, grandmother of Pvt. Watson, and Jesse Hill, a brother of the deceased soldier, came from their home in Birmingham to be present at the July 4 ceremonies. The aged grandmother reared Pvt. Watson.

Pvt. Watson received the posthumous award of the D. S. C. from Gen. Douglas MacArthur for conspicuous gallantry in the southwest Pacific. Watson, who was inducted into the army September 1, 1942, from Birmingham, lost his life in Pordoch Harbour, New Guinea. He had assisted several men to safety on a raft from their sinking boat. Then, overcome by exhaustion, he was pulled under and drowned by the suction of the boat.

A bronze plaque was unveiled at the dedication by Jesse Hill which had the name of the field and an excerpt from the citation on it. The plaque then was bolted into a large rock near the baseball diamond.

List Women for Key Committees

WASHINGTON, D. C.—(ANP) — A national roster of women qualified to serve on national and international committees and delegations looking to post-war adjustment is being established, the National Council of Negro Women announced last week.

The move is an outgrowth of the conference held by 200 women three weeks ago at the White House where the spokesman for numerous women's organizations placed their claim for a right to share in negotiations and conferences being held to restore the world to peace and to maintain it that way.

"We plan to establish this list and to make recommendations of qualified persons whenever the opportunity permits," Mrs. Jeanetta Welch Brown, executive secretary of the council, announced.

Mrs. B. Dickerson Works for Dewey

Mrs. Bettie Dickerson of New York, better known in Nashville where she once lived as Bettie Walker has been in Nashville, the guest of Mrs. Kirkpatrick, 1604 Scovel Street. Mrs. Dickerson is an ardent worker for the election of Gov. Thomas E. Dewey for the Presidency, although not a politician. She is dissatisfied with the treatment of Negro Soldiers under the Roosevelt Administration, she states, and believes this condition would be changed by the election of Dewey as President.

TRUMAN PROMISES SQUARE DEAL TO ALL, IF ELECTED

New York—"It is our aim and goal that Negroes will share equally in opportunities offered during the period of reconversion, and I feel that they will," so declared Senator Harry S. Truman, Democatic candidate for vice-president in a press conference in Detroit on Labor Day.

The Senator told reporters that "Negroes have never had a better friend in the White House and I know that they are going to continue him there."

Commenting on the great gains made by the Negro people under the Roosevelt administration, Senator Truman stated: "I feel that the improved conditions of Negroes are going to improve still more as we swing into the peacetime era."

Senator Truman was in Detroit to address a mammoth Labor Day Rally. Speaking before thousands of UAW-CIO and AFL workers, he warned: "In any society which puts property first and humanity second, this fact is a major tragedy. If a nation is to be run for profit first and people second, this fact of ever higher productivity means certain ruin—ruin for labor and ruin for business."

"What you want today," Senator Truman declared, What all American labor wants, is peacetime security, steady work, the knowledge that you will have a job after this war is over."

White Scholar Looks at Negro World

By Emmet Phillips (For ANP)

SMALL TOWN PEOPLE NOT SO BAD

Are you one of those susceptible persons who believes an oft repeated statement just because you haven't the knowledge or courage to question its truthfulness? Take the statement so often heard and accepted as true, that small town people are more narrow minded and intolerant than those who live in the city.

If you live in the city you know that there is an Italian section, a Polish section and a Negro section, to name the most noticeable ones. These people live in another world so far as participation with Anglo Saxon Americans in the social and even religious life of a metropolis is concerned. You don't see Italians, Poles or Negroes at social affairs conducted by the Anglo Saxon Americans; if they ever had the boldness to appear at one of these functions they would be given the bum's rush. In the religious setup it's the Italian church or the Polish church or the Negro church, and while these people would not get the bum's rush at the English, German, or Welsh church their presence would be resented privately if not publicly. Even the political setup is narrow. It's the Italian Republican club or the Italian Democratic one, the Polish Republican club or the Polish Democratic one. Although Italian and Polish support is sought by the so-called native stock on election day, mixing with them at meetings is out.

Now let me tell you how minority groups fare in a small town, my own to be exact. In a town of 1400 we have an Italian shoemaker who has done very well indeed (much better than he did in a neighboring city having a large Italian population) also an Italian barber who not only does a good business but is better liked than either of the other two barbers who incidentally are of English and German descent respectively. Italians operate farms on the outskirts of our town and they too are welcome. The outstanding insurance man in our town is of Polish descent. Polish people mine iron ore in our local mine and Polish farmers contribute to our well being to say nothing of our taxes. What few Negroes there are in our town are not segregated, but live in various parts of the town just as the Italians and Polish do.

In our local young Republican club Italian and Polish men meet and socialize with the rest of us, English, Irish, Welsh, German, etc. On Sunday morning we of various nationalities meet in church. I experience real pleasure in belonging to a church which honestly welcomes souls regardless of nationality or color. The athletic pride of our community is a Negro young man, now in the service, who played hockey on the high school and town teams. This young man became a professional boxer, a good one, and every victory which he achieved was hailed with joy by our local citizens.

Whether it's a ball game, a music festival, or a town meeting we're all there, Italians, Poles, English, Irish, German, Negroes, Welsh, Scotch, etc. We live as one community family and when death strikes we pay our respects as fellow townsmen.

You'd have thought it was an Irish wake had you been around when our Negro athlete's mother was in her casket. Baptist though she was, Catholics of various nationalities were there. You see, we felt that this family belonged to us.

Now I don't claim that our town or any other small town is free from narrow mindedness or intolerance, but I do believe that small town people are more tolerant and not so narrow minded as city people, and the reason is that small town people live in friendly proximity to each other while the city people build a wall and live in separate worlds, thereby breeding distrust. And when you distrust your fellow citizens you're on your way to becoming intolerant.

BEATING THE GUN

(Alvin Moses)

REMINDS ME OF TENNYSON'S BROOK

NEW YORK, —(ANP)—He's a member of the United States' coast guard and a fine brother-of-a-laddie he is . . .bee-jabbers (pardon my Irish, or Gaelic), racing for the DMT subway trains, of a busy mawning (morning) . . . Eulace Peacock, an immortal of Temple (Philadelphia) university, is the subject who seems to go on forever and forever.

Time was when track authorities were saying that the one man in the world who appeared to have the well-known "Indian sign" on incomparable Jess Owens,—was this same . . . Eulace Peacock. That was back in 1936, the year when Herr (Schicklegruber) Hitler, of Chermany (Germany), was calling America's brilliant Negro athletes who were showing up his Nazi-murderers-protem, "black auxiliaries."

No greater sprinter or broad-jumper than Eulace Peacock ever breathed, unless it was, as I've often stated, Owens.

In this year of 1944, we find Peacock being crowned . . . National AAU Pentathlon Champion, piling up 2,852 points in winning three of the five major events at Elizabeth, N. J. Peacock won the broad jump, javelin throw, and 200-meter dash. Eight years since the Berlin Olympic games and this classy brown Hercules continues to stand out in the athletic firmament . . . like a sore thumb. Highly intelligent, personable and a hale fellow well met, Eulace Peacock is a definite credit to his race and to the branch of his country's armed services.

LEROY PAIGE SHOWED SCOFFERS

For years a lot of self-styled white writing experts, have poked fun at Leroy (Satchel) Paige. Paige, sort of a legendary figure in the annals of Negro baseball in this country, has been made the brunt (supposedly good-natured) of most of the whimsies some writers can conjure up.

But during the first week of July, the elongated one who toils in the livery of the Kansas City Monarchs team, won what amounted to rave notices from New York writers of . . . all stature.

The amazing part about Paige lies in his age. He admits to something like 46, and his hard-fast-one still whistles by as if hurtled towards the platter by young Bobby Feller, Cleveland, here now in the U. S. navy.

While on the subject of Paige and his unquestionable wizardry as a pitcher, we want to say a word here for Roosevelt Davis of the Ethiopian Clowns, Cincinnati.

Davis impressed me as being the finest pitcher I have looked at since the days of "Army" Rogan and "Little Pitch" Harvey, of the Brooklyn Royal Giants, New York. On my team, choosing between Davis and Barnhill, I'd take Davis and let the sideline managers laugh their hearts out . . . Yes sir, I would, and I don't mean—pernaps.

ALL 'UNCLE TOMS' ARE NOT AMERICANS

On Sunday, July 8, a group of the star members of three local cricket (Colored) clubs, faced a Royal Air force (white) team from Mt. Hope, Hamilton, Ontario, at Triboro stadium, New York City. In the interest of better understanding and the practice of equal rights towards long-suffering members of my race in this, our native land, . . . many years of my life have been devoted to such campaigning in various Negro and white newspapers.

Naturally, we highly endorse such meetings like the one above if for no other reason than it supports the principle of our crusading. When we learn that many of the "Uncle Tom" practices, deprecating acts that our British (West Indians) cousins have accused native Negroes of committing, have been employed in order to make possible such meetings; . . . it causes us to think mightily!!!

It remained for a local white newspaper, the New York Evening Post, of last Saturday, to bring the story out into the light. The chances are that one of the high moguls of the cricket association raced over to the newspaper office to release the story there, not caring for the small publicity that would be given it by the local Negro press. Leonard Cohen, who writes a column called "The Sports Parade," commented on the phase of Uncle Tomism we refer to as follows:—"These leading 11 colored players who learned the game in the British West Indies have guaranteed the expenses of the visiting cricketeers who in peace time were members of club, school and county teams in England."

We can assure you that were these same gentlemen asked to donate as little as $5 per head in the interest of Negro education, etc., in this, the land of their adoption, they'd walk away from you.

DUKE OF WINDSOR VISITS BAHAMIAN FARM WORKERS HERE

WASHINGTON, D. C.,—1944—Bahamian farm workers at two places in Delaware—the farm labor supply center at Cool Spring and Chandler's Orchards, near Cool Spring—had a caller from home Tuesday, August 8 and gave him an enthusiastic welcome. He was the Duke of Windsor, Governor of the Bahamas.

For the Duke it was a case of combining pleasure with business. It was an official inspection trip to see how these subjects of the British Empire were getting along. And he had a good time making it. He expressed pleasure over seeing the workers, having lunch at the Cool Spring center, and hearing of their experiences in helping American farmers produce one of the Allies' most essential weapons of war—food.

After the inspection, the Duke commented that he had found the workers "very well taken care of and in very good condition."

The workers were equally pleased over the Duke's visit. At the Cool Spring center, the 175 living there gathered around to chat with him, pointed with pride to their kitchen, mess hall, health clinic, living quarters, and other facilities, and staged a little impromptu entertainment for his benefit. And at Chandler's Orchards, as the Duke stepped from the automobile, the 19 workers there, lined up alongside the road, sang in unison. "God Save the King."

Photographers wanted the Duke to climb a ladder and pick peaches. He agreed to do it. But he found the peaches on that particular tree beyond his reach. A Bahamian, quickly noting the Duke's predicament, moved behind the tree and handed peaches up to the Duke from his basket. Amused by this, the Duke joked, "This is the lazy man's way of doing it." as he placed them into his basket.

Accompanying the Duke on his tour were Lieut. Col. Henry Walsh, assistant director of labor, War Food Administration, Washington, D. C.; John A. Hughes, labor officer of the Bahama Government; and several officials of War Food Administration's Office of Labor. The Duke came from New York City to Wilmington, Delaware, by train and returned to New York City by train that night from Baltimore, Md., after a 200-mile auto trip into Delaware and Maryland.

More than 5,700 workers from the Bahama Islands, representing about 20 percent of the adult population of that British West Indies colony, are in the United States this summer, under contract with WFA's Office of Labor.

HARSH TREATMENT GIVEN NEGRO TROOPS FLAYED BY LEADER

President of Alliance Charges New Deal Is Responsible for Army Evils

CHICAGO—"If Negroes knew the true story of how our boys are being mistreated in the armed forces, not a one would vote a Democratic ticket again," declared Robert L. Ephraim, president and founder of the Negro World Alliance, here last week in an interview at his headquatrers at 64 West Randolph Street.

"The disgraceful record of Negro soldiers being shot down like dogs by white civilians and white members of the military, not only in the deep South but elsewhere, is one which President Roosevelt, as Commander-in-chief of our armed forces, can alone assume the responsibility for," he continued.

Ephraim's World Alliance, founded in 1933, allied itself strongly with the cause of Ethiopia, then about to be attacked by Italy. In the ensuing years the organization gained in membership until in 1935, during several demonstrations, its membership was estimated at close to 10,000 members, many of whom were Chicagoans. Today, he said, his roster has over 2,000 active members in the Chicago area.

Recently relieved from active army duty and transferred to the enlisted reserve, Ephraim pointed out that as a private, and later a first sergeant, he had been in the following army training camps: Fargo, North Dakota; Fort Snelling, Minnesota; Kessler Field, Mississippi; Camp Lee, Virginia; the Richmond Army Air Base, and at Langley Field, Virginia. With a military certificate entitling him to a commission, Ephraim said the story of adverse conditions affecting the Negro servicemen are the same both in the North and in the South.

"Thousands of Negroes are bitter at President Roosevelt's persistent refusal to do something about the way our colored servicemen are being treated," he said, "and Mr. Roosevelt is not ignorant of what is going on. The Negro press, delegations from various organizations, and the ordinary citizen who has a husband, son, brother, nephew or cousin in the armed forces, write him daily. Yet he does nothing. It is his job to see that Americans are not discriminated against because of race and color, especially when they are sacrificing their lives for the country of their birth.

"This administration," he pointed out, "is guilty of a criminal waste of manpower and at the same time, tries to cover up for the slipshod manner in which manpower is distributed by claiming shortages here and there. I have seen Negroes with college degrees hauling logs in the swamps of Mississippi. I have seen these same men deliberately held back in promotions they clearly had earned.

"I have seen Negro soldiers," he asserted, "in the service for 18 months and not reclassified. They sent Negroes at Kessler Field in Mississippi, to clerical school who could not read or write their names. They, on the other hand, sent Negroes with college degrees, background and training, to the cooks and bakers school."

Ephraim, whose record in public life has been militant in the service of his people, feels that the revelation of New Deal duplicity on the Negro in the armed forces would do more than anything else to wean away hesitant Negro voters from the Democratic Party. Through his organization and a small tabloid newspaper, "TNT", Ephraim is carrying on a private campaign to educate Negroes to the danger in following the Democratic bandwagon in 1944.

SCS CHIEF IN SOUTH AFRICA

Dr. Hugh H. Bennett, chief of Soil Conservation Service of the U. S. Department of Agriculture, has gone to South Africa at the invitation of the government of the Union of South Africa to spend two months working with agricultural officials there. Recognized as a world authority on soil conservation and land use, Dr. Bennett will exchange information with officials of the South African government regarding social and technical aspects of the work being done in both countries to control soil erosion and advance sound land use practices.

Here's the Answer

(A) Marian Anderson, Paul Robeson and Dorothy Maynor.
(A) Jay McCrae, 21 year old Baltimorean.

(A) Catherine Ferguson.

Hunter (to old guide): "Have you ever been lost in the woods?"
Old Guide: "None—I never did get lost, but I was bewildered once for four days."

THE NEW ORDER

The present United States Supreme Court dealt a body blow to the foundation of insurance when it classed it as interstate business and subject to the anti-trust laws.

For 75 years insurance has been subject to state regulation. At present the insurance industry and insurance commissioners of the various states, which regulate the industry, are hanging in the air waiting for the Federal bureaucracy to figure out how to displace state supervision with Federal supervision.

To remedy the situation the House of Representatives voted 283 to 54 to amend the Sherman and Clayton anti-trust acts so they shall not be construed to "apply to the business of insurance." Now the matter will come before the Senate.

There is no longer any definition for interstate commerce. Certainly a trunk manufacturer whose agent sells his product to travelers who cross many state lines, is as much in interstate commerce as an insurance company whose agent sells an insurance policy.

In the face of such confusion, industry is expected to absorb the postwar unemployment load, pay taxes and maintain prosperity. Or do the directors of our growing centralized government want that to occur? Is their real objective a program to make it difficult for private enterprise to carry on, thereby forcing government deeper into business?

J. FINLEY WILSON, HEAD OF ELKS, URGES ORDER TO SUPPORT DEWEY

Fraternal Leader Raps Failure of Chicago Mayor to Show Proper Courtesy to Members of Largest Negro Fraternal Organization

Chicago—J. Finley Wilson, leader of the 500,000 members of the I. B. P. O. of Elks, told a jam-packed house of delegates and visitors attending the 43rd Annual Convention of the organization at Metropolitan church here, that: "Elks would support that aggressive, young man from New York, Governor Thomas E. Dewey, for President of the United States."

Deafening cheers rang out through the auditorium when Mr. Wilson, who was re-elected Grand Exalted Ruler, made the announcement that the "antlered herd" would back the New York Governor against President Roosevelt.

The 1,100 delegates also re-elected by acclamation Mrs. Elizabeth Gordon as Grand Daughter Ruler.

In a speech just before his re-election, Mr. Wilson ripped into the New Deal Administration generally, then specifically blasted Mayor Edward J. Nelly, devout Roosevelt follower.

"Mayor Kelly did not keep his promises to us insofar as providing a police escort or a City Council appropriation to pay expenses, and we had to pay for a parade permit and for the construction of the reviewing stand."

The Grand Exalted Ruler warmly praised Governor Dwight H. Green, who greeted the delegates on behalf of the State of Illinois, for his hospitality.

Mr. Wilson accused the Mayor of finding it convenient to be out of town after promising to address the Convention. The Rev. Junius C. Austin, Grand Chaplain of the Elks, was sent as a representative of the Mayor, but the meeting was adjourned before he could speak.

It was observed also that Chicago is the first city in a score of years whose mayor did not honor the visiting Elk's policemen with temporary appointments for the duration of the convention in his city.

Describing the action of Mayor Kelly as indefensible and typical of public officials when they become drunk with power, Mr. Wilson said he would make a campaign issue of the "insult" and would take it to the people in Negro districts here and in other states.

WHAT BECOMES OF 4-H'ERS?

Looking back over 34 years of home demonstration and farm club work, the Negro Agricultural Extension personnel of Okfuskee county, Oklahoma, became interested recently in finding out what becomes of 4-H boys and girls. So they made a survey. And according to a report which the U. S. Department of Agriculture has just received, former 4-H clubbers of Okfuskee county are giving a good account of themselves.

According to the survey, 46 percent of the former 4-H'ers are operating farms growing vital war crops; 29 percent are teaching school; 13 percent are holding jobs in various fields, including Extension work, and insurance salesmanship; 10 percent are operating business, and three percent are in professions.

Incidentally, club work among colored youngsters, had its origin in Okfuskee county. As early as 1910, four years before the message of the Smith-Lover act, Mrs. Annie Peters Hunter, first colored home agent, was carrying on club work among farm girls. They weren't called 4-H'ers for head, heart, hand, and health, but were known as "Tomato club girls."

PHILIP MURRAY AND ROBERT E. HANNEGAN START TO "FEUDING"

Democratic Chairman Accused of Being Anti-Labor By CIO President

New York (WDL)—President Philip Murray of the CIO is reported to have recently criticized Robert E. Hannegan, chairman of the Democratic National Committee for interference on behalf of the company in a case between the United Retail, Wholesale and Department Store Employees of America, CIO, and the Famous-Barr department store in St. Louis, Mo., according to a front-page story in the Mid-West Labor World, organ of the union. Labor circles in St. Louis are seriously disturbed over the charges, as Hannegan is running the Roosevelt campaign and is the main political sponsor of Senator Truman.

Harold J. Gibbons, director of the Joint Council of the United Retail, Wholesale and Department Store Employees, said union officials had received information from reliable sources charging that Hannegan had approached members of the National Labor Relations Board, urging them to rule against the union's demand for a new election.

The story was first revealed by Edwin A. Lahey, veteran labor reporter of the Chicago Daily News and reprinted by the Mid-West Labor World.

The Lahey story in the Chicago Daily News follows:

"Washington, August 11.—Philip Murray, president of the CIO, had a testy conference with Robert E. Hannegan, national Democratic chairman, in Washington Tuesday and accused Hannegan of attempting to influence the National Labor Relations Board in favor of a St. Louis department store. . . .

"Hannegan hotly denied the accusation, although Murray is not the type to make such an accusation lightly. At any rate, the meeting broke up in a surface appearance of friendly understanding between the two men.

"This incident, which took place when the wounds of the Democratic convention should have been healing, serves to emphasize that the President has a large-sized job of peace-making to do in his own family, particularly between his close political and administrative aids, such as Hannegan and James F. Byrnes, and his labor backers of whom Phil Murray is No. 1.

"In his meeting with Hannegan, Murray related that one of his unions, the retail clerks (who had that scuffle with Montgomery Ward), lost an NIRB election last January among the employees of the Famous-Barr department store in St. Louis.

"The union filed an appeal from the election to the NIRA, asking the Board to invalidate the election and call another on the ground that the store management engaged in illegal tactics during the election campaign among the employees. The union's appeal is now before the board.

"Officers of the union filed with Murray and with Lee Pressman, general counsel of the CIO, their reasons for believing that Hannegan had approached some of the board members (since his election as national Democratic chairman) to intercede with them and turn down the union's appeal for a new election.

"The meeting between Hannegan and Murray followed, with the Democratic leader apparently eager to convince Murray that he had not meddled in the case."

JAMES A. JACKSON ENTERTAINS FRIENDS OF "ESSO" AT PARTY

Popular Standard Oil Representative Gives Account of Company's Aid to Negroes.

A group of a dozen or more business men, the friends and associates of the noted James A. (Billboard) Jackson, were his guests at an enjoyable luncheon in the private dining room of the Waikiki Cafe, 16th Ave., N., and Jefferson St., on Tuesday night of this week, and heard the popular New Yorker make a report on the activities of "Esso Marketers" the branch of the great Standard Oil Company, with which Mr. Jackson is connected.

For several years Mr. Jackson has gone up and down the country establishing colored men in "Esso" filling stations and he had an interesting series of stories to tell the successes these men have made in the filling station business. The fine relationship that colored men are sustaining with the Standard Oil Company and the increased patronage colored citizens are giving Standard Oil products, were revealed in Mr. Jackson's talks. The net result was that there were substantial pledges made by business men at the luncheon that they intend to increase their patronage in appreciation of the broadminded and liberal attitude that officials of Standard Oil are manifesting toward their colored patrons and workers.

Among those in attendance at the luncheon besides the host were Walter N. Pettiford, also a special representative of Standard Oil and traveling with Mr. Jackson; Messrs. Jasper W. Pattion, H. E. Clark, Joe W. Jackson, Matt Borgus, Halliburton, I. T. Creswell, Woodson Williams, Ephriam Bateman, Milton Robinson and Randall Tyus.

Some of the men present were long-time employes of Standard Oil and also stockholders of the world-famous company. Speeches made at the meeting lauded the generosity of the company toward the educational and religious uplift of Negroes in the United States.

James A. Jackson, formerly connected with the United States Department of Commerce, and a veteran newspaper man, is always given a hearty welcome when he visits Nashville and his visit this week was no exception. His associate, Mr. Pettiford, also made a fine impression while here.

U. S. Helps Deal by Lend-Leasing Four American Planes to Ethiopia

Washington, Sept. 14 (ANP)—With the disclosure that Ethiopia had granted Great Britain post-war commercial air rights, Maj. Gen. B. F. Giles, U. S. Middle East commander, handed over the first of four lend-lease American planes when it arrived at Addis Ababa, Ethiopian capital, last week. The air agreement between Emperor Haile Selassie and Great Britain was signed in 1942. Col. John C. Robinson of Chicago is again head of the Ethiopian air program.

While the United States has asked for no concessions in return for the planes nor for the air bases which have been built by American forces in Ethiopia for military purposes, Emperor Haile Selassie's decision to grant Britain exclusive commercial air rights over Ethiopia is said to be in recognition of Britain's aid in liberating the Ethiopian empire from Italy. The agreement, dated Jan. 31, 1943, revealed that Britain promised Ethiopia economic assistance and restored Haile Selassie to full sovereignty when Italian invaders still held the country.

The British-Ethiopian agreement is said to have had the sanction of Adolph A. Berle, assistant secretary of state, who attended London conferences with Lord Beaverbrook, lord privy seal, privately known as William Aitken. All commercial aircraft other than British are barred from Ethiopian skies in the agreement.

Vote Ban Probed

Mobile, Sept. 14 (ANP)—Franchise ban last May to Mobile Negroes is being probed by the FBI.

Mobile primaries were held shortly following the supreme court rule which granted Texas Negroes the right to vote in the Democratic primaries.

FROGS BEAT THE DROUGHT

If you were a frog, and faced with the problem of drought, what would you do?

You could safely copy the method of either one of two species of frog, for while one runs from his danger, and the other stays to meet it, they seem equally successful.

The small, toothless frogs which dot the pools of South America with splashes of brilliant color are the ones who do not wait for the drought to catch them. As soon as these wee creatures have decided that a deeper pool must be found, whole families leave. The babies are carried pick-back fashion on the backs of their mothers, where they adhere because nature has provided a sticky secretion which fastens them securely.

The placid, patient frogs of central Australia, however, refuse to budge from their ponds. Warned in advance by the drying up of the puddles, they drink all the water their bodies will hold, and then tunnel far into the damp ground. By this means the frogs can keep alive until the pool is again bubbling with water, and have been known to endure for years.

Ida M. Pardue

SOMETHING REALLY NEW

Over 17,000,000 American homes are heated today by stoves.

For about as many centuries as we know, mankind's primary wants have been: palatable food, a compatible mate, shelter and bodily warmth

As to heat, Benjamin Franklin observed that there had been almost no progress for 2,000 years and put together his famous idea in home heating,

But at last a new stove that is really a furnace is here—a stove that one can forget for a week in moderate weather—that burns up its own smoke—that whacks one third off the coal bill for a starter—that can heat an entire bungalow snugly—that will cost less than a hundred dollars—that is ready for postwar use.

This new departure in heating embraces the most radical and revolutionary principles that have ever been advanced for economical comfort for the great bulk of American homes. It has been developed by the bituminous coal industry's best technical minds, cooperating with leading United States manufacturers of heating equipment.

BACKS APPEAL OF DR. STUDEBAKER TO YOUTH OF NATION

Supt. W. A. Bass Urges Response to "Back to School" Message

Supt. W. A. Bass of the Nashville City Public Schools endorses and urges widespread publicity of the message to young people issued recently by Dr. John W. Studebaker, urging them to return to school so as to be prepared to take their proper place in society following the war.

"Get Set for Tomorrow—Go to School Now," is the subject of the message of Dr. Studebaker, who is United States Commissioner of Education. His appeal is as follows:

To the Youth of America:

Let me lay before you a serious problem we Americans must face; a problem only high school students can solve. Our nation, which has grown great by cultivating the abilities of its people, is now rolling up a colossal deficit in education. Our college classrooms have few men students. More than 1,000,000 fewer young people your age are now in high school. Hundreds of millions of man hours of learning are being lost forever.

You want this country to be powerful and prosperous after the war. But this country can do its duty in world leadership only if its citizens continue to have the "know how."

The best place for you to get ready for tomorrow is in high school. The army and navy wants boys and girls to complete their high school education before joining the services. The War Manpower Commission says schooling comes first.

To give up a job in September and return to school may mean a temporary sacrifice of income. It may seem to mean sacrificing work essential to the war. But your "battle station" is in school. Your nation asks that you return to your post of duty in high school and stay by it until you have finished the job.

Cordially,
(Signed) John W. Studebaker,
U. S. Commissioner of Education."

"What's the date today?"
"I don't know."
"Take a look at that newspaper."
"It's no use. Its yesterday's paper."

THE FIRST HORSE DESCENDANTS OF THE DAWN HORSE

The splendid animal we know today as the horse, is a far cry from the Dawn Horse, a midget in size, which roamed the eastern slopes of the Rocky Mountains some forty-five million years ago.

The modern American saddle horse, a medium-sized equine, stands an average fifteen and a half hands high, and tips the scales at half a ton, while Eohippus, for so the daddy of them all was named, was about the size and weight of a large tame cat. The largest member of the family weighed not over one hundred pounds and stood about twenty inches high.

Eohippus made his debut on the North American continent at least forty million years ahead of man. He just missed making the acquaintance of the dinosaurs and other scaly horrors who took their final curtain during the Age of Reptiles, the era just preceding the Eocene period, which Eohippus helped to usher in.

It seems fantastic that the little horse survived at all, since he seemed so ill-equipped to protect himself against enemies. His teeth were small and of no value whatever except to chew his food. His body was well-rounded and his neck short, but what Eohippus lacked in armament he more than made up for in speed. Probably nature's first attempt at streamlining, this midget's only defense was his legs, which at this point in his development did not as yet end in hoofs. His feet with four toes on the front feet and three on the back, were well padded in the manner of a dog's feet, and gave him the added advantage of being able to come and go almost without a sound. Strictly a vegetarian, the Dawn Horse kept to his own kind, and avoided the proximity of his own enemies. He fed and watered in the shelter of lush vegetation which flourished in the tropical climate. Thus, when danger came to him he took to his flying heels and scampered away, his toe nails helping him to cling to rocky, steep slopes where other animals could not follow.

The Dawn Horse was, for his time, the fastest thing on legs, and this fact coupled with his disposition to keep out of trouble, made him a permanent resident of North America until the Ice Age caused his descendants to migrate to Asia, South America, Europe and Africa.

BISHOP BRAY URGES RURAL CHURCHES TO PUSH WAR-TIME FOOD PRODUCTION

Bishop James A. Bray, who recently retired as president of the Fraternal Council of Negro Churches in America, urged in his annual address before the Council that rural churches take a more active part in encouraging increased war-time food production.

He pointed out that the rural church has an excellent opportunity to offer effective support to the food production program so that our fighting men and our Allies may continue to be well fed and kept in good fighting trim to carry the drive for victory to the enemy's door. Said he, "The soil building program of the land at maximum production levels has been an important factor in assuring adequate supplies for our armed forces, and also in raising the standard of living of farm people. The continuation of the AAA program in the postwar era will go a long way toward assuring economic freedom for Negro farmers."

The Fraternal Council has organized a program among the rural churches for promoting increased food production. Some of the churches are growing gardens, others have organized staffs of workers to assist farmers in their production efforts.

FOREIGN TRADE A NECESSITY

In discussing the importance of a nonpartisan plan for trade between nations as the solid foundation for peace, employment and prosperity, Alf M. Landon, former governor of Kansas, and Republican nominee for President in 1936, said:

"A lot of people have the mistaken idea that a substantial portion of our lend-lease materials will be repaid. Many assume that we can export record-breaking quantities of finished goods to Europe, the Orient and South America and that we can carry most of our foreign shipments in our own ships and that while doing all this we can still maintain air-tight tariff barriers for the protection of all domestic industry.

"In foreign trade, a nation gains capital in three principal ways: The sale of goods, the sale of services and the receipt of income from foreign investments.

"Conversely, the nation that habitually enjoys a favorable balance of trade from everyone is some day going to find its customers in distress. The time comes when it cannot continue in foreign trade unless it agrees to purchase more goods, or more services, or arranges to extend credits to these customer nations.

"Following the first World War, we were unwilling to accept large imports. We hiked tariff rates to an all-time high. Then the monetary devaluation of 1933-34 had the indirect effect of raising them still higher. However, we had to sell abroad so we subsidized our customers with large credit grants.

"Are we going to make those mistakes again? If we are to avoid it; we must learn that international trade is a two-way street that can't be blocked at either end without creating a traffic jam.

"Our industrial system, which in its infancy desperately feared the competition of foreigs imports, is now a colossus hungry for world markets.

"A free and easy inter-exchange of raw materials and finished products among all the nations of the world is the quickest way to world prosperity, and world prosperity is the number one prerequisite not only for American welfare but lasting peace. If all parties were to join on that kind of a foreign plank something worthwhile might be accomplished.

"We can make our currency the soundest in the world We have the largest and most modern merchant marine. We have the most efficient mass-production system. I believe it is to the interest of the United States to unite with other nations in a spirit of mutual concessions and mutual responsibility in removing economic frictions.

"No system of extravagant spending on public works will bring the prosperity that the waiting markets of the world will bring.

"I believe this is the only way we can enjoy solid prosperity, and I believe it is necessary if we are to develop among the nations of the world the type of social and economic relationship upon which peace ultimately can be based.

CAN TOMATOES NOW

While tomatoes are plentiful over most of the country at this time, only five-eights as much commercially canned tomatoes and tomato juice will be available to civilians this fall and winter, the U. S. Department of Agriculture warns. Thus, it seems a good idea to can all the extra Victory Garden tomatoes now. Quantities of tomatoes may also be purchased from the markets and canned.

Two other reasons for canning tomatoes are: (1) they are a good source of vitamin C, and (2) ration points are again required to purchase canned tomatoes.

AN IDEA IN A CARPET BAG

This country has always done big things in a big way because the American people as individuals have never known anything but complete freedom. And though it may sound like a blast of hot air from the chamber of commerce the right to create and build a business or an industry and earn a reward for doing it, is an inherent part of American freedom. If that right is taxed and regulated out of existence, the greatness of America and her freedom will become a myth.

The history of the express business is typical. For more than a century, the word express has stood for speed. In 1839, William F. Harnden, a pioneer railroad conductor, had an idea. He quit his job and devoted himself to the business of putting it to work. He became the world's first express messenger, traveling between Boston and New York by the fastest conveyances of that day, carrying a carpet bag. The carpet bag contained packages of money, documents, jewelry, gold and other valuables and articles entrusted to his care. Gradually Harsden's express business expanded. The carpet bag became inadequate, and in time a railroad car was needed to hold all of the things that people wanted him to carry. That still was but the beginning. Today the Railway Express Agency maintains 23,000 offices scattered throughout the United States. It uses more than 200,000 miles of railway lines, 13,000 miles of steamship lines, 45,000 miles of airlines, and 16,000 miles of motor truck lines in its regular daily operations. As an example of what such a service means to the war effort, it is sufficient to point out that in the single month of May, 1943. 253,360 pints of blood were handled by express for the Red Cross.

In this land of 3,000,000 square miles, new ideas are springing forth in men's minds every second of the day. Some of those ideas are the seeds of new industries which may one day benefit all mankind. No one could conceive of the future in store for the idea What we can and must do in this country is to save the right of the man with an idea to put his idea to work profitably. In saving that right, we are saving the meaning of freedom in America.

Prefer Dewey

New York—Expressing a wide preference for Governor Thomas E. Dewey, delegates to the National Negro Funeral Directors Association last week voted 56 for Mr. Dewey and 42 for President Roosevelt in a poll on the question, "Who is your choice for President of the United States."

The roll was taken Monday afternoon at the Reniassance Casino where the annual convention of the Association was held August 21 to 24. The meeting was attended by delegates and visitors from every section of the country.

Edgar G. Brown, director of the National Negro Council, who conducted the poll, said the vote was in keeping with the results in two other polls taken in 23 states in which Negroes vote. The trend to the Republican Party is evident throughout, he said.

REVOLUTION OR RESIGNATION

"Anything which facilitates ambition towards paternalism obstructs democracy, and nothing could contribute more to this end than the impounding of the earnings of the people by a government which pretentiously proposes to support them,' says the Hon. V. J. Shricker, Judge of the chancery court, Mississippi.

"In democratic ages tyranny always begins with benevolence, and this benevolence, feeding upon itself, is supplied through exactions from the people—whatever the intention, this process gets beyond control, and with compulsive force, defeats itself in direct proportion as the demand for charity comes to exceed the demand for liberty. In their inevitable order, indolence, poverty and vice advance in succession, until revolution defeats the system, or resignation enslaves the people.'.

FOOD PRODUCTION INCREASED

(Continued from Page 1.)

pork for 1,584,800 men, and enough milk for 1,344,500 men.

Livestock Sales Increase

Total sales of livestock and livestock products in 1943 from the farms of these families, and the percent increase over their sales in 1942, were:

Hogs, 532,361,500 pounds, 56 percent increase.

Cattle and calves, 432,360,700 pounds, 43 percent increase.

Sheep, 62,777,800 pounds, 30 percent.

Milk, 571,116.000 gallons. 18 percent.

Eggs, 126,333,300 dozen, 32 percent.

In the meantime, these families produced for home use 149,146,500 pounds of hogs, 29,371,100 pounds of cattle and calves, 1,049,900 pounds of sheep, 163,089,200 gallons of milk, 35,683,000 pounds of chickens, and 42,916,200 dozen eggs.

The families surveyed had 49,579,-300 acres in farms in 1943, 7.7 percent more than the year before, and of this acreage they had 19,521,-300 acres in crops, which represent an 11 percent increase over 1942.

Negro Farmers Make Contribution

In the Black Belt of Alabama, for example, scores of Negro FSA borrowers have found profit in shifting from cotton to cattle. As of June 20, some 32 Negro borrowers who have organized the Haynesville Farms, Incorporated, in Lowndes County, Alabama, produced 134,823 pounds of milk, for which they received checks totaling $3,322.46. Out of this amount they have paid $1,559,25 on their FSA loans and $446.41 as rent. Most of this milk is sold to nearby Army camps. Many individual FSA farmers in this area also sell milk on established commercial milk routes.

Mrs. Minnie Kelly of Hinds County, Mississippi, last year, sold $771 worth of pullorum-tested eggs from her pedigreed flock of New Hampshire Reds to hatcheries in Jackson, Mississippi. She has 171 laying hens at the present time and says she will have 1,000 "by Christmas." by fall she expects to have more than 1,000 broilers ready for market. Her poultry enterprise is a sideline in connection with the general farming of her husband, George Kelly. They have been on the FSA program for four years and she says, "We don't know what we would do without the FSA." Last year she canned 1,027 quarts of fruits, vegetables and meats.

David Rivers, 52, of Fayette County, Texas, worked for 14 years as a farm laborer before he got a loan from FSA in 1938 to buy his 127-acre farm for $3,350. He has whittled this debt down to $1,-500 and plans to pay $1,200 on the balance this fall. Rivers is not growing any cotton, either. He concentrates on poultry and livestock and has planted 35 acres of corn for his feed. He will have 40 hogs ready for market this fall and his 700 layers produce 45 dozen eggs a day. He hopes to increase his laying flock to 1500 by the end of the year. Rivers is considered as one of the most progressive Negro farmers in Region VIII (Texas and Oklahoma). He is a member of both the Negro Farmers' War Production Committee of Texas and the State Council of Negro Farmers.

Has Come A Long Way

James Miller, of Duplin County, North Carolina, has come a long way since he worked for 50 cents a day back in the '30's with a family of four to support. Today he is buying a 75-acre farm with a loan from the Farm Security Administration, and is planning to pay out this fall. He has two tobacco barns, having built his second this spring at a cost of $150. This, he feels, will take care of the tobacco crop from his allotment of 9.2 acres. He has 30 acres in corn, 6 in cotton, 9 in hay, 2 in wheat and 4 in truck and garden. About two acres are in peanuts. In addition to his cash crop, Miller sells hogs, chickens, calves, syrup, milk, sweet potatoes, and strawberries With ten in the family now he will kill ten hogs for home use this fall. His wife canned about 800 quarts of food last year and hopes to do as well this year. Miller is handy with tools and built a body for his farm wagon for $5 that would have ordinarily cost $20. He also built a truck trailer for $8 thereby saving approximately $40.

Negro FSA borrowers are not only producing war food and fiber but are also buying War Bonds. Take the case of Joe Young of Clarenden County, South Carolina, for example. Back in 1936 he was virtually penniless with wife and nine children. His worldly goods at that time consisted of a few household effects valued at not more than $260. He was approved for an FSA loan. By dint of hard work, thrift and the practical guidance of FSA supervisors he and his family have managed to lift themselves from near relief to where his holdings today are valued at close to $4,000, the major items being War Bonds, hogs, poultry, cows, other livestock, food and feed crops. He also has a sizeable bank account.

In addition to buying more than $1,000 in War Bonds, last year, he had enough cash on hand to pay his debt in full to Farm Security in 1943 with enough left over for his 1944 farming operations.

When FSA Regional Director E. S. Morgan in Montgomery, Alabama, read about Young's success and patriotism in the local paper, he was moved to write Young the following letter:

"I have read your statement in your county newspaper. I have also checked your record. It's a fine record. You were broke and could not obtain credit or assistance from any other source when you applied for a Farm Security loan. It was a character loan, just as most of our loans are at the start.

"Your record shows that each year you made payments on this loan and borrowed each year to make sound investiments in equipment, in livestock, and other Food-for-Freedom enterprises. Your progress was steady. Please accept my heartiest congratulations.

"You have rendered a great service to our fighting men. You and your family are a credit to your country and to your race."

Hancock Praises FSA Borrowers

Frank Hancock, FSA Administrator, pointed out that the high percentage increases in war production by Farm Security families, particularly their expanded production for the commercial market, are of great value not only to the nation, but also to the families themselves.

"The extra margin toward victory which these small, family-type farmers have contributed is of primary importance to the Nation at this moment," Mr. Hancock said. " Also, these families, who received credit and practical guidance from Farm Security when they could not qualify for adequate credit from other sources, have strengthened their own security for the years to come.

"Like all farmers, they have done more with less, for thousands of their sons and daughters have gone into the armed services and war industries. Many of these borrowers already have paid off their Government loans in full and have become independent and debt-free, while most of the others have made rapid advances toward that goal. As far as our resources permit, we are continuing to help additional small farmers help themselves and at the same time aid the country and our allies toward victory."

PRICE SUPPORT

Last year WFA bought nearly 12,000 carloads of Irish potatoes to support farmers' prices. This price-support operation cost slightly more than $8,000,000. It was carried on by WFA last year in order to provide farmers—who were producing potatoes sufficient to meet all wartime demands—with the assurance of a market for all they produced and a fair and equitable return for their efforts.

WAR VETERANS MAY BUY FARMS WITH GOVERNMENT AID

Soldiers, sailors, and marines who have served more than 90 days in the armed forces since September, 1940, are now eligible to buy farms of their own with the government guaranteeing half of a loan up to $4,000 at 4 percent interest and on 20 years time to pay for a farm or business. Any veteran of this war, white or colored, who has an honorable discharge from the service, may make application for a loan to purchase a farm. The Southern Tenant Farmers Union will aid its members who have been discharged from the service, in getting government help to buy land and homes.

ALL NEGRO ASSOCIATION

(Continued from Page 1)

standing with this organization amounted to more than $175,000. Since 1939 the Star NFLA, another all colored lending cooperative, joined in with the Pee Dee Association to form the present Salem National Farm Loan Association.

Joe A. Frierson, President of the Salem NFLA, is not only the father of the organization, but its greatest advocator, and no doubt, the leading spirit behind it. He was one of the organizers and a member of the Board of Directors of the original association. Mr. Frierson was elected president when the first organization was formed, and without a break in service, he has been reelected each year for twenty-five years.

The association office is in the Agricultural Building in Sumter. Prior to that time it was in the home of Professor C. A. Lawson, who served as its secretary-treasurer from 1924 to 1939. Professor Lawson is principal of the Lincoln High School, where he has served since 1909.

Talk with any of the Salem NFLA members and most of them will end up by saying that the association has been a life saver to them. One member tells how a loan helped him to rebuild his farm home and barns destroyed by fire. Says another member. "I was able to own a farm home for the first time in my life because of a loan made me by the association." Some borrowers say they like the low interest rates. Others state that they like the way the annual payments are distributed over a long-term period, thereby enabling them to meet the installments without difficulty.

The Salem National Farm Loan Association is one of the 2,218 local cooperative associations of farmers operating under the supervision of Farm Credit Administration. These organizations supply farm mortgage credit to eligible farmers regardless of race. In the Columbia FCA district, where the Salem association is in operation, there are two other all colored cooperative credit organizations. Negro farmers are also members of biracial associations in all FCA districts.

Sumter, Lee, and Clarendon Counties in South Carolina, served by this all Negro lending cooperative, are heavily populated by Negro farmers. Sixty-four percent of all farmers in the three counties belong to the colored group. They farm thirty-seven percent of all the land in farms. The value of the land plus the buildings on farms operated by them totals $7,748,380, of which they own outright land and buildings valued at $2,017,324. Twenty-one percent are owners and over eighty-three percent are independent operators, that is, either owners or cash renters.

The members of the present Board of Directors of the Salem National Farm Loan Association are Joe A. Frierson, President; Sumter Jefferson, Vice President; George Rhone, James Seals, and Abie Stukes.

Harry—I just got myself some Victory underwear. Jerry—What's different about that? Harry—One deep breath and you open a second front.—Pennsburg, Pa., Town and Country.

DISCHARGED SEABEES ASK REVIEW OF DISCHARGE FOR ATTACK ON "JIM CROW"

NEW YORK—In one of the first, if not the very first, requests for a hearing as provided for under the Servicemen's Readjustment Act of 1944, more commonly known as the G. I. Bill of Rights, two of the 19 Seabees who were discharged without hearing last October after they had complained of intolerable Jim Crow conditions at their Carribbean base, have written to the Secretary of the Navy asking for a review of their cases, the Lynn Committee to Abolish Segregation in the Armed Forces announced today. The Lynn Committee is handling the men's cases and will provide counsel for them at the hearing. All previous appeals, including letters to President Roosevelt, had proven of no avail.

Harvey Steele, 26, and Isaac G. McNatt, 27, both living in New York at present, were discharged on the grounds of unfitness. This prejudicial type of discharges has denied them mustering out pay and other rights and privileges provided for veterans of this war. It has also made it impossible for them to resume their normal place in civilian life, barring them from many schools and opportunities for employment. Steele, after passing all his examinations for a Civil Service job, was told he could not be hired because of his type of discharge. McNatt, who is studying law at night, can not be admitted to the New York Bar because of it.

The Negro Seabees, all volunteers, were discriminated against and Jim Crowed from the very first day of their boot training. They were offered inferior and Jim Crowed mess halls, recreational facilities, ship's store service and liberty leave. Of the 1,000 men in their battalion, only 200 were white, but all officers and petty officers above second class were white, and the men were told openly that no Negro would be promoted above second class.

The 19 men were discharged after they had been invited into the C. O.'s office and asked about conditions at the base. They were assured this was a "man to man," off-the-record talk, and were asked specifically to discuss the racial situation. The men were therefore frank in airing their grievances. The next day, the regimental commander had the men called back into the C. O.'s office and unbraided them for "griping" and petty complaints, and told them the would tolerate no conferring and "committee-ing". A few days later the 19 men were dismissed, sixteen as undesirable on grounds of unfitness and three on grounds of inaptitude. These three later upon appeal were given honorable discharges.

The Servicemen's Readjustment Act directs the Army and the Navy to establish boards of review to hear cases of discharge from the armed services with the exception of those resulting from a general court martial. Attempts are being made to reach the remaining men.

The N. A. A. C. P. and the C. I. O., through the Veterans Division of its National C. I. O. War Relief Committee are also supporting the case.

VICE PRESIDENT WALLACE VISITS PAPER OFFICES

New York—Taking the editorial staffs of the People's Voice and New York Amsterdam News by complete surprise, Vice-President Henry Wallace visited the newspapers last Monday on his informal tour about the city.

Walking unobserved down Harlem's busy 125th Street, the Vice President evinced a keen interest in the problems of Harlem's teeming population. At the office of the People's Voice, Mr. Wallace explained that New York was his last stop enroute back to Washington after a tour of New England where he discussed the problems of post-war employment with Mayors of various cities.

In reply to a question on his speech at the Democratic National Convention, Mr. Wallace told Amsterdam News reporters, "I hope I did center attention on the plight of the man farthest down."

It was announced this week that Mr. Wallace will make his first major compaign speech for the re-election of President Roosevelt at Madison Square Garden in New York on September 21, 1944.

NEW MARKET FOR COTTON

A new market for the hard-to-sell low quality cotton looms with the development of a new insulating material, according to E. H. Omohundro, writing in the July issue of the War Food Administration publication, "Marketing Activities."

Says Mr. Omohundro, "Assuming that a tenth of all the U. S. cotton that might be used for insulation is so used, it is now estimated that the new product will consume half a million bales a year."

The article points out that cotton insulation is now being used in homes, industrial buildings, and trailers, and is beginning to be used in refrigerating warehouses, freight cars, and trucks. Experiments are being conducted looking to its use in household refrigerators, low-temperature cold storage, air and marine transportation equipment, and in other fields.

TEXAS "REGULARS" BEAT UP COLORED NEW DEAL VOTER

Cameron, Texas—The charge that "Cecil Poole, a Negro resident of Cameron, Texas, was attacked by three white men on the streets near the front of the Newton County court house because he voted in the Texas Democratic primary" was made by Rev. Aron S. Gilmartin, national chairman of the Workers Defense League in a letter to Assistant Attorney General Tom C. Clark, requesting "an investigation of the violation of the civil rights of Cecil Poole by the Department of Justice."

The letter further states that, "After the beating, he was ordered to leave town and was later notified that he had been discharged as a member of the Newton County Agricultural Extension staff. He had been employed by the County for five years and had never had any complaints against him before this event. The order to leave Newton County was given to Poole by a white bailiff who observed the attack on Poole.

"An investigation of the violation of civil rights of Cecil Poole by the Department of Justice is surely in order. The recent decision of the Supreme Court granting Negroes the right to vote in primaries is meaningless, if attacks like this can continue. It seems evident that county officials were part of the attempt to drive Poole out of the county and to intimidate Negro voters."

"This man," said the keeper, softly, "imagines he has millions."

"Isn't that nice!" answered the visitor. "Whenever he needs money, all he has to do is to draw on his imagination."

THE MODERN FARMER

VOL. XVII. NASHVILLE, TENN., OCTOBER 15, 1944 No. 9.

Agricultural Department Prepares to Aid G. I. Joe

The Road Up

WHY a Farmers' Newspaper ?

By Giles A. Hubert

WHY A FARMER'S NEWSPAPER

There are more than 681 thousand Negro farm operators in this country—more than 3½ million Negro farm people.

Endeavoring to lead these people are more than 2,000 Negro county agents, vocational agricultural teachers, Farm Security Administration supervisors, agricultural teachers in colleges and national, regional and state officers of various bureaus in the U. S. Department of Agriculture. Add to this list thousands of ministers of churches in rural areas, and teachers in rural schools.

Together, this is one of the largest groups of people with a genuine common interest in the United States. Yet it is doubtless one of the most unorganized and inarticulate groups on the American scene. Of all the so-called forgotten people, this group is surely the less thought about, fought for and planned for section of our population.

Yet, this group is one of the nation's important producing and cultural elements. An important share of the cotton, tobacco, sugar and food products that we depend upon comes directly from the sweat and tears of Negro farmers. A goodly part of our new population, not only of the farms but also of the towns and cities, north, south and west, comes from their ranks. Through the folk lore and songs which have sprung from their suffering, the nation has gained a rich contribution to the culture that is American.

They struggle against the suppressions and frustrations of a tenancy and debt system designed to keep them at the bottom of the economy to be exploited. Yet 174 thousand of them have attained some little freedom and independence through acquiring ownership of small farms. The all driving ambition of thousands more is to attain the ownership of land they can call their own.

With the poorest educational facilities in the Nation, with no say so in the political life of the communities in which they love and work, and with the most meager capital and financial resources, theirs is a hard and discouraging life. The changing times which call for new ideas and new methods of farming with new types and amounts of equipment have

(Continued on page 3)

Mr. and Mrs. James Sanders of Dublin County, North Carolina, who paid off their 40-year farm purchase loan in two years, proudly look over the cancelled deed of trust to the 120-acre farm. Sanders received a loan of $4,300 from the Farm Security Administration to buy the farm in 1941. Looking on are, three daughters and a son, Pauline, George, Annie Mae and Olivia. Two other daughters, Lila Mae and Bertha, are not shown in the photo. Another son, John, is overseas with the Army.

(See story on page 9—FSA Feature Section.)

LETTERS TO THE EDITOR

24 R Street, N. E.,
Washington, D. C.

Dear Sir:

Enclosed please find money order for one ($1.00) dollar for 12 monthly issues of the Modern Farmer.

May I congratulate you on your appointment of Mr. Giles A. Hubert as the new editor. You have in Mr. Hubert a most capable man. I am sure this appointment will bring about even greater success to the Modern Farmer.

Sincerely yours,
J. Jerome Robinson.

Sept. 27, 1944
Piney Woods, Miss.

Modern Farmer Publishing Co.,
447 4th Avenue, North,
Nashville, Tennessee.

Attention: Mr. Giles Hubert

Dear Sirs:

Thank you for your kind letter explaining your proposed project. I think it is a very fine movement, and I shall do my bit in helping you put it over. Although my work keeps me very busy, I am willing to do what I can, as I do feel this paper will be instrumental in raising the standard of our farmers.

You will find enclosed one dollar for a year's subscription to "The Modern Farmer."

With best wishes, I am

Sincerely yours,
Laurence C. Jones.

Hampton Institute,
Hampton, Virginia,
September 26, 1944

Dr. Henry Allen Boyd,
447 4th Avenue, North,
Nashville, Tennessee

Dear Dr. Boyd:

A few days ago I received a letter from Prof. Giles A. Hubert of Fisk University, informing me that he had worked out an arrangement with you that he would take over the editorship of the Modern Farmer, a publication that you have owned and got out regularly without missing a publishing date for seventeen years. This is a remarkable feat especially when you realize the handicaps and experiences you have had during the long seventeen year period.

I am glad to know that Prof. Hubert has consented to give assistance in making the Modern Farmer what its name implies. As an agricultural worker I shall be glad to become a regular subscriber

(Continued on page 4)

JOHN W. MITCHELL
Field Agent U. S. D. A.

MITCHELL TO ADDRESS LAND GRANT COLLEGE MEETING ATTENDS FEDERAL EXTENSION CONFERENCE

Hampton, Va.—John W. Mitchell, Field Agent for the Agricultural Extension Service has been invited to appear on the program of the Conference of Presidents of Negro Land Grant Colleges meeting in Chicago this month. Mr. Mitchell will address the Conference of October 26.

Mr. Mitchell is also scheduled to attend the quarterly conference of Federal Extension Workers which meets in Washington, October 5-7. As T. N. Campbell, the other Extension Field Agent, is in Africa on a government misson, Mr. Mitchell will be the sole Negro representative at the meeting this year.

INTER-BUREAU COMMITTEE MAKES PLANS TO GUIDE VETERANS RETURNING TO FARMING

New Booklet Tells HOW, WHEN, WHERE

Washington, D. C.—The U. S. Department of Agriculture has recently released the first definite information as to how G. I. Joe can go about purchasing a farm when he returns from the war. That is, if he wants to.

The Department's Inter-bureau Committee on Post-War Program has published information which is available to every soldier in the Armed Forces or to parents or friends of soldiers. Carefully prepared courses and text books can be secured by soldiers from (1) the United States Armed Forces Institute, Madison 3, Wis.; (2) The Educational Services Section, Bureau of Naval Personnel, Washington 25, D. C.; (3) Civilians should write the U. S. Department of Agriculture, the State Agricultural Colleges or the local County Agent.

The most important information is contained in a booklet entitled SHALL I BE A FARMER? which your county agent or FSA Supervisor can secure for you. It was prepared by Mr. Paul V. Maris of the Farm Security Administration.

The Department advises that soldiers who have never farmed before should take everything into consideration before deciding to try farming. Men who have already had experience have the best chance to succeed in agriculture.

Loans Available

Under the so-called "G. I. Bill of Rights" the Federal Government will guarantee loans to veterans, for 50 per cent of the amount of the loan. The government, under this provision will guarantee loans up to $2,000.

Soldiers with agriculture experience are also eligible for loans from the Farm Security Administration under the Bankhead-Jones Farm Tenant Act. Information regarding these loans may be secured from the local FSA Super-

(Continued on page 3)

NEGRO FARM EXPERT FLIES TO LIBERIA TO PUSH COUNTRY'S FOOD PRODUCTION

Charles E. Trout, Tuskegee trained agriculturist who has been appointed as an agricultural expert to assist the Liberian Government with its problem of developing adequate farm production to increase the nutritional standards of the population and provide commodities for export, left last Tuesday by clipper for the African Republic.

Lend-leased to the Liberian Government by the State Department through special arrangements with the Department of Agriculture from whom he was borrowed, and the Phelps-Stokes fund, Mr. Trout will set up temporary offices in the American legation where he will work very closely with Minister Lester A. Walton in preparing and presenting his formal recommendations to Liberian officials. However, throughout the period of his year's assignment, the agricultural expert will be working for the Liberian Government at its expense.

Specifically assigned to assist and advise the Republic in the promulgation of programs looking to the improvement of agricultural methods, better land utilization, and the introduction of new subsistence crops for local consumption, Mr. Trout plans first to make a survey of the existing agricultural situation and then recommend remedial action.

Among other things, the young agriculturist expects to set up a demonstration plot to show the Liberians how to expand their production of vegetables, citrus fruits, bananas, rice and coffee. He plans to make wide use of insecticides, and disease-resisting varieties of crops. Some of this work may be carried on in cooperation with the Booker T. Washington Agricultural Institute at Kakata, 40 miles from Monrovia.

The end result of this initial attempt at implementing the President's promise of "freedom from want" everywhere in the world will be adequate home production of such crops as will improve the nutritional standards of the Liberian people, and also provide sufficient supplies for export markets.

Readying himself for his Liberian assignment, Mr. Trout spent six weeks in the Department of Agriculture conferring with officials of Extension Service and Foreign Agriculture Relations, and studying methods and techniques for organizing and developing an extension program.

Mr. Trout is the first colored appointee to be named under Executive Order 9190 which provides for the assigning of specially trained U. S. Government employees to foreign governments on request. Officials in government circles are pointing out that the initiation of this policy offers new promise for colored career men.

Prior to his selection for the post, Mr. Trout was for nine years county agent in Tuscaloosa, Alabama, where he assisted 1,200 colored farmers with their production problems. He did an especially effective job in improving the living standards of the low-income farm families. Through the establishment of a curb market, he provided many of the farmers with a year-round source of income.

Graduated from Tuskegee in 1934, the 33-year-old agriculturist was first appointed agricultural teacher and high school coach at his Alma Mater. He got the coaching job on the basis of having played right tackle on the Tiger squad. While he's tackling important problems in Liberia, Mrs. Trout and their 5-year-old son will be in school at Tuskegee . . . wife pursuing graduate studies in home economics, and son in nursery school.

NEGRO FARM WOMEN IN WARTIME PRODUCTION

By Sherman Briscoe

Colored farm women certainly come in for a lion's share of the credit for the record wartime production achievement of Negro farmers.

It was a hot afternoon in May when we drove up to the home of ailing 64-year-old Floyd Walton of Valley Springs, Louisiana. And although he couldn't do much field work on his 120-acre farm, and despite the fact that two of his three sons were in the Army, his crops were in good shape. "Well, why shouldn't they be?" said Miss Emma Walton, one of his four daughters, who was handling a sweep like a veteran.

"You see, it's like this," she continued, "Papa's getting old and our only brother who isn't in the Army is in town today seeing his draft board. But the ground is just right for plowing so I'm doing it for him. It's nothing unusual though, me and my sisters plow all the time."

With that she pulled the reins, said, "Giddap," and continued side-dressing a thriving plot of corn that was almost knee-high. She wore a broad-brimmed straw hat and heavy work shoes, and her back was wet with perspiration. While pausing to wipe her face when she came to the turn-row again, Miss Walton said, "Plowing is a sorta hot job, but the Government says they need more food for the soldiers—and we're trying to help grow it for 'em."

And the Walton's were growing food too: 20 acres of corn, eight acres of peanuts, one acre in garden vegetables: then there were 11 hogs in the pen, 15 cows in the pasture, eight of them fresh; and there were more than 200 chickens on the yard, of which 65 were laying hens.

But the Walton girls are no different from Mrs. David Rivers of Fayette County, Texas, who is helping her husband run his poultry farm. "Since our son has been in the Army," she said to me last spring, "I've been helping my husband more with his chickens. You know, we got 700 layers and it's a real job keeping the poultry houses clean, and collecting eggs every day. Some days we get as many as 500 eggs."

Farmer Rivers was anxious to give credit where credit is due, too. Said he with a broad smile, "I don't know what I'd do without my wife to help me."

From Texas I went to Mississippi on my hop-skip tour of the farming areas of seven Southern States. There, too, the farm women were on the job: working in the field, tending the garden, raising chickens, canning extra supplies of fruits and vegetables, and one was running a 35-cow dairy. I think I ought to tell you something about her.

Well, her name is Miss T. Birdette Cameron and she's a college graduate and was a school teacher until a few years ago when her father died and things began to get out of hand at home. Then she left her school teaching job and came home to Madison County to help run the farm. But things were too far gone and they lost the farm anyway. Not to be outdone, Miss Cameron sat out to buy another farm, and two years ago she carefully folded the deed to her 224 acres and safely tucked it away. It isn't just an ordinary cotton farm either. Of course, she grows some cotton—more or less as a sideline—but the larger part of her farm is in improved pastureland for her 35 milk cows from which she sells milk to the grocery stores and cafes in Canton, the largest town in her county.

After culling a few of the best Jersey calves from the crop each year for dairy cow replacements, Miss Cameron sells the others to neighbors who are without milk cows and to the packers' commission market in Jackson.

While Miss Cameron makes her contribution to the war effort by producing vital milk, Mrs. William Phillips in the neighboring State of Ala. is helping her husband raise beef cattle and hogs on a 1200-acre farm near Tuskegee. Last year they sold 60 head of hogs and nearly 100 head of beef cattle. Throwing feed to a flock of 65 layers, Mrs. Phillips confided to me hopefully, "After the war we are going to finish our bathroom, fixtures and all."

In South Carolina I visited Mrs. Rosa Glover, who lives near Orangeburg. Her husband, Jesse, is in Philadelphia working in a war plant while she operates their 35-acre farm. And she's doing a first class job of it, too. To supplement her income from the 14 acres she has in cotton, Mrs. Glover is growing a two-acre truck crop: lima beans, string beans, and okra.

"I've already sold 46 crates of string beans," she said. "They brought me $145. I'll also have about 40 bushels of lima beans, and several crates of okra to sell."

Pointing to a plot of sunflowers, Mrs. Glover told me that these flowers saved her on feed for the 150 fryers she was raising for market. "You see," she said, "I mix sunflower seed with my regular poultry feed."

In North Carolina Mrs. Bertha Goodson a brave little gray-haired woman, nearing 60, told me about her work as a neighborhood leader. "I visit the farmers on my list nearly every week," she said, "and I see 'em at church on Sundays—we're working together, too—growing our own food and some extra to sell in town." By town she meant Raleigh.

Mrs. Goodson's farm is in the heart of the tobacco area and she has more acres in "smokes" than any farmer for miles around. I want to have a surprise for my sons when they return from the war—I want to have our farm back," she said.

Mrs. Goodson has three sons in the armed forces. A fourth son, who is a little lame, is home helping her with the crops. When we had left her farm, County Agent M. H. Crockett pointed out that Mrs. Goodson's husband had died in 1937, and that on the day of his burial their small farm had been foreclosed. "Since that time" he said, "she has been planning to buy it back. Last year she had a good crop and made the down-payment."

These are just a few samples, taken here and there, of the heroic part that Negro farm women are playing in the war effort. Everywhere it's the same—unheralded farm women are carrying on side by side with their husbands, and sometimes they are carrying on alone, having taken up where husband or brother left off when he went to war or into a war plant.

The fact that this year's food production may exceed the 1943 record crops by five per cent, and may surpass the average production during the 1935-39 period by 39 per cent is to a large extent attributable to the nation's farm women, colored and white.

Before dawn they are up preparing breakfast for the family, shortly after sunup they are in the field carrying their own row, often after having done several home chores including watering and feeding the chickens. During their spare time they look after the garden, and do the home canning.

Important, too is the contribution of Extension Service Home Demonstration Agents and Emergency War Food Preservation Assistants. In some areas these women are the only source of information and guidance available to the farm people. They not only help the farm women to grow better gardens, can their fruits, vegetables and meats more effectively and improve their homes, but they also explain to the farmers how to obtain lime and phosphate through the Agricultural Adjustment Agency. They help them with their sick animals, advise them about the use of sprays and insecticides, and in scores of ways bolster farm production.

The men may be fighting this war, but the women are winning it. On the farm front it's the plowing of thousands of women like Emma Walton, the raising of larger poultry flocks by farm wives like Mrs. Rivers, the growing of truck crops by farm home-makers like Mrs. Glover, and the producing of increased quantities of milk by dairy farm women like Birdette Cameron which are making possible the surpluses of food that are tipping the scales of victory.

JAMAICAN LIAISON OFFICERS CONFER

Called to Washington for a three-day conference with Chief Jamaican Liaison Officer Herbert G. Macdonald, and with officials of the War Food Administration and the War Manpower Commission, the assistant liaison officers of the Jamaican Government are shown conferring with Mr. Macdonald. Among other things, they discussed the most effective utilization of West Indian farm and factory workers during the fall and winter months. Both WFA and WMC officials have highly praised the island workers—Jamaicans, Bahamians, Barbadians, and British Honduras—for their contribution to wartime production. Seated, left to right, are: Miss Sadie A. Robinson, secretary; Mr. Macdonald, and C. C. Russell, assistant to Mr. Macdonald; standing, left to right, are: Assistant Liaison Officers Arthur Legarde, A. S. Lusanne, R. C. Somerville, J. L. Meagher, Charles Browne, Roy Abendana, and E. C. Carnell-Sara. Miss Robinson, Mr. Russell, Mr. Lusanne, and Mr. Somerville are colored.

AGRICULTURAL DEPARTMENT PREPARES TO AID G. I. JOE

(Continued from page 1)

visor. Local committees are being set up to assist soldiers who wish to locate farms upon their return from the war.

Parents and friends interested in helping their sons and G. I. friends should secure all information possible NOW from county agents, FSA personnel and local committees, the agricultural department advises. Parents and friends might begin NOW to search for desirable farms for the boys so as to be in position to advise.

Basic Requirements of Success Outlined

Mr. Maris' boklet sets up the following basic requirements if the soldier expects success in his farming venture:

"1. That you get a farm that is big enough to make a living on.

"2. That you do not pay more for it than it is worth on the basis of what you can earn over a period of years.

"3. That you farm it well and manage your business affairs well."

What the soldier can expect to earn in different types of farming in various sections is estimated.

The booklet makes the following estimates of the probable cost of good family farmers in various southern states:

State—	Cost	Range
Alabama	$3,500—	$ 4,500
Arkansas	3,500—	5,500
Delaware	5,000—	8,000
Florida	3,500—	5,000
Georgia	3,500—	4,500
Louisiana	3,500—	6,000
Maryland	6,000—	9,000
Mississippi	3,500—	6,000
Missouri	4,500—	7,500
No. Carolina	4,000—	6,000
Oklahoma	4,000—	10,000
So. Carolina	3,500—	5,000
Tennessee	1000—	6,500
Texas	4,000—	10,000
Virginia	4,000—	6,000
West Virginia	3,500—	5,500

Why a Farmers' Newspaper?

(Continued from page 1)

found them in a poor position to compete with others who are more advantaged.

No group in the country needs more to have a united and forceful leadership. No occupational group needs more to become organized to work for their own welfare and improvement—yes, even their survival. No group needs more to talk things over with one another and to be heard by the rest of the Nation.

THIS IS WHAT A NEWSPAPER IS FOR. The farmers' newspaper should be an organ where farm people can talk to one another—where a farmer and his wife can learn what their fellow farmers are doing and what they are thinking about. It should be where they can tell their own story of successes and mistakes.

The farmers' newspaper should be an organ through which the farmers' leaders, their county agents, their FSA supervisors, their ministers and their representatives in Washington can talk to them and where they can talk back.

It should be a forum where ideas and information come alive and meaningful for both farmers and leaders. It should be a powerful and fearless advocate for the interests and welfare of the farm people it sets out to serve.

This is why we need a national Negro farmers' newspaper. This is what THE MODERN FARMER proposes to be. It can be just the very thing that all of us want and need. It must have your cooperation. Let us all pull together. Read your paper every month. Show it to your friends. Send in news itsem about your own community. WRITE your suggestions and criticism TO THE EDITOR.

Officer: "Why were you late to formation?"

Private: "I squeezed out too much toothpaste and had a hard time getting it back in the tube, sir."

Here is one about the absent-minded professor who got married. Next morning he awoke to find a partner in bed with him. Leaning over to see who it was, he exclaimed:

"Why, Nellie Bly! What are you doing here?"

THE COTTON SITUATION

During the month ended August 18 the 10-market price of Middling 15 16-inch cotton averaged 21.33, a decline of 47 points from a month earlier. July was the 16th consecutive month in which mill consumption of cotton was lower than in the corresponding month a year earlier. This downward trend in consumption has been both marked and uninterrupted, declining on a daily basis from 46,142 bales per day in the month of peak daily consumption—April 1942—to 36,208 bales in July, a drop of 22 per cent. At the same time that cotton consumption per working day has declined 22 per cent (from April 1942 through July 1944), it is significant that deliveries of rayon to consuming establishments have continued to increase.

BETTER USE OF FARM LAND

In a discussion of post-war agricultural policies, Alvin T. M. Lee of the U. S. Department of Agriculture raises the question as to whether it would not be more desirable to improve production on existing farms rather than to open many new farms. Tracing recent improvements in land management and in crop varieties, he says that use of hybrid seeds and new crop varieties on the one hand and wider utilization of lime and fertilizers on the other, have resulted in large increases in yields of certain crops. Improved production techniques and management bring results.

A man had been bitten by a mad dog and was rushed to the hospital for examination. The doctor pronounced the case hydrophobia. A few minutes later the patient summoned a nurse and asked her to bring him a pencil and some paper .

After several minutes of business with the pencil and paper, in which he wrote, erased, scratched and rewrote, the nurse said: "'Hadni't you better have a lawyer assist you in making your will?"

"I'm not making my will," the patient answered. "I'm making a list of the people I want to bite."

THE FORUM

The Modern Farmer

Published monthly by the Modern Farmer at Nashville 3, Tennessee.

Henry Allen Boyd --------- Owner
Office, 403 Charlotte Avenue.

Devoted to the interests of the Farmer, Truck Gardner, Livestock and Poultry, Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer, should be addressed to The Modern Farmer, 403 Charlotte Avenue, Nashville 3, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

to it. Without a doubt, we need this publication for the good of agriculture in America.

Yours sincerely,
John W. Mitchell,
Field Agent.

200½ South 2nd Street,
Mr. Giles Hubert, Editor
Muskogee, Okla.,
October 6, 1944.

Modern Farmer,
403 Charlotte Ave.,
Nashville 3, Tenn.
Dear Mr. Hubert:

Let me congratulate you on your new undertaking. We need a farm magazine. You know the conditions of our people.

When I can be of service to you, please don't fail to call on me.

I am working in Muskogee and Wayne counties now.

You have the names of both counties. I will send you more names. Place my name on your mailing list.

Success to you and your staff.

Robert E. Lee.

ON THIS WE STAND

THE MODERN FARMER is not a new publication. It has been published monthly for 17 years. Its purpose, through the years, has been to faithfully report news and information of interest and value to Negro farmers and to those people who are interested in the problems of Negro farmers. It has endeavored to be impartial in its views and non-partisan in politics. There will be no change in this general tradition.

In order to reach a wider range of interested readers, however, and because of the demands of the dynamic period in which we live, we wish to re-state the editorial policy of this paper in terms that will be clear and understandable to all. ON THESE PRINCIPLES WE TAKE OUR STAND.

1. THE MODERN FARMER stands, at the outset, for full first class citizenship for all farm people regardless of race, color or creed. This means not only the right to vote in all elections for those persons who are to govern them, but also it means a more complete participation in all phases of the life and activities of the communities of which they are a part: the Nation, the State, the County and the local community. Nothing short of this can be the goal of true democracy.

2. We advocate a rural social order based principally upon the BED ROCK FOUNDATION OF THE FAMILY FARM—farms on good land and of such size and equipment as to provide a livelihood and security for the families which operate them. These farms for the most part should be OWNED BY THE FAMILIES WHICH FARM THEM. We believe that this is the best foundation for real democracy in rural life.

3. There should exist a system of landlord-tenant relations which allows continually for progress of farm tenants and laborers up the "agricultural ladder" toward ownership, independence and security.

This means better landlord-tenant laws protecting the rights of both landlord and tenant in the land and the products of their labor. It means written and long term leases which encourage industry, initiative and conservation of resources. Leases should provide for just compensation for improvements made by the tenant and protection against eviction.

The current and historic SHARECROPPER PLANTATION SYSTEM MUST BE SUPPLANTED by a tenure arrangement which does not promote shiftlessness, thriftlessness and poverty.

4. There must be ABOLITION OF DEBT SLAVERY and of all the injustice and persecution which goes with it. Adequate farm credit from sources interested in the welfare and progress of the farm family is needed and should be encouraged. This should be provided by government wherever and whenever such is not available from private and cooperative sources. Guidance in the successful use of credit will be a paramount need for a long time to come.

5. We advocate the development of well organized and progressive LAND-OWNING NEIGHBORHOODS as the primary basis of rural organization. They should be serviced by adequate and efficiently functioning social institutions: churches, schools, clubs and associations, and homes.

6. We will foster COOPERATION, and cooperative enterprises, among farmers for the joint ownership and operation of production, marketing and processing facilities such as are feasible for family type farmers. Cooperation will be encouraged in the purchasing of supplies and in the provision of credit facilities.

7. We will whole-heartedly support those governmental activities, federal, state and local, which are established and operated in the interests of the family type farmer and the farm laborer and which operate in line with the above outlined principles of DEMOCRACY AND "FAIR PLAY."

8. We urge Negro farmers to cooperate with and participate wherever possible in those Farmers' organizations which work toward the interests of the family farmer and the farm laborer, provided that these organizations are thoroughly democratic in their organization and procedure.

UNDER NO CONDITIONS WILL WE ADVOCATE COOPERATION WITH OR MEMBERSHIP IN ANY ORGANIZATION WHICH DISCRIMINATES AGAINST ANY FARMERS ON ACCOUNT OF THEIR RACE OR RELIGION IN SERVICES RENDERED OR IN MANAGEMENT AND CONTROL.

THE MODERN FARMER WILL ALWAYS FIGHT FOR THESE PRINCIPLES.

ECONOMIC SALVATION

BECAUSE THE PEOPLE HAD A MIND TO WORK

By Neill A. McLean

During the fall and winter of 1935, the writer had several conferences with various educators and people in high governmental positions relative to initiation of cooperatives among destitute rural Negroes in the South.

It is true the different authorities varied in certain minor details about what they thought of the cooperative movement for Negroes but in effect they all concluded with a

(Continued on page 7)

—IT CAN BE DONE—

By a Friend of Farmers

We have called this column, "It Can Be Done", because we don't know of anything that needs doing that can't be done.

We propose to keep the words short and to the point, because any ideas that cannot be reduced to very simple terms are not worth the time it takes to rea d about them.

Another reason for sticking to the short word is that it is easily remembered. The dictionary is full of 64-dollar words seldom used. We want what is said here to be remembered.

Students of agriculture, of sociology and of economics, will, we hope, read this column. Their teachers, perhaps, will read it. Farmers, farm supervisors and county agents will read it and maybe argue about it. What they argue about they will remember.

We are going to talk over a good many things in this column in the next twelve months. All of them will be problems tied up with small farming. The column is going to be run this way because we are a small-farm group, and small-farm business is our business.

We plan to bring out the many theories about farming and get them down where they can be kicked around to see whether they hold up or fall to pieces under rough treatment. (Teachers and students please take notice. A B C's come before Ph. D.'s!)

What is said here should stir up our farm circulation (not a pun) and do us all good.

Suppose we start with the G. I.'s—

A million and a half farm boys went off to fight in this World War II. Of that number, 250 thousand, or one out of every six, were Negroes. Some of them will never come back. Most of them will.

What these young farmers have to come back to will depend largely upon us. Right now we should be keepng our eyes on our "surplus military lands."

Here in a nutshell, is the story on the "surplus military lands." We're calling them "G. I. lands."

The United States Government has under its control a fortune in what are known as "surplus war properties." These properties are lands, factories and machines which have been used to carry on the war, and are no longer needed for that purpose. The government now wants to turn these properties back to the people. The question is how they should be returned.

The "surplus military lands" are factory sites, firing ranges, air fields or camp sites, for instance. At one time perhaps, they were farms on which crops were raised, or perhaps they are land on which crops could be raised.

The figures on this are 20 million acres of land, all told, of which about six and one-half million acres are so-called "agricultural land" and of this **about three and one-half million acres are good farm land.** The other three million acres are poor land, that can only grow poor crops. They should not be put back in cultivation as farm lands, now.

The three and one-half million acres of good farm land need our closest attention. Offering these lands for sale to the highest bidder wonld open the door to more land control by big farm operators, and would mean less land for small farms.

President Short of the Arkansas Farm Bureau Federation is in favor of selling these lands to the highest bidder. The highest bidders, of course, would be bankers and insurance companies, not small farmers. When we say small, here, we mean 300 acres or less.

Until recently this land was controlled by the Surplus War Property Administrator, Will Clayton. Mr. Clayton has now resigned, and sale of the war plants and surplus land has been stopped for the moment.

Control will shortly be placed in the hands of a three-man surplus property board, and the Surplus War Property Administration will come to an end. Once this three-man board is appointed, it will draw up plans for the disposal of these good farm lands and other properties.

A large number of our returning farm veterans should be able to get family-size farms on this G. I. land. Some of them come from families who were put off the land to make way for the war plants and air fields.

Help them by saying what you have to say **now**, in black and white, so it can't be forgotten. Don't wait until the planning is finished, and don't wait for "George" to do it—"George" never does it.

Pay That Poll Tax.

BEST TIME TO BUY A FARM

An Important Letter from one who knows

Dear Fellow Farmer:

A few days ago a neighbor asked me if I thought this was a good time to purchase a farm, and my reply to his question was No. I explained to him that right now I did not have the funds even if an opportunity presented itself but that was not my only reason for saying No.

My experience and observation leads me to believe that the best time to buy a farm, for a Negro who does not have a farm home and who wants one, is when he gets an opportunity to buy one. He should be careful to see that he is getting something for his money. The land

STATEMENT OF OWNERSHIP

The MODERN FARMER **as required by the Act of Congress, Aug. 24, 1912.**
State of **Tennessee**

County of Davidson.

Personally appeared before me, a Notary Public in and for the State of Tennessee, County of **Davidson, S. B. Wilson,** who having been duly sworn according to law **deposes and says that she** is the Business Manager of the MODERN FARMER **and the following** is to her knowledge and belief, a true statement **of the Ownership,** Management etc., of the said publication for the date sworn in the above caption requested by the Act of Congress, August 24th 1912, embodied in section 443 Post Office laws and regulations.

1. That the name and address of the publisher and business manager of the MODERN FARMER is Nashville, Tenn., S. B. Wilson, Business Manager.

2. That the owners are Henry Allen Boyd and S. B. Wilson, both of Nashville, **Tennessee.**

3. That there are no known bonds, mortgages or other security holders holding one per cent or more and that there are no bonds, mortgages or other securities on the corporation.

(Signed) S. B. WILSON

Sworn before me this 21st day of September, 1944.

M. G. FERGUSON, Notary Public

My commission expires April 8, 1947.

FSA LOANS AID MANY FAMILIES IN OHIO

MARIETTA, Ohio—When the Farm Security Administration made a loan to the Carl Rush family of Lowell, Ohio, the indirect result was the improved living conditions of all the Negro families living near Lowell.

Mrs. Rush, who has always been a leader in her community, saw in the FSA supervised loan program an opportunity to help her neighbors improve many of their economic and social problems.

She has helped to organize study and community action groups, to pass on to neighbors the information about good farm and home practices which she learned as an FSA borrower.

Through her endeavor, with the assistance of the FSA associate county supervisor, Mrs. Rush helped to secure the appointment of a Negro housewife on the Washington County Nutritional Council, the first such appointment in the Midwest.

Mrs. Rush is a school teacher, with six years experience in Washington County, Ohio and in West Virginia. After her marriage, however, the Rush family moved to the farm and settled in the Lowell community as operators of an uncle's farm. An FSA loan enabled them to purchase the livestock and machinery needed for sound economic operation.

The family worked out a "live-at-home" plan with the assistance of the County FSA Supervisor. This plan included provisions for growing most of the family's needed food for canning, and storing surplus foods grown on the farm, for use during winter months.

Mrs. Rush's record book soon convinced her of the value of the live-at-home" program. She saw her living expenses drop and the net earnings from the farm increase.

At the same time she quickly recognized the improved health of her family when they started eating well-balanced, health-giving, farm-raised foods. The improvement in her own family's economic and health conditions were so marked that Mrs. Rush decided that her neighbors could profit by the lessons she had learned.

Mrs. Rush is president of the Culter group, an organization of Negro families in her community who are practicing "live-at-home" methods which Mrs. Rush passed on to them. She is also local adviser for 4-H Clubs, bringing the advantages of planned agricultural training to the Negro youth of her community.

The work of Mrs. Rush with the Washington County Nutrition Council has been her outstanding contribution to the improvement of both Negro and white groups in the county. The Council, an Extension Service project, is composed of a dozen housewives in the county who outline training plans for all women in their community; and who follow up this outline by holding group meetings with their neighbers to provide needed instruction on the selected projects.

Last year the Council selected the subject, "Making Time Worth More," as the theme of their discussion groups; and all instruction was on methods in which the farm housewife could use her time to greatest advantage. Mrs. Rush served as community leader for her local community, passing on this information to other families in a series of demonstration meetings over which she presided. These instruction classes for all housewives in the Cedar Ridge Community were attended by both Negro and white.

URGE CONSUMPTION OF SMALL-SIZED POTATOES

Faced with a crop of small-sized potatoes in several eastern producing areas as a result of abnormally dry weather, the War Food Administration is calling upon American housewives to use more potatoes of that size during August to prevent spoilage and waste, because these small potatoes cannot be stored.

Small potatoes are as nutritious as the larger ones and at present are available at very reasonable prices. WFA officials point out. Small-sized potatoes are available to consumers in most locations in the eastern half of the country.

On the heels of this appeal comes a warning from the U. S. Department of Agriculture that civilians will have somewhat fewer white potatoes this season than last, and also fewer sweet potatoes. This year's crop of white potatoes is expected to be 17 per cent smaller than last year's record crop, but six per cent larger than the 10-year average. Prices are expected to be higher, too.

To farmers comes the statement from Department specialists that potatoes will keep longer in winter storage, if they have not been cut, skinned, or bruised in digging and handling. It is also pointed out that potatoes dug during hot, sunny weather are likely to rot in storage unless picked up within a half hour after digging.

FIND NEW MEDICINAL AGENT IN TOBACCO

Rutin, a valuable glucoside effective in treating conditions that arise from high blood pressure associated with increased capillary fragility, has been extracted from bright and Flue-cured tobacco by Department of Agriculture scientists.

GREEN HILL NEIGHBORHOOD UNIT NO. 13

President A. J. Gates Tells of their Activities and their Membership in the National Federation of Colored Farmers.

Billings, Miss—(Special)—There has been no let-up in the work, the activities and in the meetings of the Green Hill Neighborhood Unit No. 13 of the National Federation of Colored Farmers, according to the report of the president, Mr. A. J. Gates. Our membership continues to hold up, our program is active, although we are in the midst of our farm work we do take time out to attend the several meetings. Our plan is to get farmers to realize that they can best help themselves by depending upon themselves after they have tilled the soil, cultivated their farms, raised more chickens, ducks and geese and then do some truck gardening. Mother earth knows no race, no creed or color, because He that ruleth the universe sends the sunshine and the rain as well as the harvest of golden grain.

We are urging each individual member of the Green Hill Neighborhood Unit to put forth strenuous efforts to increase their farm products and raise more of the things needed to meet the requirements and the demands of the American people. We believe that food will win the war. We are not slackers, not jerkers, not shirkers, but farmers who know that those people who own the land and till the soil will be independent.

Some parts of our district have suffered from the drouth, but recent rains have encouraged all of us. We are getting ready to attend the National Federation of Colored Farmers wherever it is held. We have elected our representatives, and we mean to have an exhibit when the time comes. We are going to keep up our charter fees and pay our annual dues, so continue to send us the Modern Farmer because without it we would be lonesome.

ANNOUNCE MINIMUM WAGES FOR LOUISIANA CANE HARVESTING

The War Food Administration has announced minimum harvesting wage requirements for producers of the 1944 Louisiana sugarcane crop who apply for payments under the Sugar Act of 1937. The required rates are the same as for the 1943 season when an increase from a basic wage of $1.85 to $2.70 per day was made following announcement of a price assistance program for such producers.

Two adjustments have been made in the determination which will permit greater utilization of labor during the present shortage. The first provides a special piece rate for certain cane cutting operations which have developed as a result of wartime labor scarcity. The second change will permit the employment of prisoners of war on a piece rate basis without guaranteed equivalent time earnings, and arrangement already effective in the case of cultivation rates.

The Sugar Act requires, among other conditions of payment to growers, that all persons employed on farms in the production of sugarcane be paid in full for such work at rates not less than those determined to be fair and reasonable, after investigation and public hearing.

She: "Are you cool in time of danger?

He: "Yes, but at the wrong end."

NEGRO FARMERS AND FARM WORKERS HARVEST VITAL WAR CROPS

Washington, D. C.—Peanuts for oil, fruits, vegetables, and grain for the nation's food basket, hay and other feed for livestock and poultry production, and cotton for gun powder, parachute cords, uniforms, and tents are among the important war crops that Negro farmers and farm laborers are harvesting this year. A good many of the younger men have gone off to war, but the older men, the women, and the children have stepped into their places to keep farm production going. They are soldiers of the soil, everyone, fighting on one of America's vital fronts. Top, left to right, a Negro farmer in Georgia stacks his peanut crop; in Maryland, a Women's Land Army worker drives a tractor, helping with the harvest of hay and grain; in Alabama, an older man shakes and stacks peanuts, while in Mississippi a still older man helps with the bagging of peanuts for shipment. Bottom, left to right, a woman and even a small boy help with the harvesting of carrots in Florida; in Maryland a 'teen age girl picks tomatoes; in Mississippi, it's a smile of pride on this worker's face; knowing that Uncle Sam needs high-grade cotton for the manufacture of important war goods, he picks swiftly, but carefully as this armful shows; in Florida, a farm worker fills crates with peppers; in South Carolina, it's snap beans that this youth has picked.

FARMER PAYS OFF FSA LOAN IN TWO YEARS

(See Picture on page 8)

RALEIGH, N. C.—By paying off his 40-year farm purchase loan of $4,300 in two years, entirely from farm income, James Sanders, a 53-year-old Negro of Duplin County, North Carolina, has made an enviable record on the farm ownership program of the Farm Security Administration.

Sanders credits his success to careful planning of his farm operations with FSA supervisors and following his plans as closely as possible under their guidance.

Today, after a lifetime of struggle he has achieved his greatest ambition—security on a family-size farm of his own. As a boy, James Sanders, wanted to farm and own a home and began to "put in some crops" with his father's mule. He watched the neighbors and "did what they did."

Food was scarce except at the end of the month when his father, a railroad worker, came home and brought supplies for the family. The years went by quickly and James hired out first as a farm laborer. Later he sharecropped and started to buy a farm but couldn't make enough money to pay for it.

Neighbor Told Him About FSA

In 1941 his ambition and desire to get ahead so impressed one of his neighbors that he convinced Sanders he should apply for a farm ownership loan from the Farm Security Administration. A committee of farmers in the county went over Sanders' application and considered his qualifications, his character, and his chances for success. He was elected to receive one of the limited number of farm ownership loans made each year in the county.

He found a 120-acre farm about a mile south of Warsaw, North Carolina, with 63 acres cleared, and started on his amazing career of success. His loan, made in May, 1941, included not only the purchase price of the farm, but an additional $1,000 for repairing the buildings, for fencing and other improvements necessary for a sound farming operation enabling him to provide adequately for family living as well as to repay the loan.

Sanders made a good crop as a tenant in 1941. and when he moved onto his farm in the fall he made a payment of $850 on his loan. A year later by "working hard and living close," he paid half the remaining indebtedness on his farm and saved enough additional to operate on in 1943. Last fall he paid off the balance of his loan—in full.

Follows Good Farming Practices.

This accomplishment isn't as easy as it sounds. His rapid repayment is most unusual, but there are ample reasons for his success. One reason is Sanders is following the best farming practices. For example, some parts of the farm had very poor soil, and the County Supervisor suggested that he plant crotalaria in these areas in 1942, turn it under in the fall and plant corn. Neighbors told him, "You might as well be sitting in the house as planting corn there. It won't grow two feet high." The corn yield was abundant and supplied all food and feed needs.

Sanders raises everything on his farm that his family eats "except fish and we catch them in the creek." Whenever he goes to town he takes some produce to sell so he can carry as much money home as he took away. He has a son overseas in the Army and backs him up with regular War Bond purchases.

By crop rotation and other soil conservation practices Sanders is increasing the fertility and productivity of his farm. The family follows new and practical ideas in home management. They keep a record book and operate on a strict budget.

Has Year-Round Garden

Their one-acre fenced garden is planted in rye during the winter. This soil builder is turned under and vegetable planting begins in February and continues through September to provide year-round food for the family.

At the end of the first year the farm was furnishing 200 pounds of dried peas and beans, 30 bushels of white potatoes, 100 bushels of sweet potatoes, 15 to 20 gallons of cane syrup, 1,500 pounds of flour, 20 bushels of corn meal, 200 pounds of butter, 800 gallons of milk, 1,200 pounds of pork and lard, 250 pounds of chickens, 250 dozen eggs, 100 bushels of fruit and garden vegetables, and 200 pounds of beef for home use.

With six children at home, the live-at-home plans are so perfected that the Sanders family spends less than 50 cents per month for food. On the pantry shelf one may find a wide variety of fruits and vegetables, fruit juices, kraut, relish, pickles, canned pork chops, sausage, spare ribs, stew beef, hamburger and steak.

When Mr. and Mrs. Sanders moved to their new farm in 1941 their net worth was $1,890. When they made their final payment on their farm, last fall, their net worth had increased to $7,127. They have 3 mules, 1 mare, colt, 3 cows, 2 heifers, 4 calves, 4 sows, 27 shoats, 60 laying hens, 5 turkeys, 9 plows, disc, corn planter, fertilizer distributor, cultivator, cane mill, wagon and cart.

Son Now In Army Oversesa

"We don't work any harder than before we started cooperating with the Farm Security program," Mrs. Sanders said, "But FSA's assistance and guidance have helped us to live and eat so much better, and above all own our own farm." John Sanders, son, now overseas with the Army, will have a home to come back to when the fighting is over.

Mr. Sanders is a deacon in the community church, where the family goes regularly. The girls sing in the choir. All participate in community and civic activities. They contribute to the Red Cross, March of Dimes, various War Relief agencies, and other organizations.

Sanders was awarded the Government Merit Award by FSA, last year, for "outstanding production of vital war crops." He is almost as proud of this award as he is the deed to his farm.

EX-FARM TENANT MAKING GOOD AS 214-ACRE OWNER

Jacksonville, Ill.—The James A. Douglas Family, farmers who live in the Murrayville community near Jacksonville, are proving that the Morgan County Farm Security Administration committee made a wise move in selecting them for promotion from tenancy to farm ownership.

Douglas was a farm hand until 1932 when he rented a farm and gradually accumulated livestock and farm equipment.

He obtained a tenant purchase loan from the Farm Security Administration in the fall of 1943 and is now in his first crop year as an owner. He has materially improved his new farm and buildings, and has worked out a cropping and livestock program which is showing immediate results. He has already repaid the government the equivalent of two full years' payments on his loan.

One of the first steps taken by Douglas was to talk over his farming program with Charles Myers, head of the Morgan County Soil Conservation District and worked out a long-time plan for soil conservation and rebuilding. It was decided to lime and phosphate the entire farm except the wooded areas, and to make this possible FSA included enough loan funds to purchase two cars of limestone and phosphate.

PREPARES CROP ROTATION

With Myers' assistance, Douglas prepared a crop rotation plan, decided on location of fences, terraces, and contour lines, and has started the 1944 crop season by planting all his crops on the contour. His 1944 fields have all been refenced, small plot combined for more efficient operations, and two terraces built. All pasture land has been reseeded, and 20 acres have been set aside as permanent wood-plots which will not be farmed because they are already badly eroded and any further cropping would ruin adjacent fields.

While Douglas and his family were not operating their own farm last year, they used the services of the Farm Security Administration's supervised provised program on their rented farm. They kept accurate records of their year's work, and found this an excellent help in preparing their income tax report and also in planning their operations for the new year. They started on the food-canning and storage budget recommended by FSA, and were able to materially reduce their family living expenses by growing and processing a larger percentage of their own food.

Operating as a tenant last year, Douglas' income report showed that he produced over $8,000 in gross farm income, while spending less than $4,000 for farm operating expenses and another $1,000 for family living. As a result, he was able to clear up all his old debts and start in with a clean slate when he moved to his new farm.

TO INCREASE CATTLE

On his 214-acre Morgan County farm this year, Douglas has out 132 acres of grain and hay crops. From these he hopes to more than exceed last year's food production record when he sold over $4,000 worth of pork, $1,000 worth of cattle and dairy products, and about $1,500 worth of soybean and grain. Once more he will depend upon hogs for the principal source of his income, and will grow most of the feed needed to bring them to market. He has enough dairy cows, laying hens, and ewes, however, to provide a good margin of profit in addition to his hogs. Since a large part of his farm is rolling and fit only for pasture, he plans to gradually increase both his cattle holdings and his sheep.

LABOR AND FARMERS

By George S. Mitchell

You hear it said a lot that better wages for city workers make things tougher for farmers. Maybe also there are some people who think that higher earnings for farmers would make it harder for workers. In an effort to divide farmers from workers, some big-farmer organizations keep up a steady propaganda that labor is against the farmer, and that the farmer should be against labor.

The truth is that labor and the farmers each stand to benefit from progress made by the other.

The farmers who are afraid of good wages in the city are big farmers who have day-hands and croppers and tenants, and who want to be able to get them cheap.

It is now generally agreed that the future of farming in the South will be bright if Southern farmers turn much more of their land to feeding the people of the South. Most of our people don't eat anything like enough dairy products, meat, fruit, and fresh vegetables. If we all ate what we should of these foods, Southern farming could be prosperous and good.

Labor stands to gain if the farm land is worked by prosperous people. One of the big reasons why wages are lower in the South than in the North is the fact that hundreds of thousands of farms in the South afford such a poor living that farm boys and girls are willing to work in town for comparatively small wages. In many a Southern town, it has been impossible to get unions started because the working people knew that employers could give their jobs to new people from the farms if the workers asked for union scales. Farmers need union standards, too.

Here is what the CIO "People's Program for 1944" says about farmers:

"1. At least seventy-five per cent of our people need more and better food. Realization of the goal of full employment will permit our people to satisfy their need for food and clothing materials and assure farmers a market for their product.

"2. We advocate the continuance of price guarantees to farmers at levels which will encourage full production and assure them of a fair return for their product. However, parity in price is not enough to assure parity of welfare. All agricultural programs and planning should be designed to eliminate discrimination against rural areas and give farm people the same social and economic benefits enjoyed by city dwellers.

"3. The family owned and operated farm is the backbone of the nation's agriculture. All farm programs, including the Farm Tenant Purchase Program, the rehabilitation program and the soil conservation program, should be directed toward its protection."

Labor in the South wants Southern farmers to have land of their own, good homes, good barns, good fences, good stock, good health, and good earnings. Then labor will have work at good wages, making things that prosperous family farmers will buy.

We can only build a real democracy if farmers and the city people are both secure and prosperous.

Labor and farmers need to stand together. Only the big people gain if labor and farmers fall out.

Maid: "Good gracious! Who'd ever think you'd been married all these times, mum!"

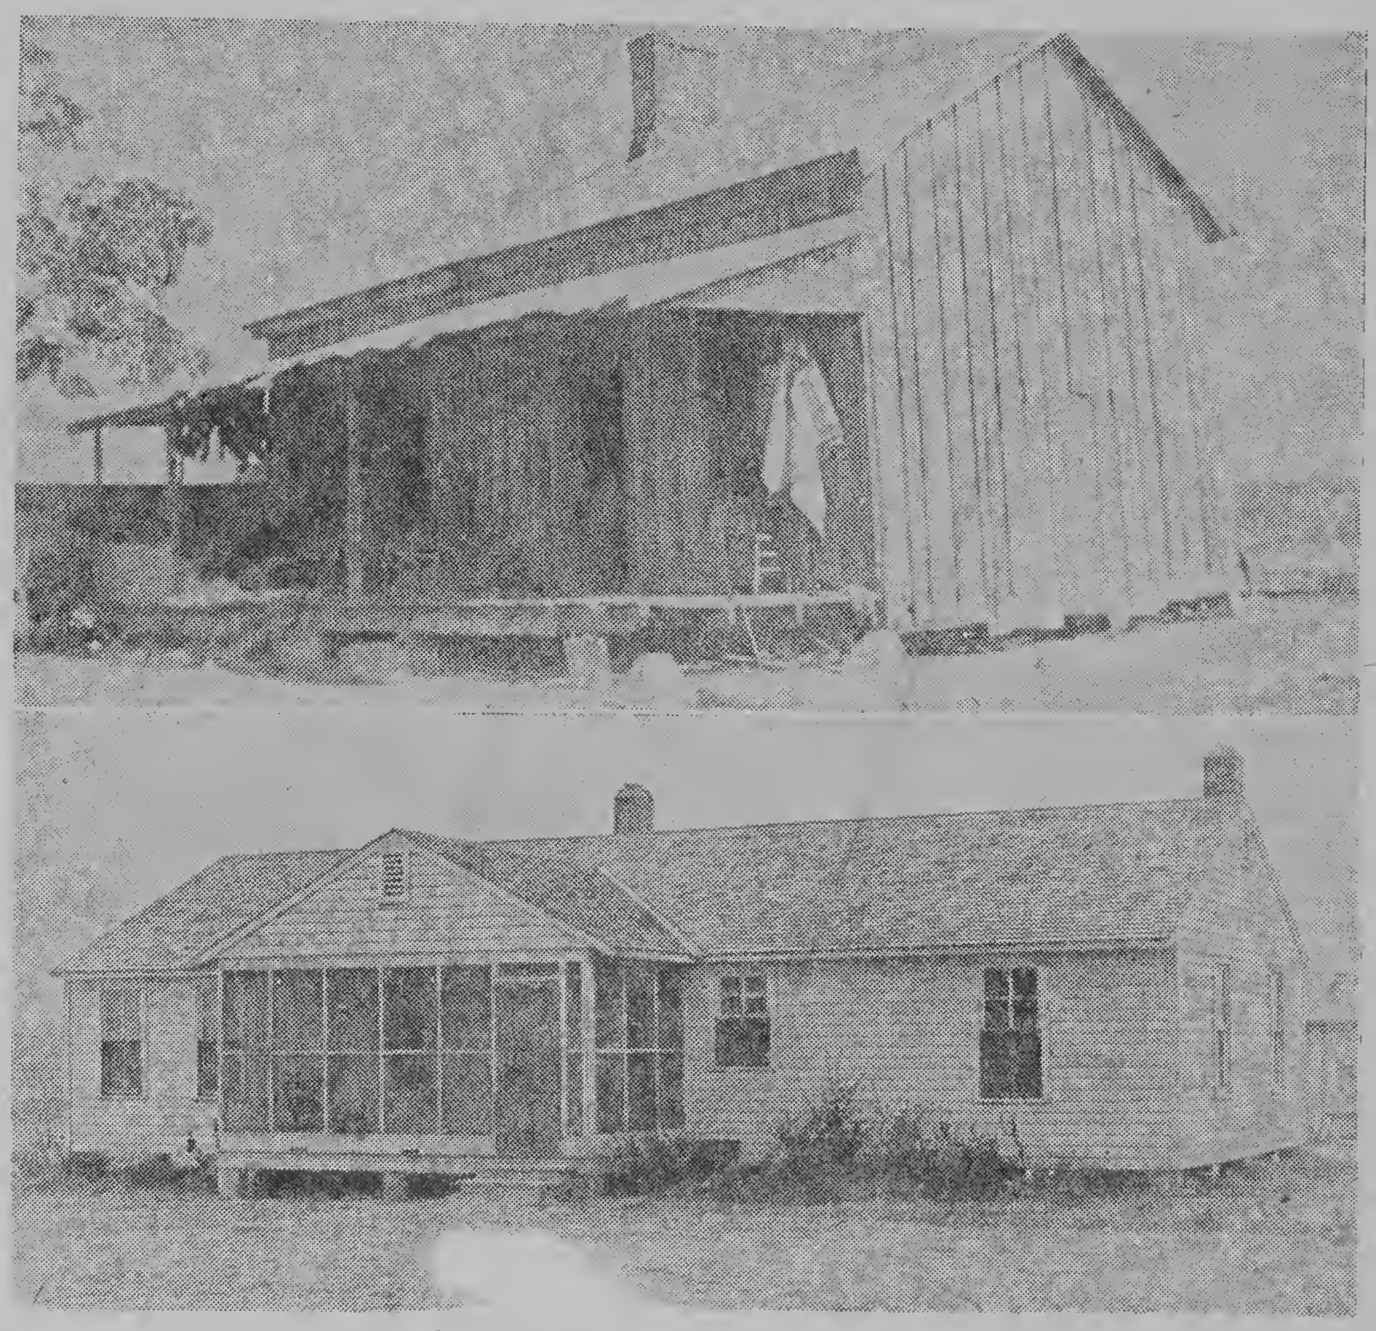
Let's Get the Voting Habit

OLD AND NEW HEART OF THE DELTA



The Farm Security Administration program of assistance to low-income farm families has brought better living conditions as well as improved farm and home practices to tenant families in the Mississippi Delta.

Shown above are typical "before" and "after" views which could be duplicated on many farms throughout the South. Cabin in top photo was the home of Stokes King, Washington County, Mississippi, former sharecropper, his wife and 15 children before he got an FSA loan to buy an 80-acre farm and build the attractive 6-room frame house in lower photo. Four of the King boys are now in the armed services. The small constructed cabin of rough lumber, unpainted, in poor repair with few windows and no screens was inadequate for this large family.

Already King has repaid more than $900 on his farm ownership loan and at this rate he will have paid out long before the 40-year period allowed under the Bankhead-Jones Farm Tenant Act.

ECONOMIC SALVATION

(Continued from page 4)

statement such as the following:

"The cooperative movement will not work among the rural Negroes because they are not a homogeneous people. Cooperatives can develop only where people are of a common racial stock."

They also pointed out to me that the Southern Rural Negro had no business background and therefore was a failure before he started in any venture requiring business practices.

I listened at all of these things but my faith in humanity and a Christian zeal to help people do something to help themselves led to the organization of the Bricks Community Federal Credit Union in July, 1936. The success of this organization and publicity given it by professional people as well as farmers soon led to a desire for a Credit Union by people in other communities.

The writer never lost an opportunity to go and help inspire other groups.

About this time North Carolina passed its State Credit Union law and created a division in the Department of Agriculture to promote and supervise State Chartered Credit Union. With the original rural Credit Union at Bricks bearing witness to what people could do if they only had a mind to work there was begun a slow but sure march in the development of Credit Union across Eastern North Carolina. By 1939 there were fourteen state and Federal Credit Unions among Negroes in Eastern North Carolina.

Out of the experience with the Credit Union and the available funds it had made possible the people around Brickes decided that a farmer's Cooperative Exchange might add to their success as farmers and in March, 1939 the Bricks Mutual Exchange officially opened its doors for business. This makes it possible for the farmers and residents of the community to purchase through their own organization, groceries, feed, seed, fertilizer, notions, and other equipment on consignment. For further service the members on recommendation of the director authorized in 1941 the purchase of an incubator which now hatches all the baby chicks for the community.

In 1939 the officers of the Fourteen Credit Unions and the Bricks Mutual Exchange met at Bricks Rural Life School and organized the Eastern Carolina Council on Cooperative of which Mr. S. P. Dean is president. Under the wise and courageous leadership of Mr. Dean the council has inspired cooperative promotional and educational work in eastern North Carolina so much so that today there are thirty-five Credit Unions, eight Cooperative Stores and Farmers Exchange, two Health and Medical Associations, one saw mill and one Co-op Farm.

Not much for nine years 1935-1944, except undeniable proof that it is not who you are, what you know or what you have that counts in a people's movement for progress but what you are, how you think, and what you want.

This column will tell the complete story of each of the cooperatives Eastern Carolina and South Carolina-Virginia in the issues that follow.

Next issue will feature the cooperative development in Tyrrell County, North Carolina under the leadership of the High School Principal, Mr. S. P. Dean.

WAF URGES QUICK USE OF "HURRICANE" APPLES

Because an estimated 3 to 4 million bushels of apples were blown to the ground along the Atlantic seaboard by last Thursday's tropical hurricane, the War Food Administration urges consumers in the heavily populated eastern areas to take advantage of the temporary market surplus of this fruit for stocking pantry shelves as well as for immediate use in apple pies, cobblers, fritters— and as just plain apples.

35 MILLION TURKEYS

Over 35 million turkeys, or 8 per cent more than last year and 4 per cent more than the record crop of 1940, will be raised this year according to preliminary estimates. The 1944 turkey crop will exceed the 5-year (1936-40) average by 20 per cent.

Anxious to get ample supplies for our fighting men, the War Food Administration made a statement this week urging a speedup in the turkey procurement drive. Said WFA:

"Turkey processing and procurement for America's Armed Forces must be speeded up immediately so as to guarantee turkey for Thanksgiving, Christmas and New Year's Day dinners of service men and women overseas. Despite unusually light delivery of turkey thus far made available to the army, the WFA poultry procurement board and the Office of the Quartermaster General are determined that turkey will go overseas "enough and in time" to our fighting forces.

BEST TIME TO BUY A FARM?

(Continued from page 4)

should be capable of producing or at least being brought to good production fertility.

As important as accessibility to market, good roads, good water, and good fertility of the soil are, one may find himself situated on a farm of his own that satisfies all of the qualities mentioned above and still the farmer and his family may find themselves in a very precarious situation. If there does not exist a state of psychological intimacy between his family and those who live near and who are normally called neighbors, the situation is not likely to be a happy one.

This being true the prospective buyer might well check on the possibilities of the following:

1. Are there enough Negroes living in the area to make possible the development of a good school, church and social-recreational activities for the young people?

2. Are the neighboring farmers the types who will share commonly in such mutual assistance activities as may from time to time be beneficial and necessary to the best interest of all?

3. Will I feel free to walk over in the evening, pull up a chair and talk things over by the fireplace of the majority of my neighbors?

4. How high is the social and economic ceiling of Negroes in the area, and are factors over which I shall have no control favorable to the raising of such ceiling as may exist?

When one buys a piece of land where he is to live and rear a family he is buying more than a section of earth, he is buying an opportunity to establish a home where individuals, boys and girls can grow up into the fullness of man and womanhood, with the foundation of their lives rooted in the soil but whose spirit reaches outward and upward. The ownership of a good home or farm is your identification of good citizenship.

Yes, the best time to buy is when you have an opportunity to make a sound transaction. Don't put it off.

Sincerely yours,
NEILL, A. McLEAN,
Bricks Rural Life School.

WFA BEGINS USING KERFORD QUARRY; STORES 13 CARLOADS OF DRIED EGGS

The world's largest natural cold storage unit went into service Saturday, September 2, when 13 carloads of dried eggs, representing more than a million dozen shell eggs, were unloaded and stored in the limestone caverns of the Kerford Quarry at Atchison, Kansas, by the War Food Administration.

Owners and operators of the giant limestone quarry, a part of which has been leased to the Government, are two colored businessmen, of Atchison, Lloyd Kerford, and his nephew, George Kerford. The former is an engineer, and the latter, an accountant. The mine has been owned by their family since the 1880s.

Development of the quarry into suitable storage compartments came about by sheer accident. In digging out the limestone for building purposes, the workers cut perfect chambers and corridors, which in the present emergency furnish the United States Government with a tailor-made warehouse. The natural temperature of the unused portion of the mine is sufficiently low to make it useful for "cooler space", and for adaption to even lower temperatures.

When the mine was inspected and found available, the Government leased the unused portion for the "duration" on a year-to-year basis, with an option for two additional years use by the War Food Administration.

Located approximately two miles from the center of the city of Atchison, the mine is of the type commonly known as a gallery quarry. The interior has about 615,440 square feet, roughly totaling 15 acres, with an average ceiling height of 14 feet. This gives a storage space of nearly 8 million cubic feet, accommodating between 30 and 50 thousand tons of foodstuffs according to the size and shape of the material stored.

Among other foods to be stored in the warehouse are cheese, lard, and cured and salted meats, all lend-lease commodities. Food in this category will continue to flow into the mine while the work of installing cooler machinery is being completed. Much of the equipment necessary to lower the mine temperature to a 30 to 32 degree level is available and will soon be installed.

To facilitate use, railroad spurs were built from the main line of the Missouri Pacific to the mine area, where a long loading platform forms the terminal. It was necessary to construct a short road to the mine portals. The loading platform and the road will be covered with a huge canopy, making full operation possible during inclement weather.

Mechanical equipment will be used in handling the mass foodstuffs which will be put into the mine, consisting of 70000 pallets, 10 electric telescopic forks, 5 gasoline mules, 5 electric mules, and 50 four-wheel trailers. The electric mules will be used inside the mine. Outside haulage of trains will be handled by the gasoline mules. A train consists of a mule and 5 trailers.

Loading and lifting containers will be done by the electric fork trucks, thereby lessening the need for manpower, as only about 50 men will be employed.

On the inside of the mine, only the floors will have be concreted to make them suitable for storage purposes. Absolutely dry, the mine walls will not have to be touched. Ceilings, too, are in good shape and do not need any renovation. Certain chambers in the mine will be shut off for serving the best storage interests and to maintain temperature at an even level.

Miles and miles of corridors run through the mine in all directions. These are called "boulevards" and will be illuminated by neon lights, as these give off the least heat.

Consruction of a building with space equivalent to that in the mine would cost millions of dollars and priorities on the necessary material would delay construction. But the comparatively low cost of renovating the mine and installing equipment makes it very acceptable to the Government.

Close to the "icebox" is an abandoned deep coal mine now filled with water suitable for the manufacture of ice. This will be used in icing refrigerator cars, which move the commodities away from the mine to ports on the seaboard. The enire project, storage space, ice manufacture, transportation fits into an ideal arrangement and the War Food Administration officials are looking forward to the early completion of the project which they hope will relieve storage shortages in other parts of the country.

AGRICULTURE WORKER LEAVES FOR LIBERIA

Director of Agricultural Extension Service M. L. Wilson, right, says, "Goodbye and good luck" to Charles E. Trout, Tuskegee trained county agent of Tuscaloosa County, Alabama, who left recently for a year's stay in Liberia as agricultural adviser in that country. While in Liberia, Mr. Trout will make a survey of rural conditions, set up demonstrations and work with the farm people with the ultimate aim of establishing some type of Extension Service there. Mr. Trout is being loaned to the Liberian Government by the U. S. Department of Agriculture.—USDA Photo by Ackerman.

LIFE MEMBERSHIP SPURS CHICAGO NAACP CAMPAIGN

CHICAGO, Ill.—A recent contribution adding impetus to the Chicago campaign, being conducted by Field Secretary, Daisy E. Lampkin, was the receipt of a $500 life membership from the Rev. Clarence H. Cobbs, pastor of First Church of Deliverance. Not satisfied with limiting his efforts to individua generosity, the prominent minister, turned in also 300 new NAACP memberships representing members lof his church. The Chicago area, now in the third week of its drive, expects to reach the 12,000 mark by October 20th.

ON THE AGRICULTURAL FRONT

NEGRO FARMERS WIN BLUE RIBBONS

Participating in their first dairy cattle show in Halifax County, N. C., recently, Negro farmers won 11 blue ribbons, according to reports received by the U. S. Department of Agriculture.

From the herd of underfed cattle which they purchased in a drouth area of Mississippi last year, the farmers exhibited 55 head of well groomed milk cows. Negro County Agent D. J. Knight says that it is hard to believe that these are the same animals.

A check is being made of several North Carolina counties to determine the need for dairy cattle among colored farmers. It is believed that hundreds of farmers in the state without a source of home milk supply will purchase cows or heifer calves this fall. Last year nearly 2,000 North Carolina colored farmers purchased milk cows.

TEXAS 4-H BOYS ATTEND FIRST WILDLIFE CAMP

For the purpose of developing farm leadership which will continue to improve rural life now and after the war, the first wildlife camp for colored 4-H boys was held recently at Prairie View. Fifty-one boys attended and heard talks on forestry, and on the habits and identification of small birds and animals of Extension Service workers and experts from Texas A. & M. College.

SEEK BETTER MEDICAL CARE FOR RURAL AREAS

In line with Secretary Wickard's proposal to the House Special Committee on Post-War Economic Policy and Planning that due consideration be given to the needs of rural areas in the disposition of surplus medical and dental equipment now held for war purposes, the North Carolina Council of Home Demonstration Clubs, representing 45,000 women, have passed a resolution calling for the transfer of surplus medical equipment to the local governments at the end of the war. The council further suggested that such equipment be used in equipping hospitals in rural areas.

FIND NEW INDUSTRIAL USE FOR STARCHES AND SUGARS

A new discovery has been made by the Research Administration of the U. S. Department of Agriculture which Dr. O. E. May, chief of the Bureau of Agricultural and Industrial Chemistry, says promises to open a whole new field for the industrial utilization of surplus starches and sugars.

The new product, known as "allyl starch," is a resinous coating material that looks like varnish, withstands high temperatures, and the action of most chemicals and solvents. It is made from sugar and starches of farm crops.

THE COTTON MARKET

The War Food Administrator announced early last week that the Commodity Credit Corporation will offer to purchase 1944 crop cotton from producers at parity prices and that the CCC will sell cotton at not less than parity. Following this announcement prices in the 10 markets advanced more than half a cent a pound and market activity increased sharply. The parity price of cotton for September was unchanged at 21.08 cents per pound, and prices received by producers as of September 15 averaged 21.02 cents. Rains and labor shortages in some areas were reported to be hampering the harvesting of the crop.

Prospects of an early peace in Europe have had differing effects on cotton prices in the U. S. and in certain foreign countries. In Brazil, for example, where the end of the European war would seem to hasten the day when the accumulated stocks of Brazilian cotton can move freely into international trade, prices of Type 5 cotton at Sao Paulo, advanced 132 points between August 18 and September 22. In the U. S., on the other hand, where an early peace is expected to lead to widespread cancellation of military contracts for textiles, while providing no offsetting assurance that American cotton will be exported in larger volume, Middling 15 16-inch cotton at New Orleans declined 71 points.

The 1944 cotton crop is currently estimated at 11,483,000 bales, 500 pounds gross weight. This is 461,000 bales larger than indicated in August, and 56,000 bales larger than production in 1943. This production would be from an acreage of only 20,164,000, the smallest harvested acreage since 1895, and with a yield of 273.4 pounds per acre. This would be the highest yield on record, and compares with the previous record of 272.4 pounds produced 2 years ago. Indicated yields were higher than in 1943 in all States except Louisiana, Texas, and California.

Here is the well-screened and well-kept home of the James Sanders family on their 120-acre farm near Warsaw, Duplin County, North Carolina. A life-long ambition of Sanders to "own his own farm" was made possible by financial aid and practical guidance of the Farm Security Administration.

THE FARM INCOME SITUATION

Current estimates place total cash receipts for September at 1,880 million dollars as compared with 1,697 million dollars in August and 1,935 million dollars in September 1943. A gain of about 24 per cent over August in receipts from crops is looked for as larger quantities of most crops are marketed in September. Income from livestock and livestock products is not expected to show much change from August, for the seasonal decrease in dairy product marketings is likely to be offset by greater sales of meat animals.

Cash receipts from farm marketings for the period January through September amounted to about 13,848 million dollars, 6 per cent above 1943, with crops up 7 per cent and livestock 6 per cent. The preliminary estimate of cash receipts for August is 1,697 million dollars, 4 per cent below the income of 1,772 million dollars in August 1943, and 6 per cent above the receipts of 1,602 million dollars in July 1944. This was the first time this year that monthly cash receipts have failed to exceed receipts for the same month in 1943.

JAMAICANS PROVE GOOD CORN BELT WORKERS

As in the cultivation and harvest of other crops such as tobacco, sugarcane, fruits and vegetables, Jamaicans are also proving to be good corn production workers, according to reports received by the U. S. Department of Agriculture.

Recently a large group of Jamaicans was employed in Illinois to perform the highly important and somewhat skilled task of detasseling corn in connection with hybrid seed production. The growers point out that the Jamaicans detasseled the corn with considerable care and skill, and proved very satisfactory workers.

Up to now the Office of Labor of the War Food Administration has brought into this country, under contract, nearly 18,000 Jamaican farm workers to help relieve the critical farm labor shortage.

FARM EMPLOYMENT DOWN

There were 268,000 fewer hired workers on farms on August 1 of this year than on the same date a year ago, the U. S. Department of Agriculture reports. However, unpaid family workers, white and colored, were carrying on as was indicated by the fact that the number of family workers had declined only slightly.

While declines in the number of hired farm workers have been somewhat general, sharpest drops have been reported for the South with the South Atlantic Region showing a 17 per cent decrease. Yet despite the shortage of workers everywhere, high school boys and girls, urban, and migrant farm workers, colored and white, together with Jamaicans, Bahamians, other foreign workers, and prisoners of war have succeeded in saving most of the crops. It is expected that additional Victory Farm Volunteers, and townspeople will pitch in to help during the next few weeks when the peak of the harvesting season is reached. Perhaps a million extra workers will be needed at that time.

SELLS $200 WORTH OF SURPLUS FARM PRODUCTS IN ONE MONTH

Garfield Daniels, a North Carolina farmer, sold $212.69 worth of fryers, culled hens, eggs, dairy products, vegetables, and pulpwood during a single month, Negro County Agent R. L. Hannon reports.

1 & 2: Mrs. Samuel Crawford of Prince Georges County, Md., takes the place of hired hands on farm operated by her husband. Drives tractor and aids in tobacco harvest.

3: Mrs. Laura V. Hammond, Maryland farm woman, packs eggs for shipment to market.

4 & 5: Mrs. T. Birdette Cameron, owns and operates A-1 dairy farm in Madison County, Miss. She is shown with prize calves and capping milk for market.

THE MODERN FARMER

VOL. XVII. NASHVILLE, TENN., NOVEMBER 15, 1944 No. 10.

The Road Up

The Significance of Neighborhood

By

GILES A. HUBERT

About the only place that I can enjoy the illusion of real freedom in this country is when I visit one of the Negro land owning rural neighborhoods. I visit them as often as I can. Even though the people are often poor and housing facilities may not be up to the Waldorf Astoria, I always feel comfortable and at home.

At Center Cross in old Virginia, on St. Helena in South Carolina, at Fessenden in Florida, at Springfield in Georgia, at Denmark in Tennessee or Negro Ridge in Mississippi, these are the places where I can tread land of people I can truly call my friends. There are many more such neighborhoods scattered from Maryland to Texas.

I have never lived among and communed with these people but that I have left with renewed inspiration and new hope for the future. Why not? If people who have fought the struggle that they have, and have borne up under the trials and tribulations of "Job," can still be hopeful and forward looking, why can't I?

In the struggle for survival of Negroes as land owners in Southern Agriculture over the years, these neighborhoods have a place of major significance. They have even greater significance for the future. Often forced to the poorer hilly lands because of plantation dominance of the better lands, they have seen a hard time. Some of them have faltered and passed from existence as such.

But, by and large, they have been hard to kill—like the cat with nine lives. In some places new ones have been created, FSA projects and tenant purchase subdivisions have made it possible to develop new landowning neighborhoods on some of the better lands of the South. The very habits of mutual helpfulness and group solidarity which has helped the old neighborhoods to survive will serve to make them key points of adaptation and survival in the new agriculture of the future. Here is why:

Intimate, face to face relationships are those which make up the neighborhood. These intimate relationships are the basis for mutual helpfulness when they are friendly, when all have the same major problems. Basic habits of cooperation can best be developed on a neighborhood basis. Later they can spread to cover larger problems of many neighborhoods, the community or the county.

Neighbors can learn to buy land together. They can learn to plan production activities together. They

Louisiana Credit Union Has $70,000 Savings

PUREBRED JERSEYS WASHINGTON PARISH COOP IMPORTS

How farmers and rural people in Washington Parish, Louisiana, have developed a successful farmers cooperative with 125 members and a rural credit union with savings approaching $75,000, and which has made loans of $25,000 to its members in the last nine months, was told last month in a forceful story by Cornelius King. Mr. King is Special Assistant to the Governor of the Farm Credit Administration.

This is an outstanding example of successful cooperation among Negro rural people in solving their problems of finance, purchasing and marketing. Great economic progress has been made in Washington Parish. It is inspiring and good news.

Mr. King's complete story follows:

Nothing but a circus, a livestock auction, a Saturday afternoon, or some similar occasion could have brought so many people to town. They were crowded around the livestock unloading shute and pens along the railroad track. The place was Franklinton in Washington Parish, Louisiana.

People came from many sections of that Louisiana parish. A number of them had direct interest in the livestock being unloaded, and others were merely spectators. In the crowd were farmers, youths, townspeople, and business men—black and white—who had come to witness the unloading of a bunch of purebred Jersey heifers which had been purchased for the members of the Washington Parish Negro Cooperative Association. Naturally folks were curious as an event of this type was rather unusual for them.

The Washington Parish cooperative association is one of the larger co-op organizations operating in

WICKARD OFFERS POST WAR PROGRAM

Trained Workers to Lead Way

Washington, D. C.—Declaring that the utilization of Negro leadership in the U. S. Department of Agriculture must continue so as to provide incentive for colored students of agriculture, Secretary of Agriculture Claude R. Wickard told the presidents of the Negro Land-Grant colleges in an address before their conference in Chicago Wednesday that the colored personnel in the Washington office of the Department of Agriculture had increased 200 per cent in the last three years.

Continuing, the Secretary said that Negro youth must be given reason to feel that there is room higher up the ladder for qualified men and women regardless of race,

JAMAICAN PRESENTS BUST TO PRESIDENT

Alvin T. Marriott, Sculptor

(See Picture on Page 3)

Alvin T. Marriott, Jamaican sculptor who has been in the United States since April helping to cultivate and harvest important war crops, presented a bust of President Roosevelt which he made during his spare time to Maj. Gen. Edwin M. Watson who received it for the President at the White House Wednesday, November 1.

Father Of 99th Hero In Africa On Important Research Mission

(See Picture on Page 5)

Serving as a member of an Anglo-American committee which will take a highly important survey of education, agriculture, and rural life in Africa, T. M. Campbell, Extension field agent of the U. S. Department of Agriculture, and father of a hero of the 99th Air Force, has arrived in Liberia by plane to join members of the committee coming from England, according to an announcement made this week by the General Education Board. Mr. Campbell was accompanied by Dr. Jackson Davis, associate director of the board, and chairman of the survey group.

Sponsored cooperatively by the Foreign Missions Conference of North America, the British Conference of Missionary Societies, the General Education Board, and the Phelps-Stokes Fund, the research committee will study, among other things, the extent to which the Tuskegee movable school idea, and the Agricultural Extension Service approach may be adapted in the development of a mass education program in Africa.

Mr. Campbell was selected for the survey because of his wide experience in Southern agriculture. In his letter of invitation to Mr. Campbell, Dr. Davis said, "I do not know of anyone whose experience, training, and background could be more helpful in dealing with the problems of agriculture and agricultural education than yours."

Emory Ross of the Foreign Missions Conference added, "Mr. Campbell's contribution to the survey and to the broader aspects of Anglo-American-African understanding will be invaluable."

Mr. Campbell was graduated from Tuskegee in 1906, and was immediately placed in charge of the newly completed experimental movable school. In this position he became the first colored Extension worker of the U. S. Department of Agriculture. With the movable school, Mr. Campbell carried agricultural education right up to the door of colored farmers in Alabama.

After the passage of the Smith-Lever Act, Mr. Campbell became colored state agent, and later federal regional agent with a terri-

Washington Parish Coop.

(Continued from Page 1)

the county. The other is the Washington Parish Negro Federal Credit Union. The former was chartered under State law in June 1943, and the latter was set up under Federal charter about five years ago. The smaller group efforts or activities of the Negro are either outgrowths of these two associations, or else they are sponsored directly by them.

This association is the only farmers' co-op organization presently operating in the county. Its main efforts are concerned with purchasing and service activities. To date, the marketing situation in the county has been so satisfactory that up to now the association has deferred entering into that phase of the cooperative movement.

Some 125 farmers have joined the co-op since it was organized just about a year ago. These people have not only bought, this year, dairy heifers cooperatively, but also a carload of wire fencing and 4 carloads of commercial fertilizer. Other articles purchased in smaller quantities include field peas, soybeans, sweet potato plants, white potatoes for planting, seed oats, and other farm needs.

Purchasing of farm seed, supplies, and equipment is only a part of the help rendered Washington Parish farmers by their co-op. The service features of the association are equally as beneficial. A syrup mill is in operation in one community. In another, the organization of a community heavy farm machinery and equipment cooperative is under way. The members over the parish as a whole benefit from the educational program sponsored by the organization, and through use of the "co-op center" with office space for their farmers' cooperative, credit union, county agricultural agent, and with an assembly room for meetings.

Members are particularly proud of their "co-op center." It is a very attractive, well-constructed, and spacious building located on a large plot right in the heart of the section of the town where most of the colored people live. The center is a virtual beehive of activity where people are continually coming in to see the manager of the co-op, to deposit funds in the credit union, to discuss some problems with their county agent, or to attend committee or general meetings of their organizations.

There are very definite physical as well as other evidences to show that cooperative associations—along with the services rendered by the county agent, Vo-Ag teachers, Jeanes supervisors, and certain other leaders—are contributing toward improving conditions among the colored farmers and Negro people generally. Improvements have been made on farms and in homes; houses have been painted, or they are in process of being painted; most of the farmers have good, high grade, or purebred livestock; farmers have plenty of food and feed on hand; co-op members have made substantial purchases of Government bonds, and they have fairly large share savings in their credit union. Above all, the folks are imbued with the mutual self-help idea and talk enthusiastically of cooperation and cooperatives.

On a Saturday afternoon early in September of 1944, I sat in a meeting of officials and directors of Washington Parish mutual self-help endeavors, and here again, I was further impressed with the accomplishments of these people through their working together; with the possibilities for growth of their movement as indicated in the discussions of their future plans; and with the absolute faith, confidence, and belief in what they are doing and what they plan to do.

It was through this meeting that I got a more complete picture of their cooperative savings and loan association. They informed me that the credit union is their oldest co-op organization, and the one from which they learned of "cooperative ways."

Over 600 persons are now members of the all-Negro parish credit union. Share savings of members total $58,000 as of August 31, 1944. Of this amount, $25,000 was saved by members within a nine-month period.

On December 31, 1943, the association had a share balance of $33,000. The members in their annual meeting set a goal of $50,000 to be attained by December 31, 1944. This figure was reached and passed by $8,000—three months ahead of time. It is now estimated by the treasurer that savings of the members at the end of the fiscal year will probably reach $75,000—present figure, $70,000. The credit union also has $12,000 invested in Government bonds.

During the first nine months of 1944, members borrowed $25,000 from their savings and loan association. Of this amount $10,000 was loaned to farmer members. Loans have been made for various purposes, such as providing for simple emergencies, the purchasing of a syrup mill and equipment, and the prevention of impending foreclosures.

Several short-term loans have been made by the credit union to provide immediate cash for persons desiring to purchase farm property considered worthwhile and reasonable in price, and in order to prevent impending foreclosures. Instances are reported of farms about to be foreclosed for amounts far below the normal agricultural value of the property. Credit could not be obtained in time from local sources nor through the national farm loan association. Under the circumstances the credit union has stepped in and loaned as much as $2,500 to take care of such emergencies. This has enabled the farmers to have sufficient time to get their debts refinanced—usually through the NFLA.

"What would you say are the reasons for the success of your cooperative efforts?" I asked a member of the Washington Parish co-op group.

He replied without hesitation saying, "We act together, we work hard, and we talk little."

Later, I gleaned through conversation with other members and leaders that often reference is made to the slogan—"Cooperative Action—Not Words." Any visitor to Franklinton would hardly miss the meaning implied in this slogan. He would readily see it in the activities and accomplishments of the organizations; through contact with Manager F. E. Dyson, or President Eldridge Magee of the farmers' co-op; Vo-Ag Teacher Willie Crain, president of the credit union; or any participant in the cooperative program.

The manner in which Washington Parish colored people work together generally, can best be summarized in their common slogan—"Cooperative Action—Not Words." In this group are the farmers, the townsfolk, the school children, the Vo-Ag teachers, the county agent, the school principals, the academic teachers, the business men, the Jeanes supervisor, and others.

This idea of "cooperative action" is embodied in their plans for initiating other group endeavors, and in the program for the post-war period. They are now laying the ground work for insuring their property through their own mutual fire insurance association, ginning their cotton through their own co-op gin, building a warehouse and a shipping shed for their farming needs, providing refrigeration for saving meats and various products from their farms, and they are thinking of other programs and projects that should provide for richer and more abundant living.

In all of this, these people are not forgetting that thrift is important—so they are liquidating their debts, investing in Government securities, and adding to their share savings in the credit union.

Father of 99th Hero

(Continued from Page 1)

tory which includes Florida, Georgia, Alabama, Mississippi, Louisiana, Texas and Oklahoma. Taking a six-month leave from this post through which he has been an important factor in stepping up wartime food production, Mr. Campbell told Secretary Wickard that he didn't want his son William, a pursuit flyer in the 99th, or his son Tom, a doctor in the medical corps, or his daughter Abbie, a captain in the WACs to outstrip him in helping to win the war.

Said he, "I'm trying to help win the war through agricultural production, and on the mission I am going to try to help lay the groundwork for a lasting peace through agricultural education as a means toward realizing the first of the four freedoms—freedom from want."

Replied the Secretary, "We know you'll do a good job. The Department is honored to have you chosen to take part in this important survey."

BE CAREFUL

Under the withering late summer sun, the danger of fire increases. Forests and fields are tinder dry. Farm barns are crammed to the roof with inflammable livestock feed.

This year the danger of fire is greater than normal, because of the manpower shortage. Forest protection agencies have lost many of their trained "smoke chasers" and no longer can count on large numbers of men to combat conflagrations. Last year in the single state of California, fires in timbered areas, water sheds, and grain fields swept through 675,000 acres. Nine out of ten were man made and therefore preventable. Such fires do irreparable damage to the war effort. They destroy natural resources that only time can replace. Where standing timber has been wiped out, this means hundreds of years.

From now until the first soaking fall rains, efforts to prevent fire should be redoubled. Extreme care should be used in burning trash. Every cigarette butt should be completely extinguished. Extreme caution should govern the use of matches.

There are stiff penalties for failure to observe preventative measures during the fire season. But even these are futile unless the public wholeheartedly cooperates with fire prevention authorities. In most instances, the thoughtless culprit who starts a fire through carelessness, is not apprehended. He may wreak destruction totaling many millions of dollars. He may also bring death to many persons.

When cooking snap beans for dinner, plan on having enough left over to be chilled in the refrigerator and used in a salad a day or two later. They are especially good served with a bacon dressing.

RADIO BROADCAST HAILS TEXAS FARMER'S PROGRESS

Interview by W. C. David, District Agent.

In 51 counties where Negro county agricultural and home demonstration agents are employed, Negro farm families have responded to the call to step up the production of vital food to meet wartime demand. Negro Extension workers have accepted the responsibility of seeing tha t no efforts were spared in helping farmers make their fullest contribution toward attaining food goals established by the Department of Agriculture. One of the most vital products needed was eggs, and farmers throughout these counties have done an amazing job along this line .

Just to give you a picture of what is being done, here with me is David Rivers, a Fayette County farmer, who will tell you his own story of what he has achieved in egg production. Tell us Rivers what you have done.

RIVERS: My first inspiration to increase egg production came when I heard about the Food for Freedom Movement after the Farm Defense Program had been announced. I wanted to do my work. Before that time I had only produced enough eggs for family consumption, but now I could help by producing eggs to meet demands of war. And, too, I had just bargained for my first farm and thought I might realize some cash that would help in paying the farm out. Since that time I have sold on the market 12,800 dozen eggs. That is enough eggs to supply an egg each day for 421 people for a period of one year. And I have also supplied the family with enough eggs for home needs. For the eggs I sold have realized a net profit of $2320 over all cost and in addition I have 500 high quality laying hens on hand. The money earned has enabled me to make substantial payments on the farm.

DAVID: But now, Rivers, since the price of eggs is low and the price of feed is comparatively high, are you still operating at a profit?

RIVERS: Yes, I can still realize a good profit in producing eggs at present prices. You see, with my flock, I follow practices recomended by the Extension Service through my county agents and I have done so since I started. I have had very good luck.

DAVID: I am glad to hear you say you follow recommended practices of the Extension Service. Tell us, Rivers, if you will, what are some of these recommended practices you follow.

RIVERS: Well, first I bought high quality chicks to start with and followed good brooding, feeding, and sanitation practices in growing them. Pullets are culled before they start laying and very often afterward, too. When a hen does not make a profit, there is no place for her on the yard. Some of the other practices I follow are: proper feeding in order to get best production and not to waste feed. I also keep poultry houses clean and comfortable and keep the flock as near as possible from internal and external parasites. I always provide plenty of green feed and water and practice cleanliness at all times.

DAVID: Well, Rivers, it seems that you have made a fine contribution to the war effort in egg production.

RIVERS: But, Mr. David, I wouldn't like for you to think that the production of eggs is the only contribution I have made. I have increased the production of pork and other vital products and have purchased war bonds with much of the money earned.

DAVID: Yes, and that was one of the many Negro farmers who could tell similar stories. Farmers who are not commercial egg producers have been patriotic in answering the call to increase production of this vital food to meet war-time needs.

Rivers is a FSA Farmer. He has been on the program 5 years, and is 15 years ahead of schedule in his annual payments.

He also milks an average of 8 Jersey cows, sells sour cream and feeds the skim milk to his hens an growing flock.

FARM POPULATIONS DECREASE 16 PCT. IN FOUR YEARS

New Figures Released by Bureau of Agrictultural Economics

In January, 1944, there were 25,521,000 persons living on farms in the United Staes, according to the estimates of the Bureau of Agricultural Economics. From a level of 30,269,000 in January, 1940, the farm population has decreased in the last 4 years by 4,747,000 persons, or 15.7 per cent. Half of this decrease took place in the single year 1942, when migration of farm people to war industries and entrance of farm men into the armed forces was heaviest. Slackening of migration of farm people to cities, towns, and villages and deferment of essential farm workers cut down the rate of decrease during 1943. The farm population decreased by 1,138,000 persons between January, 1943 and January, 1944, but this was only half the decrease of 2,389,000 which took place in 1942.

By far the largest part of the decrease in the farm population since January 1940 was caused by the migration of farm people to cities, towns, and villages. A substantial part of the decrease was due to inductions and enlistments of men into the armed forces. Some of the decrease in the farm population, however, has come about without migration when farming operations have ceased on a unit and its dwelling is longer classified as a farm residence. All these departures from the farm population were only partially offset by natural increase and by people moving to farms.

In the 4 years since January 1940, the following changes are estimated to have occurred in the farm population:

(1) A net loss to the armed forces of 1,650,000 men who were living on farms at the time they enlisted or were inducted;
(2) A net loss of 4,660,000 persons of both sexes and all ages who either moved away from farms or who are living on places which are no longer farms because all agricultural operations have ceased;
(3) A net gain of 1,562,000 through the excess of births over deaths in the farm population.

The estimate of the number of persons living on farms who entered the armed forces includes not only farm workers, but also a great many young men who were living on farms but working at nonagricultural occupations or attending school.

If the farm men in the armed forces are counted as part of the farm population, the present level of farm population is about 650,000 lower than the level which would have been reached if the depression of the early 1930's had not interrupted the downward trend which prevailed from 1916 to 1930. Thus 4 years of increased nonfarm employment opportunities during the defense and war period have more than wiped out the effect of the depression on the trend in farm population.

Information on changes in the composition of the farm population during the last 4 years will be released shortly from a cooperative survey made this year by the Bureau of the Census and the Bureau of Agricultural Economics. Estimates of changes in the farm population due to births, deaths, and movement to and from farms during 1942 and 1943 by major geographic divisions are also being developed and will be released at a later date.

Cultural Session to Be Feature of 6th All-Southern Negro Youth Conference

Constitutional Convention of Association of Young Writers and Artists To Be Held on November 30

Birmingham, Alabama—Louis E. Burnham, acting secretary of the Association of Young Writers and Artists, affiliated with the Southern Negro Youth Congress, has announced that Thursday, November 30th, the opening day of the Sixth All-Southern Negro Youth Conference will be devoted to the cultural activities sponsored by the Association. Several of the honorary members of the Association are expected to be in Atlanta for the conference sessions. Among those expected to be present are Dr. Alain L. Locke, chairman of the Department of Philosophy at Howard University; Sterling Brown, Negro poet and teacher at Howard University; Harold Preece, author and columnist; and Marjorie McKenzie, attorney and columnist.

Members of the Association will spend the morning session in a full discussion of further program for developing the cultural life of Negro youth of the South. Winners of the first quarterly contest sponsored by the Association will be announced by Dr. Locke, one of the contest judges. The contest had as its topic, "The significance of the novel, 'Freedom Road', by Howard Fast."

Other sessions of the Youth Conference will be devoted to panel discussions on the problems of veterans and service personnel, economic security, education, community welfare, constitutional liberties, the franchise and personality problems of Negro youth. Among the panel consultants expected are, Thomas N. Roberts, Personnel Division, U. S. Department of Agriculture; Col. Campbell C. Johnson, Selective Service System; Frances Williams, Office of Price Administration; Forrester B. Washington, Director of the Atlanta School of Social Work; Dr. Ira DeA. Reid, professor of Sociology, Atlanta University and Osceola McKaine, candidate for state legislature, South Carolina.

Farm Experts Plug Sweet Potato As Corn Substitute

Atlanta, Ga.—This bit of postwar planning is tied up with strings—sweet potato strings.

Farm experts with an eye toward putting the South on a more even footing with the West in the production of livestock, have been plugging the sweet potato as a substitute for corn.

Use of sweet potato strings—the tip ends of the potato—instead of potato slips, they claim, will reduce the work involved and produce a carbohydrate feed that would be equivalent to 50 or more bushels of corn per acre. Much of the South's corn land averages a dozen or fewer bushel of corn per acre.

The Central of Georgia Railway's agriculture agent, J. F. Jackson, has been advocating the idea for the past several years. He reported some headway this year but said the war demand for sweet potatoes as human food had worked against the idea.

It is time to harvest sweet potatoes again and Jackson said farmers should save the tip ends of potatoes for seed with a view toward trying the idea next spring. If the war is over in Europe, he said, some of the sweet potato crop planted for food could be turned into livestock feed.

A Birmingham, Ala., firm, the General Steel Tank Company, has hydrating machines for taking excess moisture out of the potatoes and shredding them. All of these machines went to Texas and Louisiana.

Significance of the

(Continued from page 1)

can learn to own and operate large scale machinery and equipment together, equipment too expensive for one small farm to support.

They can learn to purchase their supplies together. They can learn to pool their savings in credit unions to meet some of their own credit needs. Neighbors can learn to work together to build better churches, schools, lodges and clubs.

Some neighborhoods and communities are beginning to do these things (see articles in this issue by Mr. Cornelius King). More and more can and must do these things. Why?

Because this is the only way small independent farmers, and Negro farmers in particular, are going to be able to compete. It is the only way they will be able to withstand and adapt themselves to mechanized farming to meet the competition of the big farms.

LET NEGRO FARMERS TRY TO BUY LAND IN OLD OR NEW NEGRO LANDOWNING NEIGHBORHOODS. LET THEM LEARN THE BASIC ESSENTIALS OF MUTUAL HELPFULNESS AND COOPERATION. IN THIS THEY HAVE A FUTURE.

Other people, with all the advantages theirs, may possibly be individualistic and get away with it. NEGRO FARMERS CANNOT AFFORD THE LUXURY OF INDIVIDUALISM.

Mr. and Mrs. Belfield

(Continued from Page 1)

"All the boys wrote home and said that they are telling everybody they meet how our democratic Government gives the little fellow a chance to get ahead," Mrs. Belfield said.

Typical of what the boys wrote is the following paragraph from a letter from Charles, a corporal with the Army in the South Pacific:

> "I am very proud Farm Security has made it possible for you to purchase a farm home. You can expect me to do my part when payments fall due. This is a splendid example of the fact that American democracy is providing more and more for the welfare of the people."

Charles volunteered for Army service shortly after graduating from North Carolina State College at Durham, where he worked his way through school.

Two other sons, David, Jr. and Willie Lee, are also in the South Pacific area. David is a seaman first class in the Navy while Willie Lee is a non-commissioned officer in the Seabees. Luther is with the Navy in the Mediterranean theater while Edgar, a staff sergeant, is recovering in an English hospital from wounds received in the invasion of France.

A niece of Mr. and Mrs. Belfield whom they reared—Clara Mills—is a WAC at Ft. Riley, Kansas.

The Belfields, one of the families in their country this year chosen to receive a farm purchase loan by a committee of three farmers in the county who help FSA administer the program, will have up to 40 years to repay the loan. They feel that with the help received from their sons in service and the increased income they expect as a result of sounder farming practices they will pay for their farm in much less time.

"We had sharecropped a long time," Belfield said, "but a sharecropper with eight children of his own and several others he's raising, has a hard time saving enough money to buy a farm. The Government has helped us by lending us this money, and now we can help the Government by producing more food, paying more taxes and buying more War Bonds."

The Belfields have increased their poultry flock from 67 to 350. Garden vegetables have increaseed 100 per cent. They plan, this year, to increase food conservation by 200 per cent and they are stepping up the production of pork, milk, butter, grain and dry feed.

Jamaican Presents Bust of President at White House

USDA photo by Osborne.

Alvin T. Marriott (center), Jamaican sculptor who came to the United States last April to help cultivate and harvest war crops, is shown presenting to Maj. Gen. Edwin M. Watson a bust of President Roosevelt which he made in his spare time. The general received the bust for the President at the White House in the presence of important officials. Pictured, left to right are: Herbert G. Macdonald, chief liaison officer of the British West Indies Central Labour Organization; General Watson, Mr. Marriott, Brig. Gen. Philip G. Bruton, director of the Office of Labor of the War Food Administration; and William W. Harris of the Anglo-American Caribbean Commission.

Jamaican Farm Workers Present Bust of President at White House

(Continued from Page 1)

Presented on behalf of the 19,000 Jamaican farm workers in this country, the bronze finished, over life-sized bust which stands 26 inches was made by Mr. Marriott as a token of his appreciation and that of the other Jamaican farm workers of the opportunity to come to America under arrangements made by the War Food Administration to help cultivate and harvest vital war crops.

It is believed that this excellently sculptured bust, which is a remarkable likeness of President Roosevelt, will be placed among his other effects at Hyde Park. Mr. Marriott points out that he used a special technique in chiseling the bust, one which he says has been highly developed by Balkan artists.

Among those who witnessed the presentation were Brig. Gen. Philip G. Bruton, director of the WFA Office of Labor; William W. Harris of the Anglo-American Caribbean; and Herbert G. Macdonald, chief liaison officer of the British West Indies Central Labour Organization.

Following the presentation of the bust, Mr. Marriott addressed the Capital Press Club at Republic Gardens, and later broadcast a message to Jamaica. He pointed out in his talk before the press club that he had been inspired to make a bust of the President after seeing him in a newsreel. It took him two months to complete it, working only in his spare time after hours of hard work every day in the fields.

Mr. Marriott, a mild-manner, youthful looking man of 32, began shaping statuettes out of clay, and carving figures out of wood when a small child. At the age of 10 he made a bust of the late King George V of England. Seven years ago he carved a Jamaican girl out of mahogany. So attractive was it that curator of the Victoria and Albert museum of London, purchased it for the museum.

Although Mr. Marriott has had no formal training in art, several renowned artists visiting Jamaica, have viewed his work with admiration, and have offered helpful criticisms. Among them has been the famous British artist, Sir Augustus Edwin John.

Having completed his farm labor contract here, the sculptor is returning to Jamaica shortly. "It'll be fun," he says, "telling my wife and five children about the tobacco fields of Connecticut where I worked, and about this unique honor of presenting a bust of the President at the White House."

In his home town of St. Andrews, a suburb of Kingston, Mr. Marriott will resume work in his studio, carving decorative furniture and scupturing.

Wickard Offers Post

(Continued from page 1)

creed, or color.

Secretary Wickard's address was delivered before the 22nd annual session of the Conference of Presidents of Negro-Land-Grant Colleges meeting at the Wabash Avenue Y. W. C. A., October 24, 25, and 26, to discuss 'Problems of Higher Education for Negro Colleges in the Post-War Period."

Pointing to the contribution which colored farmers have made to wartime production with the help of the Land-Grant Colleges, their products — vocational agriculture teachers, farm and home demonstration agents, junior soil conservationists,—and with the encouragement of the rural church, the Secretary said that they are helping to fill the mess kits of our fighting men. Said he, "If every one in the armed forces sat down to eat one time, the table would have to be almost 2,000 miles long. A table that long," he continued, "would stretch from here to Prairie View and across to Tuskegee; and the food required to serve one day's mess would weigh 25,000 tons."

Going further, Secretary Wickard said, "The nation's colored farm families have helped, and are helping, tremendously in meeting the great wartime need for food. They are growing a lot more of their own food at home. This helps in two ways: it means that more of the commercial supply can go to other war uses, and it means that the families are eating better—more healthful meals. What is more, a great many colored farm families are now producing more food than they need for themselves. This extra food is helping to keep our fighting men well fed, and is helping to keep the shelves of our grocery stores well stocked.

"Yes, our hats are off today to all of the nation's farm people—tenants, owners, and laborers; colored and white; young and old. We cannot praise them too highly or too often."

Turning to the importance of trained leadership, the Secretary said, "Training for leadership must always be the colleges' first responsibility. That is true, of course, of all Land-Grant colleges. But I think at this time it is particularly true of the Negro colleges. I say this because of the great gains the Negro has made in the past few years—gains that include not only agriculture but all of the other lines of endeavor.

"Now as you and I both realize, most of those gains should have been made years ago, and the present advance represents only a small part of what still remains to be done for and by the Negroes of this country. Now that appreciable gains have been made, it is desperately important that we keep moving forward instead of slipping back. To move forward will take leadership—trained, intelligent Negro leadership."

Referring to the employment of trained colored leadership in his Department, Secretary Wickard stated, "Since 1941 Negro personnel in the Department of Agriculture has increased over 300 per cent; and I think it is very significant that the majority of our Negro employees no longer are custodial workers. Whereas three years ago over four-fifths of our Negro employees were in custodial positions, less than half of them are doing that kind of work today. The rest are clerical, subprofessional and professional workers.

"And, of course, I do not have to remind you that your own Dr. Patterson, and Claude A. Barnett, the director of the Associated Negro Press, serve as my special assistants to help keep me informed as to the special needs of Negro farmers and help shape the Department's program for assisting those farmers.

"This trend toward Negro leadership is all to the good, and it must continue in order to provide incentive to the Negro boys and girls who are studying in your institutions. They must be given reason that there is room higher up the ladder for qualified men and women, regardless of race, creed, or color."

In closing, Secretary Wickard pointed out that the colleges could perform a great service by offering special abbreviated courses in agriculture for Veterans returning to farm homes who want to farm for themselves but whose war service has prevented them from taking standard agricultural courses.

It Can Be Done

A Farmers' Friend

Note to the GI's and their friends: Write down these G. I. land facts. We gave them to you in less detail, in November:

1. Of the **six and one-half** million acres of agricultural lands held by Uncle Sam as "surplus military lands," **three** million acres are good farm lands. But **three and one-half** million acres are poor lands that cannot for years to come, support families. If you are thinking about buying, **leave that three and one-half million acres of poor land alone.** Love of the soil, without good dirt, won't grow the first bean, onion or potato.

WOULD YOU MOVE INTO A HOUSE THAT WAS TUMBLING DOWN just because the old folks used to live there, and you had friends, on the next street, in houses just as bad?

2. But the quarter million Negro farm boys in the service are nearly all from the South, because that's where Negro farmers are, owners, tenants or croppers. That, of course, is not an exact statement. A few of Aunt Hattie's boys did move to farms up North, or out west, but only a few.

Now, only 30 percent, a little less than one-third, of that G. I. farm land (the good part) is in Southern states, where roughly, 700 percent of our farm GIs came from. That 30 percent is just about 900 thousand acres. If our Negro farm GIs, who are about one-sixth of all farm GIs, get one-sixth of the good GI land that is in the South, they would get about one hundred fifty thousand acres. That divides up into 1,500 hundred-acre family farms. Not very many, is it? But if the boys are ready to do a little pioneering, to cut loose from the old home places and the old home counties, the OLD HOME STATE, if necessary, and go where the land is, **one sixth of the 3 million good acres, spread all over the United States, might well be their goal.** That would be half a million acres, or enough land for 5,000 hundred-acre farms. That is something to think hard about, and something definite to shoot at.

AND DID YOU KNOW THAT THE NEW FARMERS OF AMERICA, ALONE, HAVE SENT 15,000 MEMBERS TO THE ARMED FORCES, TO FIGHT IN WORLD WAR II?

Future Farmers, the white organization, has sent 150,000 former and active members.

These trained boys, as well as thousands of others with less training, are coming back ready for business. What will be the business? Aside from Item No. One, which is to get on dirt that will grow food and cash crops before the family starves to death, one of the questions calling for attention will be this business of power-farming.

All of you know what power-farming is. It is farming with engine-driven machinery, tractors, combines, pickers, instead of farming with man-muscle and mule-muscle.

Now, there is talk going the rounds which is not smart talk. This talk is to the effect that power-farming is in; that the family-size farm, as a producing unit, is out; and that whatever we, as farmers, or as a region, or as a country, can get the most of the cheapest, IS BEST.

According to that way of thinking, slave labor is cheaper than free labor. So slavery, of one kind or another, is smart after all. Before we swallow that dose, we might find out who mixed it. We won't have to look far. It was mixed by the people who want to make as much as they can for as little as possible, by plantation owners who want to continue to live on a scale that honest profits won't support. It was mixed by the big commercial growers who are pocketing most of the benefits from agricultural subsidies. It was mixed by the bankers, the insurance companies and others who have influence enough to control the ideas they put out. Influence enough to dupe even ministers and teachers and put words in their mouths that will make the rest of us believe that what they say is so.

"IT AIN'T NECESSARILY SO." We can't match a man with a mule against a man on a power-driven gang plow. No. But we can match our own gang-plow or any other kind of power equipment we need against another owned by a planter, a commercial grower, the XYZ Insurance Company or anybody else. Because we can buy these new tools and use these tools, TOGETHER. And we can sell what they produce, TOGETHER. An idea is no better than the people behind it.

Power farming needn't lick us if we have producing dirt and stick together.

Pay that Poll Tax

Dependency and the Vote

By George S. Mitchell

I have been searching for a long time for the inner reason why the proportion of adults who vote in the South is so much smaller than in the North.

The usual explanation are the poll tax and the one-party system. The poll tax is wrong and it is a real barrier for a lot of people, especially where it adds up year after year. The predominence of the main party narrows the issues in primary contests and is responsible for the light vote in general elections. Crooked enforcement of literary or educational tests holds back a lot of votes, too. Still, all these things can be overcome when people really want to vote.

From studying a country neighborhood I know pretty well, I made up my mind a while ago that the deeper problem is dependency. When you look to a boss man for your job, for promotion, for land to farm, for a house to live in, or for credit, you are under some pressure to leave voting to the boss and his friends. If you are really poor and have every now and then to go to some person who is important locally and borrow ten dollars from him to keep the family from starving, you are pretty careful not to do anything that's going to get that fellow down on you. Sometime you might go there when you badly needed that ten dollars and be told that he doesn't lend money to the likes of you.

One of my friends in the deep country has been in this situation all of his life. It never crossed his mind to vote. I never talked to him about voting, but I think I know the reason—in this emergency dependence on a big man's favor.

A couple of weeks ago, I visited my friend again. He has still got ten or eleven children and grandchildren around the place, and he is still poor, but in the last few years he has got himself a long-term lease on a scrap of a farm, a good house on land he owns, a tight fence, a one-acre garden, enough farm machinery, a mule, and a cow, and four hogs, and three hundred chickens. His wife showed me 500 quarts of home canned fruits and vegetables. He told me he was getting ready to vote and he was going to vote for Mr. Roosevelt. He's 57, and he had never voted. Here lately, he had paid up his poll taxes and he was ready.

"AFTER THE BALL IS OVER"

Every four years this country goes on a rampage of DEMOCRACY. During the presidential campaign "ball" DEMOCRACY is served up as the main dish by both parties, by all candidates. So full of preachment and promise of DEMOCRACY are we, that we veritably burst at our seams.

This presidential campaign is significant for the fact that both parties have become fully awake to the importance of the NEGRO VOTE. Both parties found it necessary to write definite Negro planks in their platforms.

Both candidates promised a permanent Fair Employment Practices Committee. Both parties went tooth and nail after the Negro vote (the democratic party over the protests of its Southern cohorts).

BUT NOW THE "BALL" IS OVER. It is time now for the hang-over. It is hoped that Negroes have kept the old "grain of salt" handy and have a plentiful supply of bromide and soda in the medicine cabinet.

A Mississippi jury has just set free the louts who murdered a Negro farmer and minister simply because he wanted to keep his hard earned farm. Hundreds of thousands of Negro farmers still face displacement and poverty from the tractor and cotton picking machine.

Negro farm families still have the poorest educational and health services of any group in the nation. Negro veterans will be coming home to communities largely indifferent as to their welfare.

The American Farm Bureau Federation will still be directed by Southern planters who maintain their control by proxy voting their Negro sharecroppers whose only connection with the Farm Bureau is an annual picnic and a few prizes each year for working hard.

Negro farmers still remain the most unorganized, inarticulate and almost totally disfranchised major occupational group in the nation. Their leadership is the only professional group which has no national or regional organization. It has no organization which can unify its efforts, its thinking and planning. It has no organized means of presenting the case of the Negro in agriculture to Congress, the Administration, or to the Nation at large.

Negro agricultural leadership has little reason to be over optimistic. Its task is gigantic. The odds against it are surely great. Negro farmers received some help from the New Deal and we can expect more from liberal elements both in and out of government. But, the surface of the problem has only been scratched.

There is need for more Negro county agents more Farm Security supervisors, soil conservationists and foresters. Our farmers need millions in financial assistance, millions in better schools, teachers and health facilities. Experience tells us that these things come the hard way—Democratic or Republican.

The fight has only begun. Let's roll up our sleeves. Let's get organized to do the job. The people are ready. They are strong. But, they need a unified and forceful leadership—a leadership willing and able to struggle with them as well as for them.

THE "BALL" IS OVER. LET'S GET TO WORK.

TEXAS COUNTY SOLVES OWN FARM LABOR PROGRAM

Through the establishment of local labor supply officers and training centers, McLennan County, Texas, has solved its farm labor problem, according to reports received by the U. S. Department of Agriculture.

Dr. E. B. Evans, colored state Extension leader, points out that the labor supply officers make it convenient for persons seeking work on farms to find jobs, and they also enable farmers to find trained workers quickly, because the labor offices maintain a small staff to give instruction in the operation of farm machinery. Considerable emphasis is placed on safety which the offices report has reduced farm accidents.

Soil Fertility and Human Betterment

By Dr. M. F. SPAULDING
(Reprint from Service Magazine)

In February, 1939, I spoke from this rostrum on the subject of "An Appeal for Country Gentlemen." At that time, the young men filled the pews to my right and upstairs. Today, our country is at war. The young women are occupying most of the area once held by young men. Our country is being drained of its manpower, its wealth and its soil fertility. Births are on the increase to replace the loss in manpower. A shortage of civilian commodities is curtailing expenditures. The soil conservation service is making us conscious of soil losses and suggesting remedial measures for maintaining our present fertility level.

This soil fertility loss has been going on in the United States since the cutting of the first forest following the Jamestown settlement in 1607, when we began to cultivate the hillsides. There are now no new undeveloped Wests to move on to after the natural fertility of the soil has been destroyed. The drain of food and manpower to the allies from our soils is taking away from the shores of America essential chemicals badly needed by unborn generations, if they are not to yield to the force of destructive pathological organisms and nutritional disorders. There is a great need of mass education on the subject of soil fertility and the part it plays in reproduction and in the building of sound bodies and healthy individuals. The soil controls the body. Our health comes from the soil.

All our foodstuffs, both in their primary nutrient qualities and in their mineral and vitamin content, are influenced profoundly by the soil which produces them. The plant products we eat and the plant products the animals eat and which in their meat pass on to us have their "hidden" food values largely determined by the soil, good or bad, from which they are nourished.

The calcium content of lime, for example, make up 1.6 per cent of the normal body weight, yet appears in the available form in the soil to about 0.2 per cent. Phosphorus, the companion element for bone construction, is in the soil in an available form to an extent of less than 0-01 per cent. Animal deficiencies are pointing to the soil and not the drug store. The solution to many problems in plant, animal and human nutrition lies in the soil's capacity to provide these two nutrient elements liberally. As the lime and phosphorus are stintingly withheld or generously offered, there is exerted a quiet force that determines the distribution pattern for plants, for animals and for human beings. The supply of these two nutrients may nourish life forms into dominance, or may reduce them to annihilation. They are the first two nutrients in importance in terms of common deficiences. There is no substitute for them unless we are to accept limited starvation.

Science tells us that there are 30 elements associated in one way or another with the fabric of all life, human, animal and vegetable. When the orange trees of Florida suffered for iron, Zu., or Cu., they may be alleviated by feeding them through the leaves in sprays that penetrate the leaf. In man and animals, these deficiencies must be met from the inside through the diet or the doctor's prescription.

It is in terms of absolute supply of body-building nutrients that the soil controls and directs the pattern of life. It limits life, at least to those forms and members that can be maintained by the nutrient supply delivered by the soil.

When one agricultural plant variety is no longer highly productive, we search and supplant it, only to boast of tonnage and herbage. We have moved plants from place to place according to the weather rather than according to the plants' nutrient requirements. We forget that when the first plant failed because of declining fertility, then the second or introduced variety that succeeds must be producing tonnage by taking relatively less from the soil. It must be making its volume from the materials of the air, water and the action of sunshine; or chiefly carbon, hydrogen and oxygen, combustion materials, cellulosic materials, good for firing a boiler where considerable heat is desired, but providing chiefly a filler for empty paunches and human stomachs. As the nitrogen content declines, the carbon content increases. The undernourished young animals and poorly fed children in a vain attempt to support the body's cravings for soil nutrients, stuff themselves until they look like individuals with arms and legs much less mature than their digestive systems.

The poorly fed pigs slip through the fence in search of these body deficiencies. Often, they do a good job of finding a supplement. The shrubbery around the Milbank Agricultural Building has been practically uprooted this Spring by pigs searching for animal protein from the soil (earth worms). But how about those little offsprings from ignorant tenants, cotton farmers with cotton up to the back and front doors with no meal in the barrel or food in the pantry, and the only semblance of a garden is on an eroded hillside which has long become worthless as a productive unit? These little unfortunate creatures are suffering and don't know it for the want of good fresh spinach, Georgia collards and turnip greens. Nature is being forced to use carbon in body structures instead of nitrogen and protein.

Medical and soil science research have begun to dig up evidence that improper food and bad nutrition are the underlying causes of many diseases. Research in Tuskegee Institute's own soil laboratories have proven many of the scientific theories of the C. N. Ratio.

If any of you students should go to Doctor Kenney or Doctor Walwyn and either of them should prescribe some bone meal, lime or rich vegetables well seasoned and appetizing, you would feel that you were not receiving full value from the medical fee imposed. You would turn to a doctor who would prescribe high sounding tonics, pills and capsules. I predict that the time is not far in the future, if not here now, when the medical profession will be prescribing for your ailments some of the things we now call pig and livestock feed or organic fertilizer. You, as a patient, will no doubt think that you are taking some rare imported chemical.

The South has often been classed as lazy by individuals from other sections. In most cases, they are just hungry, have no energy and starving for some good lean meat, fresh seasoned Georgia collards, some of Doctor Carver's weeds and peas from good rich gardens; plants and animals that have quality or class. I am sure most of you have heard horse and mulemen say that they could not give a certain pair of young horses or mules as much to eat as they needed, because they became unruly and couldn't be handled. They reduced the feed input, in order to reduce the energy output, and limit the actions to the controlled level.

The Negro in slavery was a work animal. As a result, he was given food in order to produce. When President Lincoln signed the decree removing him from lawful bondage, the South found another method of controlling him, limiting his diet. Fat-back meat, molasses, prescribed for the Negro tenant and cropper have been adopted by the white tenant and cropper. But these are air foods, woefully lacking in the vital soil materials needed for vim, vigor and vitality to give resistance to the body and protect human health.

The starting point for the solution of our problems of how to get a strong, healthy and happy people living in an effective social order is the "soil." An adequate diet is no so much a matter of income as it is of wise buying, proper preservation and proper cooking.

A full basket, a barn of plenty, health for farm and home workers, an educated populus can come only from healthy fertile soil. Farming by chance, as has too often been the case, cannot build a strong South and release the Negro from bondage. Behind the harvest must go all the brains, skill and intelligence that it is humanly possible to muster on the part of the southern husbandryman and the Negro race. Toil and sweat must be backed by brain and skill.

A grass is not a grass unless the soil on which it grows is really and truly a soil. The people are not a people and are in a sense abnormal to the extent that they are nourished from infertile unproductive soils. Today, we are hearing a great deal about selective service. In agriculture, there should be "selective service" for each acre of soil cultivated. As the army chooses for definite purposes, so should the agricultural husbandry select the soil and crop to be grown on the basis of what the soil supplies and what the crop demands. There should be a scientific balance between soil building crops and soil depleting crops.

Moses was inspired to deliver to the Children of Israel, wandering in the wilderness, the Ten Commandments to regulate man's relations to his Creator and to his fellow men. But there was no erosion in the forest and Moses failed to forsee during his forty years in the wilderness the need of the future for an additional commandment to regulate man's relations and reponsibility to Mother Earth

I dare say if Moses had visited Alabama, Mississippi, Georgia or Florida and seen some of the gullied lands of the South and Mid-West; and if he could have seen the undernourished, impoverished conditions accompanying soil erosion and the production of cotton in Alabama among the tenants and croppers, he would have been inspired to have delivered an eleventh commandments to complete the Trinity of man's responsibilities to his Creator, to his fellow man (the Negro) and to Mother Earth.

Such a commandment as proposed by W. C. Lowdermilk should read about as follows:

> "Thou shall inherit the holy earth as a faithful steward, conserving its resources and productivity from generation to generation. Thou shalt safeguard thy fields from soil erosion, thy living waters from drying up, thy forests from desolation, and protect thy hills from overgrazing by herds, so that thy descendants may have abundance forever. If any shall fail in this stewardship of the land, thy fruitful fields shall become stony ground and wasting gullies, and thy descendants shall decrease and live in poverty or be destroyed off the face of the earth."

As college students trained in nutrition and the science of living, you have an obligation to perform as you return to your respective communities. This story of the stream and the lake illustrates keenly the point I have in mind:

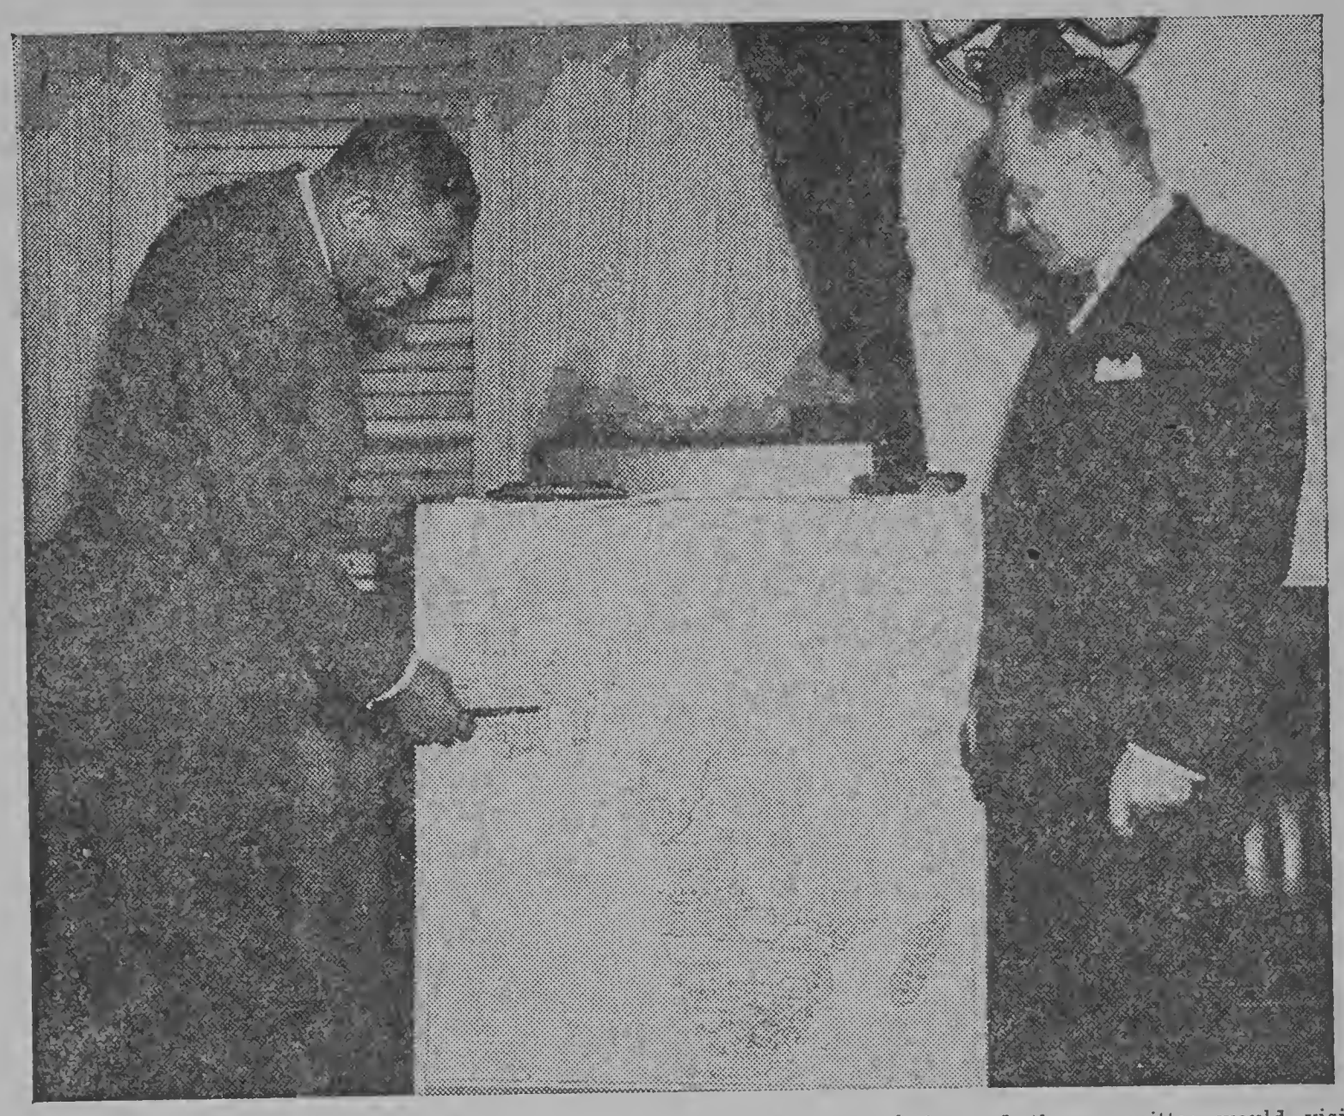
Said the lake to the stream, "You are very foolish in giving your water away to the birds, the trees and grasses. Just look at me, my basin is filled to the brim. What I get, I keep." The stream replied, "Look at my clear crystal stream. I am fed by the trees from the mountains, a jolly frolicking brook. In giving, I get." Later on as the season grew hot, the winds became warm and dry. Evaporation was rapid from the surface of the lake. Soon its waters became stagnant and filled with scum and bacteria. The lake was a filthy mass to be avoided. The stream was still a jolly rollicking brook, fed by the seepage from the foothills. The lake said to the stream, "You were wise; I have been foolish in getting and not giving."

The stream lived because it gave and took. The lake perished because it only took. We cannot continue to take from the soil and not return as much or more than we take. Let's be a stream and not a lake.

"We should never let a friend go out of our lives if we can by any possibility hold him.

If misunderstandings arise, let them be quickly set aright. Friendship is too rare and sacred a treasure to be thrown away lightly. And yet many people are not careful to retain friends. Some lose them through in attention, failing to maintain those little amenities, courtesies, kindnesses, which cost so little, yet are the hooks of steel to grapple and hold our friends."

Leaves for Africa On Important Mission



Before taking a plane recently for Africa where he will serve as a member of an Anglo-American committee which is to make a highly important survey of education, agriculture, and rural life there, T. M. Campbell, Extension field agent of the U. S. Department of Agriculture, called on Secretary Wickard to say goodbye. While chatting with the Secretary, he pointed out on a map some of the areas of Africa that he and the committee would visit. The Secretary told Mr. Campbell that the Department was honored to have him chosen to take part in this important survey.—USDA photo by Hunton.

ARMED FORCES WILL HAVE HOLIDAY TURKEY

Sixty million pounds of turkey will be required this year to provide every man and woman in our armed forces with turkey dinners on Thanksgiving, Christmas and New Year's Day, according to the War Food Administration.

The requirements of our fighting forces for turkey are greater than last years needs due to the increased number of men and women in the services.

Thousands of Negroes serving in the Army, Navy, Coast Guard and Merchant Marine will know that the folks "back home" want them to enjoy the traditional American holiday dinners when the mess sergeant serves turkey this year.

Civilians will have turkeys as soon as the quota for the services has been obtained. According to early estimates, there will be slightly less turkey for civilians this season as compared with last. Turkeys will be rather scarce at the butcher shops for Thanksgiving, but more will be available by Christmas time.

Small farmers, including many colored, who grow turkeys for their own consumption and for neighborhood sales, will help supply the civilian demands for turkeys thereby releasing other birds for purchase to meet Government needs. It is expected that the amount needed for the service will be obtained sometime in November, at which time the set-aside order can be removed.

BRICK HIGH SCHOOL OPERATES SUCCESSFUL CANNERY

Bricks, N. C.—The old adage, "It is an ill wind that blows no good," is of special significance today. Along with the many struggles, prejudices, and other privations that accompany war have come much good to farm families all over the United States. Many of the innovations brought on to meet the present crisis will righly become a significant part of our educational and economic plan for the future.

At present, the school cannery activity is aiding in the development of useful citizenry. More and more our farm families are being made to feel conscious of our national and local nutritional problems; and with a vigorous post-war educational plan as set-up by our federal, state and local administration, a sizeable job will be accomplished.

The cannery at Bricks is a cooperative effort on the part of farm families, county, state and federal governments. It is adequately housed by the Bricks Rural Life School, temporarily. Approximately, $2,000 have been spent in equipment and installation by the local, state, and federal governments to assure a good plant for processing farm food products.

The cannery has been in operation since June, 1944, for farm families. However, the State Workshop for teachers of Home Economics and Agriculture was conducted here on May 22-24, 1944. During this intensive training period, canning technique and some experience were acquired to start our local training program. Each Wednesday through the month of June was known as "Canning School Days" when Food Production War Training Instructors along with other community leaders came in for their specific training.

Miss E. B. Hilliard, a F. P. W. T. Instructor, served as manager of Cannery along with Miss M. E. Reid, teacher at Brick Tri-Co. High School. During July and August, Wednesday, Thursday and Friday were canning days. The hours most convenient for the farmers were from 10 a. m. to 8 p. m. In the peak season, the cannery was opened to 12:00 p. m. on Wednesday and Thursday nights.

Two days each week, four hours of instruction were given one or a combination of the following: The operation of equipment; canning acid foods; canning non-acid foods; canning meats; and canning individual products of particular interest of the community. For the past two years, Food Production Classes have been held in twelve different school communities with some local leader as instructor. These F. P. W. T. Instructors were approved by our principal, Mr. J. W. Wiley and County Superintendent, Mr. E. D. Johnson. The supervision of the classes as in the case of the cannery was by the teacher of Home Economics, Mrs. I. M. Knight and the local teacher of agriculture. Two hundred farm familes that were interviewed expressed a desire to participate in the activity. Approximately 100 families have used the cannery, and they have canned more than 6,500 quarts of food through September 30, 1944.

The installation was under the supervision of the local County School Engineer, Mr. J. B. Arnold. Adult young farmers and all-day groups helped at setting the cannery up for operation.

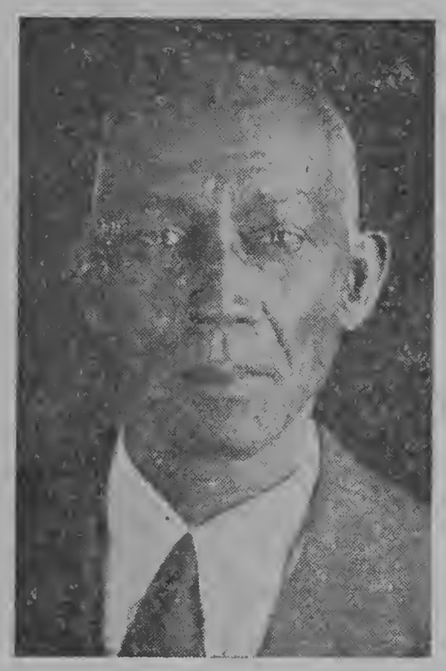
THERE'LL BE LESS CANDY; SOLDIERS COME FIRST

Because of the increased demands by the armed forces over seas, half of all candy bars, rolls and candy in packages, manufactured in this country and designed to retail for 5 cents, are now being set-aside for procurement by the armed forces according to the War Food Administration.

During the last three months, the demand for these items by the military personnel increased sharpely, making it impossible to fulfill requirements by the normal procurement methods. Civilian supplies will be slightly lower as a result of the new order, and popular candy items may be missing from local stores for a time.

Molded chocolate bars are not included in the order as manufacturers are already supplying more than 50 percent of their output to the armed forces.

Successful Farmer



MR. PAUL W. KELLY, of Clarendon, Arkansas, was voted most successful farmer in a contest sponsored by the Arkansas State Conference of Vocational Workers. He operates a family type farm which he is purchasing through aid of the Farm Security Administration. Sixty-five years of age, Mr. Kelly has reared a large family (five boys and five girls). Two sons in the armed forces.

PAUL W. KELLY VOTED MOST SUCCESSFUL FARMER IN ARKANSAS

Mr. Paul W. Kelley of Clarendon, Wins Contest Honor

The Farmer

Paul W. Kelly, 65 years of age, Clarendon, Arkansas, is one of the most successful farmers in Arkansas. He is not only a good example for Negro youth interested in farming, but he is a challenge to others as well. For thirty years, he rented land from one white family. In none of these years did he fail to get an even break, but in at least two, 1914 and 1921, he failed to make money. During the first of these years, the price of cotton was down and in 1921 he failed to market his cotton soon enough. For the past five years he has been farming his own land purchased through the aid of the Farm Security Administration. He has an eighty acre track of rich level sandy loam in a good Negro community, three miles from Clarendon. His house is a well constructed six room bungalow, modern in every respect. He is abreast with the payments on the home and expects to have the entire loan liquidated in the next three years.

His Success

Paul Kelly has not obtained large holdings of land, he does not have a large bank account, even though he does not have to borrow money on which to make a crop. His success is in other areas. As mentioned above, he made money twenty-eight out of thirty years as a renter and broke even the other two. Such a feat is no small achievement. Add to this, his record for the past five years since he has been farming his own land, every year a black ink year, and the achievement increases.

Paul Kelly has been and is a community leader. He served as Sunday School Superintendent in his church for twenty-five years and is now teaching a class. He resigned as superintendent because he felt the church needed a younger man. He has been a leader in county civic affairs influencing the development of his race, leading the movement which resulted in Monroe County's having both Farm and Home Demonstration Agents for Negroes. His wife has also served as a civic leader and has represented the Negro women of Monroe County in many state events. At the present time she is chairman of the County Nutrition Committee for Negroes.

Kelly has many friends among the white citizens of the County. When he needs to hold a meeting of Negroes in the court house for some civic enterprise, it is open to him. He has reared a large family, five boys and five girls, sending them all to grade school and the boys to high school. He has two sons in the armed services, one in the Army and the other in the Navy. Both of those are noncommissioned officers.

He has often set examples for the other farmers of his race in farm and home improvements. For instance, he was the first Negro in the County to own a pressure cooker.

Why He Has Succeeded

Paul Kelly has the philosophy of a successful man. He has faith in his Lord. To visit with him is a genuine pleasure and the visitor is likely to come away feeling that he has been associating with one of the world's great souls.

He has long practiced diversified farming, raising feed for his farm animals and food for his family in addition to cash crops. The fact that he has been able to break even or make money every year he attributes to raising early feed crops and truck farming.

He likes to compete with his neighbors in the production of early truck crops. He has marketed the earliest roasting ears in the county for the past twenty-five years and has failed to have the earliest watermelons in the county only twice in thirty years. He not only strives to excel in being early, in addition, he works for the top in both quality and quantity of production. In all this, he wins more often than he loses.

Paul Kelly says that he always has the top market for all truck crops he produces. On being asked why, he said he asked one of his customers that question who replied, "You never try to 'put over' anything on me. You show me what you have, tell me the truth about it, and I buy." He markets his produce in Clarendon, Holly Grove, and Brinkley. He says he always gets the top price and always gives good measure.

He is alert and keeps well posted on current affairs through newspapers and radio. He studies better methods of farming continuously by reading books and periodicals on the subject and by making the best use of the Clarendon Negro teacher of vocational agriculture and both of the Negro extension agents. He watched the development of the Farm Security Administration program from the time Congressmen began to talk about it until it became law. He is strong for the program. He has kept a record of his farm operations. He knows what he receives and he knows what he pays out. He said he could not recommend share cropping for anyone because share croppers do not keep records.

Answers to Questions:

On being asked what teachers should tell boys who would like to become farmers, he mentioned five things as follow:

1. Buy a farm.
2. Get good hogs, cows, and a good breed of chickens.
3. Get up early and work late. Don't go to town on Saturday.
4. Try to save two dollars out of five.
5. Choose a good garden and have one the year round.

On being asked how much education a young man should have before entering farming as a career, he said he should have at least two years of college.

On being asked to name some of the disadvantages of farming, he mentioned two—the weather and middle men.

On being asked if he were a young man would he take up farming as a career, he said he would not think of entering any other occupation.

—From Careers in Farming, by J. C. McAdams

Problem Child

By Bernell Winn

Onions are acting up again. Early this year there weren't enough of them, remember? Now it's the other way around. Or to be more exact, there are more than we can take proper care of with the limited storage space we have for onions today.

What to do about it? Somehow, we've got to get U. S. consumers during the next month or two to buy more, store more, and eat more than before of this delightful though capricious problem child of food distribution.

A record late summer onion crop of 17,320,00 sacks (100 pound) was indicated for the northern and western producing States on the basis of August 1 conditions. This crop would exceed the previous record established in 1939 by more than 3 million sacks. It is 51 percent greater than last year's crop and 47 percent above the 10-year (1933-42) average.

The greatest expansion in acreage and production has occurred in the Western States (Colorado, California, Idaho, Oregon, Utah, Washington, Nevada, and Arizona) where this year's production is more than 133 percent above average. The crop in the Eastern States (Massachusetts, New York, and Pennsylvania) is 20 percent above average, whereas that of the central producing States (Michigan, Minnesota, Wisconsin, Illinois, Indiana, and Ohio) is about 20 percent more than half of the late crop, the Eastern States about a fourth, and the Central States about a fifth. During the 10-year period 1933-42 each section produced roughly a third of the total.

Storage Space

As a result of increased production in the western producing States this year, a critical shortage of storage space is anticipated there. Although the shortage of warehouse space may be a problem in the Midwest and East also—particularly New York, where the crop is expected to be very large—the problem in these States should not be so serious.

The help of retailers in moving these record onion supplies is needed, particularly during the harvest season. Retailers can feature the sale of onions at attractive prices through store advertising and special displays. Besides promoting greater-than-usual consumpton, retailers can help by advertising lots of 10 pounds or more for home storage. And restaurants, hotels institutions, and other large users can pull part of the load by using more onions this fall than usual and arranging to store some also. Onions can be stored all winter if they are in a cool, dry place that has plenty of ventilation. For the most successful home storage they should be placed in a cool basement or storage room where the temperature ranges between 32 degrees and 55 degrees F.

—Marketing Activities

Why

By RUTH TAYLOR

Why do I talk so much about brotherhood A good many people have asked me, making all sorts of suggestions as to why I take the line I do.

Most of them make the mistake of thinking I talk about tolerance. I don't. I loathe the word. To say "I tolerate" is to say "I put up with you"—which to my mind is almost as bad as active dislike. It is so unpleasantly patronizing.

I talk about brotherhood and neighborliness and understanding for purely selfish reasons. I happen to believe in America. I reckon that by ancestry I am as completely a hundred per cent American as anyone without Indian blood can be. I believe in democratic government and the rule of the people by the people. I believe in Lincoln's great line—no nation can exist half slave and half free.

Since I believe this, I feel that intolerance, prejudice, hatred because of race, creed or color, discrimination or special privilege—either for or against any group—are denials of the things to which I owe allegiance and are termites gnawing at the pillars of our national house.

I may be an idealist but I hold that idealism is part of the American picture. As Walter Lippmann said once—"Let us remember when we talk of realism and of being realistic, that hope may be as realistic as fear, faith as realistic as doubt, and that George Washington who endured the bitter winter at Valley Forge was the same hardheaded man who at Philadelphia presided over the formation of the Union."

I believe that unless we put into practical application the ideal that is America we cannot spread the ideals of the Four Freedoms abroad. Like the Communist—old style—I do not believe the way of life which I want is safe unless it is safe everywhere. The world is too small for differing ideologies. No man can be free unless all men are free.

I do not feel that I have to pick my friends or my enemies by groups. I do not feel that I have to open my home to anyone whom I do not wish to receive—but I do feel that my neighbor is entitled to the same privileges that I enjoy— and that the best way to get along with him is by the strict application of the Golden Rule. I feel that the persecution of any American of any race, creed or color is my affair because it threatens my life and the existence of me, my parents, my grand parents, the democracy which has given my great grand parents, my great great grand parents, and my great great great grand parents, etc., so much.

That is why I preach brotherhood. That is why I will continue to bear witness for my faith.

NO RECONVERSION—BUT

Few people realize that agriculture is one of America's largest industries and employs approximately one-fifth of America's total workers. During wartime, our farm families have performed their difficult task of supplying food for our armed forces and Allies, only by working long, hard hours, seven days a week, 365 days a year—coping daily with the shortage of farm machinery, equipment and manpower. While this industry will not need time for conversion of its processing plants at the end of the war—it still faces a tremendous responsibility of producing greater quantities of food than ever before in history . . . so that the people in these United States and throughout the world may have better food, better health, and a better life. —Dairyman's League Cooperative Association, Inc.

WHAT NEXT?

Mechanized manure removal is the latest wrinkle now being developed for dairy farms. Agricultural engineers are experimenting with a slow moving, endless belt conveyer placed in the drooping trough. It is designed to deliver its load direct to the manure spreader outside the barn. This is not all that has come to light of late in the line of farm invention. A new York farmer, tired of pitching in hay by hand, cut off the blower end of his threshing machine, put the discharge shoot in the loft, and did as much work with two men as five would normally do.

People wonder how the American farmer has managed to get along during the war, in the face of labor shortage. He has done it through determination and ingenuity. If it had not been for these assets plus the effective help of his marketing organizations, the farmer would have been out of business long ago.

WICKARD SETS POST-WAR OBJECTIVES

(Supplemental Statement by the Secretary of Agriculture, Claude R. Wickard, before the Agricultural Subcommittee of the House Special Committee on Post-war Economic Policy and Planning, August 31, 1944).

The Agricultural Subcommittee of the House Special Committee on Post-War Economic Policy and Planning asked me to submit a statement of my suggestions for actions to be taken to accomplish the objective which I described when I testified before the Committee on August 23. This statement is in response to that request. The suggestions herein cover only national agricultural policies which can be inaugurated or expanded by action of Congress. They relate primarily to long term policies. The short-term problems of reconversion are closely connected with present wartime agricultural operations.

The chief prerequisite of a sound post-war agriculture—full domestic employment, with its corollary, expanded world trade—is not directly treated here. Achievement of this end is a problem for the whole nation, not agriculture alone.

Maintaining Agricultural Income and Redirecting Production

No single type of action is suitable for maintaining a satisfactory income for all agricultural commodities. Nor is any single action suitable for maintaining income from any one agricultural commodity under all conditions. Therefore it is desirable that Congress provide the basis for many action programs which can be used as the occasion warrants. These steps should include:

1. Extending the school lunch program.
2. Providing assistance to all families with incomes below $1500 so that they can obtain adequate diets and clothing.
3. Expanding research programs for finding new uses for farm and forestry products.
4. Expanding Ever-Normal Granary programs by providing adequate loan programs to farmers for products which may be safely stored for long periods.
5. Authorizing purchase programs for perishable products which can be used to accompilsh the aims stated in Items 1 and 2.
6. Providing, through price-support measures, a comprehensive program to support farm income. The advisability of lower price supports for portions of the production of a commodity going into export trade or lower-value domestic uses should be considered.
7. Encouraging full and efficient production, but providing administrative flexibility in fixing loan rates and support prices so there will be less tendency for farmers to remain in over-extended lines of production and neglect those where greater production is needed.
8. Authorizing development of international arrangements whereby both exporting and importing countries will agree upon the total quantities of the different products to be exported or imported, prices at which they will move in international trade, and each exporting nation's fair share of the world market. Such arrangements also should include provision for disposing of supplies which cannot be moved at satisfactory prices in commercial channels to deficit countries with low per capita incomes on terms which they can afford.
9. Strengthening marketing agreement programs so as to give growers a chance to see that their products are well distributed among areas, seasons, and uses.
10. Directing the making of payments or furnishing of materials so as to bring about necessary shifts in production.
11. Renewing and expanding a Federal Crop Insurance program.
12. Expanding research programs which will provide for more efficient production and for deliver-

ing a more attractive product to the ultimate consumer.

Equal Standards, For and Among Farmers.

Living standards of rural families for years have been below those of town and city families in regard to many important services and facilities. Steps can be taken by Congress to stimulate the provision of such services and facilities for farm families. In many instances programs of this nature would at the same time make sound and productive contributions to nationwide full employment.

Specifically, some of the steps which might be taken by the Congress are:

1. **Health.** Encouragement of more adequate health programs through grants-in-aid and other forms of assistance. Such a program would include:

a. Establishment of more hospitals, health centers and sanitation facilities in rural areas.

b. Due consideration to the needs of rural areas in the disposition of surplus medical and dental equipment now held for war purposes.

c. Development of a department of health in every county, or in appropriate groups of counties, and a more equitable distribution of medical and dental personnel between rural and urban areas.

d. Adequate medical care for migratory farm workers and other rural groups in special need of such assistance.

e. Encouragement and assistance through a special financing program to rural health associations in developing voluntary medical and dental care and hospitalization insurance plans.

2. Rural Schools, Through a Federal aid system designed to equalize educational opportunity, the States should be helped, on -a basis of need, to develop satisfactory teaching standards in all rural communities and to construct adequate rural school buildings.

3. ' Housing. Many farmers will not have adequate cash on hand for necessary improvements or new construction. Therefore, adequate credit facilities, varying with the needs of different types of farmers, should be provided for farm building and repairs. These would include.

a. Making loans under Federal Farm Loan Acts up to 75 per cent of value of buildings and land.

b. Providing Federal insurance for private loans for farm housing under terms similar to those available through FHA for urban housing.

c. Expanding and modifying the tenant purchase program to provide for (1) present tenant purchase loans which provide for better housing where needed, and (2) loans for better housing to owner-operators and landlords of family type farms.

d. Providing funds for minor housing improvements in rehabilitation loans.

Many families live on farms too unproductive to support adequate houses. The best solution in such cases is to find them more remunerative jobs. But these families, while they remain on such land should receive direct grants for essential improvements, such as protection of water supply, screening, and roof repairs.

Research and education to make available information on plans and materials for homes and other farm buildings should be continued and broadened.

4. **Electrification.** Existing programs are admirably fitted to perform the task of bringing electricity to a vastly larger number of farms after the war. Funds are needed for a comprehensive survey of needs for electricity in all rural areas and for drawing detailed plans for providing it. Also, funds should be made available immediately to finance rural electric cooperatives in the years immediately after the war ends, and the REA should be authorized to make loan allotments to cooperatives as soon as detailed plans for a given area are completed and local groups want to start carrying them out.

5. **Roads.** Through grants in aid and other forms of assistance, rural communities should be provided an adequate system of all-weather roads. This should be done with an eye to general requirements of rural living as well as to the farm-to-market aspect of road systems.

6. **Social Security.** Social security legislation should be amended to make farm people—operators and workers alike—eligible for old age and survivors' allowance. Likewise hired farm workers on large scale farms above family size should receive the benefits of unemployment insurance. The public assistance phases of the program should be liberalized. Should the Social Security Act be amended to provide for health insurance, all farm families should be covered.

Also, among different groups of farmers there have been great disparities of living conditions and standards. National farm programs of the post-war years should go farther than those of the past in recognizing those differences. Steps to maintain incomes from sales of farm products will be of benefit primarily to large-scale farms and to commercial family-type farms. The suggestions made for developing facilities and services should benefit all types of farmers. However, about half of the nation's farm families either operate farms on which annual production for sale or family use is very small, or are farm laborers.

Special measures to aid members of this group include:

1. Training programs to fit persons on inadequate farms for part- or full-time work off farms; and an employment service to help them find rural or urban situations.

2. Assistance in moving off inadequate farms, or in enlarging their present units to a point where they can be expected to yield a decent living.

Owner-Operated Family-Sized Farms

All agricultural legislation should be so drafted, and all programs so administered, so as to strengthen the family-sized farm. The best way to do this is to keep the agricultural ladder open by:

1. Seeing that wages and working conditions of farm laborers are such as to prevent exploitation and to permit enterprising individuals to move ahead.

2. Improving tenure conditions, especially in those areas where current tenure systems are little more than a wage contract, in such a manner as to stabilize tenure arrangments, conserve the soil, and allow for the development of family-size units.

3. Maintaining farm prices and permit enterprising tenants to incomes at such a level as will accumulate enough savings to enable them to purchase farms and allow older farmers to pass their farms on to younger men.

4. Continuing and substantially expanding current rehabilitation and tenant purchase programs and providing for farm enlargement loans to owners of inadequate units.

Conservation and Development of Agricultural Resources

Conservation and wise use of soil, water and forest resources are basic to efficient and sustained production. The following types of action should be considered:

1. Continuing conditional payments, based on needs for conservation, and otherwise assisting producers in carrying out suitable agronomic and soil-management practices, and in building terraces, dams, ponds and other conservation structures.

2. Expanding current programs for supplying technical advice and mechanical assistance through soil conservation districts to individual producers; and making available to the districts surplus war equipment on terms they can meet.

3. Developing a comprehensive flood control program, including maximum control of water on the ground where it falls.

4. Orderly development of new land, as requirements for new agricultural production warrant, through irrigation, clearing, aid to drainage and levee districts, and through extension of such activities as provided in the Water Facilities and the Wheeler-Case Acts. New land and other agricultural land now owned by the Government should be disposed of in family-sized tracts to families who intend to live on the land.

5. Expanding public purchase of lands that have been reduced to non-productive conditions by erosion or destructive forest practices as well as other lands plainly submarginal for permanent private ownership and lands essential for watershed control or other public purposes.

6. Effective public regulation of cutting and other forest practices on private land to stop destructive cutting and keep forest lands reasonably productive.

7. Providing more adequate reforestation programs for public lands.

8. Expanding the present program for encouraging the growing of trees on private lands better suited for trees than other uses, by aiding in planting of trees and protecting trees from fire, insect and disease damage, and in helping land owners in obtaining a more satisfactory market for their trees.

More Effective Marketing

Reduction in the price spreads between farmers and consumers would be of great benefit to both groups, and would be one of the most effective means of developing the widest possible market for farm products. Action in this field might include:

1. Development of a freight rate which would equalize and minimize transportation costs for agricultural products.

2. Regulation of certain marketing agencies in such a way as to reduce waste and inefficiencies and assure farmers and consumers fair treatment.

3. Reduction and elimination of a great mass of municipal and interstate trade barriers.

4. Development of more efficient means of assembling farm products and distributing them to consumers, including assistance in developing new market outlets in areas where they are needed.

5. Development of an adequate system of grades and standards so as to encourage the production of the highest quality of farm products, while, at the same time, indicating to consumers what they are buying.

6. Further encouragement and aid in the development of cooperatively-owned marketing facilities in order to increase returns and give farmers maximum control of their products.

Education

It is difficult, if not impossible, to attain most of the agricultural objectives if farm people do not have a thorough understanding of the problems involved and the methods for solving them. It is recommended that a Federal Extension program of adult education and demonstration should be broadened to fully cover all phases of rural living.

Rural Works Program

While many of the developments proposed above should be undertaken regardless of the level of employment, we should have plans ready to accomplish some of them as public works projects should there be a need for such a program to provide supplementary jobs during the reconversion or later post-war period. In such an event, it would be well to accelerate the application of measures to further the conservation of natural resources and measures to provide adequate services and facilities for rural people.

Two FSA Officials Get Overseas Posts

J. JEROME ROBINSON

FRANK E. PINDER

Both Julius J. Robinson and Frank E. Pinder, who established excellent records as administrative officers in the Farm Security Administration where they played an important part in helping to get aid to low-income farmers, are slated for overseas service with the United Nations Relief and Rehabilitation Administration and the Foreign Economic Administration respectfully.

Mr. Robinson, who is now taking a brief orientation course at the University of Maryland for his new assignment, expects to be assigned to the European theatre. His work will be that of an administrative assistant in the division of relocation. This branch of UNRRA will concern itself with relocating families who have been dislocated by the war. It is estimated that several million families have been dislocated and are now refugees.

Mr. Pinder's work will be confined to Liberia where he will serve with a special mission from the Foreign Economic Administration. This mission will have the dual objective of assisting Liberia in increasing its production of such strategic materials as rubber, and palm oil, and it will also develop other resources needed by the United Nations.

An important part of the mission's work will be connected with the development of a seaport to be constructed by a private United States contractor under the supervision of the Bureau of Yards and Docks, of the United States Navy. U. S. Government funds advanced for this purpose are to be repaid by the Government of Liberia from commercial port income. The mission will be concerned with co-ordinating port activities with other plans for aiding Liberia in the development of its resources.

Prior to leaving for Liberia Mr. Pinder pursued a brief orientation course in tropical agriculture at Louisiana State University.

Mr. Pinder is a graduate of Florida A. and M. College, and was for eight years a county agent in Florida. In 1941 he came to the U. S. Department of Agriculture as an assistant cooperative specialist in FSA. He was later promoted to cospecialist and finally to the position of agricultural economist.

Mr. Robinson is a graduate of Virginia Union University and the Atlanta School of Social Work. He entered the Department of Agriculture in 1940 as an administrative assistant in FSA. Three months ago he was promoted to the position of special assistant to the FSA administrator. While with UNRRA he will be on leave from FSA.

Colored Farmer Makes REA Hotbead Pay Big Dividends

REA power means more than electric lights, radio, fan and electric refrigerator to Mr. and Mrs. Bert Eird, cooperators of the U. S. Department of Agriculture's Rural Electrification Administration. To this colored farm family it also means an extra hand these days when labor is unusually scare, and a better hotbed for their vegetable plant business.

The Eirds, who live near Danville, Kentucky, grew vegetable and flower plants as an important source of extra farm income. A few years back farmer Eird used to have considerable difficulty sometimes finding enough manure in the right condition for his eight section bed; and shoveling the manure wasn't an easy job, nor was the trotting back and forth through the day to watch the thermometer and adjust the ventilation after the bed had been sowed down in seeds.

He and Mrs. Eird were getting old, too, and their two sons were in the Army, so he thought there must be some easier way to handle the hotbed. Of course, he didn't think that flue-heated, or pipe-heated beds were practicable of his operations. It was then that he talked with manager of his REA cooperative. The manager advised him to electrify his hotbed.

The initial outlay of $55 for installing an electric heating system looked a little large in a lump sum, but, of course, he could spread the payments over several months, so he took the REA co-op manager's advice and electrified his hotbed.

The first year he succeeded in breaking even, and last spring, his improved plants, grown under uniform control temperature conditions, brought him over $300. He had produced 1,300 dozen plants—potatoes, three kinds of tomatoes, and flowers. Two of Mrs. Eird's flowers won honorable mention in the Boyle County, Kentucky, flower show.

With the extra electricity costing the Eirds only $23.77 for the growing season this year, and with the seeds costing only $24.00, they netted more than $250 off their plants last spring.

Farmer Eird thinks it's a little soft, too, only having to adjust the thermometer, and water his hotbed plants. When his sons come home after the war, the Eirds plan to expand their hotbeds and go into the vegetable plant business on a much larger scale.

39 Million Pounds of Food Go to Puerto Rico, Virgin Islands

Over 39 million pounds of foodstuffs and other agricultural products were delivered to shipside for Puerto Rico and the Virgin Islands during the month of September, according to the War Food Administration monthly report.

Rice accounted for 14,782,000 pounds, or over a third of the total tonnage, white flour accounted for 6,306,000 pounds, cured fish, 2,832,000 pounds, and evaporated milk, 2,592,000 pounds. Other items included onions, canned fish, soap, frozen meat, lard, oats, corn meal, and vegetable seeds.

Shipments are made to the islands on a cash sale basis under agreements between WFA, the Department of Interior, and the insular government.

In addition to listing foodstuffs delivered to shipside under the cash sale arrangements, the report also lists lend-lease deliveries for our allies, and food supplies made available to school lunch sponsors. Total agricultural products delivered for lend-lease shipment in September amounted to 541,872,551 pounds.

Sponsors of school lunch programs, relief agencies and civilian groups received 1,539,000 pounds of food, including unconcentrated grapefruit juice; shell eggs, family mess pork, and pork ribs during September.

WOMAN'S PAGE

MAKE YOUR CUT OF UTILITY BEEF ATTRACTIVE AND TASTY

These days, there is much talk of "utility beef." Some folks may thinks this a new kind of beef—a war variety—it isn't; we have had it all the time, just as we have had other grades of beef. In some areas, however, a large portion of the beef has been of this grade.

Military demands for beef and the tremendous increase in livestock which has outrun our food supplies have changed the picture. As a result, "utility" beef has become more common in our markets.

This grade of beef has been produced largely on grass instead of "finished" in the feed lot. The better and more expensive grades of beef have been "finished" on corn and other feed concentrates which put streaks of fat called "marbling" through the rich red meat and that fine layer of white fat on the outside.

The cattle which produce "utility" grade of beef haven't had this special feeding due to the wartime feed situation. In the main they have grazed on grass until they were ready for the market.

This grade of beef is just as nutritious as other grades but preparation and cooking of it has much to do with making it attractive and tasty. Housewives can overcome most of the characteristics of "utility beef" which make them cheaper than the more choice grades. Mainly, it is not as tender and, therefore, should be tenderized to make it more edible.

There are three ways of tenderizing meat; first, natural aging; second, chemical reaction through the use of acids like vinegar, lemon juice or sour milk; third, mechanical, such as beating, grinding and chopping.

"Utility" grade beef does not age as well as the more choice cuts, so this method of tenderizing may not prove too satisfactory. The third method is the most commonly used, although there are many housewives who use the vinegar method to tenderize cuts before cooking.

All cuts of "utility beef" should be cooked with slow, moist heat. A judicious flouring of the cuts also helps preserve the flavor and retain the natural juices.

Under normal conditions, about 15 per cent of the beef retailed is "utility" grade beef, but with the war taking most of the better grades, consumers find more "utility" grade beef in butcher shops than before.

CHOCOLATE CHIP BREAD PUDDING

2 cups breadcubes
½ cup shredded bran
3 eggs, well beaten
½ cup sugar
¼ teaspoon salt
3 cups milk
½ cup semi-sweet chocolate chips
½ teaspoon vanilla

Mix bread cubes with bran and place in greased baking dish. Sprinkle half the chocolate over bread and bran. Add sugar, salt, milk and vanilla to the beaten eggs and pour over the bread. Sprinkle remaining chocolate on top. Set baking dish in pan of hot water and bake at 325 degrees for one hour.

CUCUMBER DRESSING

1 cucumber
1 stalk celery
6 green olives
Salt and pepper
1 tablespoon tarragon vinegar
2 tablespoons chili sauce
1 cup mayonnaise

Chop cucumber, celery, and olives (pitted) very fine. Sprinkle with salt and pepper. Add vinegar and chili sauce. Let stand at least 15 minutes in refrigerator. Beat into mayonnaise just before serving.

CEREAL PIE CRUST

¼ cup white corn sirup
2 tablespoons sugar
¼ teaspoon salt
½ tablespoon butter or margarine
¼ teaspoon vanilla
2 cups slightly broken corn flakes

Combine sirup, sugar, salt, and butter. Cook to soft ball stage. Remove from heat, add vanilla. Pour over corn flakes and toss lightly. Press into pie pan and cool before adding filling. Yield: 1 crust.

CORN PUDDING

2 cups cooked corn
3 eggs
3 tablespoons melted butter
2 cups milk
1 teaspoon salt
2 tablespoons sugar if desired

Beat the eggs slightly, add corn and other ingredients and mix well. Pour into a buttered baking dish, set in a pan of water for uniform baking. Bake in a moderate oven, 350 to 375 degrees, for about 35 minutes, or until the custard is set.

Variations: Add 4 tablespoons chopped green pepper, 4 tablespons chopped parsley, ½ cup ground cooked ham, or ½ cup grated cheese.

SHRIMP AND LIME SALAD

1 7-oz. can shrimp (1¼ cups)
1 cup finely chopped celery
½ cup mayonnaise
¼ cup lime juice
½ teaspoon grated lime rind
1 avocado
Salad greens
Paprika

Combine shrimp and celery. Blend together mayonnaise and lime juice; add lime rind. Slice avocado. Arrange salad greens on serving plate; make ring of avocado slices to shrimp and celery mixture; pile in center of salad plates. Sprinkle with paprika. Serves 4.

Before working with fish, pour salt on the fingers to avoid that fishy odor on the hands.

PEACH FRITTERS

1 egg
1-3 cup milk
1 teaspoon melted margarine
1 cup flour
1 teaspoon brown sugar
1 teaspoon baking powder
½ teaspoon salt
1 cup sliced peaches
Fat for frying

Mix and sift dry ingredients. Add milk, margarine, and egg, beaten. Mix thoroughly. Stir in peaches lightly. Drop mixture by spoonfuls into deep fat. Fry until golden brown. Drain on brown paper. Serve with lime sauce.

A tablespoon of molasses added to vegetable soup and stews produces an excellent flavor and good color.

CHICKEN-CORNMEAL CASSEROLE

1 cup cornmeal
2 cups boiling water or chicken broth
3 eggs, separated
1¼ teaspoons salt
1 teaspoon baking powder
2 tablespoons melting shortening
1 cup chopped cooked chicken

Gradually add cornmeal to boiling liquid, stirring constantly. Cook slowly, stirring until thickened. Remove from heat. Beat egg yolks well; add salt. Stir into cornmeal mixture. Beat egg whites until stiff. Add baking powder, shortening, and chicken to egg yolk mixture; fold in egg whites. Pour into greased two-quart casserole and bake in moderate oven (325 degrees) 1 hour. Serve immediately. Six servings.

APPLE, NUT CHIFFON PIE

1 tablespoon unflavored gelatin
¼ cup cold water
1¼ cups applesauce
1-8 teaspoon nutmeg
2 tablespoons lemon juice
2 eggs, separated
4 tablespoons sugar
¼ cup chopped nut meats
1 pastry shell, either pie dough or cereal pastry

Soften gelatin in water 5 minutes. To the egg yolks add the sugar, applesauce and lemon juice, and cook in a double boiler until of custard consistency, stirring constantly. Add this to the softened gelain. Cool. When mixture begins to stiffen, fold in the stiffly beaten egg whites and the chopped nuts. Pour into a baked pie shell or cereal crust and chill.

The United States is the world's largest producer and consumer of cotton.

HELPFUL HOUSEHOLD HINTS

AVOID CURLING RUGS

If rag rugs are inclined to curl, they can be satisfactorily straighened by dipping the ends in starch after washing. Press the slightly dampened ends with a moderately hot iron.

A sandbox or sand pile in the backyard will bring the seashore home to the children.

RICH IN VITAMIN A

Try to induce your family to eat some of the parsley you use for garnish. It is loaded with Vitamin A. Chopping it fine is a persuasive means to this end. In soups, on sandwich spreads, and in salads the flavoring is excellent.

SALVAGE LINENS

Following are a few suggestions that will be found helpful if table linens are showing signs of wear:

Tint damasks that have turned grey-white to pastel shades of lemon-yellow, ice-blue, or bluish pink. Cut frayed or torn dinner clothes into luncheon clothes, and decorate them with applique designs, which are clever camouflage for mended spots. Cut luncheon cloths that are worn in spots, into mats. If salvaging a crash material, or rough spun fabric, draw the bordering threads until a pretty fringe is evident.

REMAKE HAND-ME-DOWNS

Is there a child in your home who inherits hand-me-down clothing? Remember that no child enjoys wearing clothing that is merely turned up, let out, or taken in, to fit. Of course, for conservation's sake, materials on hand should be used; but for your child's pleasure and self-respect, do take the extra time to rip the garment apart, eliminate worn places, and fashion a garment expressly for the child who will wear it. Girls are always pleased when you add a touch of something new—say, a hand-crocheted collar, or a touch of simple embroidery.

Be sure to buy children outer garments that are easy to get in and out of and that allow for active movement.

Warm colors, those related to red and yellow, are pleasant in rooms that face north and rooms with little window space. Cool colors, those related to blue, are suggested for rooms facing south. In a climate that has a long cold season it is well to avoid a cold-color effect.

BEAUTY TIME SAVER

A covered soap dish, preferably the kind with a hinged top, is an excellent aid to home manicuring. It makes a convenient container for an orange stick, cotton, cuticle oil, and other smaller essentials which you can keep conveniently near the bathtub. Then while you are enjoying, a sudsy soak, you can get double profit by giving first aid to your garden-roughened cuticle. Just reach for the bath-manicure kit and push back the water-softened skin around your nails.

BETTER HEALTH FOR VIRGINIA 4-H'ERS

Virginia colored 4-H Clubbers are developing a man sized health program according to J. L. Charity, colored district agent.

Realizing that health is one of the H's for which 4-H stands, 133 members of three Virginia Clubs have carried out a health project. All of these youngsters have had thorough physical examinations by physicians. Of the 133 examined, 37 were found to have some type of ailment, mostly of minor nature. If the parents fail to take steps to have the ailing members treated, the clubs will raise a special fund to pay for the necessary treatment.

Mr. Charity points out that 133 clubbers are only a drop in the bucket, but he thinks it's a good start.

BLIND FARMER MAKES FARM PAY FOR ITSELF IN FEW MONTHS

L. S. Haughton, blind colored farmer of North Carolina, wanted to buy a 130-acre farm a few months ago, but he had only $250. The cost of the farm was $2,500, and the downpayment was $500. He borrowed $250, made the down-payment, and has since completed payment for the farm.

Here's how he did it: On the place there was some good timber for which he was offered $1,500. Before selling, he thought he'd have a talk with his county agent and with the farm forester. They advised conservation cutting of the timber on his 100 acres of woodland. The forester carefully examined the woodland and marked the trees suitable for cutting, leaving a good stand of young, growing timber. The marked trees, minus their tops which farmer Haughton sold for pulpwood, brought $2,850. And there was enough timber left for the farmer to build himself a new house.

ONIONS ARE PLENTIFUL

Remember about this time last year, and even a few months ago when merchants used to hump their shoulders, raise their eyebrows and say somewhat dejectedly, "Sorry, haven't had any onions in weeks." Perhaps you had just accumulated enough points to buy that juicy porterhouse steak; and you had dreamed of smothering it in onions . . . . and then no onions.

Well, the farmers have sworn, it seems, that this will never happen again; at least not this year. It is estimated that farmers will produce 51 per cent more onions this year than last and 47 per cent more than the average for the last 10 years. Despite the fact that the government will need for dehydration and other uses 500,000 more 100 pounds sacks of onions this year than last, there is still likely to be a shortage of storage facilities which may cause heavy losses.

Housewives can help by using more onions throughout the remainder of September and during the early part of October. It's a good idea to buy up an extra supply and store them away. The Department of Agriculture points out, however, that onions must be stored in a cool, dry place, but not cool enough for freezing temperatures. The attic or a spare room is ideal for this purpose.

State Labor Department, Unemployment Compensation

Nashville, Tenn.— Agriculture's traditional position of predominance in Tennessee's economy is being challenged by manufacturing according to the best available information, State Labor Commissioner S. E. Bryant said today. Based on numbers currently employed manufacturing is now on an equal level with agriculture and may actually be on a higher level.

"Ever since Tennessee became a state," Mr. Bryant said, "agriculture has provided more jobs than any other employing classification. But the coming of TVA and, largely as a result of the work of the present State administration, numerous manufacturing enterprises have been established. This has caused a change in the State's economic picture. Manufacturing now appears to be the predominant source of employment in the State."

Mr. Bryant explained that the Census Bureau in 1940 reported 313,029 engaged in agricultural pursuits and 172,416 in manufacturing. Since 1940 agriculture, by conservative estimate, has lost 15 per cent of its workers to the armed forces and to construction, manufacturing and other lines. This leaves an estimated 265,200 gainfully employed in agriculture. On the other hand, based on reports to the Unemployment Compensation Division of the State Labor Department, manufacturing has increased by leaps and bounds until it currently employs 276,800 persons. This probably is now the largest employing classification in the State. Whether it will remain so no one knows.

"It must not be assumed," Mr. Bryant said, "that agriculture, which includes forestry and fisheries, is not a major and highly important source of employment. It looms very large in the State's job opportunities. The trend indicates, however, that the State's economy is not one-sided but is better balanced than ever before."

To make the historic change from an agricultural economy more impressive, Commissioner Bryant said that there has been substantial growth in other non-agricultural lines that are not included in the manufacturing employment quoted. The other lines include mining, service, utilities, finance and miscellaneous trade groups. There are many thousands of small businesses that do not report to the Unemployment Compensation Division because they have fewer than eight employees. These businesses include small factories, banks, stores, repair shops, barber shops, beauty parlors and garages. In addition to these other non-reporting groups whose numbers are not known are the self-employed, men and women engaged in public work, navigation, educational and religious work, domestic service and certain family employment.

"The change in Tennessee's economic complexion," he said, "presages enlarged purchasing power and a higher living scale for a large portion of the population. If the change should be permanent, it will mean greater prosperity for tradesmen, merchants, wholesalers and business men generally. Many factors have combined to bring about the change but none outweighs the advantages brought by the Tennessee Valley Authority and the stimulation it has urovided private enterprises throughout its region."

The Road Up A Christmas Greeting

By GILES A. HUBERT

Christmas, seven years ago, I was in the little country of Denmark. With this thought comes memories of the pleasant and hospitable people of pre-war Scandinavia. My memory is of a Christmas three thousand miles away from my own home, family and friends.

The prospect that I had for a holiday filled with loneliness was broken only by the company of Mrs. Hubert. Together, we bought a little Christmas tree and some doo-dads, little bells and trinkets and stuff that you put on Christmas trees. We prepared to do the best we could.

We had made many friends in Copenhagen, the capital city where we were living, but had not been in Denmark long enough to have any friends out in the country. But herein lies the story.

When the Christmas holidays came, the great city of Copenhagen, of one million people, was as dead as "Main Street" on Sunday morning here in America. All the theatres were closed. The gay restaurants and clubs were either closed or operating on a limited scale without the embellishment of orchestras and floor shows. Even the great Mother Church, which we expected to be filled on Christmas morning, had only a handful of people present. Half of the population of the city had migrated.

Gone? Gone where? "Well, home, of course," was the answer they gave us. "Well, don't they all live here in the city?" "Yes, but this isn't home." Yes, they lived and worked in the city, they were proud of and adored their great city, but this was not home to the good people of Denmark.

Where then was home? It was in Aarsley, in Tune, in Ribe, in Askor and in thousands of other little rural village communities all over the country. "Do you mean to tell me that all these people leave the gayeties and attractions of the metropolis to go home to these hick villages?" "Yes, Herr Hubert,"I was told.

It was not until the next spring, when I could get out on the land, in these villages and in the Danish farm homes, that I really understood what this meant.

Danish life, traditions and culture have grown up around the rural home in its village. There is where mother and father, grandmother and grandfather, uncle and aunt or brother, sister and cousin now live. These attachments run deep—firmly embedded in the soil from which the culture sprang.

AND, HOME IS A LOVELY AND PLEASANT PLACE TO BE. It is a place of many flowers, of cozy rooms, of growing crops, "contented" cows and the healthy flock. It is where the family and friends gather around the fireside and drink good beer, smoke good cigars, sip black coffee and munch sweet cakes.

Mitchell Proposes National Farm Labor Union

FSA Farmer Pays Out

Buys Farm in Six Years

Opelika, Ala., Dec. 1944.—Rogers Hunter, 53-year-old farm ownership borrower of the Farm Security Administration, recently became the first in Lee County to pay for his farm under the Bankhead-Jones Tenant Purchase Act.

Although he had 40 years to pay out, he became a full-fledged farm owner in six years, entirely from farm income.

Hunter applied for assistance from Farm Security in 1938. He had been unable to borrow money from any other source. At the time he had a pair of mules, 4 cows, 6 hogs and 75 chickens on which he owed $250.

Today, Hunter owns 3 head of workstock, 12 head of cattle, 10 hogs and 150 chickens on which he owes nothing. He raised a pair of mules and sold them this year for $200. He made 25 bales of cotton, 800 bushels of corn and produced large quantities of cane, sweet potatoes and other crops. His fertilizer is paid for each year with money he gets from the sale of corn.

Mr. and Mrs. Hunter and their two children believe in a "live at home" program. They raise practically everything they need to eat. They also have a year-round garden and Mrs. Hunter has canned more than 400 quarts of fruit and vegetables this year. They have started a small orchard and plan to increase the number of trees each year.

Mrs. Hunter says she'd be "completely lost" without her pressure cooker she bought since coming on the FSA program. Also her 50 laying hens supply enough eggs for family use and also provide a source of income for household needs. Hunter's son, Charles, is also a farm ownership borrower of FSA.

Animals' Christmas Night

By Mabel Hatten Marks

The stable's room was warm and comforting
With fresh-laid straw; although aware
Of something strange, the cattle scarcely stirred
As the lantern's light shone flickering,
Then, with a sudden yellow flare
Made grotesque shadows huge and blurred.
A day-old calf, its round eyes
Large and blinking, wobbled unafraid
To where a calm contented sheep
Lay watching and without surprise
The woman and the man who softly prayed
Above the bright-haired baby, fast asleep.
A lonely dog, unwanted of the Inn
Crept through the door from out the empty dark;
Soon feeling comforted
Among the group where all were kin
He gave a glad tail-wag, a grateful bark
And curled to sleep beside the manger bed.

Farmers Organize to Help Veterans

Some 11,000 practical farmers, colored and white, in two-thirds of the nation's counties, cooperating with the U. S. Department of Agriculture Extension Service, are checking land values and other agricultural facts in preparation for service as personal advisers to returning veterans interested in farming.

In preparing for service on Veterans' Agricultural Advisor Committees organized by State cooperative extension services, the farmers are attending land-classification training tours, studying soils maps and land-use planning reported and surveying farming possibilities, Extension Director N. L. Wilson reports.

Information received by the Department from Extension directors in 43 of the 48 States shows that organization of veterans' advisory Committees begun at the request of the War Food Administration, has been completed in 2,162 of the nation's 3,070 counties. Organization of the committees is in process in most of the other counties.

NEGRO AGRICULTURAL LEADERS MEET AT TUSKEGEE

Tuskegee Institute, Ala., Dec 13—Agricultural leaders from all parts of the South and from Washington, D. C., assembled at Tuskegee Institute this week for the Annual Farm and Home Leadership Conference.

Representaties were present from the Agricultural Extension Service, the Farm Security Administration, the Agricultural Adjustment Agency, Farm Credit Administration, the Office of Distribution and the Soil Conservation

(Continued on Page 2.)

Suggestions Wired To Major Labor, Farm Conventions

A plan for organization of a national farm labor union was submitted to conventions of A. F. of L., New Orleans; C. I. O., Chicago; and the National Farmers Union, Denver, last month.

H. L. Mitchell, President of the Southern Tenant Farmers Union, sent telegrams to William Green, President of the American Federation of Labor; Phillip Murray, President of the Congress of Industrial Organizations; and to James G. Patton, President of the National Farmers Union, urging cooperation in organizing a national farm labor union extending social security laws and federal protection and the right of collective bargaining to farm workers.

The telegrams also stated that, "Due to rapid mechanization of cotton production and plans for manufacture of mechanical cotton pickers in 1945, it is necessary for thousands of white and Negro workers to migrate to other areas." Both sections of organized labor and the progressive National Farmers Union were urged to use their influence to secure the immediate opening of government owned lands in the West for resettlement of dispossessed farm families of the South.

Mitchell said this action followed plans worked out at the 11th Annual Convention of the S. T. F. U., which ended in Little Rock on November 17th, where he was directed to enlist the support of organized labor and small farm owners in organizing a nation wide farm labor union to be composed of workers employed on industrialized farms and plantations.

Special Organizing Committee Established

The President of the S. T. F. U. also revealed that a special Organizing Committee had been formed for the purpose of union-

WICKARD OUTLINES POSTWAR PROGRAM

Time For Change In Southern Agriculture

"In a statement last Monday before the Special Committee of the House Committee on Agriculture, Secretary of Agriculture Claude R. Wickard outlined a postwar farm program designed to aid the cotton producing Southland.

Said the Secretary, "More than half of the nation's farm people live in the 13 Southern States; they have among them less than one-third of the nation's cropland, and receive only about one-fourth of the nation's farm income. The great majority of these families receive most of their cash income from cotton."

(More than 90 percent of all colored farmers live in the cotton producing Southern States. And it is estimated that nearly three-fourths of all Negro Americans live in the Southern cotton region. However, over half of them live in towns and cities of the South.)

Pointing up the problem of the cotton South, Secretary Wickard said, "Even if farmers received parity for every pound of cotton that could be grown in the South, the income of a great many of them still would be too low to afford an acceptable level of living. And the prospects of marketing at a satisfactory price all the cotton this country is capable of producing is, to say the least, doubtful."

Considering full industrial employment, a special distribution program for low-income families, and an adequate share of world trade as basic to any agricultural program, the Secretary went on to point out such other objectives as are vital in improving the Southland.

Among these objectives listed were credit to help tenants move into ownership, assistance in helping farmers to obtain part-time off-farm jobs, and in some cases, for helping families to get out of agriculture altogether. Other aims included sound soil conservation, encouraging the family-sized farm, improving the standards of rural living—such as health, housing, schools and roads— and perhaps most important of all, encouraging greater industrialization in the South.

Turning to the economy and efficiency aspects of cotton raising, the Secretary pointed out that mechanization of cotton production is inevitable. Said he, "In the Mississippi Delta, where much cotton is still produced with one-row mule equipment and with hand picking, about 150 hours of labor per acre are required to produce the crop. With four-row tractor equipment, the mechantical picker, and cross cultivation, I am told that cotton can be produced in the Mississippi Delta with 25 to 30 hours of man labor per acre. This is only a fifth as much labor as is

Time For Change In

(Continued from Page 1)

with mule power and hand methods."

Concerned about the four workers and their families out of every five who would be displaced, the Secretary indicated that the displacement would create serious problems unless many of these workers could find other employment. Along with reduction in labor force, the Secretary pointed to other methods of reducing the cost of production and marketing.

Coming to the crux of his statement, the Secretary suggested four alternatives which are open for aiding cotton growers: (1) By holding the price of all cotton produced in this country at a specified level, such as a parity price; (2) by maintaining a parity price for the domestically consumed portion of our total cotton production, with growers receiving a world price for the export portion of the crop; (3) by selling all cotton produced in the country at a world price established either through unrestricted competitive forces, or by international agreement, and then make Government payments to our cotton farmers to maintain their income; and (4) by developing a reconversion program for the cotton South. As in the third approach, American cotton would be sold at the world market price, and the farmer would receive income payments, but these payments would be only for a specified period. The purpose of the payment would be to give direct aid to cotton farmers who needed to change partly or wholly over to other crops, or lines.

Said Secretary Wickard, "It seems to me, however, that the various programs would reach their greatest effectiveness under the fourth approach. Then, credit to buy livestock or equipment, for example, or special technical service to individuals or cooperatives each would be part of a concerted drive for adequate and stable income from the wisest use of the farm resources of the South. Government assistance in developing industry in rural areas and in encouraging Southern industrialization also should be undertaken as part of the same great effort."

A Part of Secretary Wickard's Statement Follows:—

I believe that a well conceived program of crop insurance for cotton can do much toward adding to the security of southern farm families. As you know, H. R. 4911, recently passed by the House and now pending in the Senate provides such a program for cotton, as well as wheat and flax.

We also should remember that cotton is unique since it is both an export crop and one subject to increasing domestic competition. It may well be, therefore, that the best policies we can work out for cotton may be very different from those for any other farm commodity.

Now I should like to give the outlines of some possible approaches to the cotton problem.

The first approach would call for holding the price of all cotton produced in this country at a specified level, such as a parity price. Under any conditions that we can now foresee, that would be far above the level at which American cotton could be sold abroad in competition with foreign growths. Foreign acreage of cotton would be further encouraged.

Synthetic fibers would capture more and more of the domestic market, since the higher price of cotton undoubtedly would restrict its domestic market. Unless growers would accept exceedingly small allotments to match the quantities that would be consumed at the support price, surpluses would further accumulate under the Government loans and purchases needed to maintain prices.

Several supplementary programs almost certainly would be added. Since it is most unlikely that the nation would be resigned to losing all the foreign market for cotton, the Government probably would shoulder the sizeable task of subsidizing exports by in some manner paying the difference between the domestic price and the world price. This would be costly and might lead to reprisals by other nations. Embargoes and high tariffs would be required to keep out foreign cotton and cotton products. In order to avoid serious losses in domestic consumption it would be necessary to spend large sums in subsidizing new uses for cotton and in helping low income families buy more cotton goods.

While an approach of this kind might seem easy to operate, its execution really would be complicated. Restrictive individual allotments for every farm would be required. So would marketing quotas. The Government would be making day-to-day decisions in the sale of cotton all over the world and in the United States. Government purchase and sale of all raw cotton might eventually result.

On the other hand, despite the large sums of Government money required to maintain the price, this approach would conform to the traditional belief held by many persons that the farmer should get the entire return for his product in the market place; and it would maintain growers' prices for their cotton as long as the American public was willing to bear the cost of the operations and pay the higher price for cotton goods.

The second approach I have in mind would provide for maintaining a parity price for the domestically consumed portion of total cotton production, with growers receiving a world price for the export portion of crop. For example, if two-thirds of the entire United States cotton production were consumed in the domestic market, each grower would receive parity price for two-thirds of his production and the world price for the remaider. It would be necessary, of course, to segregate cotton for domestic consumption from cotton for export.

This procedure in effect would give farmers a blended, or average, cotton price lower than parity, unless the world price equalled parity; but there would be no restrictions on the amount of cotton each farmer could produce. Assuming a good flow of exports, the cost of this approach to the Government loans to protect the price of the export portion of the crop from sudden fluctuations in world prices might be desirable.

In regard to domestic consumption, this approach has all the disadvantages of the first suggestion, but shares with it the advantage that the farmer would get his whole return through the market place. Surpluses would not accumulate so long as the world market took all the cotton we offered at the world price. If it did not absorb all our export cotton, either acreage allotments and marketing quotas would have to be used to avoid surpluses, or subsidized programs of domestic surplus disposal would be required.

The third approach would call for a domestic price of cotton hitched to a world price established either through unrestricted competitive forces or by international agreement. The average price of cotton sold under these conditions would be lower than if farmers were assured of parity for part or all of their production. Government payments would be made to maintain growers' incomes. Government loans would be offered, but only for the purpose of preventing short-term price fluctuation and therefore would be in line with the world price. Export subsidies would not be needed. Encouragement of textile purchases by low-income families and aids in developing new uses for cotton still would be desirable, but would be less costly. The Government payments to producers might be so much per pound of cotton sold, representing part or all of the difference between the market price and a parity price, or they might be based on income.

Under this approach American cotton would be in a strong position to compete with foreign growths and synthetic fibers. No special structure of tariffs or import quotas would be required. American consumers would be paying less for American cotton and would be able to buy it for the same price at which it was offered to foreign buyers. An important part of the income of cotton farmers would depend on payments made from annual appropriations, and the payments would perpetuate the situation that made them necessary. In fact, all three of the possibilities I have mentioned likely would be operated largely on a year-to-year basis.

Two of the approaches—the first and the third—undoubtedly would require large annual appropriations. And the second, calling for a high domestic price, would have the same effect if an effort were made to maintain domestic consumption; for large-scale subsidies would be required for that purpose.

On the other hand; the three possible methods we have discussed all have one great merit in common; They offer a way of protecting the income of farmers in the cotton South. That goal is basic; it would be disastrous to revise the present cotton program without a thought for the growers in less favored areas and the hundreds of thousands of families that would be displaced everywhere. Nevertheless, we must work as directly as possible toward the time when cotton can stand on its own legs. That time will not be hastened by continuing to make cotton growing artificially profitable in areas better fitted to other types of production. That goal, too, is basic.

We may as well face the issue frankly—the two aims conflict at many points. But until we start making progress toward both of them we are not getting any where with the cotton problem. The situation is too grave for any easy solution that will be convenient to everyone all of the time.

Three is a fourth approach to the problem. I would call it a Reconversion Program for the Cotton South. As in the third approach, the domestic and world market price of American cotton would be the same, and income payments would be made to farmers. But these income payments would not be perpetual; they would extend only over a stated priod, and one of their main purposes would be to give direct aid to cotton farmers who needed to change partly or wholly to other lines.

If such a course were followed it would first be necessary to offer to all cotton growers some kind of income payment, on a descending scale during a fixed period of years —perhaps five, perhaps more. This should be sufficient for producers who can take full advantage of mechanization and all of the other efficient methods that lower production costs. It would cushion the descent of cotton prices to a new level and make allowance for the time required to readjust farming practices and systems. Producers in areas less well adapted to cotton production, and those who would be displaced by mechanization would need considerably more assistance. Probably their payments should be larger. One way of putting such a policy into effect would be to offer income payments to all cotton farmers, conditioned on following a pattern of farming judged by a local committee utilizing adequate technical assistance to be the most desirable and most likely to bring about a substantial and dependable farm income. The size and perhaps duration of a farm's payments would depend on the extent and nature of the changes required in the farming practices.

For a short time, such an approach would require heavy Government spending to protect farm income and to aid farmers in adjusting operations. But it offers a real possibility for eventually doing away with large annual subsidies, and the best possibility for a permanent self-sustaining farm population in the South, where so many of the people and so much of the land are so well fitted for cotton production.

One merit of such a policy would be the way it could be geared in with supplementary programs, many of which are already in existence, in a concerted drive toward better living in the rural South.

I have given only the barest outlines of the possible approaches, and have paid particular attention to the key points in which they differ from each other. Thus, I have not emphasized soil conservation, or the various types of agricultural credit or other activities that must be part of any well-rounded farm policy. For the same reasons I have not discussed international agreements for world trade in farm products; they would be helpful with any of the four approaches, and would be particularly effective with those providing for a world price for export cotton.

It seems to me, however, that the various programs would reach their greatest effectiveness under the fourth approach I mentioned. Then, credit to buy livestock or equipment, for example, or special technical service to individuals or cooperatives each would be part of a concerted drive for adequate and staple income from the wisest use of the farm resources of the South. Government assistance in developing industry in rural areas and in encouraging Southern industrialization also should be undertaken as part of the same great effort.

I realize that this approach would call for marked changes from the pre-war agriculture of the South. I also realize that it could not succeed without the participation and support of the cotton growers of the nation and the institutions that serve them. It would be a tremendous undertaking but I believe that with all agencies working together it can accomplish tremendous results.

The choice, of course, is up to the people of the United States through their representatives in Congress. Whatever that choic is, I pledge the full support of the Department of Agriculture in developing and administering the necessary programs.. I believe that the greatest contribution I can make at this hearing on post-war legislation is to bring before the committee my views on the basic choice we must make and the possible courses of action open to us.

PORK CHOPS ON TINIAN!

"Battle News," newspaper of the United States Marine Corps, relates the story of the young Marine stationed at Tinian in the Mariannas, who approached his superior officer and said: "Sir, I was attacked by a pig." Aware of the order forbidding Marines to kill any livestock found at large on the island, the officer deliberated the case in all seriousness, and after due consideration nodded his head and said "Save me a piece."

SUGGESTIONS WIRED TO

(Continued from Page 1)

izing skilled farm laborers employed astractor drivers and farm machine operators on cotton plantations of the mid-south area. He said the S. T. F. U. intended to request the A. F. of L. and C. I. O. to furnish two or more good trade union organizers to direct the campaign.

Among the highlights of the S. T. F. U. Convention held in Little Rock, attended by 124 delegates from 11 southern states, was a visit of a delegation of Cannery Workers from the west coast, who were enroute to the A. F. of L. Convention in New Orleans. The Cannery Workers degelation was headed by Hal P. Angus of Oakland, Cal., who stopped in Little Rock for a day to attend the S. T. F. U. meeting and work out plans for the migration of several hundred unemployed workers to California for the winter season.

Also audressing the Little Rock Convention during its 4-day session were: Leon B. Schachter of the Meat and Cannery Union (A. F. of L.), Camden, N. J., Adolph Germer, National Representative C. I. O., Denver, Colo.; Herman Gehrig, A. F. of L. Organizer, Memphis; and Fred Bayler of the International Oilers and Firemen's Union (A. F. of L.) Miss Rose Pesotta, Representative, Workers Defense League, New York.

Condemn Competition of Nazi War Prisoners

A resolution adopted by the S. T. F. U. Convention condemned the use of Nazi war prisoners in competition with free Americans in the cotton fields, compresses, and warehouses of the mid-south.

Another resolution instructed newly elected officers to make arrangements for ex-service men who are members of the Union, to secure a year's free training in accredited schools and colleges under the G. I. Bill. The officers were directed to plan courses for vocational training in operation and care of farm machinery, management of cooperative business enterprises, and trade union organization. Officers elected for the year 1945 are as follows: H. L. Mitchell, President, Memphis, Tenn.; F. R. Betton, Vice President, Cotton Plant, Ark., Executive Council Members: W. A. Johnson; McAndrew McCrary; Royal Isom; John Alford Gammill, J. E. Clayton, J. F. Hynds, O. C. Morgan, Mae Pearl Kelly, George Stith.

NEGRO AGRICULTURAL LEADERS

(Continued from Page 1)

Service. The meeting was held under the chairmanship of Mr. Thomas N. Roberts, assistant to the Director Personnel of the U. S. Department of Agriculture.

Other speakers included Mr. James G. Maddox of the Bureau of Agricultural Economics, Mr. tural Press Seriee and Mr. Clyde Sherman Briscoe of the Agricul- F. Clark of the AAA.

STRESS POST-WAR PROBLEMS

Attention of the conference was centered upon meeting war-time food production needs and upon the problem of agricultural adjustment in the post-war period. Mr. James Maddox stressed the importance of full industrial employment to the future prosperity of the farmer. Even with full employment, however, there will probably be more cotton produced than needed if current trends in cotton production continue.

The impact of a successful cotton picking machine on the Negro farmer was discussed. Members of the conference expected considerable displacement of share-cropper and tenant farm families as result of mechanization. A gloomy picture was presented as the outlook for these people if employment in industry is not readily available.

The conference was held in connection with the annual Tuskegee Farmers' Conferenee held at Tuskegee on December 13 and 14. The Farmers' Conference was established by Booker T. Washington during his principalship at Tuskegee.

ON THE AGRICULTURE FRONT

WFA POINTS TO VALUE OF VICTORY GARDENS

In issuing a statement regarding the Victory garden program for 1945, the War Food Administration pointed out that the produce from the Victory gardens, both rural and urban, had contributed materially to the nation's food supply. "Home gardens," WFA said, "have freed thousands of tons of fresh and canned fruit and vegetables for the armed forces, have saved transport services, processing facilities, and have furnished abundant foods of the highest quality to their families."

Continuing, WFA said, "Regardless of when the war ends there will always be need for abundant supply of fresh fruits and vegetables. They will be just as necessary for healthy diet in peace as in war. Those who grow their own fruits and vegetables will be sure of having them in their prime."

WFA points out that although it does not plan to set a definite Victory garden goal for 1945, every farm should have a garden to supply its vegetable needs, and many town and city families, it believes, will want to continue their garden program. Victory garden organizations are urged to remain intact to continue helping gardneners in every way they can.

TEXAS COUNTY SOLVES OWN FARM LABOR PROBLEM

Through the establishment of local labor supply offices and training centers, McLennan Co., Texas, has solved its farm labor problem, according to reports received by the U. S. Department of Agriculture.

Dr. E. B. Evans, colored state Extension leader, points out that the labor supply offices make it convenient for persons seeking work on farms to find jobs, and they also enable farmers to find trained workers quickly, because the labor offices maintain a small staff to give instruction in the operation of farm machinery. Considerable emphasis is placed on safety which the offices report has reduced farm accidents.

HERE'S WHY BUTTER IS SCARCE

Although 80 out of every 100 pounds of butter produced by American farmers will be consumed by U. S. civilians this year, the supply is still going to be "tight" and many families are not going to have as much butter as they should like to buy, according to the U. S. Department of Agriculture.

The supply of butter is "tight" for several reasons: (1) More people have money to buy more butter than ever before, thus the normal demand is expanded. (2) About 15 percent of our butter supply goes to those who come first, our fighting men; and 5 percent goes to the Russian Army, chiefly for hospital use.

Another important reason why there isn't as much butter as we should like to buy is the fact that production for the first seven months of 1944 was 131 million pounds less than production during the same period in 1943. Then, too, civilians are drinking more milk, which cuts down on the supply of milk available for butter production, and the manufacture of evaporated and condensed milk is taking annually about three billion pounds more milk than before the war.

More milk is also being used in the making of milk powder, cheese, and ice cream. However, the War Food Administration has been taking steps all along to help maintain and if possible increase civilian butter supplies. Among other things it has encouraged farmers to produce more milk, and it has sought to check the diversion of milk from butter manufactured by limiting the quantity of milk that can be used in the manufacture of various other dairy products.

Although butter is produced seasonably—more in the spring and summer when milk production is high and less in the fall and winter when milk production is low—WFA has sought to even the flow of butter to civilians by purchasing all of the butter it needs for war and other requirements during the season of high production and by buying no butter during the season of low production. And recently WFA announced that five million pounds of butter it it had ordered set aside for Government war agencies will be released to hospitals at frequent intervals.

INVENT ODORLESS FLY SPRAY

Chemists in the Agricultural Research Administration of the U. S. Department of Agriculture have perfected an odorless and non-irritating household fly spray. While this spray is not available for sale to civilians, it is being used by our armed forces. More than 13 million spray "bombs" have been supplied to our fighting men for use against disease-carrying insects.

CHRISTMAS TREES

Christmas trees on December markets should be enough to supply demands, the Forest Service of the USDA estimates from reports sent in from Christmas-Tree producing regions. There will be no need for many transient vendors to enter the Christmas trade, as they did last year. This caused an over-supply and wasted great numbers of trees. Labor shortage is not expected to hamper the harvesting of trees much this year.

FARM POPULATION DECREASED BY NEARLY 5 MILLION

In January 1944 there were 25,521,000 persons living on farms in the United States, according to the estimates of the Bureau of Agricultural Economics of the U. S. Department of Agriculture. From a level of 30,269,000 in January 1940, the farm population has decreased in the last 4 years by 4,748,000 persons, or 15.7 percent.

Half of this decrease took place in the single year 1942, when migration of farm people to war industries and entrance of farm men into the armed forces was heaviest. Slackening of migration of farm people to cities, towns and villages and deferment of essential farm workers cut down the rate of decrease during 1943. The farm population decreased by 1,138,000 persons between January 1943 and January 1944, but this was only half the decrease of 2,389,000 which took place in 1942.

An estimate of the number of Negro Americans now living on farms is not available. In 1940 they numbered 4,502,300, or 14.8 percent of the total farm population.

In the 4 years since January 1940, the following changes are estimated to have occurred in the total farm population: (1) a net loss to the armed forces of 1,650,000 men who were living on farms at the time they enlisted or were inducted; (2) a net loss of 4,660,000 persons of both sexes and all ages who either moved away from farms or who are living on places which are no longer farms because all agricultural operations have ceased; (3) a net gain of 1,562,000 through the excess of births over deaths in farm population.

The estimate of the number of persons living on farms who entered the armed forces includes not only farm workers, but also a great many young men who were living on farms but working at non-agricultural occupations or attending school.

If farm men in the armed forces are counted as part of the farm population, the present level of farm population is about 650,000 lower than the level which would have been reached if the depression of the early 1930's had not interrupted the downward trend which prevailed from 1916 to 1930. Thus 4 years of increased non-farm employment opportunities during the defense and war period have more than wiped out the effect of the depression on the trend in farm population.

GI's TO SHARE THANKSGIVING TURKEY WITH U. S. CIVILIANS

Although sufficient supplies of turkey to meet all the requirements of our armed forces have not been procured, military authorities have agreed to partial suspension of the turkey set-aside order, so that turkeys may be marketed for civilian Thanksgiving dinners, the War Food Administration announced last week.

Sufficient turkey has been obtained to supply the overseas needs, but all forces stationed here have not as yet been taken care of.

Even with processors able to sell newly-processed turkeys to regular commercial markets, turkey supplies for civilian Thanksgiving dinners will be short of demand, WFA officials predict. Turkey production this year is expected to be the largest on record—more than 500,000,000 pounds, dressed weight compared with 466,000,000 pounds in 1943 and 422,000,000 pounds in 1939. But with military requirements considerably larger than last year, and insufficient labor available in processing plants to handle the rush of turkeys which always come to market after November 1, marketing and distribution probably will be slowed up.

Civilian supplies will be considerably larger for Christmas and New Year's day dinners.

HERE'S A TRUE FISH STORY

You know, the story might go something like this: We have caught a fish so large that we don't have anywhere to put it. With our cold storage space a third fuller than a year ago, it seems that unless the people eat more of the fish already in storage, we are not going to be able to get all of this huge freshly caught fish into the refrigerator.

Putting it another way, the Office of Distribuion of the U. S. Department of Agriculture says: "The latest figures on cold storage holdings of fish in the United States were 33 percent above those of the similar period in 1943, with every major section of the country showing an increase. These large holdings are creating a storage problem. The industry is faced with the responsibility of a shutdown in operation if existing stocks are not reduced."

However, the fish storage problem is not nation-wide, it exists only in certain sections near the sea coast. Home-makers in these areas can help solve the problem by giving their families more fish during November. In that turkeys may be scarce around Thanksgiving, perhaps a nicely baked fish can serve as a good substitute.

SCHOOL LUNCH IMPORTANT IN THE LIFE OF A CHILD

It makes a long range difference whether or not a child has an adequate school lunch, according to specialist in the U. S. Department of Agriculture. They point out that one year of right feeding in the life of a child is more important than 10 years of right feeding after one reaches the age of 40.

Now here's where the school lunch comes in to meet its share of the day's dietary needs. It is estimated that some four million children in 35,000 schools are having nourishing school lunches this year. The participation of colored school children averages about 13 percent.

The specialists point out that the school child needs a minimum of a quart of milk each day, two vegetables (one green, leafy or yellow), two fruits, one egg if possible, one serving of meat, fish poultry or cheese; three servings of bread or cereals; butter or fortified margarine, and cod-liver oil, preferably until the child is 14-years old.

Because the child's stomach capacity is smaller, dividing his food into three fairly equal meals is much better than having his stuff at the evening dinner hour.

The War Food Administration offers financial aid to communities in providing school lunches.

WFA ANNOUNCES 1945 PRODUCTION PROGRAM

The 1945 national production program, suggesting about the same total crop acreage as was planted this year, to be submitted to the State agricultural leaders for their determination of State goals at meetings beginning November 20, was announced November 15 by War Food Administrator Marvin Jones.

"The food production job for next year will be as important to the war and to the peace as it was in 1944,' War Food Administrator Marvin Jones said. "Some shifts in the pattern of production will be needed in line with changing demand situations, but the total needs will continue to be great. We must make certain that we have plenty for our armed forces, for civilians, for our Allies and for relief needs.

"To allow a margin of safety in case of adverse weather, and to assure maintenance of our reserve stocks, we will need to plant about the same total acreage as in 1944. We cannot risk the possibility of a shortage. We are planning to have enough in total, with full consideration for all factors, and we know we can count on farmers and ranchers to meet the necessary goals."

Suggested total crop acreage for 1945, although smaller than the goals for 1944, amounts to nearly 364 million acres, as compared with an estimated 360 million planted acres in 1944. The individual goals provide a continuance of 1944 levels for most of the more important crops. Goals are somewhat below 1944 plantings for some crops and somewhat above 1944 in a few cases where prospective demand still requires adjustments upward. Among Southern crops, cotton and sweet potatoes stand at last year's level, but peanuts are down slightly.

Livestock goals call for slight increases in number of pigs farrowed, in milk production, and in cattle slaughter—to reduce total cattle numbers. They suggest a decrease of about 16 percent in egg production.

A series of State meetings, at which local farm representatives and Agricultural leaders will determine the State goals, will be held during the period November 20 to December 15. Representatives of the War Food Administration will be present at the meetings to discuss questions of production, marketing, price support, materials and facilities and other factors related to the 1945 production program.

After the States have determined their individual production goals, the War Food Administration will announce the resulting national totals. If the demand situation changes materially before planting time, WFA will suggest desirable modifications in state and national goal levels.

PLAN NEW CURB MARKET FOR N. C. COLORED FARMERS

So successful have been the colored curb markets in North Carolina that a new one is planned for Halifax County, according to reports reaching U. S. Department of Agriculture. D. J. Knight, colored county agent, says that a temporary shed will be built in Scotland Neck on the vacant lot where a new post office is to be erected after the war.

The progress of the other curb markets is shown by a report from S. T. Lloyd, assistant county agent of Edgecomb County. He points out that the curb market at Rocky Mount sold $115.09 worth of farm products on Saturday, October 14.

NATIONAL FOOD SITUATION

The total civilian supply of food in 1945 is expected to continue about the same as in 1944, when per capita civilian consumption has been at least 7 per cent above the pre-war average, 1935-39. Supplies of some fruits, turkeys, and beef may be larger next year, but supplies of pork, potatoes, butter, and perhaps, chicken and some fresh vegetables may be smaller. Civilian food supplies will not be generally changed by the end of the European war as non-civilian requirements will continue to take a substantial proportion of the total food supplies throughout 1945.

STUDY STORAGE METHODS

Colored farmers in several areas are studying improved storage methods for such products as sweet potatoes, canned fruits and vegetables, peas, beans, and eggs. The studies are being carried on through field meetings and demonstrations.

ULYSSES WALDREN, VETERAN, WORKS FOR FINAL V-DAY

Princeton, Ind., Dec.— Ulysses Waldren, 47-year-old veteran of the last war, remembers his fighting days in the trenches in 1918, and to help hasten final V-Day he's hard at work on two producion fronts: ship factory and farm.

Not only that, but his entire family has gone all-out to help the United States and her Allies win this global war at the earliest possible moment. The Waldrens have 320-acreas of good farm land in production near Princeton, but that's just part of the story.

Every night around 11 o'clock Waldren drives into Princeton, picks up five other war workers and heads for a shipbuilding plant 30 miles away where he works the "graveyard shift" as a grinder. By 9:30 the next morning Waldren is back home, helping grow vital war food and feed. The farm work lasts until about 4 in the afternoon when he turns in for some sleep until about 10 p. m.

Waldren's twin 20-year-old sons, Paul and Paris, share in the family's war effort. Paris tried to enlist in both the Army and the Marines but when he failed to pass the physical examinations he went to work with his father in the shipyard. He is married and lives within a few blocks of the shipyard but rides home with his father about once a week to help on the farm.

Paul is the real farmer in the family. When his father returns home from his factory job, the chores are completed and Paul is in the field with the tractor or doing other work. Father and son—sometimes both sons—work side by side throughout the day, and Paul carries on after his father goes to bed to get his "40 winks."

Mrs. Waldren has been under a doctor's care most of the past year, and 8-year-old Lila has accepted the responsibility of being "head woman" in the household. She is learning to cook, sew, can, mind the baby, work in the garden and tend the chickens.

The Waldren farm is producing more than its share of needed war foods. Most of the grain and hay goes to feed 43 head of cattle and six litters of hogs. Most of the cattle is raised for beef, but the Waldrens are milking 10 or 12 head now that they are selling whole milk instead of cream.

The local supervisor of the Farm Security Administration says Waldren is one of the best farmers among FSA borrowers in the county.

"All Waldren needed," he said, "was a chance to get started. He came to us five years ago and said he could get a farm to rent if we would help him buy the stock and equipment needed to work the land. At the time he had no other source of credit and FSA helped him arrange his lease and get livestock and equipment, this ambitious farmer has bought a 118-acre farm of his own and is still farming the leased land, too. He is practically out of debt and is turning out tons of food for war needs. He isn't wearing out his new farm in order to get increased production. Waldren plows on the contour, digs drainage ditches and uses lime and barnyard manure for fertilizer.

THE FORUM

The Modern Farmer

Published monthly by the Modern Farmer at Nashville 3, Tennessee.

Giles A. Hubert _____Editor
Sadie Wilson _____ Secretary
Henry Allen Boyd_____ Publisher
Office, 403 Charlotte Avenue.

Devoted to the interests of the Farmer, Truck Gardner, Livestock and Poultry, Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer, should be addressed to The Modern Farmer, 403 Charlotte Avenue, Nashville 3, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

IT CAN BE DONE

The editor will kindly change our name to Diogenes without more ado. In this Year of Our Lord, 1945, we have found someone who actually believes—right out loud in black and white, with a signature to back it up—that "the problems of the Negro farmer at the present time are not so much with organizations as with plain and simple everyday questions of how to get a good crop, etc."

Well, thank God for that little sign that says "and-so-forth." Without it the editor of one of our biggest and most stalwart weeklies must have been consigned to the purgatory of the uninformed!

Not long ago, this editor wrote a piece about a pastor, Isaac Simmons, lynched in Mississippi. He was not lynched because he did not know how to get a good crop. No, he was lynched because his crops were too good and there was a little oil on his land. Because he was too prosperous. Because he wanted security. BECAUSE HE WANTED TO KEEP THE LAND HIS GOOD CROPS HAD BOUGHT.

The editor is willing to write articles about a dead farmer who ran afoul of what Arthur Raper calls the "neighbor complex"— living near people with green eyes and mean souls. But he thinks it quite useless to write facts about live farmers and their problems, so that they and their brothers of the mills and factories, pulpits and teachers' desks, can apply their united strength to the job of controlling the problems of all.

So that is that. If you didn't know before, the kind of job you undertook in getting understanding across to the folks in a position to help, you know now. A white collar around your neck sometimes cuts off circulation above the eyebrows. Better take it off before you speak. Or if you're wearing overalls, be sure that you speak for your less fortunate neighbors as well as for yourself. Don't brag—please don't. It makes these other fellows think that everything's all right, so they can go home and sleep.

Hopeful and cheering is the theme of this year's Fireside Chats —ORGANIZATION OF NEGRO FARMERS AND AGRICULTURAL WORKERS IN THE

STATES RIGHTS AND LOCAL GYPS

By George S. Mitchell

In the last couple of years before Pearl Harbor the air was thick with plans for reorganization of the various local and agricultural programs conducted with Federal aid. These included the Agricultural Extension Service. the A. A. A., the Farm Security Administration. the Farm Credit Administration and the Production Credit Associations. Crop Insurance, Farm Forestry, and in dry land areas the Reclamation Service. At one time the Federal Government aided a string of rural housing authorities mostly in the Southern States which put up new farm homes and buildings in limited areas.

Little people in Southern rural counties know about the power that be in their countries. Many of these agencies have been rightfully accused of playing unfairly close to the interest of the big farmers in the county.

The situation springs partly from habit and partly from the arrangements made about local financing of the programs. In any county run on poll-tax principles county government is worked for the big fellows. County Court House officials over most of the South are not nominated or elected in a truly democratic way. The people who run many of the agricultural programs have their salaries partly paid from county funds, and they are mighty apt to adopt the general ideas of the bigger farmers. They are picked by big-farmer minded politicians. Not many of them successfully get over the idea that the little farmers in the country are poor because they are "trifling."

The same thing goes for the states' share in administration. The head men are timid about breaking up farm tenancy, and getting good rural housing. and helping set up co-ops that will really help the little fellows.

Re-organization will be talked again in the next few years and doubtless a good deal of it will be done. In the long run the way to clean up unfair administration of farm programs is to get true democracy in the counties and states. Until we get to that stage, it is important for the Federal Government to share heavily in payment for the farm programs and to see to it that Federal money is spent without discrimination of any kind.

It is a good sign that the Secretary of Agriculture has recently been speaking along this line. The control that big farmers exercise over these programs either individually or through their big-farmer organizations like the Farm Bureau is in for more airing than it has been getting.

Labor is aware of this situation. It can be counted on by little farmers to share their effort to make the government programs deal fairly for all.

POST-WAR PERIOD. So farm leaders seem to think that organization is important after all. And of all things they've invited the newspapers in! City newspapers! Mourners bench to the right. Information desk to the left. Herb Henegan, Sherman Briscoe and Al White will tell you what your government programs are doing. YOU TELL THEM what you WANT your government program to do. It's your move. Short words are longest remembered.

Let's give a hand to Hubert and Fred Patterson for leading in the right direction, and to newsmen Barnett and Sengstacke for coming out to look, learn and listen. Be sure that they go home with full notebooks.

Leave your pet peeve and Pollyana at home, and PAY THAT POLL TAX!

WHICH WAY—MR NEGRO FARMER?

The Secretary of Agriculture looks southward and frowns. He is worried about cotton. He is worried about the millions of people who produce cotton and the additional millions whose business and commercial lives depend on cotton. He certainly has plenty of people to worry with him.

We produce more cotton than we can sell at a price which can sustain the cotton system. When we peg the price in the U. S. at 19c or 20c, while the world market price is 11c or 12c, we do two things: (1) We encourage production at home and build up surpluses which cannot be sold at home or abroad without great loss to government. (2) We encourage production, and expansion of cotton acreage abroad thus increasing the competition to American cotton.

The Secretary says, in so many words, that THIS CAN'T GO ON FOREVER AND FOREVER. He points out also that all the competition does not come from cotton production abroad. There is increased competition from other fabrics—nylon, rayon, etc. It will be difficult for cotton to compete with these fabrics at home or abroad as long as the mills must buy cotton at high pegged prices.

Increased use of machinery in cotton production is another factor that is disturbing. "Mechanization of cotton production is inevitable," says the Secretary, "we can't stop it and we should not try to." The social implications of the prospective displacement of families is enormous.

In other words, the Secretary means IT IS TIME FOR A CHANGE. And, he makes a proposal. Instead of government subsidizing the perpetuation of an unsound cotton production system, why not let government subsidize a change-over to other lines of production where this is needed, on the one hand, and help mechanized growers adjust to more efficient production in the more favored cotton producing areas, on the other hand.

In this manner we may be able to bring to an end finally the need for subsidies and a more permanent adjustment made in Southern agriculture. This all sounds good, reasonable and solid.

From the point of view of Negro farmers who will be a major element in this change-over, there are several questions which should be raised.

Will opportunities for educational guidance and financial assistance be equalized as between whites and Negroes. In any process of social change, competition for a place in the new scheme of things becomes increasingly severe. Those less able to make the adaptations to change are lost in the shuffle.

If Negroes have poorer schools and less teachers, if Negroes have less county agents and supervisors or less competent and sympathetic guidance, if they cannot belong, AS EQUALS, to the organizations that make for progress and development, Negroes will be the losers.

If Negroes are not provided with the same amounts and quality of land and capital resources as other farmers, they will not be able to compete. Will the same old philosophy of SERVE THE WHITES FIRST AND PROVIDE NEGROES OUT OF WHAT IS LEFT prevail?

Another question: Will large mechanized factory type farms be encouraged to occupy all of the better lands of the South? Or, will there be any subsidy for the establishment of cooperative farms or of family type farms so organized in cooperating groups as to efficiently utilize modern machine and scientific techniques

MOST NEGROES ARE NOW TENANTS AND SHARECROPPERS ON THESE BETTER LANDS. FACTORY FARMS WOULD DISPLACE TWO-THIRDS OF THEM. The remainder would become an agricultural proletariat in an area where the whole historical and traditional background would tend toward their continual exploitation and impoverishment.

The COOPERATIVE FARM or COOPERATING FARMS types of arrangement would support the largest number of families possible under conditions of efficient production and adequate living standards.

It is realized, here, that many Negro families on farms now too small for efficient production will have to leave agriculture and find other occupations. Many will not be able to learn fast enough to make rapid changes in methods and mode of living. It is hoped that expanding industry and commerce can absorb these people in time. Government will necessarily have to tide them over.

The question is how many Negro farmers will be able to acquire land good enough, capital sufficient enough and education fast enough to survive the change-over. The Secretary is right—it is time for a change. But, which way the agricultural Negro? UP THE LADDER, DOWN THE LADDER OR OUT?

A Christmas Greeting

(Continued from page 1)

The village is the place for going to church, to market, to club and association meetings. It is the place for young peoples' events athletic and social and where old cronies meet each other on the streets. You really never know these people, even the city folks, until you have met them at home in the village.

What a "far cry" this is from Black America. Ask a young man or woman in St. Louis or Chicago where they are from and they will seldom admit that they were from five miles out from Alligator, Mississippi. And those who live in Alligator do their level best to get to Memphis or at least to Clarksdale during the holidays—there to revel briefly in the bright lights on their temporary wave of Christmas prosperity.

No wonder though—this difference between Mississippi and Denmark. First, home usually is not pleasant. It is not even home in the Danish sense. The family probably never lived in one place more than a year or so at the most. It is not HOME with a family tradition of several generations. Again, it is drab and uninviting. It is nothing to come home to.

Village community—why, there is none. Yes there is the little cross roads village or town, but that doesn't belong to the farm people but to merchants, shopkeepers, bankers, insurance men and undertakers. People who belong to the city—or think they do.

What a pity! I thought on that lonesome Christmas in Denmark. What a pity our people don't come from country homes that we would be eager to return to, come Christmas. Most of us who now live in cities came from the farm or our parents did. But our roots in the soil of the Southland are not deep —too easily they are forgotten—they never were much good.

The contrast is great and significant. I can well understand how the Danes, without a strong military and completely over-run by the Germans can still fight back with reserved obstinance. I can well understand how, when the Germans forbade them to gather to discuss anything, they would still gather to sing the songs that were part of their roots in the land. There will always be Denmark.

How much stronger would be the mutuality, the oneness of spirit and purpose, the will to be of Negro Americans if we, of the country, of the towns and of the cities, sprang from homes and communities to which we would wish to return for "communion" on Christmas day.

MERRY CHRISTMAS AND A HAPPY NEW YEAR TO YOU ALL.

FOOD FOR PUERTO RICO AND VIRGIN ISLANDS

Foodstuffs and agricultural products totaling 46,862,000 pounds were delivered to shipside during the month of October for Puerto Rico and the Virgin Islands, according to a War Food Administration report.

Rice shipments totaled 14,106,000 pounds; lard, 6,764,000 pounds; dry beans, 4,484,000 pounds; cured fish, 4,270,000 pounds; evaporated milk, 4,312,000 pounds; white flour, 4,196,000 pounds and over a million pounds each of onions, garbanzos, oats, corn meal and cured pork.

Other foodstuffs shipped in lesser quantities included cheese, frozen meat, oleomargaine and canned fish. Comparatively small quantities of soap and linseed meal were also delivered.

The Other Lights Of Tyrrell

By Cornelius King

"Are you going to see Professor S. P. Dean?" said a woman just across the aisle from me, as the bus on which we were riding neared Columbia in Tyrrell County, North Carolina.

"Yes," was my reply, "and how did you guess?" She said I looked like a stranger, and since so many people from other parts of the country came to talk with Mr. Dean about cooperation and to visit the cooperative associations in the county, she assumed that my trip there was for that purpose.

During the conversation that followed, I made inquiry about The Light of Tyrrell Credit Union—a cooperative savings and loan association organized about five years ago. An enthusiastic reply came from her regarding the progress of that organization, but she added many other lights of Tyrrell besides the credit union.

The rest of the journey to Columbia seemed very short for I was so engrossed in her story of their cooperative activities including a co-op sawmill, tractor and heavy equipment association, group efforts in the purchase of land, cooperative store, group hospitalization association, and other similar efforts.

It was during the early spring of the past year that a 600-acre plantation in the county went up for sale. The owners could not get sufficient labor to operate it and decided to sell. The price requested was $36 per acre, on a total of around $22,000.

Some of the farmers belonging to the Light of Tyrrell cooperatives, who were well acquainted with this land and the community in which it is located, decided to form an organization to purchase the farm and then to divide it into family-size of around 60 acres. They were successful in obtaining the property. The financial arrangement consisted of a down payment of $6,0000, with the balance of $16,000 to be paid over a period of years.

This new venture in land ownership on the part of Tyrrell County farmers added 10 farms to a section of the county composed largely of some 65 farmers—the great majority of whom are owners. The property joins that of five Negro owner-operators who are among the most substantial farmers in the group. And here, like in many other instances, a nucleus was formed for the further spread of the mutual self-help idea.

Last year most of the farmers in this new land ownership venture were tenants and sharecroppers. I talked with many of them, visited with them in their homes and on their farms, and seldom have I seen such hope, enthusiasm, and happiness on the part of people anywhere. It is so difficult to describe, and perhaps, can best be observed in the improvements made in their homes and the abundant harvests they have produced during this—their first year.

Talk with these people and each one will tell a story worth remembering. Among them is a veteran of the last war, who has sharecropped ever since he was mustered out way back in 1918. He will be sure to say, "It took me 26 years to learn that if I can make money for someone else, I can make money for myself." Another farmer, a veteran of the present war—who operates the cooperative tractor and heavy farm equipment—is starting on the road to ownership while he is still young. One man around 50 years of age, will explain how he bought, paid for, and lost two other farms. His case can best be summarized in these words—"Many farmers need to know more about the use of credit instruments."

One group of farmers purchased cooperatively a tractor and equipment to do the heavy breaking, disking, and plowing on their farm plots. The same individuals bought together a mill for rendering their sorghum cane into syrup. Ten farmers are participating in these two co-op activities.

In addition to doing a large portion of their farm work in the most economical and helpful way, participating farmers are also meeting their needs for credit to finance their farm operations in like manner. A production credit association—one of the farmers' cooperative lending units operating under the supervision of the Farm Credit Administration—loaned a total of $4,500 to these farmers for use in meeting their needs for short-term credit.

For a long time, the people of Tyrrell County have felt the need of new and better houses. They have often discussed this problem in their meetings. Several years ago they appointed a committee to develop plans for purchasing a sawmill cooperatively. They have plenty of available timber, and some of them have even saved money in their credit union to buy land on which to build houses, or to rebuild houses already owned. Through the past years, a common expression frequently heard ran something like this—"Some day we'll build new houses and new barns."

At last their dreams and plans became realities, for they have bought and set up a co-op sawmill. The mill equipment cost $2,200. Necessary buildings and other fixtures will make a total investment of around $4,000. They have also purchased 200,000 board feet of standing timber. In addition, most of the farmer members have good woodlots of pine, cypress, and oak sufficient to meet their present and future needs.

A good number of the members of the sawmill cooperative have worked, or are working in the sawmill and logging industries. Even some of the farmers work during their spare time in the lumbering business. With such a background of experience and skill on the part of participants, the officers of the organization anticipate no labor difficulty. The plan calls for members working in groups of eight during their spare time. Direct supervision of the work is under a hired manager who has had considerable experience in the sawmill industry.

Tyrrell County people like to talk most about their credit union as they say it is the original flame from which the other lights started burning. They not only believe that it is the source of all their mutual self-help ideas and activities, but they also feel that it is the foundation stone upon which they have built other cooperative ventures.

Up too date the Light of Tyrrell Credit Union has 400 active members. They come from many occupational groups including farmers, industrial workers, school teachers, ministers, sawmill laborers, domestic servants, railroad employees, laborers in the logging industry, and others. School and church clubs also have memberships in the organization.

During 1943, credit union members saved $10,500. Their total share holding amount to $33,000. The association has also purchased Government Bonds in the amount of $3,500, and has invested $500 in Lee Central—the North Carolina State Credit Union organization. Supplementing the share savings of members are the deposits which they make for safekeeping. Church and school clubs frequently make deposits of this type. Last year these clubs along with individual members deposited around $12,000 with the credit union.

The members buy what groceries and other supplies they need through their own consumer cooperative. The store also enjoys patronage from many nonmembers. Since the first year of operation, this co-op has paid a patronage dividend, and has a fairly substantial reserve on hand which is deposited with the credit union.

The latest cooperative project of Tyrrell County folk is a group hospitalization association. The purpose of the organization is to provide, cooperatively, hospitalization for its members. Due to the low income of many citizens of the county, it has been found very difficult to get hospitalization through individual effort. The cost ranges between $35 and $150, and the average citizen very seldom has this amount of money readily available. In many instances school children have had examinations by the school doctor only to find that there were no funds to correct their defects. Other people have needed hospital care but put it off because of the cost. Sometimes this proved fatal.

Each member pays a joining fee of $1.00 after which he pays a monthly fee of 10 cents, and a hospitalization fee of 25 cents each time a member goes to the hospital. Children may join the association by paying a joining fee of 25 cents, a monthly fee of 10 cents, and a hospitalization fee of 10 cents each time a member goes to the hospital.

Members are entitled to hospital care once a year. The maximum hospital allowance per member is $100, and he becomes eligible for benefits 30 days after his application has been approved The rules and regulations of the organization provide for the types of diseases and conditions for which payments are made, as well as stipulations for nonpayment of either monthly or hospitalization fees or both.

Since its organization, the members have paid into the Tyrrell County Hospitalization Association more than $800. Fifteen hospital bills have already been paid. Taking out expense for records, filing cabinet, supplies, and other costs, the treasurer now holds some $350, which is on deposit with the credit union.

Perhaps the cooperative educational program conducted by leaders in the Tyrrell County movement has done more to instill the cooperative idea and initiate new cooperative ventures than any thing else. Regular weekly meetings are held at which time reports are made, problems for discussion are presented, and actions are taken regarding specific projects or activities.

The educational program goes far beyond the weekly meetings. Some of its greatest good has come through the work of the various committees, and many times through the efforts of individual members. Especially is this true of Professor S. P. Dean, principal of the high school and leader of the Tyrrell County co-op movement, as well as Mr. G. K. McKeathan, the teacher of vocational agriculture. Apparently these men are tireless, for no hour is too late, no night too cold, no weather too bad for them to assist groups and individuals with their cooperative credit, and other problems.

Particularly have the various committees and individuals helped the people with their financial and credit difficulties. A few examples of problems that confronted them are cited here for illustration:

(1) There was the farmer and his wife who bought two mules on credit, and signed what they thought was a chattel mortgage, but instead, signed a mortgage on their property.

(2) Due to extensions, bonus payments, and interest charges a $100 mortgage on one farm jumped to $900 within a span of two years.

(3) A typical case was that of a man who bought a piece of property on a verbal promise and made payments on it over a period of 20 years. It was not until after his death that his heirs found that he had no legal right to the property.

(4) For over 25 years one individual had been making payments each six months at 6 per cent interest on a piece of property that originally cost $600. When he finally inquired about his balance, he found that he still owed $600. He had made all payments in cash and he had no receipts.

The story of the "Lights of Tyrrell" has spread far and wide. Inquiries through correspondence have been so numerous that the leaders have had neither time nor clerical help to answer all of them. Requests for speaking engagements at colleges, teachers' institutes, farmers' conferences, and churches have been so great that Mr. Dean has found it physically impossible to fulfill one-third of them.

Certain philanthropic boards have become deeply interested in the Tyrrell County cooperative plan. A few of them have made proposals to the leader of the movement regarding possibilities of spreading the idea.

And so, one can truly say in this instance, "How far that little candle throws its beam!" The colored people of Tyrrell County in North Carolina started a little cooperative flame burning five years ago, and they called it, "The Light of Tyrrell." From it so many other co-op lights are now burning that there are those from far and near who have seen the light and want to spread its illuminating rays to other dark corners.

ECONOMIC PROGRESS BECAUSE THE PEOPLE HAD A MIND TO WORK

Cooperative Activities in Eastern North Carolina

By Neill A. McLean

This month we shall see how they did it in the Tillery Community. The Tillery Community Cooperative is located at Tillery, North Carolina in Halifax County and fifteen miles from the Bricks Rural Life School.

In 1938 the Farm Security Administration established a rehabilitation project consisting of 147 Negro farm families in this area, and shortly afterwards there was opened up a large well supplied store financed with governmental funds and operating under a control outside of the people themselves. This venture was called a cooperative and named the Tillery Mutual Association, but the people did not, during its operating period, develop a feeling of belonging to it. They very often spoke of it as a government store.

By 1941 there were several men, including some members of the Tillery Mutual Association's Board of Directors, who had begun to visit the Cooperative program at Bricks Rural Life School and who had begun to study the Rochdale Principles and their application to the solution of problems of farm people. In August 1941 this small group convinced the authorities that they were capable of organizing and operating a cooperative by themselves. With the "go" signal from those in authority the sponsoring committee sent a representative along with the writer to apply for the charter of incorporation from the office of the Secretary of State. The charter granted and enough shares pledged to raise $800.00 required to purchase the stock of goods which was in the old store at that time, the Tillery Community Cooperative opened its doors for busness on August 1, 1941 with thirteen cents change in the cash register.

By the end of the third quarter of 1944 they had sold to themselves this year 450 tons of fertilizer. They bought and paid cash for a 2 1-2 ton truck which serves the needs of the members for hauling and gives full time employment to the driver. They have bought and paid cash for a heavy machinery unit consisting of a tractor, peanut picker and bailer. The store department which handles about 85 per cent of the buying and selling exchange of its members is managed by Mr. Loyd Smith who prior to 1943 had never done anything but farm and represents that large group who

Cotton by the Forelock

Agriculture Secretary Wickard's snggestion for coping with the cotton problem is that after the war "marginal" cotton farmers be moved over to some other kind of production, with government subsidies aiding the transition. This is what is called a "broad outline." We shall need to know what other lines of production and who are the marginal farmers.

As to the necessity for doing something, there is no question. And it is pleasant to know that representatives of the cotton industry and of government have got their heads together.

Cotton for so long has been the kingpin of Southern economy (and so large a factor in the national economy) that even the prospect of an enforced shift from cotton production sends shivers along the frame of Southern business. Cotton is the South's cash crop. The cash from cotton keeps the other businesses in business. As presently distributed, the income from cotton keeps millions of Southern families going after a fashion, and a few going very handsomely. What threatens the kingpin—and the myriad livelihoods that depends on it?

The threats are several. Overproduction (or underconsumption if you'd rather) is one, the old one. It is estimated that there will be twelve million bales in surplus when the shooting stops. That equates a year's production. The estimate probably is low.

It probably is low because the value of cotton has been pegged by Congress at or near 20 cents a pound. At that price most cotton growers, including the "marginal" ones, can come out—with something left over to purchase, say, a new suit of clothes, or a new roof for the barn. But at the same time acreage restrictions have been dropped (a prime piece of folly) and innumerable growers are planning to increase cotton acreage next year while the getting is good. With improved methods of cultivation, this means putting cotton production up to a new all-time high. Not even the government can continue indefinitely to buy up immense surpluses for which there is no demand.

Synthetic fibers are steadily encroaching upon the cotton market, and the end of this is not in sight. Another specter is the mechanization of cotton production. The mechanical picker is emerging from the wings.

This threat is directly to the livelihoods, not to cotton iself. Indeed a cheapening of production by mechanization seems to offer the best chance of restoring American cotton to its place in world trade. The big growers will be able to afford the new machines. But are all of those who can't afford them to be classed as marginal, and "shifted?" Competitively, they will be made marginal, of course, and the class will be swelled far beyond its present numbers.

Producers cooperatives, with communal ownership of machinery, might save some of the little fellows—keep them in the running. But even that would be no answer to the problem posed by the countless hands actually displaced by the machines—hands trained for no other work, if other work were available.

Cotton itself is not the main element of the quandary the South faces. Cotton will be produced and spun in the future as in the past. The main element is human: what to do with the people.

Mr. Wickard and other good minds must be wished competency in carving at this looming matter. —Nashville Tennessean.

WICKARD SAYS CHEAP WAGES THREATEN FAMILY-SIZED FARM

Washington, D. C.
November 27, 1944

Pointing out that low farm wages threaten the family-sized farm, Secretary of Agriculture Claude R. Wickard told the delegates at the annual convention of the National Farmers' Union in Denver, Colo., Tuesday that fair wages, decent housing, and good working conditions for farm laborers are essential to the well-being of small farmers in the postwar period.

In commenting on the address, Claude A. Barnett, special assistant to the Secretary, declared that this approach to the problem of encouraging further development and extension of the family-sized farm is important to colored farmers and day-laborers because they make up a large percentage of the small farmers and the wage hands.

Taking as a theme, "What's Ahead for the Family-Sized Farm," Secretary Wickard said, "I am convinced that the family-sized farm can be just as efficient as the larger units—perhaps, in some instances more efficient. In saying this, I am not forgetting that the keynotes of the world after the war will be abundance advancing technology, and probable large scale buying and selling. Even so, I believe that a fair break with its competitors is all the family-sized farm will need to assure its future."

Continuing the Secretary said, "Already there is a considerable body of legislation and a good number of programs to give the family-sized farm that kind of break. For example, the tenant purchase program already has enabled more than 36,000 former tenants to become farm owners by meeting their special needs for credit. (Of these more than 5,000 are colored farmers.) I hope that will be just a beginning of a much more extensive program in the future."

Going further with his discussion of government credit facilities for small farmers Secretary Wickard stated that the rehabiliation loans of the Farm Security Administration have helped more than 900,000 small farmers (white and colored) tenants and owners to keep their heads above the water. Also agencies of the Farm Credit Adminisration offer loans with the particular needs of the small operators in view.

Turning to Agricultural Adjustment Agency payments, and the disposal of surplus lands now held by the Army and Navy, the Secretary said, "Payments under the agricultural conservation program are scaled especially to favor operators of family-sized farms. In disposing of farmland which the government has been using for war purposes, special emphasis is being laid on making the land available in family-sized tracts."

Weighing the disadvantages which the family-sized farm faces, Secretary Wickard asserted, "However, it is perfectly clear that the steps I have been talking about are not nearly enough to enable the family-sized farm to hold and improve its position in the postwar world. For one thing there is the question of farm labor. The family-sized farm will be at a competitive disadvantage if operators of large units requiring large amounts of labor ever go back to the very low wage scale and long hours that sometimes prevailed in the past.

"In that kind of unfair competition the owner of the small farm who did most of his work either would be compelled to accept a bare pittance for his own skill and labor or would be forced out of business. That kind of farming has no place in our postwar program.

"The master key to the future of the family-sized farm is cooperation—cooperation through national farm organizations, in national farm programs, and cooperation through farmer-owned-and operated cooperative associations."

Said the Secretary, "The combined membership of farmers marketing and purchasing cooperatives last year was 3,850,000. Allowing for the fact that many farmers belong to more than one co-op, the total number of individuals participating is estimated at two million."

YOUTH CONGRESS MAPS 1945 PROGRAM AT SIXTH CONFERENCE

Atlanta, Georgia____Over three hundred and fifty delegates and observers to the Sixth All-Southern Negro Youth Conference in Atlanta, Georgia on November 30, December 1, 2, and 3, from all of the Southern states pledge that they would return to their homes and carry on and extend the program of the Southern Negro Youth Congress in their local communities. Largest delegations were from Alabama, Georgia, Louisiana and South Carolina.

Two major interests of the S. N. Y. C. for 1945 will be that of Voting with special emphasis on registration and the problems of Veterans and Service Personnel.

Columbia, South Carolina will be host to the Seventh All-Southern Negro Youth Conference in the spring of 1946. Officers elected for 1945 include as President, Rose Mac Catchings, Vice Presidents, Mrs. Barbara Oldwine, Charles Rhodes, Ernest Wright, Alton Adams in addition to Kenneth Kennedy and Edgar Holt who are former Vice-Presidents, now in the armed forces, overseas.

Esther V. Cooper and Louis E. Burnham were re-elected as Executive Secretary and Organizational Secretary, respectively.

STUDY FAMILY-SIZED FARMS

Eleven thousand farmer-committeemen and supervisors of the Farm Security Administration have been at work this fall making a thorough analysis of problems confronting family-type farmers. Many of these problems are of immediate importance in the war because of their effect on food production in 1945.

In this renewed attack upon rural problems, the U. S. Department of Agriculture aims to list the things that need to be accomplished to strengthen family-type farming, and then help the farmer accomplish them.

Cooperating are other agricultural agencies, farm organizations, local groups, county officials, and leading citizens.

Farm by farm, the resources, problems and needs of the small farmers in the FSA program are being listed. After that, neighborhood and community resources and needs are studied, since the problems of FSA borrowers often are the problems of many of their neighbors.

When the results of the studies are known, the resources of the community, the local and State Governments, and the Department of Agriculture are at the call of the farmer in planning and carrying out his improvement program. The FSA is using its combined credit and supervisory facilities to aid farmers who are eligible for its services.

Some of the most frequent problems this survey is revealing are: (1) Soil depletion and erosion (2) shortages of doctors and dentists; (3) neglect of machinery; (4) inadequate housing and sanitation; (5) low-grade livestock and sire services; (6) lack of balance between quantity of livestock and feed produced on the farm; (7) failure to undertake intensive pasture development; and (8) insufficient and inefficient marketing methods.

PROGRESS ECONOMIC

(Continued from page 5)

never has been blessed with formal education beyond the lower grades of elementary school. Yes, a farmer who never finished elementary school is managing a $35,000.00 annual business for 95 farm families. When we see people like Mr. Smith doing the very fine job he is doing in spite of limited formal education, we become ashamed to say, "If I had just had the learning I would have done thus and so."

It was my good fortune to be present at the directors' meeting of the Tillery Cooperative in November, and I have never seen a group of men anywhere who appeared clearer in their deliberations of the business before them. They were discussing new fields of services the coop might adopt as they set out in 1945 to do $75,000.00 of business. At this same meeting the directors made plans to sponsor the organization of a credit union for its members or get credit union service through the Bricks Community Federal Credit Union. A joint officers' meeting has been arranged between the Tillery Cooperative and the Bricks Credit Union for the second Thursday night in December. Yes, to continue to succeed, coopertaives must cooperate also.

Economic Highlights

DISTRIBUTION AGE IS HERE

Doctor Paul H. Nystrom, Professor of Marketing, Columbia University, in commenting on the future of distribution and the part it must play if the country is to have any semblance of normal peaceime prosperity, says:

"Reports indicate that following the war there must be work opportunities for some 57,000,000 persons. There must be a national income of from $135 billions to $140 billions based on 1940 purchasing power to maintain such employment. This amount is only slightly less than the present national income stimulated by war production and maintained largely by government purchases on borrowed funds. It is greater by more than 50 per cent than the largest national income that we ever had in any peacetime level of $140 billions, the total retail trade should be not less than $70 billions and more probably, $75 billions against a total of $46 billions in 1940 . . . .

"Can this volume of sales be effected by our distributive system? In my opinion, it can and will. Certainly, however, it will require much more than usual effort. . . There mus be the desire to exercise foresight and to make extensive plans. There must be the willingness to venture and to take risks. There must be adequate rewards and honors for those who succeed.

"To accomplish this great purpose business needs to be freed of unnecessary burdens . . . . The grinding, burning brakes of government regulation, so tremendously extended during the war period, must be lifted or we will not go very far. The tax burden needs to be lightened. It is futile to expect any return to the moderate levels of taxaion prevailing before the war, but present high tax rates, if continued, will strangle efforts to extend new business. Even more important, taxes need to be stabilized. . . . Legislative inequities, such as is found in the National Labor Relations Act, need to be drastically corrected.

"The distribution age, long discussed and forecast, is at hand."

BIG NUT CROPS

Nut trees promise big crops this fall, according to the Department of Agriculture. Walnut, pecan, and almond trees are expected to bear thousands of tons more nuts this year than last and many more than average. Of the four major tree nuts of commercial importance only filberts may have a crop this year smaller than that of 1943.

COMMONPLACE TOMORROW

Artists like to draw fanciful conceptions of the future. From time immemorial, they have imagined man flying. Contemporary artists can now go to any metropolitan airport and see how woefully their predecessors underestimated man's flying ability.

A major airline recently received answers from more than 27,000 air travelers who were asked what they would demand of commercial aviation after the war. On the basis of these answers, this airline has drawn plans indicating that the postwar airliner, which will carry more than 50 passengers from New York to London in less than 12 hours for a fare of $235, will contain many of the conveniences of a modern home, including comfortable seats, uniform heating, efficient reading lights and electrical cooking devices.

A passenger request which is receiving serious consideration is an illuminated trip program panel to keep the air traveler informed as to what cities he is flying over. But leading the list is the pressurized cabin to eliminate the effects of air-pressure changes when the plane is ascending or descending, and to permit flight in higher altitudes above the "weather."

In addition, the air will be heated or cooled to keep the inside of the cabin at a comfortable temperature, even though the temperature outside may range from 50 degrees below to 100 degrees above zero.

All of this may sound like the raving of an artist gone crazy. But it isn't. It is a preview of common place tomorrow.

PRODUCTION INCREASE BY SOIL CONSERVATION SHOWN

Washington, D. C.—Soil conservation methods not only prevent erosion, but also are a contributing factor to making possible larger yields per acre. But the Department of Agriculture observes also that rainfall has been generally above normal since the country's entrance into the war and much of the hesitancy about predicting bumper crops on the fact that a dry summer had been expected at some time during the last three year. But, during the period of the war's greatest urgency nature was unexpectedly cooperative.

Granting that the weather is the most important factor in the production of crops deriving from well-planned planting, the department then says that soil sonservation practices, better farming methods, adequate uses of fertilizer and of farm machinery and better management of grazing lands also are of great importance.

Below is a tabulation of conservation practices in production relating to 3,971,903 acres of farmland, representing 9,348 farms with an average size of 425 acres. By way of general summary of the following figures, these observations might be made: The percentage increase of average annual production of all major crops after the conservation measures were put into effect was 35.7 per acre. Increased production was the equivalent of total production on 1,075,535 additional acres without such treatment.

Changes in acreage and production on specific crops:

	Before	After	Per Cent Change
CORN:			
Acres	251,374	219,238	*12.8
Yield per acre (Bu)	25.4	35.4	**39.4
Total production (Bu)	6,382,563	7,763,166	**21.6
WHEAT:			
Acres	229,621	197,912	*13.8
Yield per acre (Bu)	13.2	19.0	**43.9
Total production (Bu)	3,038,983	3,755,211	**23.6
BARLEY:			
Acres	42,443	50,015	*17.8
Yield per acre (Bu)	21.1	27.8	**31.7
Total production (Bu)	895,285	1,392,650	**55.5
OATS:			
Acres	119,496	120,479	* 0.8
Yield per acre (Bu)	29.4	36.3	**23.5
Total production (Bu)	3,516,343	4,367,946	**24.2
RYE:			
Acres	7,670	6,496	*15.3
Yield per acre (Bu)	11.6	15.7	**35.3
Total production (Bu)	89,144	101,771	**14.2
GRAIN SORGHUM:			
Acres	45,955	48,874	* 6.4
Yield per acre (Bu)	15.5	22.4	**44.5
Total production (Bu)	713,696	1,093,416	**53.2
COTTON:			
Acres	156,418	125,671	*19.7
Yield per acre (Bales)	0.43	0.57	**32.6
Total production (Bales)	67,154	71,620	** 6.6
PEANUTS:			
Acres	9,216	14,901	*61.7
Yield per acre (Bu)	31.8	34.7	** 9.1
Total production (Bu)	292,721	517,009	**76.6
TOBACCO:			
Acres	2,474	2,196	*11.2
Yield per acre (Lbs.)	937.5	1,164.8	**24.2
Total production (Lbs.)	2,319,497	2,557,821	**10.3
SOYBEANS:			
Acres	9,702	8,136	*16.1
Yield per acre (Bu)	13.9	20.8	**49.6
Total production (Bu)	134,631	169,275	**25.7
POTATOES:			
Acres	3,659	4,532	*23.8
Yield per acre (Bu)	174.7	190.7	** 9.2
Total production (Bu)	639,094	864,413	**35.2

Acreage changes in hay and pasture: Before, 2,036,473; after, 2,279,503; increase, 11.9 per cent.

Changes in Livestock and Poultry:

	Before	After	Per cent Increase
Dairy Cows	61,576	79,199	28.6
Beef Cows	93,672	129,494	38.2
Stockers and Feeders:			
Cattle	41,123	82,776	101.3
Pigs and Hogs	15,863	25,734	62.2
Poultry	955,907	1,406,778	47.2
Turkeys	53,065	81,086	52.8

STFU MEMBERS AID WAR EFFORT

Vice President Reports on Activities and Plans

By F. R. Betton

During the year 1944, the Southern Tenant Farmers Union aided the war effort by placing its unemployed members in agricultural areas and in plants which were processing food for our armed forces. During the summer season when there was no employment, 325 of our members were transferred to the state of New Jersey and worked for about six weeks in the Campbell Soup Co. plant in Camden, N. J. I had an opportunity to be with the workers for several weeks. The officials of the company were well pleased with the type of men we sent to work in this plant. During the tomato season, this company prepared 90 million cans of tomato products, soup and juices which were sent direct to the boys overseas.

Our members made very good money on this and other jobs in that area. They were represented by the A. F. of L. Meat and Cannery Union Local 56, of which Mr. Leon Schachter is president. Rev. David S. Burgess noted as the joint representative of the Unions in dealing with the company in behalf of the men who worked at Camden this summer. During the time I was in New Jersey, it was my privilege to work closely with these two men and other officers of the Meat and Cannery Union.

As a result of our efforts we are now looking forward to working out plans for sending a large number of our members out on jobs this winter and next summer. During this convention you will hear about plans that are being worked out in your behalf.

You will also hear about the new cotton picking machine which is going into use on the big plantations as soon as they can begin manufacturing this machine. A new kind of farm worker is on his way in the South, as elsewhere in the nation. He is a skilled man—the tractor driver and farm machine operator. Our Union must take steps to strengthen our organization by uniting these skilled men together so that they may have better wages and working conditions.

We have many problems confronting us both now and in the post war world. With the new machine farming, we are going to have more serious problems to face. A lot of our people, both white and Negro, are going to have to find employment in other sections of the counry.

In the past, many Negroes have migrated to the east, the west, and the north. They have congregated in the large cities such as New York, Chicago, and Detroit. They have not always been as well off as they were back home in the South. The slums of the big cities are sometimes worse than the slums of the rural South. So, it appears to me the Negro should spread out over this land. When he migrates to other sections he should stay away from the big cities. He should go to the little towns and farm areas of the East, North, and the West, and make a place for himself.

In the history of all minority peoples, it has always been that oppression and discrimination come when such a minority congregates in one spot. The Jewish race is an example. The Jew is hated and feared when he gathers in great numbers in one place but when he is scattered out over the country, a few here and there, he is accepted. So it is with the Negro in America. It is our opinion that when a high percentage of the Negroes—in say the state of Mississippi, leave and go to other states the ones who remain will be able to secure for themselves the four freedoms promised all races of men in the great Atlantic Charter.

Here in our good state of Arkansas where I have lived for over 20 years, an amendment to the State Constitution has been adopted to block labor organization under a guise of "Freedom to Work". This amendment was put over by an organization called "Christian-Americans". We cannot see why they have that name, as they have acted neither as good Christians or good Americans in trying to shackle the organizations of the poor—the labor unions.

The Southern Tenant Farmers Union is not going to be directly affected by this law at the moment—we do not have any closed shop contracts. The only closed shop contracts on Arkansas farms are those held by the Arkansas Farm Bureau. Practically every tenant, sharecropper, and farm worker in eastern Arkansas is required to be a member of the Farm Bureau as a condition of employment on a plantation.

There are 10,000 members of the Southern Tenant Farmers Union in eastern Arkansas who can make an affidavit that they are forced against their will to hold membership in the Farm Bureau, an organization that represents only the interests of the Boss.

The Arkansas Farm Bureau furnished the names of those members to the Christian American Committee who circularized them, urging them to vote for the anti-labor amendment to the State Constitution. It was no doubt due to the Farm Bureau that this anti-labor law was adopted.

If legislation is passed by legislature and enforced against labor unions in Arkansas, the Southern Tenant Farmers Union will insist that the law also be enforced against the Farm Bureau. There are now 100 affidavits on file in Washington which prove that the Farm Bureau has an involuntary check-off of membership dues through county agents, plantation owners, and commissaries. We will produce these affidavits and thousands more just like them at the proper time.

ANIMALS AS WEATHER PROPHETS

By Ethel R. Adamson

Sheep Seek Corners of the Pasture

Many birds foretell a storm by warning cries and uneasy actions. Rooks gather in large numbers and begin to fly in circles when bad weather threatens. The rooster flies on the gate and crows, and the hens roll excitedly in the dust and seek their food later in the evening. The call of the woodpecker is a sign of rain, also that of the guinea fowl and the peacock. Geese will cackle loudly when a storm is brewing and blue jays chatter.

When the sky begins to darken, sea gulls assemble on shore, as they know that the rain will bring earthworms to the surface, and ducks go to the fields to look for snails. This, however, is merely a search for food and is due to the same instinct which teaches the swallow to fly high in fine weather, and skim along the ground when foul is coming. The different tribes of wading birds always migrate before rain, likewise to hunt for food.

It is proverbial that "pigs see the wind." These animals become restless and will carry straw and hay to hiding places often hours before man is aware of a coming storm. Sheep will skip about and seek corners of the pasture protected by trees and shrubs, when storm clouds gather. Moles begin, too, to carry earth with which to cover their holes, grasshoppers stop singing, and frogs croak loudly.

Old pussy cat in an uncanny way seems to sense the approach of bad weather, for when she rubs against a chair or table leg, draws her paw across her forehead in washing her face, or frisks about the house, it is sure sign of rain.

Fish have a strong instinct with regard to the changing of the weather, refusing obstinately to rise at the most tempting bait or flies, when clouds charged with thunder or rain are passing overhead.

Spiders repay a close study of their antics. Crawling more than usual predicts rain. Short strands of their web firmly anchored are forerunners of rain; while longer strands mean fine weather.

But when the possibility of rain is past, the ring dove again begins to coo toward evening; the spider is busy lengthening the strands of its web; the lizards climb the bushes and bask in the sun. With the proach of the fine, warm days, the robins sing high in the trees, and the swallows begin to carry mud and straw to build their nests.

Indeed, all living creatures seem to have a singular knowledge of changes in the temperature, shifting their quarters and changing their actions, as the coming rain or dryness of the air warns them.

Purging Parasites

By Erik Seidler

Whoever made observations of the habits of animals will agree that cleanliness is their very soul. Tongue and paw replace water and towel with most of the fur-bearers. Water is used too by some, but never by a fox. I witnessed an incident where this rule was violated, where a fox dipped into the water to its very neck. Another exception to this rule I was privileged to see was th anetics of some bats. They fly only at twilight and in darkness. One day while holidaying at the beaches of "Lago Maggiore" in Switzerland, I was surprised to see a flock of these nocturnal animals flying over the water, at brilliant noontide, skimming the waves till they looked for all the world like stones skipped by a boy at play. One misjudged ihs distance, splashed in entirely, and was in danger of drowning. Amazed at the performance of these bats, I rescued the endangered to see what might be causing this phenomena, and why they had left their "up-side-down" day-resting to cavort over the waves.

The answer was not long in coming. The poor bats were infested with numberless fleas. They were ridding themselves of parasites, trying to strip them off as they skimmed the waves.

Another unique "delousing" plan was used by a fox at a lonely Czechoslovakian lake, with myself as an interested spectator. This animal was nearly frantic with agony of fleas, and was crashing through underbrush with customary stealth forgotten, biting and snapping at his merciless torturers, trying to fling them from his coat. Finally, exhausted, by the heat of the day and his violent exertions, with tongue lolling out, he sat looking despairingly at the water. I expected him to leap frantically into the lake, but instead he sat meditating his problem for some moments. His reasoning outmatched mine, for as I watched, he reached down and started plucking the soft fur from his underbelly. In a moment he had a ball as large as a fist. Balancing this delicately on the end of his nose much like a trained seal, he stepped gingerly into the water, slowly, making not the slightest ripple, he waded out. The water rose up his legs, his back, his neck, until just his nostrils and the fur ball were on the surface. Released by its own buoyancy, the ball floated away taking with it all his unwelcome guests who had sought it out as a haven from the rising flood. His gentle immersion gave the parasites time to find this last dry spot, whereas a sudden plunge would have caused them to cling with greater tenacity. Retrieving the ball of fur, I found hundreds of fleas, attesting to the completeness of the fox's cure. The mentality of the fox went up in my esteem, and I vowed that I would never do anyhing to harm any of these intelligent animals.

WAR FOOD ADMINISTRATION MARKET NEWS

SET ASIDE ORDER ISSUED ON CHICKENS

Negro farmers, specializing in poultry raising, will be affected by December 11, whereby 100 percent of all chickens produced or processed in Delaware, and the heavy poultry production areas of Maryland, Virginia and West Virginia, must be set aside for sale to the U. S. Army Quartermaster Corps to avert a threatening shortage of 110,000,000 pounds of poultry for U. S. Armed Forces during the first few months of 1945.

The War Food Administration said the order would be terminated as soon as possible, but warned it might be sometime before the army is able to obtain enough chickens to make up the military's acute shortage of this food for American servicemen overseas and in hospitals.

Dry Bean Set-Aside Requirements Adjusted

The War Food Administration has amended War Food Order No 45 to readjust the set-aside requirements on edible dry beans by classes in accordance with revised allocations to claimant war agencies.

The amendment effective December 1, 1944, divides ten classes of beans into four separate set-aside groups and fixes the set-aside percentage for each group or class according to need.

All beans in the first three groups will be purchased only by the armed forces and authorized purchasers or country shippers who acquire them for resale to authorizer purchasers or the armed services, while those in group four will be eligible for purchase by any governmental agency, by authorized purchasers, and by country shippers who acquire them for resale to authorized purchasers or governmental agencies.

Pork Set-aside Increased Slightly

The War Food Administration has amended War Food Order 75,3 to increase slightly the set-aside of various pork cuts needed to meet war requirements.

The amendment No. 4, effective December 3, 1944, require slaughterers to set-aside in the form of pork sides and specified pork cuts, a total of 28.5 per cent of the live weight of slaughtered hogs. The former set-aside required 26 per cent.

More Burley Tobacco Available

Acting at the request of the tobacco trade, the War Food Administration has issued War Food Order No. 4.8, which is designed to equalize the distribution of a record crop of burley tobacco among manufacturers and dealers.

Under the order, effective December 2, manufacturers may buy 5 percent more burley than they used during the 12 months ended September 30, 1944 and dealers may buy 4 percent more than was allocated to them from the 1943 crop.

The 1944 burley crop, sale of which is scheduled to begin December 11, 1944 will total 488 million pounds, (Nov. 1 estimate) compared with 390 million pounds last year and a 10 year average (1933-1942) of 326 million pounds. The principal use of burley is for the manufacture of cigarettes. For this purpose, it is second in volume to the flue-cured class which is yielding more than a billion pounds this year.

1945 Egg Goals

The War Food Administration's suggested goal for farm egg production for 1945 is 3,920 million dozen eggs, a 16 per cent reduction from the all time high of 1944, when 5 billion dozen eggs came to the market.

Unless prompt steps are taken to remove about 50 million surplus hens from laying flocks above normal calling this goal will be exceeded substantially.

The goals set give civilians 340 eggs per capita for 1945 compared to the 342 eggs per capita that prevailed in 1944.

Hens laying at the present rate of 112 eggs per bird indicates that 420 million layers are all that are necessary to meet the 1945 goal. At the present rate of culling of old hens out of flocks and the placing of pullets in flocks, the number of layers will be about 470 million, which will create an egg surplus.

The necessity for a thorough culling of flocks, removing old hens and poor layers is clearly indicated by these figures. And unless farmers pay particular attention to careful culling, surplus egg production will bring poultry raisers problems they can avert through early action.

SATURDAY EVE

On Saturday eve in a farming town
Where people come and stand around,
At one o'clock to town MUST go—
Those weary souls walk to and fro.

They chat with neighbors, smile at friends,
Tramp the streets from end to end;
Buy their gum, dip their snuff,
Eat sardines till they get enough.

Mothers, fathers, children all,
Thick ones, thin ones, big ones, small,
Come to town on Saturday eve.
All their change in town must leave.

Liquor, candy, gum and snuff,
Ice Cream, peanuts and all that stuff
Are things that make life worth the sweat;
For this is all the fun they get.

UNSUNG ALLIES

Research specialists have always been the unsung heroes of human progress. Not until the present war, did the full impact of their labors strike home. In the field of petroleum alone, they have literally won the war for the United Nations.

The director of research of a leading oil company observes that: "Probably the most dramatic illustration of the contribution of research in the petroleum industry to the war effort is offered by the case of 100-octane aviation gasoline. By now, virtually everyone realizes that the availability of this fuel in vast quantities is, to a considerable extent, responsible for the success of the allies' modern military aviation. However, few people stop to ask the question, 'How much 100-octane gasoline is there in crude oil and how is it extracted?' The answer is a little startling. There is no 100-octane gasoline in crude. The basic ingredients of this vital war material are made by chemical synthesis methods (artificially created) using certain petroleum fractions as raw materials. Prior to the start of the war effort the total U. S. production of 100-octane gasoline was about 25,000 barrels per calendar ray. Currently it is produced at at least twenty times that rate. If it were for this contribution of research the manufacure of high performance aviation fuel, the allied air services would be restricted to about one-fifth as much aviation gasoline as they are now receiving and that gasoline would give only about three-quarters of the performance made possible by 100-octane fuel."

These gigantic contributions to victory are but incidental to the main mission of the research man. The underlying purpose of research is to learn the secrets of nature and discover methods by which these secrets can be turned to the good of mankind. In learning those secrets, the research laboratories of modern industry are at the same time striving to extract the greatest possible use out of each secret. Thus one of the most effective conservation forces today can be found within industry itself—another fact about research that few people recognize.

WOMAN'S PAGE

DROP BISCUITS

Fragrant Drop Biscuits, golden honey, and creamy butter or margarine may rightfully be called "The Three Musketeers." These good food companions belong together, for each one lends a helping hand to make for exquisite eating.

Drop Biscuits are an especially satisfying hot bread to serve during December. Mother welcomes them, for these perky biscuits fit into her schedule of hurried household duties. Getting Jimmie and Jane off to school adds a few more tasks to mother's already crowded schedule. Yet she does not mind, for she knows it takes only a few minutes to make golden brown biscuits for the family's lunch or dinner.

Choosing Drop Biscuits as the family bread not only shows wise kitchen management, but also good nutritional planning. Each economical biscuit is chockful of good enriched flour with its added B-vitamins and food iron—thus giving her family needed nutrients for the jobs they have to do.

If there should be a few leftover Drop Biscuits, toast them, spread with margarine or butter, and drizzle with honey. This makes a pleasing variation and mighty good eating.

DROP BISCUITS
2 cups sifted enriched flour
3 teaspoons baking powder
1 teaspoon salt
2 to 4 tablespoon shortening
1 cup milk

Sift together flour, baking powder, and salt. Cut or rub in shortening. Add milk, stirring only until flour is moistened. Drop by spoonfuls on ungreased baking sheet or in ungreased 2-in. muffin pans. Bake in hot oven 450 degrees F.) 8 to 10 minutes.

Yield: About 18 biscuits.

An inviting dinner entree deserving special recognition these days of soaring food prices is Meat Square a la Mode. This savory meat dish takes as little as 1-2 lb. of ground meat for 6 generous servings that really taste meaty. To make Meat Square a la Mode, brown 2 tablespoons chopped onion in 1 tablespoon fat. Add 1-2 pound ground meat, 1-2 teaspoon salt, and 1-4 teaspoon pepper. Cook 5 minutes. Add 1-2 cup canned tomatoes, 3-4 cup cooked string beans, and 1-2 cup cooked carrots. Mix well. Pour into greased pan 8 x 8 x 2 inches. Cover with drop biscuit mixture, spread mixture evenly to edges of pan. Bake in hot oven (40 degrees F.) 25 minutes. Turn out on hot chop plate and serve with Tomato Sauce.

Flaky Baking Powder Biscuits do their share to carry a bit of good meat flavor to the family table. Make a vegetable meat stew using the less expensive meats—which incidentally give a most delightful flavor. Serve the stew in shortcake fashion and watch the family mop-up the rich meat gravy with these tender biscuits.

Make a fashionable muffin ring by adding 1-4 cup finely chopped parsley to a standard muffin recipe. Bake in greased ring mold in hot oven (425 degrees F.) 20 minutes. Serve with sliced hard cooked eggs in velvety creamed sauce or victory canned string beans, whole kernel corn in nippy cheese sauce. Such an entree brings well-deserved applause. If no ring mold is at hand, bake the muffin mixture in an 8 x 8 pan. Cut in squares to serve.

Try savory biscuits topped with creamed chicken. Adding 1-2 teaspoon poultry seasoning and 1-4 teaspoon curry powder to the flour mixture of a standard baking powder biscuit recipe offers something new and mighty good to accompany the tempting flavor of creamed chicken.

Especially good this fall is creamed cabbage with Bit-of-Ham Muffins. Cut cooked ham in bits of pieces to make 1 cupful. Add to flour mixture of standard Muffin recipe and proceed as for muffins. These golden brown muffins, piping hot from the oven are a taste sensation. Spoon creamed cabbage over them or serve the muffins plain with accompanying side dishes of 7-minutes cabbage.

Cold winter evenings call for "something warm" at the dinner meal. The plentiful supply of enriched bread, at the friendly bakers, is eager to lend assistance to new ideas for fall menus. Cover slices of bread generously with a succulent meat and vegetable mixture. Broil these open faced sandwiches at a moderate temperature (350 degrees F.). Extra slices of toasted bread may top the meat mixture should the family want to make bountiful sandwiches. Serve these sandwiches with gravy or tomato sauce.

TINY TEA RINGS

2 cups sifted enriched flour
3 teaspoons baking powder
1 teaspoon salt
2 to 4 tablespoons shortening
1-2 cup milk (about)
1 tablespoon honey or light corn sirup
2 eggs
1-2 cup grated sharp cheese

Sift flour, baking powder and salt together. Cut or rub in shortening. Beat one whole egg and one egg yolk, reserving white for tops. Add milk and honey to beaten eggs and add all to flour mixture. Stir only enough to make dough hold together. Turn out on lightly floured board and knead a half minute. Roll out into a rectangle 8 inches wide and 1-8 inch thick. Cut in half lengthwise. Spread each portion with cheese, and roll jelly-roll fashion, sealing edges. Cut into 8 inch pieces and form into rings on greased baking sheet. Pinch ends together. With scissors, cut through rings almost to center, in slices about one inch thick. Turn each slice slightly on its side. Brush rings with remaining egg white and sprinkle with sugar. Bake in moderately hot oven (425 degrees F.) 12 to 15 minutes. Fill center with a spoonful of green applesauce.

Yield: About 6 individual rings.

THE VERSATILE COFFEE CAKE

Irresistible is the sound of the morning call when the reward for hustling to breakfast is fragrant warm coffee cake. For tempting coffee cake means a hearty breakfast and a good start for the day's activities

Wise mothers find extra pleasure in making fresh coffee cakes for their families. A quick coffee cake takes but a few minutes to prepare. Mother sifts together the flour mixture and measures the remaining coffee cake ingredients after finishing her dinner dishes. She knows then that should the sandman linger a bit the next morning, her coffee cake will be mighty good, for mixing the ingredients is then a last moment affair.

To make breakfast coffee cake extra inviting and so good it could be served as luncheon bread or dinner dessert needs but one thing: a standard coffee cake recipe. Here is one such recipe tasty enough to serve plain and so versatile it can be made glamorous with a touch of fruit or spice, a sprinkling of sugar or a few nuts.

STANDARD COFFEE CAKE
1 1-2 cups sifted enriched flour
1-2 cup sugar
2 teaspoons baking powder
1-2 teaspoon salt
1-2 cup milk
1 egg
3 tablespoons melted shortening

Sift together flour, sugar, baking powder, and salt. Beat egg, add milk and shortening. Add to flour mixture, stirring only enough to moisten flour. Pour into greased pan 8 x 8 x2 inches. Bake in moderately hot oven (400 degrees F.) 25 minutes.

Yield: 1 coffee cake, 8 x 8 x inches.

Pleasing ways to dress up this plain coffee cake to tempt the sleepy family members are many.

Before baking, top the coffee cake batter with a crumbly topping that is easily made. Cream together 2 tablespoons each margarine or butter and sugar. Add 1-4 cup of bread crumbs; enriched flour and 1-2 teaspoon cinnamon. Mix to consistency of course crumbs.

Another pleasing variation for the plain coffee cake is Prune Topping. Mix 1 cup cooked chopped prunes, 2 tablespoons melted margarine or butter, and 1-4 cup sugar. Spread mixture in bottom of well-greased pan, 8 x 8 x 2 inches and pour coffee cake batter over prune topping. This coffee cake gets its satisfying sweetness from the good flavor of the prunes.

Now that sunny apricots are brightening fruit markets, try apricots instead of prunes. Sliced peaches are good and so are pie cherries.

An Orange Coffee Cake is especially pleasing for all occasions. Before baking, top the coffee cake batter with Orange Topping made by mixing 2 teaspoons grated orange rind and 1-4 cup sugar. This tasty sugar mixture gives the coffee cake its crunchy topping and makes for delicious eating.

EXTEND ONE CAN OF SHRIMP IN SWEET-SOUR SAUCED DISH

A number one 7-ounce can of shrimp is a wise buy for the alert menu-maker, and shrimp and kidney beans flavored with a sweet sour sauce as the masks indicate is a wiser way to extend a can of shrimp into a meal that will serve four to six. Canned shrimp contains Vitamins A and D; is a source of protein, iodine and eighteen minerals—a nutritious as well as a budget buy to use this way.

SHRIMP AND KIDNEY BEAN PLATTER

1 lb. dried kidney beans
2 teaspoons cornstarch
1 tablespoon vinegar
1 tablespoon sugar
1 teaspoon grated onion
1 2 teaspoon salt
1-4 teaspoon chili powder
Few grains pepper
1 No. 1 (7 oz.) can shrimp
Onion rings

Cover beans with cold water; let soak overnight. Add 1 tablespoon salt; boil beans slowly, covered, 2 to 3 hours or until tender. Drain:

Measure 1 cup liquid from beans, Blend 1 cup bean liquid with corn starch; boil until thickened and clear. Add vinegar, sugar, onion salt, chili powder and pepper; simmer 5 minutes. Add shrimp; heat. Arrange hot beans on serving platter; pour shrimp mixture in center. Garnish with onion rings.

Serves 4 to 6.

MOLASSES DROPS

1-2 cup shortening
1-4 cup brown sugar
1 egg
1 cup molasses
1-4 cup milk
2 cups sifted enriched flour
1 teaspoon soda
1-2 teaspoon salt
1-2 teaspoon ginger
1-2 teaspoon cloves
1-2 teaspoon cinnamon

Cream together shortening and sugar. Add egg and beat well. Add molasses and milk. Sift together flour, soda, salt, ginger, cloves, and cinnamon. Add to creamed mixture. Mix well. Drop by teaspoonfuls on greased baking sheets. Bake in moderate oven (375 degrees F.) 8 to 10 minutes.

Yield: About 6 1-2 dozen cookies.

Plump soft Old-Fashioned Molasses Cookies are especially fitting for youngsters' Christmas parties when these cookies are decorated with raisins or currant "faces." These generous cookies, with their B-vitamins and iron from enriched flour, molasses, and fruit, are as nutritious as they are delicious.

Open-face sandwiches made with enriched bread can enchant the simplest Christmas party. Spread slices of enriched bread generously with a soft ham salad spread using sliced hard cooked eggs as "eyes,' a triangle cut from thinly slived American cheese as "nose," and a sliver of dill pickle as sweet sour pickle for "mouth."

Another Christmas sandwich is made with enirched bread and a favorite sandwich spread. Using fancy cookie-cutters, such as a star a turkey gobblin, Santa, a tree and any of the other Christmas emblems, cut figures from slices of enriched bread and spread with luscious sandwich fillings.

STEAMED APPLE PUDDING

3-4 cup chopped suet
1 cup seedless raisins
2 1-2 cups sifted flour
1 teaspoon soda
1 teaspoon cinnamon
1-2 tsp. nutmeg
1-2 tsp. salt
1-8 tsp. cloves
1 1-2 cups grated apples
1 cup molasses
1 egg

Combine the finely chopped suet and raisins. Mix and sift the dry ingredients together, and add to the suet and raisins. Then add the apples, molasses and beaten egg. Mix well and pour into a greased casserole; set in a pan of hot water and bake at 350 degrees F. for 1 to 1 1-2 hours, depending on the depth of the casserole. Serve hot with any desired sauce, or with cream.

APPLE MACAROON PUDDING

6 apples
1 cup sugar
1-4 teaspoon cinnamon
1-4 cup butter
1 egg
1-2 cup flour
1 teaspoon vanilla

Peel, core and slice the apples into a buttered baking dish. Sprinkle 1-2 cup of sugar and the cinnamon over the apples. Cream together the butter and the remaining half-cup of sugar. Add the beaten egg and the flour and vanilla. Beat to a smooth batter. Spread over the apples and bake 375 degrees F. for 40 minutes. serve with lemon sauce or whipped cream.

COUNTRY FRIED STEAK

1 1-2 lbs. round or chuck steak (cut 1-2 in. thick)
2 tsps. salt
Flour
2 tbsps lard
1-4 cup water

Cut steak into serving pieces Season. Dredge with flour and pound with meat hammer or edge of a thick plate. Brown in lard. When well browned, add water. Cover and cook slowly—about 1 1-2 —2 hours. Add more water if needed. 4 to 5 servings.

SPICED GRAPE RELISH

3 1-2 cups prepared fruit
7 1-2 cups sugar
1-2 cup vinegar
1-2 bottle fruit pectin
1 teaspoon cloves
2 teaspoons cinnamon

To prepare fruit, slip skins from about 3 1-4 pounds fully ripe grapes. Bring pulp to a boil and simmer, covered, 5 minutes; remove seeds by sieving. Chop or grind skins and add to pulp. Add cloves and cinnamon, or any desired combination of spices.

Measure sugar, prepared fruit, and vinegar into large kettle, mix well and bring to a full rolling boil over hottest fire. Stir constantly before and while boiling. Boil hard one minute. Remove from fire and stir in pectin. Skim; pour quickly into warm, sterilized glasses. Parraffin hot relish at once. Makes about 12 six-ounce glasses.

FUDGE CAKE

1 cup sugar
1-2 cup butter or fat
1 cup flour
Pinch of salt
2 eggs beaten together
2 squares chocolate (2 ozs.)
1 teaspoon vanilla
1-2 lb. pecans or black walnuts

Grease pan and bake in 350 degree oven. Cut into squares while warm: may be iced if desired. Ice with cream icing.

CHOCOLATE CREAM ICING

8 tablespoons sweet cream or evaporated milk
2 cups sugar
2 teaspoons butter
2 tablespoons melted chocolate
2 tablespoons vanilla

Mix thoroughly, put over a vessel of hot water and stir to a smooth cream. Let cool a little before spreading on cake, or it will run.

BOSTON BAKED BEANS

2 cups white beans
2 tablespoons molasses
1-4 lb salt pork
1 teaspoon salt

Soak beans overnight or at least several hours; drain and cover with cold water; boil about 10 minutes; drain; place in baking dish; add pork, molasses and salt; cover with liquor from beans; bake in a slow oven for 3 hours. Remove cover and brown before serving. Top with slices of bacon before baking. Serves 4 to 5.

Another grand way to prepare beans is with ham. To do this, wash and drain two pounds of dried white navy beans; place beans in cooker kettle and add 1-3 cup molasses, 1-3 cup brown sugar, one large onion, six cups water, two teaspoons salt, three slices bacon and one teaspoon mustard. Over the beans place a piece of ham or ham hock. Cover kettle and turn heat to low. Cook six hours. For a brown crust, remove from kettle and place in oven for 30 minutes.

NUT CRUMB COFFEE CAKE

2 cups sifted cake flour
2 teaspoons double-acting baking powder
1-2 teaspoon salt
3 tablespoons butter or other shortening
1 cup sugar
1 cup milk
1-2 teaspoon vanilla

Sift flour once, measure, add baking powder and salt, and sift again. Cream butter, add sugar gradually, and cream together well. Add flour, alternately with milk, beating after each addition until smooth. Add vanilla. Turn into greased pan 9 x 9 x 2 inches. Combine 2 tablespoons sugar and 1-4 teaspoon cinnamon; mix with 3-4 cup soft bread crumbs. Add 2 tablespoons melted butter and 2 tablespoons chopped nut meats. Sprinkle over cake. Bake in moderate oven (350 degrees) 45 minutes.

THE MODERN FARMER

VOL. XVII. NASHVILLE, TENN., JANUARY 15, 1945 No. 12.

The Road Up

So They Sell Lake Dick

By

GILES A. HUBERT

So they are selling the Lake Dick Project, and the planters have won still another round with the Farm Security Administration and what this agency has meant. On these pages you will also read of the impending complete mechanization of commercial cotton growing and the upsetting effect this is likely to have on millions of people now depending on cotton growing for a livelihood.

These two stories sort of hang together—"but definitely."

The Lake Dick Project was an experiment—an attempt to find a pattern through which ordinary tenant farmers could organize themselves to operate a large mechanized and scientifically operated cotton farm. Could ordinary Southern farm families operate such a farm so that they could utilize the machine technique to raise their level of living rather than be displaced by it?

Lake Dick is in Arkansas, a short distance from Pine Bluff. It was formally an old plantation, one of the best in the area, located on good river bottom land. The original plan was to group the homes of the families in a village along with the major farm facilities, such as the barns, the store, the gin, grist mill and a dairy. These latter were all to be owned and operated cooperatively as was the farm itself.

The farm was divided into large sections and the workers were organized into operating groups under foremen elected by each group. Workers were paid wages designed to cover the day-to-day expenses of the families involved. This was regarded as one of the regular costs of farm operation. Any profits earned by the farm and by the cooperative facilities were to be returned to the workers according to their respective shares of the work done on the farm and of the patronage of the cooperatives.

It was a good plan and a good farm. But the Lake Dick Project was doomed to failure. First, the families selected were not from the immediate area. Many of them came from the hills where they had operated small individual farms. They were white families with the most individualistic backgrounds possible.

The planters on the surrounding plantations went to work on the families with adverse propaganda almost as soon as they arrived at Lake Dick. They were told that and the government simply wanted to make common laborers out

28,000 NEGRO SOLDIERS PLAN TO FARM

THE COTTON PICKING MACHINE

This is International Harvester's cotton picker harvesting the staple at the rate of a bale and half a day on a high producing plantation near Osceola, Ark.

FSA SELLS LAKE DICK PROJECT

Little Rock, Ark.—The 3,670-acre FSA re-settlement project, Lake Dick Farm, Inc., established several years ago and later abandoned, is to be sold to the highest bidder, A. D. Stewart, regional Farm Security Administration director here, has announced.

The 10-unit project, located in Jefferson County, will be sold as a single unit. Bids were received up to January 15. The sale is in compliance with congressional orders issued last year directing FSA to liquidate its projects.

Mr. Stewart said he recommended that the Lake Dick project be sold as a whole because it is not suitable to be divided into family sized farms. He said the houses stand about a lake and if the project were subdivided most of the dwellings and farm buildings would have to be moved. This, he estimated, would have cost the government $75,000. It is customary for FSA to sell such holdings as individual farm units.

The Lake Dick project was established by FSA to determine if the co-operative system of farming could be successful in rehabilitating low income farmers, but the experiment reportedly failed. At present 51 Negro families live on the project as sharecroppers.

Mr. Stewart said the project is ideal for a plantation and that the sharecroppers now working the cultivated acres probably would remain under the new ownership. If not, he said, FSA will attempt to find them new locations.

FSA also is offering for sale, 2,304 acres of land near Star City which is a portion of Aluvial Farms, Inc., another FSA sponsored project. This was established in 1941. Already in the process of FSA liquidation more than 4,000 acres of Aluvial Farms have been sold. Mr. Stewart said most of these lands have been and are being divided into family sized farms and sold to FSA clients.

He said he "hoped" to have all FSA holdings in Arkansas, Missouri and Louisiana, once totaling around 100,000 acres, liquidated by February.

Baileys Win Live-at-Home Sweepstakes

Victors over 46,493 Negro farm families of Tennessee, Arkansas and Mississippi, Luther and Betty Bailey of Jeanettee Community (Crittenden County), Friday were declared the 1944 grand sweepstakes champions in the Live-At-Home Competition, sponsored by The Commercial Appeal and the Memphis Chamber of Commerce Agricultural Committee.

The sweepstakes championship carried with it $250.00 cash prize and a 53-piece set of dishes in addition to a $50.00 state prize and a Certificate of Honor testifying to the ability and industry of the Bailey family.

It was the second consecutive year for Arkansas to win the sweepstakes honor and second time for Crittenden County in the seven-year history of the event. John Gammon, Jr., of Gammonville Community won in 1941. Johnnie White of Union County won last year. Tennessee has had two sweepstakes winners and Mississippi, two.

Mr. Martin Zook, Chairman of the Agricultural Committee, presented the prizes to Luther and Betty, who are 53 and 51, respectively.

The Baileys, who own a 60-acre farm and who rent another 100-acres, had five different income sources this year and showed a net gain of more than $3000 for the year. They have a seek and feed inventory of more than $4000.

Luther moved to Arkansas in 1918 and worked as a day laborer for several years. Later he worked as farm foreman on a plantation and saved up enough money to make the down payment on a farm. He now owns this farm free of debt.

"Our year around garden, poultry, four dairy cows and 1500

Small Number Interested In Agriculture

Washington, Jan. 7.— The War Department reports that of 700,000 enlisted Negro soldiers, only 4 per cent or 28,000 intended to operate farms in the postwar period. This conclusion was a result of a survey conducted among soldiers as to their post-war intentions.

The survey reported that more than 30,000 Negro soldiers intended to return to full-time school or college after the war. Educators and leaders questioned expressed little surprise at the small number who planned to enter agriculture. Most Negro boys do not have a high opinion of opportunities for Negroes on farms of the South.

They point to the fact that a relatively small number of Negro farm boys who enlisted in the army came from the type of rural environment conducive to hopes for a secure and prosperous future. Most of them doubtless came, they point out, from homes of sharecroppers, farm laborers or tenants.

Should the 28,000, who do intend to operate farms, wish to take advantage of the training program provided under the "G. I. Bill of Rights" it would severely tax the present training facilities of the Agricultural schools and colleges. Educators have expressed the hope that adequate provision will be made to train these boys for leadership as farmers and citizens in the communities to which they may return.

Financial assistance provided by the "G. I. Bill" should be made readily available to aid returning Negro veterans to secure or improve good farms and to become firmly established in agriculture.

MACHINE-AGE COTTON WILL DISPLACE UP TO 2,500,000

By NAT CALDWELL

(By Special Permission of the Nashville Tennessean)

From 800,000 to 2,500,000 Negroes and whites will be leaving the Southland in the first six years after the war.

They'll be driven out of the fields by an army of monsters fourteen feet tall, who soon will be waddling down mile long rows, their ugly visceral tubes looping greedily at the white staple laden stalks, pulling and sucking away at the cotton.

These monsters with their Frankensteinian bulk painted a circus red and their mechanical insides giving out with the sounds of a heavy bomber, will be mechanical cotton pickers.

The people of the South who will be displaced by King Cotton's inevitable swap of sweating human backs for machines as a more secure underpinning for his throne will constitute the greatest mass migration since the Westward Movemeent swept across the Alleghanies.

Its postwar tide flowing northward and westward will blend with and swell a migration to jobs in war industry that already has carried 750,000 whites and an equal number of Negroes out of the South.

The individuals in this black and white mass will be moving out with the intention of staying—either on jobs or on relief—just as those who precede them in the still active southern trek to war industry intend to stay.

For the mechanical cotton picker, a potential seven-dollar-a-bale robot substitute for human hands that now refuse to pick for less than $30 to $40, is about to be clasped with the grip of necessity by King Cotton.

The portent of this change reaches into every phase of the traditional life of the South—and carries a heavy significance for other parts of the nation as well. For San Francisco, which in the first three years of the war has seen a 270 per cent increase in its Negro population, for Detroit and Chicago with their already teeming black belts the change spells dynamite.

The Nashville Tennessean has for many weeks had reporters busy examining the facts of cotton's life. The scope of their investigations include inspections of the cotton picker in action and interviews with white and Negro creatures of cotton, nationally known sociologists and agricultural economists, farm machinery manufacturers. On the salient facts gleaned from an analysis of these hundreds of interviews, a great majority of them off-the-record for reasons that are obvious, the foregoing basic statements are made.

In token quantities the cotton picker, the flame cultivator, and the improved ginning equipment that will hold grades of machine picked cotton within one class of the best hand harvested staple, already are accomplished facts.

A Fight For Survival

With the world market for

(Continued on Page 6)

By ARTHUR RAPER

Baileys Win Live-at-Home

(Continued from page 1)

pounds of home-cured meat, 500 pounds of beef, adequate lard and other food crops grown on the farm have made it possible for us to live at home this year," Bailey said. "We have not been concerned with ration books so far as foods are concerned. We have our own mill and grind our meal."

Discussing his feed program, the champion said: "Every year we make enough feed for our livestock and have some to sell. Our mill is used in preparing home-grown feed for poultry and livestock."

The Baileys built a new home in 1940, and since that time have made many improvements in it. They have a Delco lighting system, and their home grounds have been beautifully landscaped.

The Baileys engage in all the activities that help build up better community life, and this year they worked with their neighbors in building a community center. They made a contribution of $250.00 toward building a new church. They are members of the Farm Bureau and she belongs to a Home Demonstration Club. Their son, L. B. Bailey, 16, is a 4-H Club member.

"The Live-At-Home Competition has been a great inspiration to me and my family," Bailey declared. "We have received the very, very best assistance from our Negro Agents. We believe in getting our living from the soil."

The Crittenden County Workers —Jesse W. Mason, Negro County Agent; Corrie J. Jarrett, former Home Demonstration Agent, and Clara M. Howard, present Negro Home Demonstration Agent— were awarded both extension trophies for producing the grand sweepstakes winner, and obtaining the highest enrollment in the Live-At-Home Program—5562. This was the first time in the seven-year history of the event that one county won both trophies.

Colored Chaplain Preaches To Men Of All Races Overseas

Washington, D. C.—Chaplain Fred E. Stephens, with an Air Service Group, has described to the General Commission on Army and Navy Chaplains, Washington, D. C., certain unusual experiences during the Italian Campaign.

How gifted was the Glee Club of his Service Group was shown by its being selected by the Commanding Officer to make a concert tour of American posts in Sardinia. Chaplain Stephens accompanied the Glee Club and conducted religious services en route. The Chaplain has conducted worship under many situations but none more dramatic than those while Vesuvius was in eruption.

Chaplain Stephens was born in Potesville, Kentucky and spent his boyhood at Owensboro, Kentucky. He was graduated from high school at Evansville, Indiana, and received his A. B. degree from Indiana University and his theological training at Gammon Theological Seminary and at Turney Seminary at Atlanta, Georgia.

Chaplain Stephens taught at Morris Brown College and for the Federal Emergency Relief Administration in Denver, Colorado, and was a Y. M. C. A. secretary in St. Louis. He was ordained a minister of the African Methodist Episcopal Church and has held pastorates in Atlanta, Georgia; Tucon, Arizona, and was minister of St. Paul's A. M. E. Church, Columbia, Missouri, when appointed Chaplain. The Chaplain is married and has three children.

Chaplain Stephens has sent the following account of his services in Italy:

"I came overseas with an Air Service Group and have preached to men of various races and faiths since my arrival. I find that religion is being taken seriously by more men than ever before, and I have seen many soldiers weeping with humble faces seeking the strength of God in these trying times. A frequent sight is of Americans of all races and faiths sitting side by side at religious services in a practical demonstration of real democracy.

"In one Italian town where we were stationed, a large group of Italian civilians attended the Protestant services. Though they could not understand the language, yet being lovers of song and music, they seemed to enjoy the congregational singing.

"Another fine experience was the baptizing of soldiers in the Tyrrhenian Sea over which the Apostle Paul sailed on his way to Rome. Another large group of men was baptized in the Adriatic Sea. On our way to Naples in the spring of 1944, some men and I were caught in the midst of an eruption of Mt. Vesuvius. It seemed as if the heavens were raining down black hail which was scattered for miles.

"On another occasion, I held services on a hill at the outskirts of Naples over against Vesuvius. It was near dusk. The sun was setting like some gigantic ball of fire sending off a deep orange glow which spangled the whole of the horizon. To the east, Mt. Vesuvius was erupting great billows of fire and down the side of the volcano ran a red river of molten lava. It was a beautiful and breath-taking sight. To the strains of music coming from the portable organ, the men were singing 'On Christ the Solid Rock I stand.'

"In our unit was an Air Service Group Glee Club, one of the best glee clubs that came overseas. It was the first organization of its kind to give a concert in the American Theater in Naples. Such favorable opinion was evinced that we were sent to tour Sardinia by order of the Commanding General of our Service Command. During our Sardinian tour of ten concerts in fourteen days, we were given a most enthusiastic reception. At one of the concerts we had as special guests several American, French and Italian generals and Mlle. Curie, the daughter of the French radium family."

Child Pianist Contributes Month's Allowance to March of Dimes in Celebration of the President's Birthday

"There has been an alarming rise in the epidemic of infantile paralysis in America. Last year was the worst but one in the tragic history of polio. It is fearfully democratic, striking rich and poor, black and white alike. None of us can conquer it alone. We can only hope to overcome it with the help of others. Now, how can we insure the help of others?

"When a member of a large family becomes ill, all of them pitch in and help. That is what a family is for. Mutual aid and comfort. A nation must do the same thing but on a larger scale.

"Since children are the worst sufferers of this dreaded disease, they would like some positive way to help fight it. They can't be doctors or nurses and they haven't much money—so what can they do? About the only financial resources even the luckiest of us have is a monthly allowance. Since this is our fight, too, I do not think it would be too much to ask each young person having an allowance to contribute one month of it to the Infantile Paralysis Fund. It would be our insurance policy for the future. For the greater the fund, the more research that can be done on polio and, therefore, the greater our safety in the future will be.

"When I was eleven and twelve years old, I only received twenty-five cents a week allowance. So I conrtibuted One Dollar to the fund those years. But now that I am thirteen, my allowance has been raised. So I am very happy to say that this year I can contribute twice that much to the fund to fight infantile paralysis."

PHILIPPA SCHUYLER.

GIVES ALLOWANCE TO MARCH OF DIMES

Philippa Schuyler, 13-year-old concert pianist, appeals for support of the March of Dimes in Celebration of the President's birthday. Miss Schuyler contributed one month's allowance to the March of Dimes. She is the daughter of Mr. and Mrs. George Schuyler of New York City. Her father is the well-known author, columnist, and lecturer.

Churchman Against Evil Bill to Draft Men For War Work

George Edmund Haynes, Ph. D.
Executive Secretary, Department of Race Relations, The Federal Council of the Churches of Christ in America.

New York—The proposal for a National Service Law to draft all workers now recommended by the President with the endorsement of the military leaders raises an old question which was discussed during the last World War as well as the present one. It has certain interracial aspects that may not get into the news, certainly not into many editorials of the daily newspapers.

Some people will remember a movement during World War I in some of the southern states led by a saw-mill magnate, called "The Self-Preservation Loyalty League," which sought to get compulsory work ordinances from city councils and work-or-fight laws from state legislatures. The effort succeeded in some cities. Its net effect as this writer saw it was to tie down both white and Negro workers to employers. Each worker carried a work card which had to be signed by his employer if the worker undertook to change jobs or if for some reason he wanted to stop work his employer had to give his signature for the release. Cases were found where employers refused to sign such release cards. Police officers were known to stop workers to demand their work cards and to take them into custody when they could not produce the required card. Police visited Negro homes to see that all able bodied persons signed up to go to work or go to War. If he did not sign a fight-or-work card, he went to jail. There was agitation also about Negro women who left their domestic jobs because for the first time they were staying at home to care for their families since they were getting allotments from their husbands or other relatives in the Army or since their men folks were earning enough in war jobs to provide for the family.

These and several other facts about the movement for compulsory labor led many people to conclude that it was not wise then. Similar misgivings raise the question whether it is wise now to have any legal draft of labor. It does not stand on the same basis as the military draft, which brings men and women to national defense and into the public service of the nation A labor draft law as proposed brings workers into private industries for private employers. It would tend to freeze Negroes in the work status where they are. In some areas of our country racial minority workers are too recently removed from a serf status to view such a proposal of any compulsory work law with anything but apprehension bordering on fear. This is especially true of Americans, Negroes, Mexican & Japanese ancestry. For all workers, too, there is the caution lest the gate opening into such a draft of labor may not swing as freely on its hinges outward toward freedom after the war as it may swing inward now.

A Warning Against Sowing Hate Propaganda

By A. PHILIP RANDOLPH
President, Brotherhood of Sleeping Car Porters

New York (WDL)—My attention has been called to an article on Jews which recently appeared in a Negro weekly. The title of the article was "The Indigestible Jew," and it contained a number of statements which both amazed and pained me. Of all people, Negroes should be the last to cast any aspersions on another minority group, which more often than not is the target of the poisoned arrows aimed at us as well. It is this consideration which prompts me to write the following lines.

It behooves us to be doubly careful not to do anything that would tend to arouse prejudice against other groups. The Negro press should be especially on the alert against misleading items concerning our neighbors. We resent such items in the general press when they reflect unfairly and unjustly against the Negro community. Well, the same rule obtains with respect to other groups, including members of the Jewish faith.

Let us not forget that the enemies of the Jews are the enemies of the Negro, and the enemies of the Negro as a rule, are the enemies of the Jews. Instead of the Negro becoming a tool of anti-Semitism, he should be the uncompromising foe of this dread anti-social pestilence, because anti-Semitism is not only directed against the Jews but it is the enemy of democracy, liberalism, and freedom which are the hope of the Negro and all of the minorities.

We must never forget the old adage that, "You'll reap what you sow." If you sow the wind you will reap the whirlwind. If you sow the seeds of hate propaganda against the Jews, you will reap the hurricanes of racial discrimination. Moreover, Negroes who are themselves the victims of racial discrimination and prejudice, as shown by lynch and mob law to which we are subjected, should be the last people on earth to be a party to any scheme to visit racial and discrimination upon any other people.

The publication which carried the article referred to above is appearing in Memphis, Tenn., and the editors, I am sure, are aware of the Rosenwald schools for Negroes that have been established in a number of rural communities. These schools, because of the low appropriations for education for Negroes in the South, are, in some instances, the only means whereby Negro boys and girls can receive an elementary education.

Who was Mr. Rosenwald? He was a Jew who believed in the possibilities of growth and development of the Negro people. This same Mr. Rosenwald perhaps has done more toward the establishment of Y. M. C. A's. among Negroes in this country than any other American citizen. I am sure we would not want to insult and humiliate the group to which such a man belongs. But even if there wasn't a single Jew who contributed one dime for the education and advancement of the Negro people, articles such as the one in question, which inflames the populace against our Jewish citizens, would be objectionable. I am sure every enlightened Negro citizen will agree with me in this position.

We who are insisting that the rights of the Negroes should be respected in fact as well as in law have a contribution to make to the development of sound, constructive, and just relationships among the various groups comprising our nation.

Mixed Groups Participate in Agricultural Meet at Tuskegee

TUSKEGEE,— (ANP) — Negro and white farm leaders were in accord on every question last week as the southern division of the Agricultural Adjustment agency gathered in the 54th annual Farmers conference, here. Farm leaders from 15 states and China participated in training courses and discussions of important farm problems.

Speakers on the program included an address by C. D. Walker, director of the southern division of the AAA, who stated that both colored and whites vote alike in the AAA referenda.

William Pickens, chief of the interracial section of the U. S. treasury's war bond division, was another speaker. Dr. Irving A. Derbigny, dean of administration, Tuskegee, and Albon L. Holsey, special assistant to President F. D. Patterson, Tuskegee, busied themselves welcoming conference groups and presiding over some of the sessions.

Labor Draft Would Be Step Toward Fascism, WDL Tells Congress

New York (WDL)—Charging that discrimination against Negroes is the major weakness of U. S. manpower policy, Rev. Donald Harrington, Minister of the Community Church of New York, testifying in behalf of the Workers Defense League, told the House Military Affairs Committee that "a labor draft is unnecessary, and would be a step toward fascism."

Rev. Harrington read to the Congressmen an affidavit from Adelene McBean, a Negro who declared that she had registered for employment with the United States Employment Service in New York on July 3, 1944, and had not been offered any employment to date.

Among the points Rev. Harrington made in his testimony against a labor draft were these: It is unnecessary, for minority groups are not utilized; it would not produce the required results; it creates the false impression that labor is to blame for the present manpower situation; it would give power over the liyes of men and women which it would be hard to find anyone good enough to administer; it would carry us one more long step down the road towards fascism by establishing forced labor which the Supreme Court of the United States has said is slavery.

Popular Mortician Of Bowling Green Here In Hospital

J. E. Kuykendall, popular and successful mortician of Bowling Green was brought to Nashville for an operation last week and is now at Hubbard hospital. Mr. Kuykendall has been visited by relatives and friends of Bowling Green and also Nashville since being here. He is well known in Nashville and is the uncle of Mrs. Ruth K. Simpkins who superintends the Fisk Social Center on Fifth Avenue, North. Mrs. Simpkins' mother & Father, Mr. and Mrs. Virgil Kuykendal, were among last Sunday's visitors of their sick brother.

Mr. J. E. Kuykendall besides being a successful business man is one of the most prominent churchmen in Kentucky and is at present president of the Baptist Laymen's League of the state.

The class in public speaking was to give pantomimes that afternoon. One Frosh got up when called on, went to the platform and stood perfectly still.

"Well," said the professor after a minute's wait for something to happen, "what do you represent?"

"I'm imitating a man going up in an elevator," was the quick response.

Paul Ewing First to Pay Off FSA Loan in Arkansas County

LITTLE ROCK, ARKANSAS—When Paul Ewing, 56, recently made his last payment on a $3,900 loan from the Farm Security Administration, he became the first farm ownership borrower in St. Francis county to pay out his loan in full.

When Paul was 18 years old, he started working on a farm for his brother-in-law and was to receive part of the crop as his pay. He worked under this arrangement for five years, earning on an average of about $80 a year. He then decided to venture out and find work in a large city. He went to St. Louis and got a job at a packing house where he was employed for seven years.

He was still interested in farming and returned to work with his brother-in-law and sister for two more years.

Paul married and started farming for himself and has proved to be a good manager as well as a good farmer. He and his wife have reared a family of seven children. Three of the boys are in the Army. One was wounded during the battle of North Africa and is now in a hospital in Mississippi. Another son is stationed in Italy and one is in a camp in Louisiana. The oldest son is farming in Louisiana. The three girls are married.

Started as Renter

For 38 years Paul Ewing rented a farm in St. Francis County and earned enough money to furnish his family for the next year. He always paid cash for everything he purchased. His wife, Mrs. Eliza Ewing, always did her part. In addition to her housework, she helped in the field, took care of the children, did laundry work and housecleaning for families in Forrest City to make ends meet.

This family moved on the farm they purchased in 1936 and paid $300 crop rent each year until 1940 when the Farm Security Administration made them a loan to purchase the farm.

The house was remodeled, a new barn, smoke house, poultry house and sanitary privy were constructed. The entire place was fenced including pasture, lot, garden, and yard.

This farm home has been made into a beauty spot of the county. The yard contains about one acre which has been sodded with bermuda grass and is kept in good condition at all times. Walnut, pecan and oak trees furnish shade in the yard. Shrubbery has been set out around the house and flowers will be blooming in the Spring.

The family was commended for its excellent food production, home improvement, conservation and preservation programs carried out under the supervision of the FSA home supervisor. They own their own pressure cooker and can all vegetables and fruit the family needs. Chickens, pork and beef raised on the farm furnish all the meat for their use, both fresh and cured. They also have ample quantities of milk, butter and eggs. Syrup, potatoes, peanuts, pop corn, pecans, walnuts are produced in abundance every year and there is always a surplus for the neighbors.

Set Out Orchard

An orchard was set out in 1942 which will supply apples, peaches pears, grapes and berries in a few more years. This farm has a year-round garden which keeps the table supplied with fresh vegetables in addition to canned food.

Mr. Ewing does not depend entirely on cotton for a cash crop. Receipts from livestock have played a big part since 1940. He was in position to produce his feed and had sufficient pasture to take care of his livestock. In the past 4 years he has sold 26 cows and calves, two work animals and 100 head of hogs. His 1944 income from this source was $360. He has for his own use five work animals, six cows, three calves, 12 hogs and 50 hens.

This farmer has purchased only $225 worth of feed in the past four years and has a year's supply on hand now. This includes corn, lespedeza, bean and pea hay.

The three sons in service have been sending money home to help make payments on the farm. As home owners, the Ewing family won the St. Francis county Live-at-Home competition which is sponsored by the Memphis Commercial Appeal.

In this field at McAllen, Texas, white hand pickers are unloading their sacks. White tenants and day wage pickers gather most of the crop in most parts of Texas, Alabama, Georgia, and the fields of the Far West. See article on page 7

John King, Joe Jones Win Washington County Contests for Negro Farmers

GREENVILLE, MISS.—John King of the W. D. Attorney plantation at Estill and Joe Jones, who lives on a Farm Security Administration project near Wayside, are winners in the Memphis Commercial Appeal Live-At-Home Competition for Negro farm families of Washington County.

King, who has lived his entire life on the Atterbury plantation, was adjudged the winner in a contest in which 85 tenants competed.

Jones, who moved on the FSA project two years ago, was adjudged the winner in the landowner division over a field of 162 Negro land owners in the county.

The judges made the selection of the winners after spending two days recently visiting the farms.

Charlie Burton, Negro agricultural agent and Mary Towns, Negro home demonstration agent, have worked with the farm families of the county throughout the year, offering suggestions to assist all of the landowners and tenants in the contest in which there was great interest.

Sim. Nichols, who farms on the Mercer Rich plantation near Arcola, was second; Garfield Williams of the John Aldridge plantation was third; and the Coleman family, who live on the George B. Walker plantation at Stoneville, were third in the tenant contest among 85 contestants.

Caesar Benson was second and Leroy Grayson of Swiftwater third of the 182 contestants in the landowner division.

The record of John King, winner of first place in the tenant division is a remarkable one. Happy and greatly pleased to live on a farm, he has lived in the same house for 35 years on the Atterbury plantation where he was born. He is a community leader and a deacon in his church. He has purchased a $100 war bond in each of the four war loans and has all of them.

King's record of production is a remarkable one. His ration books are almost intact and he has purchased only $14.82 in food, living almost completely from what he produces.

King and his wife have on shelves in their home 210 quarts of vegetables, including 122 quarts of fruits, 28 pints of jams and jellies; 14 quarts of pickles; 21 quarts of miscellaneous food. He has 36 pounds of dried vegetables, 19 gallons of syrup, 68 pounds of lard.

In his smoke house he has two large hams, 3 shoulders, 21 pounds of cracklings and six jars of sausage.

In his acre and a half of garden he has sold $1,640 worth of vegetables and given away a great amount. Eleven varieties of vegetables are now growing in the garden. He has sold $87.90 in pears and peaches and has 1,500 pounds of pecans.

His sale of chickens has totaled $36.00 and eggs at $24.60. He sold a yearling for $26 and his sales of hogs have totaled $85.10.

From 22 acres in cotton he will make 28 bales. He has grown 300 bushels of corn and 9 tons of hay. He has two fine mules.

Jones formerly lived on the A. O. Huddleston plantation, near Leland, for four years until 1943 when he moved on the FSA project. He has 40 years to pay for his land, but hopes to complete payments in 8 years. He paid two notes last year, his first crop year, and hopes to do even better this year.

He has canned 419 quarts of fruits and vegetables and has 30 gallons of syrup left over from last year and over 100 bushels of corn.

He has 185 chickens, 18 hogs, and 4 cows. He has ten vegetables now growing in a one-acre garden and has saved 8 varieties of garden seed. He sold $14.00 worth of vegetables and put out 38 fruit trees last fall. He has 10 acres of oats up, 3 acres being grazed. From two acres of wheat he made 35 bushels and will not buy any flour, meat or lard this year. He has 4 hogs to kill and 10 to sell.

From 17 acres planted in cotton he will produce 14 bales. He has plenty of sweet potatoes and peanuts.

Jones' farm is a 45-acre section with 35 acres in cultivation. He gave one acre for a church and school in his community. Jones is perfectly content with living on the farm.

Crittenden Farmers' Conference Has Large Attendance

Fourth Annual Crittenden County Negro Farmers' Conference convened on December 7, 1944 at the Marion Colored Gymnasium, Marion, Arkansas.

In spite of the inclement weather last week the Farmers' Conference was largely attended, and a great success.

The theme of the Conference "Crittenden County's Key to Victory", was beautifully displayed by using a huge key of wood with the chief agricultural crops, dairy, poultry, garden and canned products of the county there in; Charts on "Curing Meat the Country Style" and the Seven Basic Foods were included in the display. All were arranged in a very unique way.

A patriotic color scheme was used for the decoration. To coincide with it War Bond placards were placed in the spacious Gym to complete the setting.

The main features of the Conference were: Addresses by Rev. A. L. McCargo, Pastor of Salem-Gilfield Church, Memphis; Professor C. H. Jones, Secretary of The Southern Mediator's Association, Little Rock. Reverend McCargo emphasized the necessity of our group thinking and becoming more reliable. He also gave concrete examples of how much it means if we would only use our money wisely, and learn to make necessary adjustments according to progressive changes.

Professor Jones expounded on the needs pertaining to our group and listed them as psychological, physiological and mental.

Several renditions by the Marion High School Chorus and a solo by Jessie M. Lee were given followed by a demonstration on Treating Cotton Seeds by George Cooper.

The second main feature of the Conference was a Panel Discussion on the subject "To Acquaint the General Public with the Postwar World and its Problems." The discussion was very nobly discussed and enjoyable as well as helpful to the audience.

Personnel of the panel included the following: John Gammon, Jr., Chairman, local Farmer and Business Man of Marion; Dr. H. L. Price, President of LeMoyne College, Memphis; Reverend S. A. Owens, pastor of the Metropolitan Church, Memphis; Charles Fletcher, County Agent, Hernando, Mississippi; Henry W. Espy, Contact Representative AAA, Little Rock; Ocie Lee Smith, Special Representative of the FSA, Little Rock, and Mr. J. A. Beauchamp, Representatives of the Boy Scouts, Memphis, Tennessee.

Highlight of the Conference came when the president of the Crittenden County Farm Bureau, Mr. S. A. Johnson, presented prizes to the winners in the Live-At-Home and Garden Contest sponsored by the Farm Bureau for the first time this year.

The following families received prizes: Luther Bailey of Jeanette Community first, $50.00; Winston Key of Green River Community second, $40.00; Mason A. Washington third, $30.00; Nathaniel Allen, Turrell Community fourth, $20.00. Others winning $10.00 each were: Ben Harris, Edmondson Community; Fannie White, Mound City Community; Pearl Jones, West Black Oak Community, and Sid Williams Jerusalem Community.

Miss Mary Oversby, Home Demonstration Agent, spoke on the remunity; Charles Jones, Proctor Community; Dan Ingram, Stacy quirements of winners in a Live-At-Home Contest. Mr. Johnson stated that ways and means would be worked out where as this same contest would be sponsored in 1945. One of the speakers stated that the Farm Bureau was trying to do all within its power to help the farmer and no better way could have been demonstrated than that of the prizes given by the Farm Bureau.

Elsie Lee Washington, 16 year old Riceville 4-H club girl and John Banks, 14 year old Marion 4-H club boy, received $25.00 War Bonds. These bonds were made possible by the following persons: Mrs. Lola Virge and Mrs. J. S. Phelix, local homemakers, and Dr. R. E. Shiver of West Memphis and Louis Armstead of Marion.

A chicken dinner was served by the Home Economice students of Marion Colored High School, Mrs. M. E. Evans, instructor of the Home Economics Department.

Negro Digest Announces $200 Prize Essay Contest

Chicago, Jan. 3.—A $200 prize essay contest for Negro and white college students on the question "Should Negro students attend Negro or mixed colleges" was announced this week by NEGRO DIGEST Magazine.

A $100 award will be made for the best essay on each side of the question.

Open to all college students, regardless of color, the contest will be judged by a board of notables in the field of racial relations including Edwin R. Embree, Julius Rosenwald Fund, John Temple Graves of the Birmingham Age-Herald, Langston Hughes, noted poet, Charles S. Johnson, Fisk University, James E. Shepard, president North Carolina College for Negroes and others to be announced later.

The essays are restricted to 750 words. The deadline for contestants to submit their essays is April 1, 1945.

The winning manuscripts on both sides, with the announcement of the winners will be made in the June issue of NEGRO DIGEST.

For contest rules, students should write to:

Chicago, Illinois.

'American Minorities Must Be Freed by This War', Paul Robeson

By Clarence T. R. Nelson

MINNEAPOLIS, —(ANP)—There will be a lot of trouble in this country if returning Negro service men are not given their rights, Paul Robeson declared last week in a special interview with the Associated Negro Press reporter at the Lyceum here where the famed athletic actor and singer is starring as the Moor in the favorably criticized Shakespearean play, "Othello."

Asked what effect does the continued mistreatment of minorities have on our country's reputation among other nations, Robeson replied:

"America's continued mistreatment of minorities in our country makes a lie of our whole position in the world. First, in the matter of winning the war and second, in the problems that we will face when the war is over. If this war means anything, it is a war for the freedom of all minorities.

"How does this war differ from other wars in history? The war of 1776 in our nation was fought to free the colonies from the tyranny of England, but the Negro was in slavery. The French revolution was fundamentally a middle class war. The war of 1860 in our country brought about the freeing of the slaves as chattel property, but there was little thought of giving him full freedom and equality.

"This war," the actor declared, "can and ought to reach a level of comparative equality for all citizens in this country. This means the extension of equal privileges to all people, the Negro and other minorities in this country and to China, India and Africa."

Concerning the itinerary of the show, Robeson said the production would be given only in cities where there will be adsolutely no discrimination or segregation in the audience. Kansas City, no, since citizens there at the last showing practiced bias in a big way.

Cpl. Jeffrey Vaughn Awarded Medal For His Good Conduct

WITH U. S. FORCES IN FRANCE—Corporal Jeffrey N. Vaughn, son of Mr. and Mrs. John R. Vaughn of Nashville, Tenn., a member of a port battalion now busily engaged in unloading ships at a French port to speed supplies to combat troops ahead. His job is checking cargo loaded on ships, trucks and trains. A graduate of Pearl High School, he has been in the army since November 11, 1943 and recently was awarded the Good Conduct Medal.

So They Sell Lake Dick

(Continued from Page 1)

of them like the Negroes on the other plantations. A constant "fifth column" was kept up to make the families dissatisfied with this and with that.

Subsequently, many of these families left the project and others wanted to leave. The managers employed were largely from the plantation group and had little faith in the possibilities of the plan. They were immediately labeled communists and the project was called an attempt to "socialize" cotton production. Under such conditions only a management thoroughly sold on the main idea of Lake Dick could have maintained the morale of the workers as well as of themselves. The result was a complete breakdown of the morale and the will to succeed. A few bad crop years did the rest.

Finally, the project was turned over to Negroes brought in from another county who were placed under a dictatorial white management already pretty well convinced that there was not much possibility of success.

Yet, it is just by some such arrangement as the Lake Dick plan that ordinary share-cropper families could be organized to operate large mechanized farms and to take advantage of the mechanical cotton picker, tractors, the flame chopper and the other machines that threaten to displace them.

The planters have now forced through the Congress a measure designed to bring to an end all such attempts to find a way in which the cotton workers can protect themselves. All such projects must be "liquidated."

Lake Dick is to be sold to the "highest bidder." The planters plan to buy it, "lock stock and barrel" and to return it to their own pattern of operations with which we are all familiar.

It is just too bad that Negro farmers or their leadership have no organization sufficiently interested and financially capable of stepping into the breach to keep this very strategically important experiment going until it has had a chance to point the way out for thousands of sharecropper families in the South.

IT CAN BE DONE

By A Farmers' Friend

Cotton-Picker Hysteria

Come the end of the war, from three-quarters of a million to two and one-half million Negro and white farm workers will be moving to the North and West, we are told. And the reason for this moving will be the mass production of mechanical cotton-pickers. The prediction is interesting and partly correct, but it is not alarming.

Voices of the picker prophets have been heard in the land each time that one of the twenty-five hundred pickers invented in this country has been sent to the field for trial.

Some of the voices have said that no picker, however successful mechanically, would ever be generally used in the South, because the picker did not meet a need, and "every successful invention must be mothered by necessity." Other voices, many from the North, fewer from the South, have cried out as they are crying out today, that the coming of the picker would "save" the cotton industry at the expense of the cotton-field worker.

Cotton has always been produced and harvested at the expense of the cotton-field worker.

Dixie, generally, has been slow to accept the pickers for fear that costs would rise, quality and profits drop — not for fear that the picker would leave either Negro or poor-white field workers any worse off than before. The Dixie planter has asked, not "How will my workers fare?" but "Will these machines pick the kind of cotton I grow, as clean and as cheaply as I can get it picked by hand?"—as cheaply as fat-back molasses and pellagra-ridden labor can pick it?

Prospective buyers, pencil behind ear checked the October performance of International Harvesters newest pickers on the Hobson plantation at Clarksdale, Mississippi, for the answer to that question. Machine-picking, they decided, would lower the price of cotton by $10 a bale, **but the lowered price would be outweighed by lower production costs.**

That is because **field workers are getting together and are staying together** to protect their wages. So the South can no longer look to the labor from dog-run shacks to produce cheap cotton. Instead, technicians and agricultural experts alike are laboring mightily—trying to fit the picking machine to certain types of cotton; trying to match the cotton to the machine.

If success is not here, it is close by, what with flame cultivators burning out the weeds around the plants, and cyannide dusting dropping the troublesome leaves long before the pickers start down the rows. It is close by, marshalled by the machines of John Deere, International Harvester, Allis-Chalmers —Rust Brothers, and others.

And the voices from Dixie are changing their tune. They no longer speak of what never will happen in cotton production. Although many are still wary and slow to convince, Southern planters in increasing numbers are preparing, a bit grimly and very much against their will, to mechanize their cotton as fast as picking-machine production permits.

To the cotton-field worker, whose bedfellows through the years have been wretched housing, malnutrition and starvation wages, this should be no cause for alarm.

No one knows how soon the machines will be produced. Three years after the announcement of the Rust brothers' picker in 1936, after the Stoneville, Mississippi, tryouts—and in spite of a subsequent announcement of a thousand-machine capacity factory, only twelve of the machines had been produced.

The ideas of the Rust brothers, sons of the soil themselves, had something to do with the delay in production. Men of goodwill, they were torn between a desire to free labor from a poorly-paid, back-breaking job, by the use of the picker, and an equally strong desire to save these brothers-of-the-plow from the results of a free-for-all mechanization, by the control of the picker.

But a stronger demand must have swept aside this unreadiness. The demand simply was not present.

(Continued on page 11)

ON THIS WE STAND

The MODERN FARMER is not a new publication. It has been published monthly for 17 years. Its purpose, through the years, has been to faithfully report news and information of interest and value to Negro farmers and to those people who are interested in the problems of Negro farmers. It has endeavored to be impartial in its views and non-partisan in politics. There will be no change in this general tradition.

In order to reach a wider range of interested readers, however, and because of the demands of the dynamic period in which we live, we wish to re-state the editorial policy of this paper in terms that will be clear and understandable to all. ON THESE PRINCIPLES WE TAKE OUR STAND.

1. THE MODERN FARMER stands, at the outset, for full first class citizenship for all farm people regardless of race, color or creed. This means not only the right to vote in all elections for those persons who are to govern them but also it means a more complete participation in all phases of the life and activities of the communities of which they are a part: the Nation, the State, the County and the local community. Nothing short of this can be the goal of true democracy.

2. We advocate a rural social order based principally upon the BED ROCK FOUNDATION OF THE FAMILY FARM—farms on good land and of such size and equipment as to provide a livelihood and security for the families which operate them. These farms for the most part should be OWNED BY THE FAMILIES WHICH FARM THEM. We believe that this is the best foundation for real democracy in rural life.

3. There should exist a system of landlord-tenant relations which allows continually for progress of farm tenants and laborers up the "agricultural ladder" toward ownership, independence and security.

This means better landlord-tenant laws protecting the rights of both landlord and tenant in the land and the products of their labor. It means written and long term leases which encourage industry, initiative and conservation of resources. Leases should provide for just compensation for improvements made by the tenant and protection against eviction.

The current and historic SHARECROPPER PLANTATION SYSTEM MUST BE SUPPLANTED by a tenure arrangement which does not promote shiftlessness, thriftlessness and proerty.

4. There must be ABOLITION OF DEBT SLAVERY and of all the injustice and persecution which goes with it. Adequate farm credit from sources interested in the welfare and progress of the farm family is needed and should be encouraged. This should be provided by government wherever and whenever such is not available from private and cooperative sources. Guidance in the successful use of credit will be a paramount need for a long time to come.

5. We advocate the development and well organized and progressive LAND-OWNING NEIGHBORHOODS as the primary basis of rural organization. They should be serviced by adequate and efficiently functioning social institutions: churches, schools, clubs and associations, and homes.

6. We will foster COOPERATION, and cooperative enterprises, among farmers for the joint ownership and operation of production, marketing and processing facilities such as are feasible for family type farmers. Cooperation will be encouraged in the purchasing of supplies and in the provision of credit facilities.

7. We will whole-heartedly support those governmental activities, federal, state and local, which are established and operated in the interests of the family type farmer and the farm laborer and which operate in line with the above outlined principles of DEMOCRACY AND "FAIR PLAY."

8. We urge Negro farmers to cooperate with and participate wherever possible in those Farmer's organizations which work toward the interests of the family farmer and the farm laborer, provided that these organizations are thoroughly democratic in their organization and procedure.

UNDER NO CONDITIONS WILL WE ADVOCATE COOPERATION WITH OR MEMBERSHIP IN ANY ORGANIIZATION WHICH DISCRIMINATES AGAINST ANY FARMERS ON ACCOUNT OF THEIR RACE OR RELIGION IN SERVICES RENDERED OR IN MANAGEMENT AND CONTROL.

THE MODERN FARMER WILL ALWAYS FIGHT FOR THESE PRINCIPLES.

Toward A New Farm Program

By GEORGE S. MITCHELL

In the postwar world farmers are looking for a standard of living equal to what city people have, and labor wants to help them get it.

The CIO at its recent national convention endorsed the idea of guaranteed annual earnings for farmers and farm workers. Labor also wants farmers and their help covered by unemployment insurance and social security benefits. Labor understands that if the six million American farmers and their families are earning say two thousand dollars a year in cash, over and above the living they get from the land, a whole new market will be opened up for the things that city people make. And if city people have steady work at good wages they will buy raw materials and food from the farmers at good prices.

The National Farmers Union announced its 1945 program at its convention in November. They want permanent organized peace, a minimum hourly rate of sixty cents for farm workers, social security and collective bargaining rights for farmers and farm workers, more co-ops and a policy of individual production quotas that will favor the family farmers. They urge a program of production agreements between farmers and the Government, under which each farmer will know before he plants the price at which his products will sell. They want the prices set at fair exchange value that will cover the farmer's costs for his own labor and that of members of his family and his hands and his costs in taking care of the load. They want crop insurance to prevent loss of income from crop failures.

They ask for long and short credit on reasonable terms, to enable farmers to equip their places with good homes and buildings, and good machinery, and to do soil improvement, and to educate their children. They want easier land loans, especially to help tenants to get their own farms.

They urge full support of the TVA idea for regional development of all the river valleys of the country, better soil conservation, a real rural health service, modern homes with electricity, telephones, and good roads to good schools. They ask that minority groups be protected in their right to full enjoyment of all these opportunities.

To get these things the National Farmers Union is ready to cooperate economically and politically with all branches of the labor movement. The main things that stand in the way, the Farmers Union knows, is the **lack of organization among the millions of smaller farmers.**

The farmers themselves have shown in this war an amazing ability to learn new crops and new ways of getting greater production in old crops. It will take more teaching to get new methods in use by all the farmers, and more credit to get the things you have to have to farm in the modern way. If labor and the farmers will stand together, the tremendous productive capacity that we have built up in this war can be put to the small man's advantage all over America.

Nobody sees a way to making the hours of work on farms conform to the hours of work in cities. The cows have to be milked at milking time. But except for hours of work, there is no physical reason why farmers can't have the tools and the conveniences that are the accepted things in the American standard of living. The only holdback is among people. People are learning fast. When they learn to organize they will be within reach of what they want.

Postwar Farm Security

Talk delivered by L. Herbert Henegan, Administrative Assistant, Farm Security Administration, before the Farm and Home Leadership Conference at Tuskegee Institute, Alabama, December 12, 1944.)

Since Pearl Harbor, the Farm Security Administration, like other agencies of the Department of Agriculture, put on a uniform and entered the grim business of a shooting war producing food so vitally necessary to defeat the enemies of Democracy. Plowshares actually became weapons of warfare. Slogans like "Food will win the War" or "Put your Farm on the Firing Line" were not idle words. Food produced on American farms, was a weapon in repelling the blitz over Britain, saved Stalingrad, went along with our troops in North Africa, Italy, France, Belgium, Holland and is now with them on the road to Berlin.

This food came from all parts of this great Nation. It came from big farms on whose vast acreages, mechanized equipment was needed and used to produce more than ever before, and food came in unheard of quantities from little farms which a few years before, produced scarcely enough to meet family needs. We have long known that our big farms were equipped and capable of immense production, but I think none of us had any idea that the small family-type farms would turn in the record production they did. Looking back now, I wonder how much of this was the result of preparation which started long before many of us were thinking of war or the need for weapons for war.

Since inception, about eight years age, the Farm Security Administration has been a weapon of war. Born in the thirties, this agency of the Department was mobilized for immediate action against the age-old enemy of rural poverty.

Most of you know why such an agency as Farm Security came into being. Millions of people were hungry, in chronic poverty, frustrated and gripped by despair. They were the "ill-fed, ill-clothed, and ill-housed." When the violent depression of 1929 virtually pulverized the foundation of our economic structure, farmers on the brink of starvation began to call for help. Thousands of unemployed people in cities and towns who had sought refuge from want from theoretically secure farms, discovered to what extent poverty existed throughout rural areas.

The Nation suddenly became conscious of, and I might add, conscious-stricken by the existence of an acute and pressing rural problem. Rural poverty became a topic of discussion in the press, in the pulpit, on the radio, and in the class rooms of agricultural colleges, in the legislative and executive chambers of State and Federal Capitols, and even furnished a theme for the movies.

Rural poverty was measured vertically and horizontally; it was graphed, photographed and tabulated; it was accorded the place of a national problem and the admission was made that the permanent prosperity of this Nation could be achieved only on the solid foundation of a healthier prospering rural population.

This was the depressing picture that faced the Nation and then, we made a startling discovery. It dawned upon us that rural poverty had been going on a long, long time before we were aware of it. We found that poor people on the land had been suffering many years before the rest of the Country felt it.

The Nation found a million farm families on the doorsteps of relief and another million not far away. They were hungry and lived in shacks not fit for human habitation; sick with no money to pay the doctor, pushed out of their homes and dispossessed from the land they had thought was their security .

Something had to be done in a hurry for these people. There wasn't time to map a fool-proof plan of battle. We had to engage the enemy with every resource at our command. Some mistakes were made, of course, but they were expected.

Federal agencies whose functions were later consolidated under the name of the Farm Security Administration attacked the problem by making supervised loans and grants to these disadvantaged families. One-crop farming was discouraged and farm families were taught modern farming and soil conservation practices. These forgotten farmers were helped and encouraged to start small cooperatives, to use efficient machinery and to market their goods profitably. Group medical care programs were started to give better health protection to rural families. Slowly through the years these agencies now called Farm Security put the props of better living under a million farm families, gave them a chance and they accepted the responsibility to help themselves to a better way of life. This experience has proved that with a plan and the know-how for making that plan work, this Nation can overcome most of the problems of rural poverty.

When the war came these families were given the opportunity to show how well this job had been done. Having learned how to produce food for themselves in a depression, they produced and are still producing food for war needs.

They are repaying with interest the investment made by a Nation and the only collateral was faith.

The record is well known of what a half a million farm families, virtually written off during the depression, but in less than a decade restored to a function by the aid given them through the facilities of the Farm Security program, meant to this Nation and the world when the demands of war suddenly expanded our needs for food. Given a job to do and called on to meet a need, these families stepped up their production 20 to 100 percent in war crops which was their contribution to the 12 percent wartime increase averaged by all farms in the Nation.

FSA rehabilitation loans and guidance have helped more than 900,000 small farmers of whom approximately 60,000 are Negroes. In addition, the farm ownership program already has enabled more than 35,000 former tenant farmers, including some 5,000 colored farmers to become owners.

After the war, what then? When victory comes and with it peace, we will clean up the debris and the rubble; but the question for us is, are we going to build our world back again like it was? Will we restore the palaces and the hovels alike? We will do well to keep this fact in mind: the strong will win the war, but an enduring peace must benefit the weak.

We will not be able to secure a sound and lasting peace if we now discard our concern for poverty until it is again forced upon us. If insecurity gives birth to wars we must choose between fighting a major war every generation as we have done in the past, or give some sober concern to the security of people, all people, whether they are in slums of our cities, on the land in rural areas, and throughout the world.

Here are some of the things that we must provide for farm families in the future: (1) enough good land to keep family labor fully employed and productive enough to yield them a decent living; (2) a decent and comfortable place to live in; (3) a return of a larger portion of the national wealth; (4) better and wider health facilities; (5) an education adapted to their needs; (6) a credit system related to family living and the earning capacity of the land; and (7) participation in a system of marketing and distribution that will give the family farmer a fair opportunity.

These are some of the things we must provide if farm families in the future are to have security. These are the things Farm Security is planning for now. These things are being planned because millions of soldiers will be returning and many of them will be seeking a place on the land. The kind of future the returning serviceman has will depend largely on the soundness of the farming economy to which he returns. For this very reason, there has never been a better time to make adjustments, not because something is needed now that wasn't needed before—these things have always been needed, but because the need is easier to discern.

Our rural areas should not be a dumping ground for everybody who has no other place to go. There must be sound reasons for the people who are encouraged to return to rural communities and rural life, but beyond that, our rural areas must not serve as a catch-all for the flotsam and jetsam of industrial dislocation.

In Farm Security we have tried to do something about these problems at their source. We have only scratched the surface, as you know. The result has been that this program has attracted attention and controversy.

The measure of effectiveness of our work with farm families in the past eight years lies not so much in what we have achieved but rather in what we have learned. We have learned that rural poverty can be licked if we are willing to accept our responsibility.

I think all of us in Farm Security are convinced that FSA still has a big job ahead. There has been talk of changing our name, but the objectives of the program are considered sound and secure. We expect to continue to make loans for Rural Rehabilitation and for Farm Ownership. And we have been assigned an important part in the Nation's plans to help veterans return to the land. We are joining with other Department of Agriculture Agencies in helping to make the agricultural credit provisions of the G. I. Bill serve in the rehabilitation of returning veterans.

Administrator Frank Hancock of the Farm Security Administration, has said that FSA will be ready when the time comes to do a worthwhile job of helping thousands of returning veterans who, it is anticipated, will apply for our services. Already 4000 veterans of World War II have applied to Farm Security for assistance in getting started again as farmers. We have been able to make loans to nearly 1500 of them.

Farm Security will continue its work of raising the standard of living for rural people, through supervised credit facilities, health programs, better tenure arrangements and better housing. We are making joint ownership loans for such things as heavy machinery and sire services and our medical care program is a going concern.

That brings us to the question: "What is the future of a program such as ours?" Has it been worth the time and money and the disappointments? I think it has. Farm Security still has a tremendous job to do and we believe we have learned the best way of doing it.

The fierce competition of good land, particularly in the South is one reason why we run into bottlenecks in trying to expand our rehabilitation program for Negroes. As Secretary of Agriculture Claude R. Wickard pointed out with great candor only last week before the Special Committee of the House Committee on Agriculture, more than half of the Nation's farmers live in the 13 Southern States, having less than a third of the Nation's crop land and receive about one-fourth of the Nation's farm income. And most of this income is from Cotton.

The stark fact of the matter is, there is not enough productive land to go around. With the rapid technological advances being made in our farm economy we may have to look outside agriculture itself for at least part of the solution to this problem.

Greater industrialization of the South and more diversified farming—the thing that Farm Security has always encouraged, may hold the right answers.

Whatever happens to agriculture in the postwar world I think you will find Farm Security gravely concerned about the perpetuation of the family-size farm, and that it will work for the protection of farm income, better tenure, improvements in marketing, better standards of rural living, such as electrification, health, housing, schools, good roads and soil conservation and improvement.

It is too much to ask for a Democracy to join in supporting a program like this?

When Farmers Think Of Postwar Prospects

By ARTHUR RAPER

The farmers, like every other group in the country, are **wondering** what the future has in store for them. Do they face continued good prices, or a depression? What proportion of the farm-experienced veterans and war workers will want to return to their home communities to live? And what proportion could get remunerative work there if all of them should return?

What do farmers **think** about their own position in the national life? Do they think they are worrying more, or less, than did their father about being able to support themselves in old age? As they see it, is it easier, or harder, for young people to get started in farming now than it was a generation ago?

What do the farmers themselves **want?** Do they want farm incomes to stay about where they are now, go higher, or go lower? Do they favor, or oppose, the continuation of price controls and supports for farm products? What educational and health services do they want in rural communities? Do they want the Federal Government to help provide local work opportunities for returning veterans? Do they think this country should, or should not, participate in a world association of nations?

Then there is the matter of the specific major purchases the farmers say they plan to make when wartime shortages are over. We understand that this group is especially interested in this subject. We will discuss it in some detail, after a brief summary of the farmers' general state of mind as shown by our interview with 613 farmers in 32 widely-scattered counties broadly representative of the nation's major farming areas. Because of the smallness of the sample, our findings can be relied upon only as a rough indication of farmer thinking at the time of the interviews this past spring and summer.

What Farmers Are Expecting After the War

Practically all of the farmers interviewed say they expect a depression after the war, but only one in three believe it will come in the first three years. Another one in three is looking forward to even more of a business boom than at present.

The belief that depressions always follow wars seems deep-seated in farmer thinking. To the farmer then, the real question is not "Will there be a depression after the war?" but "How soon will it come?" The proportion of farmers who expect a depression in the first three years after the war was highest in the low-income cotton and Appalachian South, was lowest in the Mid-West and Western corn and wheat belts where farm incomes are relatively high.

Half or more of the farmers in each of the Nation's major regions estimated that three-fourth or more of the farm-experienced veterans will return to their home communities to live after the war. As the majority of the farmers see their local situation, there will be work opportunities for practically all of the veterans who do return, but they are not certain the veterans will be satisfied with the work available as much of it in many areas will be for hired farm labor. A smaller proportion of the farmers in the better farming areas than in the poorer ones expressed the belief that local work opportunities would be available if all the veterans should decide to return to their home farm communities to live—only one-fifth of the farmers in the corn belt saw jobs for all of them as compared with half in the cotton Southwest, where it is a widespread belief among subsistence farmers that there is always a chance for anyone who cannot do better elsewhere to make at least something of a living on the land.

When Farmers Think of Their Own Future

On the whole, when facing the future farmers appear to be optimistic. Nearly half of them think they are worrying less than their fathers did about being able to support themselves in old age, while over half think it will be less difficult for young people to make a decent living on the farm than it was for their fathers. From the optimistic majority come frequent mention of present high farm incomes, increased use of machinery, widespread interest in soil and water conservation, improved crop seeds and livestock breeds, better method of pest control, and especially the extension of REA lines and the ready opportunity thus provided for making the farm work less arduous and farm living more comfortable. Many farmers, especially in the best farming areas, say they think that the young people themselves will be willing to stay on the farms only if they can have modern conveniences and make a living there somewhat comparable to what they can make in town.

Broadly speaking, farmers in the low-income farm areas say they are worrying more than had their fathers about being able to care for themselves in their old age, while farmers in the high-income areas think that young people will find it more difficult than had their fathers to make a decent living on the farm. Here again, the explanation of this seeming paradox lies in the divergent folk cultures in the low-income and high-income farm areas of the country—in the high-income areas the secure farmer tends to think of a farm as enough land and equipment to yield an income capable of supporting a relatively high material standard of living, whereas in the low-income areas the insecure small owner or tenant readily believes that his own son will likely make on the farm a living as good or better than the one he is accustomed to.

The Farmers' Wants Are Many, and Basic

Foremost of all, it appears, the farmers want a continuation of wartime farm prosperity without war. Nearly two-thirds of the farmers in all parts of the country think farm incomes should remain where they are now after the war, and an additional one-fifth think they should go higher. Non-owners as well as owners want high farm incomes to continue. Practically all farmers say that the last few good years were needed to offset in part the many bad ones, and many claim that the farmers' present income is not comparable to that of industrial workers. To keep farm incomes up, three farmers in four want a continuation of price floors for farm products for at least two years after the war.

Practically all farmers say they want the Government to do whatever is necessary to help returning veterans secure work. Nine in 10 think the Government should help make land easily available to farm-experienced veterans if they want to farm, and three-fourths think the Government should help them get off-farm work if they prefer that.

Most farmers say they do not want an expansion of the over-all activities of the Government in rural communities, but they do turn to the Government as a way of getting the particular thing done that they consider very important and can't see how to get done otherwise. So now they look to the Government for maintenance of high farm incomes, and for work opportunities for returning veterans. In general, the highest majorities favoring Government activities occur among the lower-income non-land owning farmers, and those higher-income farmers in areas where unstable weather conditions —droughts, floods, hail, make crop yields uncertain.

Most farmers would like to see an increase of educational and health services in rural communities. Nearly all of them want hot lunches served at school; two-thirds want the wartime school farm machinery repair shops continued after the war, and over half of them favor continuing the wartime community canneries at the schools.

Over four-fifths of the farmers favor an increase of public clinics, and three-fourths would like to participate in some flat-rate prepayment plan to cover the costs of hospital bills, and of doctor and nurse

(Continued on page 8)

Machine-Age Cotton Will

(Continued from Page 1)

Dixie's cotton shrunk till it exists only in the imaginations of a few senators and the postwar domestic market fiercely threatened by a war-fattened rayon industry, King Cotton knows that he must scramble and battle to stay alive. And no more than the diabetic demurs at the insulin needle will he demur at the deep-seated social changes certain to result from the complete mechanization of cotton production in the rich delta countries which alone can give him back his competitive price.

That is why all but five of the 53 large and small planters of cotton in the rich delta areas of Mississippi, Arkansas, Louisiana, and West Tennessee interviewed in recent weeks listen with eager hope to the promises of the farm machinery industry for mass production of the picker before the end of the second year after the war.

That is why they believe so fervently when engineers tell them that the cotton picker today is at a stage of technological development comparable to the tractor in 1913. They'll quote with enthusiasm the ordinarily dull facts from the census on the early days of mass production in the tractor industry . . . 7,000 in 1913, 10,000 in 1914, 21,000 in 1915, 27,819 in 1916, and 49,504 in 1917. They'll point to the 33 per cent reduction in cost to the farmer in this early five years of expanding tractor production.

See Profit At 10 Cents

"If there are even 50,000 mechanical pickers on the farms of the South by the end of the sixth year after the war we will have been able to forget all about 22 cents parity and be making money at 10 or 12 cents a pound," declared Dean Moberley, planter of Madison Parish, La.

Reminded that 50,000 pickers at the anticipated ratio of displacement of one machine to 40 pairs of human hands might mean 2,000,000 fewer cotton picking jobs in the South, Moberley stared at the floor for a minute. Then he declared with his original enthusiasm unabated—"I'm still for it."

Moberley sat in front of the bar at the little country club a few miles out of Tallulah, Madison parish seat, and talked. His was one of a very few frosted glasses seen in the hands of a planter, traditional custodian of frosted glasses filled with mint julep, on a trip of thousands of miles through delta country. The planter, a creature of cotton just as is the Negro and poor white who plants and plows and chops and harvests it, is a changed man.

Moberley made clear that he was "a businessman and proud of it." The growing of cotton was to him a very "hazardous business," "a business that might not be in existence a few years after the war unless costs of production could be cut sharply enough to half present sale prices."

Here are the present business conditions facing Moberley, and Oscar Johnson, president of the National Cotton Council, and thousands of other growers of cotton, large and small, throughout the South.

Industry Calls Many

From 15 to 30 per cent of their best cotton picking labor, the husky young black or white man and woman, who can harvest from 200 to 300 pounds per day, already have left for jobs in war industry. In Madison Parish it's 40 per cent. And a shuttle service of second hand limousines owned by Negroes, former field hands, supplements the bus and train service from four North Lousiana delta parishes to war plants at Las Vegas, Nevada, and on to the West Coast. There's a $40 fare with a job practically guaranteed at the other end.

Under these conditions in the heaviest producing delta areas of the deep South from one-fourth to one-fifth of the record 1944 crop still is in the fields deteriorating at the rate of several cents per pound every month. Wages of up to $3 per hundred pounds with free truck transportation to and from the fields have not served materially to stimulate the harvesting.

A restoration of the "auction block" of slave days with potential cotton pickers calling the turn and riding out to the fields in the trucks of the planter who bids highest for their services is commonplace in many small towns. These towns are the first stopping place of the farm Negro, when he abandons his shack on the plantation. During the war years he has lived there on an average of a few months picking his crop and collecting his "settlement money" or picking for wages to get a stake for the long trip out. There nine, and ten, and eleven dollars a day wages wait him in the war plants.

Labor Costs Cut Profits

This year for the average cotton planter high labor costs will have pared to a fraction of their 1942 and 1943 nets the final income from cotton. Favorable bank balances and high rates of farm mortgage retirement that have made the planters feel richer than since the latter years of World War I are now in many communities almost stabilized.

"If we have two more years of war and have to make two more cotton crops with labor as scarce and as high, some of us will be borrowing money to buy mechanical cotton pickers when they get here." one planter wrote in to the Delta Cotton Council at Stoneville, Miss., the other day.

It is against this background of the present that "businessmen producers" in the nation's largest cotton producing areas stand looking wistfully to the day, when International and John Deere and Allis-Chalmers will come through with volume production of pickers. And the day when Graham-Paige will have its fire spitting cultivator ready to kill all the weeds for three years, until because of failure to reseed, they will practically have disappeared. Then will the hand chopper be gone with the hand picker.

It is against a background of cotton pegged at 22 cents and able to be dumped on the world market only through a substantial federal subsidy that they look to the future. They see rayon and other synthetic fibers taking deep bites out of their domestic markets at a 25-cent price for the staple types.

Threat of the Surplus

They see rayon and nylon substituted for cotton in most tires for military planes and heavy duty military vehicles absorbing a potential market for half a million bales of cotton per year. The same substitution goes on in many Southern cotton textile mills, most of them within a few miles of the cotton fields, and most of them producing a garment or a sock which will have the Southern cotton farmers' family as its principal market.

They know that present stored surpluses equivalent to a full year's war swollen demands are a constant threat to the stability of cotton's price structure, regardless of the level at which it may be fixed.

The switch away from cotton for clothing amounts still to only a comparatively few thousands of bales per year. But the war will be over one of these days and 22 cent cotton still will be with the South, if there should be no change in national cotton policy.

Cotton at this price will have to stand up against rayon and other synthetics for a variety of uses. These substitutes, superior to cotton in some respects, will be produced by an industry capable of narrowing the price differential within certain limits at will. This quaint situation arises from the strong government wartime policy for encouraging rayon production with provision for full amortization of new plant costs in a maximum of five years.

The cotton producer, big cotton brokers like Assistant Secretary of State, Will Clayton, and even the conservative Farm Bureaus of the Southern states believe that the plug must be pulled on cotton prices if it is to survive in competition with synthetics. It may even be dangerous to wait until the end of the war if inroads into normal markets are not halted.

A return to 10 or 12 cents per pound without the mechanical cotton picker will mean 30 cents to 50 cents a hundred for Negro and white pickers. Only four of the 110 Negro cotton pickers interviewed in four states said they'd ever be willing to pick for that amount again. They'd go on relief first. To the Negro tenants who, until this war have far exceeded the day pickers and choppers as factors in production, the return of 10-cent cotton means an annual cash income of less than $200 for a family of four.

With the machine pickers the delta planter can pay, skilled labor $5 to $10 per day as operators and still come out with a profit at 10 cents a pound for cotton. In the 18 delta counties of Mississippi where the Negro population is two and three and four to one and the Negro lives on cotton, the changeover means displacement of an estimated 400,000.

On thousands of marginal cotton farms operated by both white and Negro farmers in Mississippi and eight other Southern states the cut in price to save cotton's imperilled domestic market means the abandonment of cotton as a crop. The mechanical picker operated by the town garageman on a custom basis or owned by a cooperative might save the day for cotton on a few of these farms.

A deliberate effort on the part of these farmers to improve the quality of their staple and raise their yields, planting only the amount that they have the hands in family to pick, might save cotton as a cash crop for thousands more. They would prove the advantage of the premium prices for top grades that careful handpicking alone can produce.

But the great mass of cotton labor will be on the move.

The two cotton pickers are biting huge hunks out of the remaining white in this field at Clarksdale, Miss. They do in one day the work of from 60 to 80 human harvesters.

A hydraulic lift on the machine picker in two minutes does the same job of unloading its 900-pound cargo that requires 10 minutes of the hand picker when he's in a hurry. The handpicker has had a hard half day and may take an hour's rest.

The Southern Tenant Farmers Union Announces Program

We believe that the independent farm family living on the land is the foundation of all civilization.

We are devoted to improving the living conditions of all low income farm people.

We support all programs designed to aid agriculture and improve both human and natural resources on the land.

We support and sponsor legislation to provide a minimum wage for all types of farm labor including small farmers.

We stand for the extension of social security and old age pension to all citizens including farmers and farm workers.

We stand for the abolition of the poll tax as a requirement for voting and seek an end to all economic and legal discrimination against citizens.

We seek written contracts between all tenants and landlords.

We believe that education is the fundamental need for all classes and toward that end we carry on a constant educational program in our organization.

We stand for the ultimate abolition of farm tenancy and wage labor on the land to the end that all men shall be free and independent.

HOW TO SET UP A LOCAL UNION

When seven or more men and women who live in the same community make application for membership and get together, elect from their own number a local President, Vice President, and Secretary-Treasurer, and send this information into the general office, a special charter will be issued for a regular local. An organizer will be sent to install the charter.

HOW TO BECOME AN ORGANIZER

Organizers for the Southern Tenant Farmers Union are needed in every rural community, town and state. There are openings for men and women organizers everywhere. Write for information if you are interested.

CONSUMER CO-OPERATIVES

Cooperative buying clubs set up by members of the Union in their locals are encouraged. Savings are made by buying large quantities of supplies at reduced prices. Cooperative stores, purchasing and marketing associations are sponsored by the Union. Successful cooperative stores are now in operation. They are owned by the people whom they serve and they pay regular dividends to patrons instead of profits to middlemen. All Union sponsored cooperative projects are operated on the democratic Rochdale cooperative principles of one member, one vote. Membership is open to all in the cooperatives.

EDUCATION

Publications such as leaflets like this are distributed free to members and non members. Free bulletins and educational pamphlets on current subjects are sent to local unions. Informed speakers and lecturers are sent to meetings. Each local union has an educational committee which plans entertainments for members. Singing schools are encouraged. Union quartets, string bands, etc., are organized. Union song books and leaflets are supplied to local unions. Educational institutes are held for local officers, organizers and members every year.

REPRESENTATION IN WASHINGTON

Members are represented in Washington by the Union officers on every issue affecting their interests. Congress and officials of the national government hear the Union representatives. Powerful labor and other farm organizations lend their support to laws benefitting members of the Southern Tenant Farmers Union and oppose measures against the welfare of our people. The influence of the STFU in Washington is great.

WHO CAN JOIN THE UNION

Membership is open to all types of farm labor including small farmers, regardless of race, creed or national origin. Family membership which includes the husband, wife, and all children under 16 years of age, amounts to $4 per year. Initiation fees of $1. per family are also charged to new members. A special student membership of $1 per year is open to all student workers in schools and colleges when such students are over 18 years of age. Veterans of World War II are eligible for membership without payment of initiation fees.

HOW CAN A PERSON JOIN THE UNION

Anyone who is eligible may become a member in good standing by filling in the application blank below and sending it in along with the payment of membership dues and fees.

Both Negroes, Whites Will Be Hit By Ruthless Cotton Field Robot

By Nat CALDWELL

(By special permission of the Nashville Tennessean)

"It'll destroy a million jobs," warned the Rust brothers, John and Mack.

Thus, with a feeling amounting almost to guilt, did these young inventors first tell the nation of their new cotton picking machine more than a decade ago.

The news break came when the people were just beginning to crawl from under a depression attributed by many to man's inability to discipline to his needs the mass of machinery he so hopefully had created.

The picker the Rust boys had then is to International Harvester's latest model as the child's tinkertoy airplane is to the B-29. International, Allis-Chalmers, which has the Rust patent, and John Deere all are racing now to be first on the market after the war with the cheapest and best machine mass production can provide.

Today's picker waddles through soggy fields even on a frosty morning when human pickers would be daring pneumonia. Its rotating racks of hundreds of barbed spindles are moved gently against the cotton stalk, almost caressing the heavily fruited bolls. Then there is a winding pull until rubber doffers in synchronized rotation arrive to relieve the spindles of their white cargo. A pneumatic tube of barrel size swirls the cotton aloft to the storage bin. This ball-shaped receptacle helps give the machine its appearance of a monster deep sea diver riding, feet extended, over the front of a tractor.

This is the new machanical picker perfected beyond any dream of the Rust boys in those days when their fan mail equalled a movie actor's. The letters they got were expressions of appreciation for their announced plan to hold their job-devouring monster off the market till the nation could recover from the depression.

Then the government had at least a strong "unofficial" policy on cotton and the mechanical picker and the human factors involved in any shift of cotton to machinery. The Rust brothers knew about it and so did the farm machinery manufacturers.

These days with the picker only the war's length from mass production the national administration has no policy on cotton, the mechanization of its production, nor the displacement of the millions of its human creatures.

Mildly Suggests

Secretary of Agriculture Wickard suggested mildly in the Pace committee hearings four weeks ago that mechanization of cotton production, allowing the price to seek its natural level, might be an answer. The picking machine and the rest of the cycle of mechanization might save for the cotton growers of the South a cash crop that paid 9,423,000 of them a gross of $1,340,705,000 for the 1943 crop year.

"Income payments over a stated period" to give direct aid to cotton farmers who needed to change partly or wholly to other lines of agriculture was one of Wickard's answers to the problem of human displacement. He added:

"One of the chief answers lies outside of agriculture. It is greater industrialization in the South. Development of business and industry in the South itself seems to be the best answer. In this connection the whole freight rate structure needs to be re-examined."

Speaks As Private Citizen

That was Secretary Wickard, speaking carefully and apparently almost as a private citizen. Latest publications of the department of agriculture quoted by state extension service heads in recent annual South raise the spector of synthetics choking cotton to death. But they skirt the issue of mechanization.

A few of these extension directors, however, are bolder than the nation's top policy makers for agriculture, C. E. Brehm, director of the Tennessee Extension Service, told his county agents the week before Christmas—"Mechanized production of cotton is here, men. Try to get your people ready for it."

Cotton Policy

The cotton policy of the Bankheads, the Bilbos and the Eastlands is the policy of price plugs out of the public till. But it is more virile than anything the national administration stands for. It is the policy of the marginal cotton farmer, not of the big planter who is the cheap producer. The policy well may stand until it is too late for a change to do any good.

And what of the picking machine's impact upon the human beings whose very living will be altered?

What of the half or three-quarters of the 9,423,000 human beings, now cotton's creatures, who will be displaced with mechanization? What of those who with equal certainty will be displaced with the end of cotton as a crop that may be the penalty for failure quickly to adjust themselves.

Sight of Picker

The sight of the picker rumbling past his four-room shack on the 17,000 King and Anderson plantation near Clarksdale, Miss., was enough to provoke 81-year-old George Kelly, Negro, to philosophic and prophetic comment.

"Boss, it'll be here picking all the cotton before ever the Good Lord is ready for me to quit the fields and go home."

The younger Negro men and women "on King and Anderson" resent Kelly's conception of the cotton past and of the future of his people. The Pittsburgh Courier might call him an "Uncle Tom."

But Kelly is no "Uncle Tom" He went past the eighth grade in school. His father, a freed slave saved and scrimped himself into the ownership of several hundred acres of good cotton land.

Lose Farm

But his children lost the farm, just as many white planters were losing theirs in one of the downs of cotton's eternal ups and downs.

Kelly had heard of rayon, knew that cotton at 22 cents a pound "couldn't stay here long" and thought that most of the Negroes from 20 to 45 already were leaving Coahoma County. And the rest might be gone before the picking machine could get there after the war to take their places.

Roy King, a white man almost Kelly's age, and Edgar Lee Anderson, whose fathers founded the King and Anderson corporation, and who still are among its largest stockholders, were apprehensive on the same score that Kelly was.

Paint Negro Shacks

King and Anderson have painted green and white the Negro shacks, built new chicken houses and privies, and done a dozen other things to hold their tenants. But they see the younger Negroes, including most of those capable of picking 250 to 300 pounds per day, leaving the South's Delta cotton regions by the hundreds of thousands each year of the war. Thousands have gone to the armed forces. But the bulk are filling for the duration only jobs in war industry or in the service trades.

Kelly, who lived for 14 years in Little Rock, Ark., and has visited relatives in St. Louis several times and doesn't like cities, believes that one of the answers to the "cotton machine" for his race is resettlement in other areas of the South on small farms. "With the government helping us out and sending a man around to show us how, we ought to be able to feed ourselves and sell enough to pay the land out on time," he believes.

FSA Theory

That is the theory FSA has been trying out now for years with whites and Negroes all over the tenant farmer South. FSA officials and their tenants say it is working. All but a few of the more than 50 white cotton planters interviewed say it is a vicious scheme to deprive them of their best labor and that it is a prodigal waste of money by Uncle Sam.

One planter volunteered his opinion that 22-cent government guaranteed parity was "the only worse waste I know of." And he did not believe the machine picker could come quick enough to save even cotton's domestic market from those who have "killed it with kindness."

Old George Kelly was as pessimistic as the planters over the single answer to the picking machine for his race that he was able to suggest. "They've changed," he said. "They believe their chances are better in the north and they're going to keep on going till the government or somebody else stops them. The chance to own a small farm of their own will come too late to stop them."

Returning Negro Soldiers

He doesn't believe that the returning Negro soldier ever again will be willing to live in the South nor that the Negro industrial worker thrown out of a war job will come home and "stick it out" for more than a few weeks.

That is the problem of Chicago and Detroit and San Francisco — Dr. Louis Wirth, University of Chicago sociologist told this reporter a few weeks ago. He was thinking in terms of the minimum $150,000,000 estimate of costs for decent housing of only the 315,000 Negro citizens Chicago had before the war. He was thinking how the bill would jump if housing were proposed for the 60,000 who have moved in since the war. He was thinking of the costs of providing housing and public health, and jobs or relief for Chicago's share of the hundreds of thousands who will be leaving the south when the cotton picker comes.

Guarantees Price

King Cotton will be wanting desperately to replace them as his slaves with the robot picker that can guarantee him a price competitive with rayon and other synthetic fibers. But from interviews with 110 Negroes, old and young and middle-aged still in the cotton labor force of Louisiana, Arkansas Mississippi, and West Tennessee, he'll be wanting them to clear out no more than those among them in the most useful age groups to agriculture will be wanting to go.

Dr. Wirth at Chicago, Dr. T. Lynn Smith, authority on population migration at Louisiana State University, and Dr. Charles S. Johnson, nationally known Negro sociologist at Fisk in Nashville, have a point to make on the score of Negro migration. They insist that less than half of the total displacement of human labor by the cotton picker will be that of black men.

Dilemma of the Whites

If 800,000 Negroes are let out there will be a million whites let out. The Negro has a better chance for the job of tractor driver and picking machine operator and even repairman and machinist than does the "poor white" in the heavy cotton-producing Delta regions. The Hopson plantation at Clarksdale, Miss., the most highly mechanized cotton producing unit in the world, with eight late model pickers, is using all Negro operators at 40 cents an hour.

And the Hopson's are willing to pay more as the quality of their labor is improved with experience and the training factory engineers are giving them. They'll have to pay more if they keep them, when their neighbors have pickers. And they know it and are projecting their labor costs for the future at nine or ten dollars a day with modern housing furnished.

Displaced Whites

The displaced white, however, will not hail from the Delta country, He will be leaving the marginal "hill cotton farm" or the eroded cotton plains, as often a landowner as a tenant. Cotton at much less than a 20-cent per pound government loan guarantee will mean he's out of the producing picture.

Oscar Johnston, president of the National Cotton Council, operator for British stockholders of huge cotton plantations at Scott, Miss., and one of cotton's handful of well-informed and realistic spokesmen, has a plan for him to stay.

There will be room in the South for hundreds of thousands of him and for thousands of small Negro cotton growers under Johnston's plan. He'll know that the machine picks at a discount of a full grade and maybe more under the best type of hand picking. He'll diversify with cotton as one of two or three cash crops. Or he'll produce all he needs to eat on the farm and concentrate on cotton for cash.

His anxious frown followed his first inspection of the machine picker at work in Coahoma County, Mississippi.

Others of His Class

He'll join with others of his class of producers in the same county or a dozen counties and plant a single improved variety to yield a staple of uniform length, tensile strength and receptivity to dyes. He'll plant no more than his family can harvest with its own hands. He won't own a picker cooperatively with his neighbor because the machine's use would cancel his grade advantage. If cotton's at 10 cents he'll sell his for the market top and make money.

Extension service specialists and county agents in several cotton belt states say, however, that it'll take five years after the war to teach him to follow Johnston's plan. And before that time he'll be broke and gone.

White Farm Owner

This marginal white farm owner or tenant, who is called by the planters of Mississippi, Louisiana, and Arkansas, a redneck or peckerwood, in Tennesse and Alabama, a redneck or hillbilly, and in Georgia and South Carolina, a "common red clay cracker"—may have his chance to stay in the south. At least a few hundreds thousand of him may.

His chance depends upon the timing of the generally anticipated rapid industrialization of the cities and small towns of the Central South blessed with the advantage of cheap TVA power as a talking point that may completely displace for this region the old sweat shop.

His desire to stop over in the Central South, even if there is a job at Decatur, Alabama, or Tupelo, Mississippi, or Nashville, will depend on the difference in wage scale between the proferred job and jobs in "CIO territory," the sociologists say.

Will Have Small Chance

The Negro will have small chance even for a temporary stopping place in southern industry, in the opinion of the planters. They pointed out that longstanding antagonisms and economic competition between the Negro and white industrial worker in the south have caused industrial management to refrain from efforts to use Negroes except in time of acute labor shortage.

There will be a comparatively few new jobs for Negroes in such industries as paper pulp turpentine, lumbering, mining and steel, they believe. But they added that even in these industries segregation of workers by skill—with the higher skills reserved for whites—will be essential if labor pace is to be preserved without strong union discipline.

Experts Say

The experts feel that in the event of a postwar depression after he's left the South he, too, will take his chances on relief as will the Negro. The trek back of a million and a half of his brothers to starve on the poorest farm land in the south during the early depression years will not be repeated in their opinion.

But the main body of the displaced from both races, even if they should stop over for a year in a town of the Central South or to work for awhile in the brand new oil fields of Mississippi, will be moving on north and west.

Substantial Qualities

The Negroes will be—not in such quantities as the planters of the deep South might wish, but in quantities substantial enough to be disturbing to the Midwestern and Western cities — the problem the South at last can share with the rest of the country.

The substantial taxpayer of Omaha, who got in a cab the other day in Chicago with a Tennessean reporter complained—"You Southerners are shipping the Negroes up here and unloading them on us. It's not right. You know how to handle them down there. Please keep them."

The head of one of the biggest meat packing firms in Chicago, discussing the problem of Negro personnel with members of his top executive staff, declared: "We have 8,500 of them on the payroll now, all on jobs belonging to white men in the service. When our men come back we're finished with the Negroes."

Same Job History

"Last hired and first fired"—that has always been the job history of the Negro in the Northern city.

It has never been the job history of the Negro on the Southern cotton plantation up to this good day. Always he's enjoyed a meager sort of "social security" even in the worst times purchased frequently with second mortgages on the planter's land.

Now the planter refuses at least publicly to consider cotton production as a "way of life." He insists upon his right to see it a business as much as he sees the machine picker only a couple of years down the road. He sees the shacks he's ashamed of, in which 100 families once lived, torn down and burned or used with new lumber to build a dozen new homes to accommodate his new "highwage" machine operator help. He sees 250 head of mules disposed of. The barns they were sheltered in replaced by trac-

ON THE AGRICULTURE FRONT

10,000 WEST INDIES WORKERS STILL HERE HELPING FARMERS

Approximately 10,500 West Indies workers were employed or available for employment in agriculture in 17 states during the early part of December, according to the December issue of "West Indies News Digest," a leaflet for West Indies workers published by the officer of Labor of the War Food Administration.

The Jamaicans, largest of the groups here, numbered 5,773 and were distributed in Maine, New Hampshire, Massachusetts, Connecticut, New York, New Jersey, Pennsylvania, Maryland, Delaware, Michigan, Indiana, Ohio, Illinois, Wisconsin, Arizona, and Florida. There were 3,375 in Florida, 754 in Connecticut, and 466 in Arizona.

The Bahamian farm workers numbered 4,760 and were employed in Delaware, Maryland, Virginia, and Florida.

In addition to the farm workers, there were about 6,000 Jamaicans and —250 Barbadians employed in industry.

As for American agricultural employment as a whole, there were about 9,337,000 persons working on farms on the first of December. This was two percent less than the number of persons employed on farms on this date last year, and the smallest on record for December 1, according to the U. S. Department of Agriculture. Of the total, hired workers numbered only 2,048,000, nine percent less than on this date a year ago, and lowest for the month in the last 10 years. Family workers numbered about the same as a year ago.

SHARECROPPERS LOSE WHO COUNT ON COTTON ALONE

Sharecroppers who counted on cotton as their only source of cash income last year lost money if they had to hire. pickers, according to reports reaching the U. S. Department of Agriculture.

North Carolina Extension Service reports that one sharecropper in the State started out last year with $400 in cash and, even though he produced 11 bales of cotton on eight acres, he closed the year with only $300.00.

It is reported that in some areas sharecroppers turned their half of the cotton crop over to the landlord or a neighbor last fall, and then took their families into the fields and picked cotton by the hundred. It is said that some of them made considerably more than they would have made by holding on to their crops and paying pickers to help them with the harvest.

However, many sharecroppers didn't put all of their "eggs in one basket" last year, but instead added some side-line cash crops such as truck, fruit, poultry, and livestock. For example, Clarence Barnes, a colored tenant farmer of North Carolina, planted an acre of Dixie Queen watermelons in addition to his cotton and netted $227.44 from the extra crop.

Perhaps, R. C. White, a North Carolina landlord, has found the answer to the one crop problem He follows a balanced farming program and insists that all of his tenants do likewise. The tenants share in the grain and hay crops just as he does. Declares farmer White, "I have no trouble keeping tenants."

SOUTH ENCOURAGES LONGER FARM LEASES

Pointing out that U. S. Department of Agriculture economists say that the landlord, the tenant, and the land will benefit by longer term leasing arrangements the State Extension Services of several of the Southern States, including Mississippi and Georgia have sent out releases urging farmers to consider making leases for more than one year.

This step is significant because about 60 percent of our tenant farmers are in the South. According to the 1940 census, there were 2,361,271 tenant farmers in the United States. Of these, 1,449,293 were in the South, and colored farmers made up 507,367 of this total.

The Mississippi Extension Service encourages both longer leases and diversification. Says its release: "A clear understanding of the rental arrangment, an earnest desire to work together, and mutual confidence between landlord and tenant will go a long way in establishing good tenancy relationship on cotton farms.

"Farm leases to encourage tenants on cotton farms to diversify production and raise food for family use will help overcome some of the renter's handicaps and often raise the income."

The Georgia Extension Service release says: "The length of the farm lease has an important influence on the welfare of the tenant, landlord, and the land.

"All would benefit if more of these arrangements were made with a view of giving advantages to both parties for continuing the lease for a number of years.

"When a farmer moves often," the release continues, "it's hard for him to make good plans. For example, it's harder for a tenant who raises livestock to find another farm with barns and equipment that fit his livestock needs than if he grows only field crops. On the other hand, the owner whose farm plant is developed for a certain type of livestock farming may have trouble finding a new tenant with the livestock and managing experience needed to handle the farm well."

Both Mississippi and Georgia have a high percentage of tenancy. Of the former's 291,092 farmers, 192,819 or about 66 percent were tenants in '40. Of Georgia's 216,033 farmers, 129,850 or about 60 percent were tenants. As for tenancy among colored farmers of these two States, 135,959 of Mississippi's 159,256 Negro farmers were tenants in 1940; and 49,074 of Georgia's 59,127 colored farmers were tenants.

FSA HOLDS THE LINE AGAINST FARM LAND INFLATION

With careful search, some good farms can still be bought at fair prices despite higher land values, says the Farm Security Administration, in reporting the 3,369 farm purchases made during the last fiscal year, under the Bankhead-Jones Farm Tenant Act, were based on its policy of holding the line against land inflation.

Although average land values increased 15 per cent during the last fiscal year, farms purchases financed by FSA averaged no more per acre than the farm bought in previous years. They were financed on the basis of their productivity, and quality was not sacrificed, FSA points out.

As of June 30, 1944, FSA had 73,538 applications for tenant-purchase loans on file, and had financed the purchase of 36,426 farms since the start of the program. Of the purchases financed by FSA, about 5,000 have been for colored farmers.

NATIONAL FOOD SITUATION

According to the Bureau of Agricultural Economics of the U. S. Department of Agriculture, when prospective supplies of various foods for the first quarter of 1945 are compared with those available to civilians in the same period of 1944, reductions in the supplies of meat, poultry, butter, evaporated milk, potatoes, fresh vegetables, and perhaps lard will not be entirely offset by the expected increases in fluid milk, American cheese, and fruits other than citrus. Citrus supplies will be about the same as last year.

In comparison with the pre-war period, it appears that as much meat, lard and fresh vegetables will be available, but potato and butter supplies, particularly butter, will be below average. However, civilians will not face an over-all food shortage.

Both Negroes, Whites

(Continued from page 7)

tor and machine sheds. The many acres planted to corn and oats and hay to feed his mules soon will be feeding several hundred head of beef cattle at a cheaper price than Western or Midwestern farmers can possibly handle them.

Missing Links at Hand

The cotton picker and to a much smaller extent, the flame cultivator, were the missing links in the Mechanization of the Cotton farm On a few larger plantations the process of mechanization already has been carried as far as the tractor and the older tractor-drawn plows, cultivators and planters could go.

Now the missing links to complete mechanization are almost at hand. The incentive to completely mechanize is the need for slicing cotton prices in half. This need is sufficient to terrify the planter who wants to stay in cotton but knows he may have to wait two or three years for the means that will reestablish his grip on a domestic market .

But if the machine should get there too late, and he's forced to leave cotton, there is another road he can turn into. A very few planters in the rich delta lands of the deep South already are far along this road.

Oats Produced

They are producing oats—100 bushels to the acre, other small grains at double the best yields in Iowa and Illinois, new varieties of hybrid corn at almost the same high ratio to the Midwestern grower. They can do the same thing with soft wheat.

They can feed a million head of near market top beef cattle for half what it would cost to feed them in any other section of the country. They don't know the cattle business. But they are gamblers and willing to learn the hard way.

The negroes and the poorer whites may be cast out by King Cotton. But the planters will be on hand even if the king himself must abdicate.

Because their climate and their richest land in the nation gives them a leg up if they choose to break in on most any other type of agriculture, the intelligent farmers of the Midwest and Far West should be interested selfishly to aid in the battle to keep cotton alive.

Negro Population

Because San Francisco's Negro population jumped 270 per cent and Utica, New York's jumped 250 per cent in three short war years and both cities were without decent housing for this increase; because jumps of 25 per cent or more were experienced by Detroit, New Haven, Los Angeles and two dozen other cities outside the South in the same period; because it is sound social practice to make it as attractive as possible for as many Negroes who wish to stay south to realize their wish — it may be that the weight of these cities and these farmers will be felt on the side of some national program for a new and richer economy in the cotton region.

Meanwhile they'll be moving along.

COLORED FARMERS GET READY FOR ANOTHER RECORD CROP

Negro farm and home agents and the emergency workers provided by the War Food Administration are helping the colored farmers to put their farm facilities in good condition for another record crop, according to State Extension Service reports received by the U. S. Department of Agriculture.

The reports indicate that in several States the Extension Service farm and home agents, as well as the emergency assistants are conducting workstock, pressure cooker, and farm machinery clinics. The farmers bring their workstock and farm machinery to the clinics where they are carefully examined. Workstock needing medical attention are treated by experienced veterinarians. Farm machinery and pressure cookers are repaired either by the farm and home agents or by mechanics.

These clinics also serve to teach the farm people how to administer some treatments to their livestock and also how to repair their farm machinery.

When Farmers Think

(Continued from page 5)

service. The basic reason given for their interest in such health plans seemed to be twofold: (1) A growing desire for more adequate medical care than they have been able to obtain in the past: and (2) the fear of the continued thinning out of doctors in the rural areas and small towns which would make medical care less available and more expensive.

Nearly three farmers in four say they think the United States should participate in a world association of nations. They desire this participation because they think it would help prevent another war. "We as a nation can't move along by ourselves," was the comment of one farmer, "any more than a man can; we've got to help each other." As some farmers see it, the basic understanding now being achieved among themselves through their cooperative points the way to constructive international cooperation.

Major Purchases* Planned by Farmers When Wartime Shortages Are Over

Summary

1. Three-fifths of the families report that they are planning to make one or more **major purchases when wartime shortages are over.**

2. Except for the **fear of a postwar depression,** more major purchases would be planned.

3. **Tractors and other farm machinery** is the largest single purchase planned; automobiles and trucks, second; household furnishings, third; installation of electric current and electrical cuipment, fourth; farm land, fifth; dwelling improvement, sixth; and improvements of other farm buildings, seventh.

4. **A larger proportion of the farmers in the West plan purchases than in the East, and more in the North than in the South.**

5. In all parts of the country, the purchases now planned by farmers reflect their **desire to raise their level of living** in addition to making needed replacements.

Those Planning to Make Purchases.

More major purchases are planned by some farmers than by others: More owners than nonowners plan purchases. more white than nonwhites, more of those under 45 than of those over.

The farmers in the Northern Plains, Southwest, and West Coast areas plan the most purchases, those in the Southeast, Appalachian, and Northeast the fewest. with the Midwest occupying the middle position. The large number of purchases planned in the Northern Plains and the Southwest is probably dynamically related to their low farm incomes means greater replacement needs for farm machinery, and long delayed renovation of dwellings and other farm buildings.

Speaking broadly, it would appear that the two groups of farmers planning no major purchases are (1) those most completely equipped with farm machinery and household conveniences when the war came, and (2) those with such low incomes that they have accumulated no surpluses, but rather have used their increased incomes for current living expenses.

* The field interviewers did not hold to any fixed definition of a "major purchase," but rather recorded the planned purchases which the farmers themselves considered major, but in no case was entry made of smaller purchases than a kitchen stove, household furniture, or a mule, and then only where a family's income was low enough for such a purchase to seem a major purchase to them.

Many farmers pointed out that the severe farm depression after World War I has convinced them that they had best plan to have such reserves available at war's end for the hard times that are likely ahead. It seems clear that any increased fear among farmers of a depression means fewer major postwar purchases by them. Any evidence that farm incomes will remain high means that farmers will go ahead with the major post-war purchases they now plan, and likely with additional ones.

What Farmers Are Planning to Buy

Taking the farmers that were interviewed as a whole in all parts of the country, a little over a fourth of them plan to buy tractors and farm machinery; a little over a sixth plan to purchase automobiles and trucks, and a little less than one sixth household equipment and furnishings; a little over one-eighth expect to get electrical current installed or buy electrical equipment; one-eighth of the farmers plan to buy farm land after the war, and an eighth want to improve their dwellings, and a tenth plan improvements of their other farm buildings.

Farm machinery constitutes the largest number of purchases planned by the families in the Northern Plains, Midwest, West Coast, and Northeast areas, with automobiles second largest in each, excepting the Northern Plains where dwelling improvements come second. Household equipment constitutes the greatest number of purchases planned in the Appalachian Area, while land purchases stand first in the Southeast and Southwest, where farm tenancy rates are highest and the status of the landless farmer is lowest.

Rising Planes of Living and Planned Postwar Purchases

Some of the planned purchases of farm machinery, automobiles, and so on, are for replacement purposes, but many of them are clearly to satisfy the farmers' desires to raise their plane of living. By way of illustration, many of the landless respondents in the cotton South hope, and now plan, to buy a farm when the war is over, while in the Western Plains the farmers are looking forward to new farm machinery and more permanent and comfortable dwellings. Perhaps the planned installation of electric current and the purchase of additional electric equipment after the war best illustrate the farmers' anticipated rise in living levels through postwar purchases. Many of the farmers now without electric current are looking forward to getting it the ones who already have electrical current and a little equipment are hopefully planning to buy farmers hope to raise their level of living. Already the lowest-income families are eating and dressing better, and many of those next above them are planning to buy some land of their own; the middle and upper-income families are looking forward to the additional machinery and household conveniences they can get after the war with some of the money set aside from their current good incomes.

In closing, it is important to note, first, that farmer thinking is closely related to the farmer's local situation; second, that in general the high income landowning farmer is more optimistic than the low-income nonowning farmer; and third, that the farmer wants his income to remain high, and wants to raise his level of living through postwar purchases.

—Bureau of Agricultural Economics, U. S. D. A.

Don't Expect Too Much

Most schemes incubated in official quarters, professing to guarantee farm prosperity, involve expenditure of many billions of tax dollars. Sooner or later government is going to have to stop pouring out these uncounted billions for what in reality are nothing more than ill-concealed attempts to cover up the increasing cost of producing food. When it does, the farmers will be on their own as never before. Millions of them are preparing for that inevitable day by strengthening their farmer-owned marketing cooperatives.

Irvin S. Cobb said: "If it ever becomes my misfortune to go insane, I want to go live in Washington where I will not be noticed."

CIO Comes to Small Farmers' Aid; Foils 'Callaway' Hired-Hand Plan

—Reprint from The Southern Patriot

The glorified "Callaway Plan" which has sought to get Georgia businessmen to establish 100 corporations of 10 men each, with each man contributing $1,000 for the purchase of 100 100-acre "demonstration" farms, has been undermined by a succession of events set in motion by public questioning of the plan by Charles H. Gillman, Georgia regional director of the CIO.

In an open letter to Cason J. Callaway, sponsor of the plan and owner of a 28,000-acre "superfarm" at Hamilton, Georgia, Gillman on September 20 asked for "assurance that the plan will not develop into an attempt by financial and business interest to monopolize agriculture."

Citing the CIO's program of supporting the family-size farm as the backbone of American agriculture, Gillman declared: "The CIO wants to see farmers living in good homes on good land of their own, raising good crops and selling them in good markets. To accomplish this, we believe government credit and government show-how are necessary. We don't think the goal of American farmers is to become managers of Callaway Plan corporation chain farms at $75 a month."

A REAL FARM PROGRAM

At about the same time, James G. Patton, president of the National Farmers Union, issued a statement in which he declared: "The Callaway Plan recalls the scheme used by Georgia bankers three or four years ago to undermine the credit program of the FSA_____ Farm Security requires real programs of rural housing, electrification, health, education, reclamation, irrigation, reforestation, and the removal of discriminatory freight rates. The Callaway Plan does not face up to these needs."

Gillman's letter coincided with these views, and asked for clarification of Callaway Plan policy as follows:

1. **How can Callaway Plan farms pay off unless they expand?**
2. **Since the farms are to be mechanized, will they follow the usual practice of corporation farms and ruthlessly tractor small farmers off the land?**
3. **Will the customary corporation farm policy of "hire-and-fire" be followed?**
4. **If Callaway Plan farm managers are to be paid $75 per month, what is to be paid farm laborers?**
5. **If the backers of the Callaway Plan are opposed to government farm credit, is private credit prepared to meet the need for long-term, low-interest farm loans?**
6. **What about U. S. employment service, social security, collective bargaining, and govern ment programs to improve the workers?**
7. **Whether the financiers of the housing and health of farm processing plants envisaged by the Callaway Plan would not be in a position to demand that small farmers sell to them at dictated prices in return for crop loans?**

NATIONWIDE INTEREST

As the Callaway Plan had attracted nationwide attention among agriculturists, the wire service moved Gillman's letter North as well as South.

The following day, both the Atlanta Journal and Constitution ran lead editorials on Gillman's letter. Both papers were obliged to make light of his questions, as both had gone all-out in publicizing the Callaway Plan. The Constitution, moreover, is the owner of a corporation farm; and the Journal had had a staff reporter assigned to Callaway's farm for months.

"Petulant_____ ill-advised _____ ridiculous_____" said the Constitution of Gillman's letter.

"Mr. Gillman asks academic questions_____" echoed the Journal.

Neither paper made any serious attempt to answer the questions Gillman raised; and both reassured the public that the Callaway Plan is not only harmless but a very fine thing indeed. Recognizing that this committed both papers to attack the Callaway Plan should it ever prove harmful, Gillman publicly welcomed the editorial assurances.

Belatedly, Callaway dispatched an open letter of reply to Gillman, in which he admitted "It is not The Plan, but a plan," and suggested that if Mr. Gillman wished to know more about it he should study the press reports, past and future.

While there is no means of estimating the total number of letters-to-the- editors which came in as a result of Gillman's open letter, they must have been numerous if those published during the ensuing weeks were any indication. Most of those published enthusiastically endorsed Gillman's views.

"Little has been mentioned in the press concerning the man with the hoe," said a typical letter from the grass-roots, which concluded that the Callaway Plan was striving to "create a system whereby the businessman would garner the profit, and the farmer do the work."

Meanwhile in Washington, Georgia's Rep. Robert Ramspeck wrote War Food Administrator Marvin Jones suggesting that Federal agricultural agencies might wish to support the Callaway Plan nationally. Replied Mr. Jones (copies to the press): "One of the traditional policies of our government____ is promotion of the individually-owned and operated family farm_____ We assume that an opportunity will be given the farm family to purchase this land from the corporation, although it is not specifically mentioned in Mr. Callaway's plan." Therefore, said Mr. Jones, "a further study is being made into the merits of the proposal."

The Last Straw

This was evidently the last straw. On October 6th the Journal's resident reporter at the Callaway Farm sent in a story which was headed "Callaway Sees Mint as Possible Georgia Crop." In the 10th and final paragraph, Callaway came across with the admission: "I hope to see these small farms auctioned off at the courthouse after five or six years, or else to the men who have been running them for the corporations."

—Stetson Kennedy

4-H Achievement Day Held

The First Annual County-wide Achievement Day for Anson County, Ala., Negro 4-H Clubs was held Saturday afternoon, December 9th. The meeting, held in the Anson County Courthouse, was attended by by 151 4-H members and approximately 125 other people. The program was in recognition of accomplishments during 1944. Among the highlights of the program were: Solo by Bruce McDaniels, Polkton Club; Group Singing by Cairo 4-H members; Team Demonstration, "Preparing a Seedbox", Morven 4-H members; and the main address by Cleveland Harris, Negro County Agent Union County.

Mr. J. W. Cameron, white County Agent, presented Project Achievement Awards as follows: Baby Beef, Lonnie Colson; Corn, Elijah McCoy, Jr.; Clothing, Ollie Mae Little and Mary A. Burns; Dairying, George T. Diggs; Field Peas, Robert J. Crump; Food Preparation, Trula Mae Jones; and Aquilla Thomas; Food Preservation, Eula Cason and Maggie Turner; Fat Pig, Doreatha Ingram; Garden, Bessie Johnson and Hattie Ingram; Home Management, Eula Cason and Ida Mat Turner; Egg Management, Doris Robinson; Fryer, Doreatha Ingram; Layers, Hayward Sturdivant and Elizabeth Chambers; Turkey, Baron Chambers; Peanuts, Eula Cason; Room Improvement, Bessie Johnson and Maggie Turner; Sweet Potatoes, Lester Townsend; Bonds and Stamps, Nannie Richardson.

Certificates for four years satisfactory work were awarded to twenty-five 4-H members. A total of 328 ribbons were awarded for first, second, and third place standings in the different projects as group method of placing was used.

Jamaican Natives Reach Picatinny for Work Period

Reporting to work Monday morning, 247 natives of Jamaica are today helping to pass the ammunition from **Picatinny Arsenal** to the fighting fronts. They are employed for a period of three months, chiefly in the loading, metal components, and stores departments. Their quarters are in the C. C. C. barracks at Hackettstown. They arrived at the Arsenal Sunday, when they were given physical examinations, photographed for passes, fed, fitted for safety shoes, and put through other employment processes.

Regulations concerning the conduct of the Jamaicans were outlined in a booklet given each new employee, and signed by Col. W. E. Larned, commanding officer. The booklet admonishes them as follows, "Conduct yourselves and your personal lives so that no discredit will be reflected on you or Picatinny. We know the responsibility that has been placed upon you by your fellow-Jamaicans. Always bear that in mind. Let us each work for this goal constantly—courtesy, cleanliness, and better understanding with our fellowmen."

None of the Jamaicans shall be allowed to leave the camp boundaries at Hackettstown at any leisure time without first obtaining an off-the-post pass. Indicating the time limits and the worker's destination, the pass is mandatory. Local police and Federal authorities have been notified that if a Jamaican is off the post without a pass he is subject to arrest.

Arrangements have been made to provide movies and entertainment in the camp's recreation hall Ping-pong, billiards, dart games, radio, and other equipment is available, and it is planned to show motion pictures each Sunday. Liquor is forbidden at the camp.

A Post Office has been set up at the camp. Arrangements are being made to bring clergymen to the Hackettstown barracks, and if the Jamaicans wish a definite type of service, a special place will be provided.

During their hours of work at Picatinny, the Jamaicans will be allowed two recesses, one from 10:-50 to 11:00 a. m., and a second from 5:50 to 6:00 p. m. Their lunch period is from 2:00 to 2:45 p. m.

Advising the new employees about keeping their quarters in order, Colonel Larned stated: **"Every** precaution must be exercised by you to safeguard your health and well-being. Personal cleanliness cannot be too strongly stressed. This, in turn, is doing only half the job. Your living quarters require constant attention and, while we shall provide adequate janitors for the general cleaning, you in turn must do your part.

Appeal Denial in Lynn Case Discredits Supreme Court

New York (WDL) — "America should be ashamed of its Supreme Court, which by dodging the issue of Army jim crow in the Lynn case, has revealed a lack of the very courage with which the members of our Armed Forces are required to fight," Aron S. Gilmartin, Workers Defense League chairman, declared.

"By again refusing to hear the Lynn Case, which challenges the legality of the Negro quota system in the selection of military trainees, the U. S. Supreme Court has given a slap in the face to more than 700,-000 Negroes now in the armed forces.' 'the WDL leader asserted.

Reducing Cotton Distribution Costs

By John W. Wright

After this war, American cotton is likely to face its most severe competition ever. In domestic markets, competition will come from synthetic fibers, paper, perhaps other materials. In foreign markets, it will come from these and cotton produced cheaper than we produce it. So the prices at which we produce raw cotton and its products will largely determine the extent of the post-war cotton market.

Foreign cotton growths are likely to continue reaching world markets at prices considerably below the prices U. S. growers have recently become accustomed to. Increased synthetic-fiber production and progressively decreasing prices as mass-production methods are adopted will probably make it more and more difficult to find market outlets for cotton at present price levels. Rayon staple fiber, which can be run on a cotton system, offers even the cotton manufacturer the choice of using the material he finds most profitable.

Processing costs of rayon staple fiber are reported to be somewhat less than those of raw cotton. Although we do not know the future price level of rayon staple fiber, we know the price may go even lower after the war. For one thing the wartime tax amortization provision under which much synthetic-fiber capacity has been built will enable manufacturers to operate with minimum fixed charges for plant investment. So it is clear that how well cotton is to keep its present markets or develop new ones will depend not only upon technological factors of suitability for specific uses, but also upon its price in relation to competing materials. Readjustments within the cotton industry in both physical suitability and price will require working together by the cotton breeders, producers, ginners, marketing agencies, and manufacturers.

Whether American cotton can meet this likely price competition without serious effects on the American growers' income depends chiefly on how much the cost—not only of growing cotton but also of ginning, packaging, storing, marketing, transporting, and processing it—can be reduced. Let's look at the possibilities of reducing the latter group of costs, including ginning and all other services and processes in the distribution of cotton between the farm and the cotton mill.

Ginning and wrapping costs for the Cotton Belt as a whole today average a little more than $6 a bale. Although this is quite an item in the cost of preparing cotton for market, it is perhaps no higher than is required for satisfactory services as the ginning business is organized at present. This does not mean, however, that ginning costs could not be reduced. Indeed, the ginning and packaging processes perhaps afford the most promising field for cotton-distribution cost reduction. Realizaton of these possibilities depends upon the development and application of basic information on the optimum size and organization of gin plants and perhaps their effective integration with such related processes and services as the crushing of cottonseed, and the storage, preliminary marketing, and possibly the processing or partial processing of the lint or linters.

Highways and Trucks

Although there are fewer gins in the United States now than two or three decades ago, the present ginning industry (with few exceptions) is designed, in both the size and location of the individual gin, to serve producers who haul seed cotton to the gin in horse-drawn vehicles. As a result, ginning is small-scale and on the whole relatively inefficient. Recent studies indicate that more than 70 percent of the crop now goes to the gin in motor vehicles. In view of present day highway and transportation developments, there is no reason why the size and equipment of a cotton gin should be limited to that adapted to serving a radius of 3 or 4 miles—the typical case today. Moreover, ginning is highly seasonal, most of the year's crop being ginned within a period of a few weeks out of the year. As now organized, the industry does not have—nor could it justify economically—the kind of mechanical service required for the best results.

Some firms have made a good start already in developing large-scale ginning establishments. One such centralized type, integrated with a cottonseed-oil mill, consists of some 36 gin stands with the ginning layout so organized that the seed is conveyed mechanically to the oil mill with no handling at all. This establishment normally gins upwards of 30,000 bales a season, its cotton (practically all of it transported by truck and trailer) drawn from a radius of 15 or 20 miles.

Many other gins have made good starts, too. Usually they have begun by installing modern ginning and accessory equipment for doing a superior job of conditioning, cleaning, ginning, and packaging. Then, in order to get enough cotton for profitable operation, the ginners have aggressively gone after it. In some cases, they have provided for the farmers a fleet of trailers, with a result of lowered charges and better service.

As the ginning industry is now organized some 12 000 separate gins are situated at practically every village and crossroads throughout the Cotton Belt. Fewer but larger and better-equipped gins located mostly in the county-seat towns would probably provide ginning services more economically. Whether this type of centralized ginning establishment could continue most advantageously as a separate enterprise or better be integrated with existing compress and warehouse establishments or cotton-oil mills is a question. At present, compresses, warehouses, and cotton-oil mills are for the most part strategically located for serving a cotton-producing territory large enough to provide the volume of cotton for optimum ginning efficiency. In general, both the lint and the seed now move on anyway from the gin to larger towns (such as county seats), so no additional transportation would be necessary too get the cotton to centralized gin plants at these points. Indeed, considerable handling of both the lint and the seed would be eliminated.

In making the transition to the centralized establishments, there

Picture Report Covering Work of Negro Farmers in Alamance Prepared

Local Negro Farm Agent H. A. Johnson and Home Agent Mrs. C. S. Wilson have been working during the past week with state executives of the North Carolina Extension office to make pictures of work carried on here by colored people. The pictures will be included in a state report to be sent to the Washington, D. C. bureau.

Scenes of home demonstration clubs, canned food storage, tenant and landlord relationship and a Negro 4-H club dairy calf project were included.

Here to direct the photography were district and state extension officers. The pictures were made in several rural communities of the county.

To keep cauliflower white while cooking use half milk and half water and cook, without covering, until just tender.

Solving Rural Community Problems

916 Gaines St., L ittle Rock
By James P. Davis

Delivered at the 54th Farm & Home Leadership Conference, Tuskegee Institute, Alabama, December 7-14, 1944

One of our most prominent religious leaders recently declared that the church holds the destiny of all Negroes, and I am adding that the Negro minister is not only our mouthpiece, but the most influential factor.

Farming is our main industry. It is our largest source of employment and income. Some years ago I was successful in securing the ear of the officers of the Fraternal Council of Negro Churches in America and convinced them of the necessity for their influence and aid in reaching the 546,000 Negro farm families in the 700 counties in our Southern Region states. My first effort was to help the minister realize the need for conservation of the soil and the value of the various phases of the Triple-A practices so they in turn could help the farm families in their community to get a full understanding of conservation problems. Despite the fine successful efforts of the Extension, Vocational and Jeanes services in connection with the efficient Agricultural Department of our colleges many farmers are yet unfamiliar with methods of preventing soil erosion and conserving the soil, developing better methods for increased production and improved quality crops. Due to heavy illiteracy among my people in these deep cotton states it is up to us to encourage and assist these agencies, and the church to devise methods that will make facts clearer.

A certain community in a certain cotton state was selected as our beginning point. The farm families were in a pessimistic mood, their minds starved, bodies seemingly stunted and aspirations baffled. We had 5c cotton, 26c corn, potatoes were 50c per bushel and eggs 12½c per dozen. Hogs were glutting the market and bringing 2½c per pound on the hoof. The church buildings were in a run down condition and the pastor shabby in his personal appearance and unable to keep his children in school. Living standards were in the lowest bracket, due to sick acres throughout the community and the crowding of God out of human life.

The Minister's Alliance was called together and we organized the rural families, landlord and tenants. One of the largest cotton farmers led in the effort and pledged a strict following of Triple-A program for himself and the 26 families on his farm.

Soil building practices were begun in 1936 when the average yield of lint was 227 pounds per acre. In 1937—290, 1938—268, 1939—292, 1940—385, 1941—500, 1942—538 and last year 551.

This increase was due to plowing under of cover crops such as clover, vetch, peas and lespedeza Crop rotation was practiced all over the farm until the entire acreage had been covered.

The farm income of these families were steadily increased and this fully convinced every family in the community of the value of Triple-A. It is now also apparent that tremendous improvement in better quality livestock and increased yield of milk and butter as result of better pastures.

Some results:

The volunteer offerings, church and Sunday School services, increased nearly 80% and the salary of the pastor of each of the six churches in the community almost doubled. As result of this effort the ministers of these churches have the following permanent set-up.

1. Chairman Soil Building Committee—to emphasize the importance of continuing all efforts in preserving the soil through advice and instructions from the State Contact Representative AAA, Extension Agts., Vocational Teachers and Jeanes Supervisors together with County Teachers, Soil Conservation Specialists and Farm Security Officials.

2. Each church to take census of persons in community and list the illiterates.

3. Improve farm labor and perfect plans for training unskilled labor in order to meet mechanized farming.

4. Organize the families to help each other through volunteer labor pools in order to offset shortage of labor caused by migration and eliminate the danger of loss in the cultivation and harvesting of crops.

5. The ministers to devote a part of their time while in the pulpit to:

a. Emphasizing wise use of the soil.
b. Improve the rural church building and build better roads leading to and from the church.
c. To encourage sound behaviour training and good manners in the home, the school and church.
d. To impress the importance as citizens, enforcement of law and all measures designed to suppress immorality.
e. To fully emphasize the importance of sponsoring a better program for health and welfare of the community.
f. To encourage and assist the day hand, sharecropper and tenant to become landowners and thereby curb restlessness; moving from farm to farm every year and finally ending in migration from the farm to northern areas where the grass seems green, but not so.
g. Superintendents of Sunday Schools to stress importance of the soil.

For the church to act as a clearing house in the adjustment of any racial outbreaks in their community for reason that critical problems of adjustment in post war period would in all probability be centered in rural areas. I consider this one of the most important features of the work that is now being promoted by the Council. It is a serious challenge which may effect the freedom of urban and rural citizens both colored and white for years to come and may determine the destiny of America.

Youth Congress Replies to President's Greeting

ATLANTA, GEORGIA, December, 1944.

In reply to the statement sent to delegates attending the Sixth All-Southern Negro Youth Conference in Atlanta, Georgia on November 30, December 1, 2, and 3, the following message was sent to President Franklin D. Roosevelt:

Dear Mr. President:

The hundreds of delegates attending the Sixth All-Southern Negro Youth Conference and representing some of their thousands of fellow Americans were thrilled to receive your message of greetings and expression of good wishes.

We send this statement in response to your challenge. We pledge out total and loyal support for all measures necessary for the complete victory of the allied nations in the war against facist tyranny.

We pledge all our energies to establish through victory the kind of world described in your message: "A universal freedom under which a new basis of security and prosperity can be established for all—regardless to station, race, or creed."

In order to achieve this kind of world, we offer ourselves in service to the nation. We offer ourselves for a program of universal military service to keep this nation and its youth strong as a guarantee of a lasting peace.

We express our determination that in such a program Negro youth must serve with equality, with dignity, and without the evil practice and effects of segregation and discrimination.

We pledge to assume and carry out our full responsibilities as voting citizens.

We wish you good health and a long life.

Rose Mae Catchings, President.
Esther V. Cooper, Executive Sec.

Reducing Cotton

(Continued from page 9)

would be no need to discard the part of existing equipment which is suitable for use. Provided it was not obsolete, it probably could be regrouped and used in the centralized gins.

Mechanical Harvesting

Mechanical cotton harvesting, if it is widely adopted (as now appears probable), will have a very definite impact on the industry in respect to both ginning equipment and ginning services. If we are to avoid the displacement of cotton by other textile raw materials because cotton spinners object to the low grades of cotton which mechanical harvesting produces, the ginning industry will have to provide a more effective way of cleaning lint than it has today. Indeed, perhaps the successful adaptation of mechanical harvesting to the American cotton crop will depend on the development of equipment which will clean lint better after its separation from the seed and before it is compressed into bales. Research aimed at the development of such equipment is even now being undertaken by the War Food Administration.

Development of this equipment would substantially reduce the cost of transporting and marketing. The extraneous material which has to be cleaned out of the American cotton crop at cotton mills every year weighs an estimated 100,000 tons. To this must be added the cost of transporting, storing, and other handling of this waste. If cleaning equipment of this type is developed, its use would presumably be more feasible in gins of the centralized type.

It must be remembered, however, that the engineering and economic aspects involved in any such ginning reorganization have not yet been worked out. We do not know, for example, the optimum size and organization for minimum cost and maximum-quality service. But the trend toward larger gins is unmistakable and may move faster during the next few years. If so, we shall have opportunity to develop more precise information by means of research and experience.

The packaging of American cotton has long been unsatisfactory both in cost and result. Except for cotton, it would be much more economical and satisfactory to prepare the final bale package at gins than to turn out low-density bales which later have to be compressed, with further handling and expense, at compresses. Recent research indicates the mechanical and economic feasibility of gin presses capable of producing bales of standard density (22 pounds per cubic foot). Bales for domestic shipment would not need recompressing. The net cost reduction is conservatively estimated at from 30 to 50 cents a bale, depending on the volume of cotton handled annually per press. The bale itself is much better than the present one in appearance, for protection to the cotton, handling, storing, for loading in the cars and opening at the mill.

Marketing Economies

Economies are possible also in the marketing and handling of cotton in marketing channels. The present spread between prices to cotton growers and prices paid by cotton manufacturers at the mill is about $10 a bale. This average includes all margins and the costs of all services in the concentration, merchandising, and delivery of cotton. Of course, the spread varies greatly in the various producing areas.

Some of the most promising cost-reducing possibilities are in the integration of the marketing services with ginning services at centralized ginning establishments. Obviously, the volume of cotton received at such establishments would facilitate segregation of even-running lots for direct shipment to mills. No doubt this volume would attract direct buying and competition between cotton merchants or shippers and often by and between mill buyers, and so avoid much of the expense of assembling from country markets.

So long as warehousing and marketing facilities were located in the same towns as the centralized gins, it would make no difference whether they were operated as separate enterprises or under the same management. There could be any number of kinds of marketing—auction sales, selling over factors' tables, through cooperatives, or by the conventional methods of private negotiation of sales between buyer and seller.

Another important advantage would be prompter service in official classification. This is especially true where the volume of cotton handled at one point would justify the performance of those services locally. The classification could be available the same day the cotton was ginned.

One of the weakest spots in present U. S. marketing is in the sampling of the bales in marketing channels. Practically all bales are cut several times for samples on the way to the mill. The fees for sampling, usually repeated several times for each bale, plus the actual loss of cotton involved, account for a significant part of the price spread between growers and manufacturers.

Notwithstanding the costs and damage to the bale package involved, present sampling methods do not provide representative samples because many American bales are not uniform in quality throughout. Samples cut from the two bale surfaces in many cases do not accurately indicate the quality inside the bales.

Recent research has provided equipment for the automatic mechanical sampling of cotton bales while they are being formed at the gin. This equipment, which can be used with standard gin equipment, takes true cross-section samples. As many duplicate samples as are required can be taken from each bale. These could be used for all purposes throughout the entire marketing chain. General installation and use of such samples all along the way would, it is estimated, reduce marketing costs by about a dollar a bale.

Customary methods of concentrating cotton of a wide range in quality from an extensive producing area, in order to facilitate segregation into lots that are even running in quality, is a rather expensive process when all the services involved are counted. This system of assembling and merchandising cotton appears likely on the way to becoming obsolete in view of present trends toward standardization of the production of improved varieties on a community or area basis.

Character

For many years, marketing agencies and cotton manufacturers have bought cotton largely on the basis of grade and staple length. Grade factors have provided a fairly reliable index of manufacturing waste and indirectly, of the extent of fiber deterioration. Staple length has provided a fairly good index of the use to which a given lot of cotton is adapted, the machinery organization required to process it, and the approximate yarn strength that may be expected. But quality factors other than grade and staple length are also important for spinning performance. These factors are sometimes referred to as "character."

Recently, laboratory methods have been developed to measure such physical properties of cotton fibers as tensile strength, fineness, length uniformity, and maturity. Relation of these properties to processing performance and to yarn and fabric quality have also been established. These accomplishments have done much to speed up the development of new varieties and strains of superior-quality cotton and to stimulate the interest of cotton manufacturers, merchants, and others in the various quality factors which they have not previously taken into account in commercial practice.

The fact that the various fiber types are inherently characteristic of specific varieties and growths manufacturers become acquainted has become well established. As with these characteristics of specific improved varieties and growth they are discovering that character—the "third dimension" of cotton quality—can be dealt with most conveniently and effectively in terms of variety and growth. They are also finding that consideration of this factor increases their ability to get supplies of the kinds of raw cotton they need.

Before cotton manufacturers can take full advantage of buying on the basis of variety and growth, production of improved varieties on a sizable area basis will have to be standardized and a system of bale identification to permit the positive identification by variety and growth throughout marketing channels must be adopted. Such a bale-identification system, by avoiding the present repeated tagging and marking of bales with each change of ownership, would result in further substantial savings.

Inevitably, as the production of cotton becomes standardized by variety in sizable areas, marketing channels will be shorter and more direct, and the spread between farm prices and mill prices will be narrowed.

—Jamaican Help to Be Used at Fisk Tire Plant

Chicopee Falls Factory Will Employ Important Labor on 'Must' Program

The Fisk Tire plant in Chicopee Falls has been added to the list of Springfield area, war plants where Jamaican laborers will be employed to relieve acute manpower shortages that are hampering war production, George F. Harding, Springfield area director of the War Manpower Commission, reported today.

About 50 Jamaicans will be assigned to Fisk, Harding said. Arrangements are being completed for hiring of other Jamaicans at Chapman Valve, Monsanto, and Springfield Bronze & Aluminum.

The Jamaicans are British subjects and will be employed here only as long as the emergency need for heavy unskilled labor continues. Harding said. They are being brought in as a last resort in an effort to meet military demands he added.

Heavy labor has long been the major manpower problem in this area, Harding said, and demands of plants producing on "must" programs can only be met by importation of the Jamaicans.

The WMC has advised the plants where they will be employed that they should not be upgraded or placed on more highly paid jobs, he said.

The WMC has not "ordered" the plants to hire the Jamaicans, he said, but the program is being undertaken voluntarily and with the consent of the labor unions involved.

The Monsanto industrial union, CIO, registered a protest over their hiring, but informed Carl T. King, production manager at the plant, that it would accept the Jamaicans under the circumstances, according to reports published this morning.

If the Jamaicans are kept at unskilled work, and not ungraded by the company managements, Harding said, they will not interfere with seniority rights of union members in the plants involved, and they will be returned to their homes as soon as the need for their labor has passed.

Veterans' Administration Announces GI Program

WASHINGTON, D. C.,—Dec. 8—Brig. Gen. Frank T. Hines, Administrator of Veterans' Affairs, today announced that under authority given him in the Servicemen's Readjustment Act of 1944, he has designated the Department of Agriculture as cooperating agency to aid in determining whether guaranty of farm loans should be approved for veterans.

Regulations governing the guaranty of farm loans were issued by General Hines and Charles F. Brannon, Assistant Secretary of Agriculture, at a press conference this afternoon.

Issuance of the regulations followed extensive consultations by the Veterans Administration with the Department of Agriculture and with national organizations representing interested groups, such as farmers, bankers and insurance companies. The guaranty of loans by the Administrator of Veteran's Affairs will be the result of close cooperation between the Veterans Administration and the Department of Agriculture, with the facilities of the department largely employed in implementing this part of the loan features of the G. I. Bill of Rights."

Where a veteran is not familiar with farming conditions, or available land in the community he wishes to settle in, his first contact will be with a veteran's advisory committee, which will function in conjunction with the county agent's office. The advisory committees, which will give free advice to interested veterans, will consist of successful farmers and business men who are thoroughly familiar with local conditions. These committees will help veterans to select farms that can be purchased at prices that permit profitable operation and will give the veteran every chance of repaying the loan.

This committee will operate primarily to protect the veteran from unwise investment that might result in saddling him with debt for a number of years, because of changed conditions while he was away from home, and to assure that he has a reasonable chance of success if he makes a loan.

If a veteran knows the community and does not need this advisory service in selecting a property, he will not need to visit the advisory committee. The leader will send the veteran's application directly to a "veterans" loan certifying committee", which operates in conjunction with the Farm Security Administration. This committee will recommend loans on the basis of an appraisal of the property plus personal knowledge of the veteran____ his ability and experience as a farmer____and of local farming conditions.

The membership of this committee, which has been in operation under the Farm Security Administration, with the addition of one member who must be a veteran and, if possible, a business man.

The law permits the Administrator of Veteran's Affairs to issue a guaranty of loan if the funds are to be used to purchase land, buildings, livestock, equipment, machinery or implements or in altering or improving any buildings or equipment to be used in farming operations conducted by the veteran, if he finds:—

(1) that the funds are to be used for purposes provided by law and in bona fide farming operations conducted by the veteran.

(2) that the property will be useful in and reasonably necessary for efficiently conducting such operations;

(3) that the ability and experience of the veteran, and the nature of the proposed farming operations to be conducted by him, are such that there is a reasonable likelihood that such operations will be sueessful; and

(4) that the purchase price paid or to be paid by the veteran for such property does not exceed the reasonable normal value thereof as determined by proper appraisal.

The advisory committees and credit information facilities that have been established through the county organization of the Department of Agriculture are to fulfill the legal requirements that the veteran be experienced. with a reasonable chance of success in the venture, and that the price of the property does not exceed a reasonable normal value.

In this connection the opinion has been expressed that inflated prices now being paid for farm lands may make it difficult for veterans to locate properties that can be purchased at values that can be construed as being either reasonable or normal, General Hines said.

Regulations implementing this law are, in so far as the real estate provisions are concerned, very similar to those previously issued in connection with the home loan provisions of the act. In addition to real estate, the farm loan provisions of the law provide for loans to purchase, repair, improve or alter equipment, or to purchase livestock and other supplies necessary to the farming operation. Profitable operation for such purposes depends almost entirely upon the experience, ability and industry of the borrower. Because of this careful investigation of the veteran's ability, experience and character are provided for if a personal property loan is to be guaranteed.

Addition to the regulations to meet this condition are about the only important variations from the previous "home-loan regulations."

In addition to loans for the purchase or improvement of property, guaranty of loan may be made for the purpose of paying off delinquent indebtedness or assessments if the place is to be used as a home. Mortgages will be required on all guaranteed loans unless the amount involved is $500 or less, in which case a loan may be guaranteed on evidence of good character and reasonable ability to repay.

Generally, first liens will be required except where a loan is made under the provisions of Section 505 of the law, which permits the guaranty of loans under second mortgages where the first mortgage is held, guaranteed or insured by a Federal agency.

In these cases the amount of the guaranty may not exceed 20 per cent of the total purchase price of the property, and is, of course, subject to the $2,000 absolute maximum that applies to all loan guarantees. Interest on these second mortgages may be one per cent higher than that charged on the first mortgage, but is, again, subject to the absolute maximum of four per cent, which applies generally.

Two or more veterans may join in a farming operation and effect a joint loan for that purpose. Under these conditions each veteran would be eharged individually with his proportionate part of the guaranty. The total amount guaranteed may not be more than 50 per cent of the loan or in any event not more than $2,000 for each veteran. In cases of default under this type of loan the veterans will be adjudged as if they were several debtors rather than one joint debtor.

The participation of the Department of Agriculture in the operation of farm loan guarantees will require almost no change in the nation wide organization now in operation through the Agricultural Extension Service, Farm Security Administration and the Farm Credit administration.

These facilities will be utilized through two committees to advise veterans on proposed farm loans and to make checks and report on both the conditions of the loan and the character and ability of the veteran making application.

The advisory committee, in cooperation with the Agricultural Extension Service, will advise, inform and guide interested veterans by applying at least the following:

(1) where to get training, if needed

(2) availability and cost of farms in the community

(3) what agreements are locally satisfactory and successful for partnerships and leases

(4) what set-ups are locally successful

(5) the required investment

(6) safe margins of debt

(7) the kind of credit needed and where available

The committee may not recommend a particular lender or urge a specific eredit.

The Veterans' Loan Committee will be a certifying body

It will certify that:

(1) the loans will be used for the purpose indicated

(2) property will be useful and reasonably necessary to operation

(3) the experience and ability of the applicant qualify him for operation

(4) the price represents a reasonable normal value

(5) if loan is for delinquent debt or taxes, it will be used that way

(6) if loan is for improvement, alterations or construction, funds will be used that way and expenditure bears a proper relation to worth of property and will enhance its value.

After considering all facts the Veterans' Loan Certifying Committee will make recommendation on granting the guaranty.

All forms incidental to these loan guarantees are in the hands of the printer and should be available in about two weeks.

Total of $715,470 to Win Its War Citizens Bank Lends Government

Citizens Savings Bank and Trust Company Is Lending the Government Money to Prosecute the War

According to a statement handed out this week by the officials of the Citizens Savings Bank and Trust Company, the oldest Negro Bank in the United States, they are continuing to lend money to the U. S. Government, in its effort to raise sufficient cash to manufacture more guns, construct more tanks, build larger and faster ships, manufacture more planes and other war supplies and to equip our men and women with the necessary uniforms, give them the training and thus enable them to go to the front so equipped and trained to bring the war to a speedy and victorious end.

The President of the bank, Rev Henry A. Boyd. and the Cashier, Mr. A. G. Price, announced on Tuesday of this week that the bank has now invested $715,470 in these government bonds, treasury certificates and other government securities Thus this bank demonstrates not only its national pride but it is an ideal institution of the race.

COTTON-PICKER HYSTERIA

(Continued from page 4)

That demand is coming soon, and the reason is clear.

Cotton farming holds all the makings of a first-rate clash between field industries and underpaid labor. What Southern croppers, day labor and wage-hands want is a fair share of the full price of the cotton they produce, whether or not that price is subsidized. What the planters want is cheap production, and as a group they will be bound by no such charity for their fellow-creatures as were the Rusts. If enough of them want pickers they will have pickers, unhampered by "social safeguards."

For years growers have been saying that the country needed a five-cent cigar, and the South, five-cent cotton, at a profit. The plainer-spoken have very frankly said that the only way to get this cheap cotton was with "slave labor." The picker offers another way to get it a way, growers think, to compete for the world's cotton market with advantage on their side. Which recalls another idea, once advanced, that cotton-field workers, share-croppers and day laborers, should buy the machines cooperatively and rent picker-service to the planters for whom they once worked.

And in the meantime? In the meantime planters are preparing for a last-ditch cheap-production stand against foreign competition, with field labor in the position of devil-take-the-hindmost. On the other hand, foreign producers, for home markets and for export, are marshalling against the advantage of American one and two-row pickers **the same pickers bought in America or manufactured on foreign soil,** plus their own "foreign-born" machines, such as the Soviets' six-row picker, unobtrusively announced in 1933, **three years before the Rusts tried out at Stoneville.**

Organization of small farmers and farm workers, the kind of organization we are talking about these days must, in the end, have destroyed the cotton industry whole life-blood is cheap labor. The pickers, thrown into the battle for markets, to save the day for the South's cotton growers, may actually serve to hasten an end long overdue, by provoking a head-on colliison with well-prepared foreign competition.

If cotton is your crop, your community's crop, or your boss's crop, plan ahead for another crop or another job, and thank God for the picker.

WDL Investigation Brings Federal Grand Jury Hearing

Subpoenas to appear before the Federal Grand Jury in Miami on January 30 and 31 have been issued to 42 persons including 13 Negro workers of Fort Lauderdale, Florida, who gave the Workers Defense League affidavits asserting that they had been falsely arrested on vagrancy charges and fined without trials. This action indicates that the Justice Department has acceded to the demands of the Workers Defense League to seek indictments of those Broward County officials responsible for the illegal action against the Negro workers.

These most recent developments stem from charges made by the Workers Defense League in March, 1944, that 49 Broward County Negro workers had been seized, jailed, and fined without trial in an illegal attempt to force them to work at Jobs which they did not desire. The mass arrests occurred during February and March, 1944, in connection with a decree by the Broward County sheriff's office issued last September under which persons found idle in the city streets were subject to arrest.

A number of the arrested Negroes were members of Local 1526, International Longshoremen's Association (AFL) employed regularly at Port Everglades, a commercial harbor on the waterfront at Ft. Lauderdale, and all, the WDL investigators showed, possessed means of support.

Fourteen men and women were the victims of the sheriff's edict on February 9, 1944, when they refused to pick beans on the farm of Dewey Hawkins at Oakland Park, nine miles north of Ft. Lauderdale, after they had determined that the beans had been picked twice before and were not abundant enough to make the work profitable to them. In the second case which the WDL investigated, approximately thirty-five men were charged with vagrancy and fined on March 24 and 25, after they had been arrested in the Negro business district during their hours off from work.

Last June, after bringing the cases to the attention of the Justice Department, the Workers Defense League sent an investigator to Ft. Lauderdale who obtained thirteen affidavits signed by victims of the false arrest wave. These affidavits were sent by the WDL to the Justice Department. Assistant Attorney General Tom C. Clark kept the originals "in case they might be usefull in prosecution of the case," he wrote.

WDL chairman Rev. Aron S. Gilmartin had appealed to Governor Holland and Senator Pepper for an investigation of the cases, and "the tenor against the Negro inhabitants" of Fort Lauderdale. Governor Holland whitewashed the local officials; Senator Pepper promised his co-

—Nashville Globe.

Call on Colored Farmers to Help Assure Chicken for Fighting Men

WASHINGTON, D. C.,—December 11, 1944—The many colored farmers, located in the Del-Mar-Va peninsula, engaged in commercial chicken raising, will be called upon to do their part in obtaining the 110,000,000 pounds of chicken needed immediately for the Armed Forces under a set-aside order just issued by the War Food Administration. The order requires all chickens grown and processed in the Delaware, Maryland, and Virginia area to be held for purchase by the Army Quartermaster Corps.

Perhaps the largest of these Negro chicken farmers are located in Delaware, where several produce from 20,000 to 30,000 broilers annually. Numerous other smaller "chicken farmers" dot the area.

The set-aside order is necessary because heavy black market operations have made it impossible for the Army Quartermaster to obtain the amount of chicken required for the Armed Forces.

For the next few months, at least, there will be a shortage of chicken for dinner tables in cities from Richmond to New York. Hotels, restaurants, cafes also will feel the shortage and proprietors, operators and customers are asked to cooperate so that our soldiers' needs may be met.

Butchers and grocers too, are asked to cooperate in advising their customers that "chicken is for fighters first."

Chicken is not only a nutritious food for soldiers, it is a morale-builder. A hot-chicken dinner is something members of the Armed Forces look forward to, especially those overseas, who for days may have been eating only cold K rations. To them, a hot chicken dinner is a royal treat.

Especially valuable in hospitals, chicken dinners typify a bit of home to our fighting men. Broilers, fryers, roasters, stewers—all types of chicken are included in the new-set-aside for the Armed Forces.

The War Food Administration advises that the set-aside order, which requires a 100 percent set-aside, will be lifted as soon as the required amount of chicken is obtained.

THINGS THAT INTEREST WOMEN

HOME-MADE LOTION AIDS IN KEEPING HANDS BEAUTIFUL

By Betty Clarke

Now, when hands are doing wartime duties—in the kitchen, garden, canteen or factory—they need more eare than ever to keep them beautiful.

A good lemon lotion can be made at home in a jiffy with ingredients that may be found in the medicine chest or can be purchased from the corner drugstore.

You can prepare the lotion by combining two parts fresh lemon juice. one part rubbing alcohol, one part glycerinc, and perfume as desired.

It can be used on the elbows, too. If they are in bad condition, scrub them first with warm soapy water with a bit of pumice stone; then cut the lemon in half and place an elbow in each half for a few minutes each day.

BOLOGNA CUPS

Bologna is more than a summer meat. It is perfect for fall—especially when served hot. Broil slices of bologna from which the casing has been removed until the slices curl. Watch carefully for it doesn't take long. Then fill the bologna cups with creamed potatoes and onions or creamed peas—and serve immediately.

BACON SPREADS PIQUANT ZESTY FOR SANDWICHES

For school or office lunch box bacon sandwiches are a joyful satisfaction. Just plain bacon and bread sandwiches are fine when the bacon is sliced fairly thick and cooked brown but not brittle and packed plentifully between slices of either brown or white bread. Then there are innumerable combination fillings for sandwiches in which bacon adds just the right salty piquancy.

Bacon-Prune filling gives a spicy-sweet flavor when made with 1 cup of cooked prunes pitted and cut in pieces, 8 slices of bacon cut in small pieces and fried until crisp, combined with 2 tablespoons of chopped sour pickles, 2 teaspoons prepared mustard and 2 tablespoons mayonnaise. Spread this on one bread slice. Butter the companion slice and put a lettuce leaf on it before pressing the sandwich gently together.

Bacon and Cheese make a good combination. If you are serving at home you may put a slice of eheese on bread or bun, top with bacon and put under broiler until bacon is crisp and cheese is creamy. But if you are carrying your sandwiches in luneh box or pienic basket, it is better to use slices of already broiled or fried bacon on top of cold cheese.

Baeon With Endive is flavorful. Broil the baeon crisp and mince it. Add it to chopped endive and season with lemon juiee and paprika for either an open or closed sandwich.

Bacon, Olive and Cream Cheese makes a delicious spread. Cream the cheese, adding a few drops of liquid from the olives and mix with chopped olives and crumbled baeon.

Bacon and Egg Salad on rye bread make the boys eome back for more. Mince hard-cooked egg and sweet cueumber pickle and mix with mayonnaise. Spread this on bread top with erisp baeon sliees.

Bacon Chopped Into Peanut Butter to whieh ehopped piekle relish has been added has a zesty nut flavor. Another good peanut-butter bacon sandwich for home use is made by spreading toast with peanut butter, putting bacon slices across the top and plaeing under broiler until bacon is crisp, and drippings have penetrated the peanut butter.

Bacon Combines With Banana, fresh peach or grated carrot for good sandwich filling. Mash the banana or peach and mix with crisp minced bacon and salad dressing.

MEAT AND CHEESE LOAF

1 Cup day-old bread crumbs
1 1-4 cups milk
2 teaspoons meat extract
1 egg, slightly beaten
1 1-2 teaspoons salt
1-4 teaspoon paprika
3 tablespoons onion, chopped
1 tablespoon chopped green pepper
1 pound ground beef
3-4 cup (1-4 pound) American cheese diced

Combine bread and milk and let stand while preparing remaining ingredients, then add in the order given. Mix very thoroughly and pack in a 4-cup, well-greased ring mold. Place upside down on a greased baking sheet and bake in a 325-degree oven for 30 minutes. Remove mold and continue to bake for 20 minutes. Place on large plate. fill center of loaf with desired vegetables, and garnish with parsley or olives. Serve 5.

If an egg breaks and the egg white is lost. drop the yolk in hot water and cook it slowly. Then set it aside and when it is cold rub through a seive to use as a garnish for salads or soups.

DID YOU KNOW

Keep your bows pretty by washing them when the ribbon is mussy or soiled. Use a little starch where needed.

There is no practical difference in the warmth of cotton or silk hosiery when they are the same knit and thickness?

CREAM PUFFS

Heat 1-2 cup water and 1-4 cup lard to boiling. Add 1-2 teaspoon salt and 1-2 cup flour all at once, stirring vigorously. Cook a few minutes, stirring constantly. Cool slightly and add the unbeaten eggs one at a time. Beat thoroughly after each. Drop by tablespoonfuls into oiled muffin tins or make into 2-inch mounds on an oiled baking sheet, about 1 1-2 inches apart. Bake at 425 degrees F. for 30 minutes, then at 375 degrees F. for 15 minutes longer, or until dry. Make cream filling, salami salad, creamed meat, or ice cream to serve in them for eight delicious servings at the main course or dessert.

If you first soak dried fruits, beans and certain cereals, it will take less time and less fuel to eook them.

HONEY FRUIT STRIPS

3-4 teaspoon baking powder
1-3 teaspoon salt
3-4 cup sifted flour
1 cup chopped dates
1-2 cup chopped nuts
2 eggs, well-beaten
3 tablespoons shortening, melted
3-4 cup honey

Add baking powder and salt to the sifted flour and sift together twice. Mix with the ehopped dates and nuts. Beat the eggs add melted shortening and honey, and blend well. Add this mixture to the dry ingredients and stir until thoroughly combined. Pour into a well-greased pan about eight inches square and bake for 35 minutes in a moderate oven (350 degrees F.). Cut in strips about 1-inch wide. Roll in confectioners' sugar if desired.

PARTY SUGGESTION

Personalized canapes are ideal for a congratulatory party. Spread square soda or whole wheat crackers with cream cheese, and decorate with the guest of honor's initial made from slim strips of pimiento or green pepper.

SPICY FISH DISH

Beat 2 egg yolks; gradually add 1 1-2 cups hot thick white sauce, 4 teaspoon Worcestershire sauce, 1-2 teaspoon dry mustard, 2 teaspoons minced parsley; thoroughly mix Add 1 1-2 cups cooked flaked fish fillet. Pour into 4 individual baking dishes or ramekins. Top with toasted "buttered" bread crumbs. Bake in hot oven, 400 degrees F. 10 minutes.

Cottage cheese is a bargain in health. Use it as often as possible in sandwiches and salads. Try seasoning it with chives or minced dill leaves.

CREOLE BEEF WITH RICE

1-2 to 1 pound ground beef
3 tablespoons fat
1 tablespoon green pepper, chopped
1 tablespoon onion, chopped
1-2 cup celery, chopped
2 tablespoons flour
1 cup water
1-2 teaspoon chili powder
1 teaspoon salt
2 eups tomatoes
1 teaspoon Worcestershire Sauce

Brown the meat in two tablespoons of fat. Brown the onion and celery in one tablespoon of fat and add the flour. Blend. Add tomatoes to make a sauce. Add green pepper, seasonings, meat, and water. Cook slowly 10 minutes. Serve on hot cooked rice. Serves 6.

CRANBERRY-ORANGE PIE

Bring 1 1-2 cups sugar and 3-4 cup water to boil. Wash 3 cups cranberries; add. Cover; slowly boil until skins break. Mix 2 tablespoons cornstarch with cold water; add cook until thickened. Add 2 tablespoons butter or margarine, few grains salt, 2 teaspoons grated orange rind and 1 cup membrane-free orange sections; cool. Pour into 9-inch baked scalloped pastry shell: cover with 7-inch baked scalloped pastry circle.

Meat is at its best when cooked properly.

Tests have shown that fluorine, in the proportion of one part to a million parts of water, builds long-term resistance to decay in the developing teeth of children.

TO WASH WOOLENS

The first laundry rule for woolens is to wash and rinse in lukewarm water. Boiling or soaking eauses shrinkage. Always dissolve bluing flakes and mild soap in hot water. Then add cold water until temperature is not over 100 degrees F. Make a 3 to 1-inch suds. The heavier the suds the less handling is required. By using bluing flakes in the wash water, you make sure of bright looking results without streaks and by-pass the need for a speeial bluing job. Squeeze suds through garment gently. Do not rub or twist because suetion mats and hardens wool fibers. Roll in a Turkish towel and gently press out excess moisture. Unroll immediately. It is a good idea to trace outlines of knitted garments, sueh as sweaters, or dresses, on heavy brown paper if you do not have drying forms. Ease back or stretch to shape. Pin in place with rustproof pins.

LUNCHBOX SUGGESTION

A salad sandwich will make a pleasing change in the lunchbox. Chop or grind raw vegetables, such as carrots, celery, cabbage, and turnips. Season well with onion or garlic and salt and pepper. Mix in enough salad dressing to hold the vegetables mixture together and spread on whole wheat bread.

You can see pink elephants even when you are rational in Asia. They are albinos and supposed to be sacred.

The average person in the United States eats about 17 pounds of butter a year, but rationing cut consumption to around 13 pounds in 1943.

DECORATIVE SOLES

Now that open-toe and open-heel shoes have focused attention on the soles of milady's footwear, designers have brought forth several ideas for making soles decorative as well as serviceable. One company has perfected a method of emphasizing soles by using a smooth, lustrous plastic and rolling over the edge of the sole for a platform effect. No stitching is visible on the custom of the shoe, the outer sole being attached to the midsole inside the shoe. Through the use of color in the comfortable plastic, designers envision a wide range of decorative effects.

When buying clothes for children, take them along to try them on or, when that is impossible, be sure to take their measurements.

STEWED PORK HEARTS

WITH RICE BORDER

1 1-2 lbs pork hearts
2 tablespoons eubed onion
2 tablespoons cubed carrot
1 stalk celery
2 tablespoons flour
2 tablespoons lard
1 tablespoon vinegar
1-2 teaspoon salt

Wash hearts and remove all veins and tough fibers. Cut in small pieces and cover with water for 15 minutes. Drain; add boiling water to cover. Add cut onion, carrot, and celery. Simmer gently 2 to 3 hours. Mix flour and melted lard and stir into the hot stew. Add vinegar and salt, and stir until thickened. Serve with border of steamed ribs. Sprinkle with chopped parsley. Serves 4.

GRAPEFRUIT USES

Dust grapefruit sections with sugar and broil until delicately brown for a meat or fowl garnish.

Resistance to spinach. Serve it with grapefruit sections and watch it disappear.

Freshened salad bowls are particularly good with grapefruit sections—mixed greens. vegetables, fruit, fish or fowl mixtures.

French dressing will have new zing if you use Florida grapefruit juiee as the aeid ingredient instead of vinegar.

TASTY JELLY TOPPING

Many amusing folk tales are told about the American elder shrub. It is said to be the dwelling place of many mischief working elves and its helpful qualities include a toothache cure, keeps mosquitoes away, and quiets the nerves. No doubt it does not possess all of these interesting qualities, but elderberry jelly makes a delicious spread for hot buttered biseuits and is particularly good with cream cheese and crackers.

For warm spice or sponge eake layers. an elderberry jelly topping is exeellent. Whip two egg whites with a pinch of salt. When stiff, lightly fold in a half cup of the jelly by spoonfuls.

Negro Farmers Own Less Land Than Whites Do

Although both whites and Ne-Negroes suffer from the traditional dependence on King Cotton, the Negroes have been more dependent than the white farmers, says a current pamphlet by Maxwell S. Stewart.

Negroes produce one-third of the total cotton crop. As long ago as 1929 it was estimated that three Negro farmers out of every four received at least 40 per cent of their incomes from cotton. There are 4,500,000 Negroes who live on the land.

Tenancy

A large part of these—more than half of the total—are tenants or sharecroppers. The South has long been cursed by tenancy. Almost three-fourths of the cotton farms are operated by tenants or croppers. The economic position of this group, white and black, has its association with a credit system been peculiarly difficult because of carrying extremely high interest rates. This credit system, in turn has increased the pressure for a cash crop—which in the South usually means cotton.

This completes the circle. The South grows cotton because it needs cash. Cotton growing is traditionally carried on by tenants and sharecroppers. This system not only robs the soil and interferes with the education of the next generation, thus preventing agricultural progress, but it requires the assistance of money lenders. And the Negro, being poorer and more dependent on cotton than the white farmer, is the chief victim of this circle.

Negro Landowners

Some Negro farmers do, it is true, own their land. But the number is not greater than one out of past twenty years. Only in Florida every seven and has declined in the and Virginia do a majority of Negro farmers own land, and in Virginia the number has declined drastically since 1910.

Moreover the Negro's farm is small, the farms owned by Negroes average less than half the size of farms owned by whites. In crop value the Negro-owned farms show up even less favorably. This may be explained both by the fact that the land owned by Negroes tends, on the average, to be less valuable and by the fact that the Negroes have less farm equipment at their disposal. The average Negro farm owner has to get along with only $90 worth of implements and machinery, while the typical white owner has nearly four times as much.

There are several reasons why so few Negroes own their farms. Starting as slaves, they were never encouraged to do much for themselves. Instead, they were taught to look to the white man for everything. And of course they had no capital with which to buy land. In many parts of the South the whites have banded together to prevent Negroes from obtaining land in white neighborhoods. Most Negro-owned farms are on back roads or in areas which the whites do not think good enough for farming.

KITCHEN HINTS

To save time, prepare a quantity of white sauce at one time, pour into quart jar, eover, store in refrigerator, and use as needed.

To peel grapefruit and oranges easily let them stand in boiling water about eight minutes before peeling.

To butter bread for thin sandwiehes spread end of loaf with softened butter and cut as thin as desired. Repeat.

THE MODERN FARMER

VOL. XVIII. NASHVILLE, TENN., FEBRUARY 15, 1945 No. 1.

The Road Up

Work Or Go to Jail

By GILES A. HUBERT

Most of our farmers with whom I have talked, or with whom I have had correspondence, have a mortal dread of anything like a "work or fight" or a "work or jail" law. With this sort of thing, they have had sad experience. It surely will not be something that is new to them.

When farm labor is plentiful in the cotton states, nobody seems to think or care very much about what happens to the Negro sharecropper or farm laborer. How he makes a living, the type of shack he lives in, what happens to him in sickness and in death is his own affair. During the prolonged depression of Oh! so few years ago, even the Federal Government had great difficulty in seeing that the federal relief funds intended for his aid actually got to him. A large percentage of it never did.

In areas where tractors, mechanized farming and plantation adaptation to the AAA cotton reduction campaign were driving him off the land, the planters surely were the last to worry about what became of the displaced sharecropper and his impoverished family. I have heard planters say that they didn't give a——what happened to them as long as they didn't hang around and make trouble. **Have we forgotten Southeast-east Missouri so quickly.** The sharecroppers haven't

Now the situation is reversed. Cotton is bringing 23 cents and machinery is hard to get. The planters say "you work or you go to jail."

The South doesn't have to wait for a war. The same thing happens during any period of high prosperity. It happens whenever plantation labor has a chance to better its situation by going to some place where it can get year-round employment a better wage. War simply makes the situation more acute. It also gives a plausible excuse for forced holding of laborers with or without their consent.

When the Federal Government set out to recruit farm laborers from low-wage areas in the South to work on farms in the North where they would receive good year-round jobs, much better housing, from $60 to $80 a month in cash wages, plus liberal perquisites, what happened?

South Carolina let it be known publicly that any agent, government or otherwise, that recruited labor in that state to go to another state would be subject to arrest, fine and imprisonment. The whole planter element in the South got mad. They forced legislation

FARMERS UNION OPPOSES LABOR DISPUTE

What Happens To Me When I'm A Part of A Community Organization

1. I forget what I've done for other people and remember what other people have done for me.

2. I ignore what the world owes me, and think of what I owe the world.

3. I put my rights in the background, my duties in the middle distance, and my chances to do a little more than my duty in the foreground.

4. I try to see that my fellowman is just as real as I am.
5. I try to look behind their faces to their hearts, hungry for joy.

6. To own that probably the only good reason for my existence is not what I'm going to get out of life but what I'm going to give to life.

7. To close my book of complaints against man and the management of the universe and look around me for a place where I can sow a few seeds of happiness.

Can you do these things even for a day? And if you can for a day, why not always? But you can never do them alone—

(Taken from a selection written by Henry Van Dyke; Rearranged by Ocie Lee Smith)

Negro Farmers To Help Produce 4,350,000 Eggs In 1945

Many Negro farmers whose egg sales increase their annual income will share in producing sufficient eggs to reach the new egg goal of 4,350,000 dozen as announced recently by the War Food Administration. This is a slight increase over the preliminary goal of 3,920,000 dogen WFA announced last November.

While about nine percent less than the 1944 record production, the goal will provide 347 eggs for each civilian in 1945, which is equal to the record consumption in 1944 and an increase of 49 eggs over the prewar, 1935-39, average consumption. It will also provide for all military requirements for shell and dried eggs, and with the reserve of about 125 million pounds of dried eggs, carried over from the surplus 1944 production, it will take care of all lend-lease and other possible outlets.

Normal production from the 466 million hens on farms January 1, would about equal the revised 1945 goal.

Thaw Labor Now Frozen, NFU Advises

Washington — Continued opposition to a national service act, at least until unused manpower in America is really mobilized in the war effort, has been expressed by National Farmers Union.

President Patton said in a statement issued during hearings on the measure:

"Demands for additional manpower for the armed services and for war production bring to a head the need for:

"1. An immediate close examination of manpower utilization in industry, agriculture, and also in the armed services and merchant marine;

"2. Strengthened civilian control over all non-military phases of the prosecution of the war, particularly legislation giving statutory authority for War Manpower Commission directives issued after consultation with Management-Labor-Agriculture committees;

Let's Mobilize!

"3. All-out mobilization, three years after Pearl Harbor, of all human and material resources in agriculture to maintain and even to increase 1944 food production levels. This includes equipping of small farmers for full production and full use of their manpower through a Farm Security type program. The same principle applies to all activity;

"4. As part of this mobilization, and of the best possible use of all our manpower, the thawing out of farm labor, now practically frozen in many sections, and providing for recruiting, transportation, training, and placement at fair wages with

(Continued on page 4)

Wickard Says Over Half Of Farm Families Ill-Housed

"About two-thirds of the nation's farm families are ill-housed. Nearly half of the inadequate houses are beyond repair," declared Secretary of Agriculture, Claude R. Wickard last week before the Senate Subcommittee on Housing and Urban Redevelopment.

Continuing the Secretary said, "Slums usually are associated with cities, yet the average level of farm housing would advance the health, dwellings. This is true of what might be termed the settled farm families. Housing conditions for

(Continued on page 7)

Texas FSA Farmer Succeeds

Hilliard Muse is a Negro farmer who on June 11, 1940, with the help of the Farm Security Administration purchased a 150 acre farm near Prairie View College. The farm, with a new house, barn, and other outbuildings cost $6479.

Mr. Muse and his wife at that time were 34 years of age. They had 5 girls and one boy ranging in age from 3 to 12 years. They owned 10 cows and one calf valued at $390., one horse $50; 5 hogs $30; one Chevrolet truck $600; 40 chickens $35; machinery and feed $115; household goods and accounts owed them $535., a total of $1755. They owed $375, leaving a net worth of $1318. In November of 1940 they borrowed $1095 from the Farm Security Administration. $862 of this amount was used to buy a tractor, a cooker and sealer, and other capital goods.

During 1942 they borrowed $2030, of which $1505 was used to buy some cows, a peanut picker, a manuer spreader, fencing and fruit trees.

Through good management and hard work this family has in four years time paid $3175, which they borrowed for captial goods and operating expense and in addition they have paid $3475.28 on their farm. These earnings have come solely from a well balanced farm and home program. Peanuts and watermelons have been their chief source of cash income; however, above the family needs this year they sold around $650 of eggs, milk turkeys and hogs. Their net worth at present is $11,481. They say that it is their plan to pay the farm out in full next year.

Muse keeps his pasture mown and as a result is able to keep a

NEW YORK FARM LABOR CAMP HIT IN SCATHING REPORT

How the War Food Administration and Extension Service permitted migrant workers, herded into upper New York state, to gather crops for corporate farmers and to be subjected to filthy, disease-breeding conditions of over-crowding without any provision for decent living, is told in a report by the Consumers League of New York. The survey treats conditions during the summer of 1944.

Workers were treated as peons; whole families were worked in the fields with no regard for children's rights or the labor laws, even after schools began. The migrants were "treated like pariahs, Joads of the East," the report said, referring to that famous expose of California conditions, "The Grapes of Wrath."

NUF last October 1, exposed the peonage practices to which migrant workers were subjected, herded in gangs by the New York Extension Service and the county agents, and how workers' freedom to move was limited by misuse of gasoline ration coupons, tire permits, etc.

War Food Administration, administered by Marvin Jones, has since refused to take any steps whatever to alleviate such practices. Now the disclosure is made that migrants so subjected to authority of the WFA and Extension Service, are not even treated like human beings.

The report covers conditions in 22 farm-labor camps in Herkimer, Oneida, Madison, Chenango, Cayuga, Wayne, Orleans, Erie and Dutchess counties at the height of the harvest season in 1944.

In part it says:

"These migrant families are customarily crowded together in filthy shacks and sheds—sometimes even in horse stalls. As many as five to nine persons often cook, eat, and sleep in space sufficient for a bed or two and a table. Often, when the family is large, its members sleep crosswise on a single bed."

Refrigeration is unknown even in intense summer heat. Garbage litters the camp ground generally, flies and mosquitoes fill the unscreened living quarters, and outside toilets are in such bad condition that pickers are forced to use the woods.

No Bathing Place

"Rarely is provision made for laundry or bathing. Cooking is usually done over kerosene stoves that run about one stove to every seven families, and generally water must be carried from one faucet, even in a camp housing several hundred persons.

"Often the re-converted, barracks-like sheds, ventilated only by one or two windows, accommodate from 30 to 50 persons, so that the pickers have little choice but to live together indiscriminnately, regardless of age, sex, family relationship or physical conditions—a fact hardly conducive to moral or physical health.

"Scored and treated like pariahs by most of the old-time community residents, these migrant workers on farms and in canneries, 10,000 to 20,000 of whom are brought from other states each season, have no social life of their own and suffer many other social and economic disadvantages.

"They are commonly overcharged at the only available store—of the roadside-stand variety. Here inadequate or no supplies of fresh fruit and vegetables are kept on

ON THE AGRICULTURE FRONT

NEGRO FARMERS GET SET FOR ANOTHER RECORD CROP

While the War Food Administration was announcing the final agricultural production goals for 1945 last week, white and colored farmers were repairing fences, checking their tools, learning how to care for their livestock and poultry at clinics conducted by Extension agents, and in general were putting their farm plants in readiness for another record crop, according to reports received by the U. S. Department of Agriculture.

The final goals call for 363,635,000 acres in crop. This is nearly three percent larger than last year. Among the commodities which Negro farmers will play an important part in producing are: peanuts, cotton, tobacco, poultry and eggs. They will also raise hogs and cattle; produce increased quantities of milk, according to estimates.

The national goals for these products is as follows: peanuts, 3,955,000 acres; cotton, 20,507,000 acres; tobacco, 1,800,000; sweet potatoes, 841,000 acres; sows to farrow in spring, 9,569,000; chickens, 745,800,000, not including commercial broilers; eggs, 4,350,000 dozens; cattle and calves for slaughter, 35,000,000 head.

Aside from the colored farm people who will help the nation attain the wartime agricultural goals this year by operating farms as owners, tenants and croppers, many will pitch in as day laborers to help with the cultivation and harvest of the crops.

The part played by day laborers will be increasingly significant this year because of the expected shortage of workers. The Department of Agriculture says that all indications point to a further shrinkage of the farm work force due both to increased demands of the Armed Forces, and to a further migration to industry.

PLANNING YOUR VICTORY GARDEN

Every Victory Garden of 1945 ought to be fitted individually to the family it is going to feed and to the space available for gardening. In planning the garden this year every gardener will do well says Victory Garden headquarters at the U. S. Department of Agriculture, if he looks back over the experience of the last year or two and plans to meet more nearly than ever the appetites and food preferences of his own family.

As suggestions for planning, Victory Gardeners have the results of a sampling survey of the gardens of 1944 as reported by the Bureau of Agricultural Economics. It tells what other gardeners liked well enough to plant in 1944.

The outstanding favorite vegetable by long odds was the tomato, grown in about 19 out of every 20 gardens in town and country. Half a dozen crops that take considerable space—potatoes, squash melons, cabbage, sweetpotatoes, and cucumbers— were favorites generally, but a much larger percentage of farm gardeners grew these crops—because they had space for them.

Onions, radishes and lettuce were prime favorites everywhere. Snap beans, wax beans, beets, carrots, and peppers, were general favorites and grown almost as commonly in towns as in the country. Cabbage grew in nearly half the town gardens and in four out of five farm gardens. Lima beans and green peas were popular in town, but far more so in the country where there was more space for them.

NEGRO AGENTS SAY ONE CROP FARMING LIKE ONE-LEGGED STOOL

One-crop farming is like a one-legged stool, liable to fall over in any direction, say Negro county agents according to reports received by the U. S. Department of Agriculture.

"While many farmers are turning to poultry and egg production to supply still another leg to the stool," the report says, "other growers are specializing in growing hogs."

Lee Sanders of Johnston County, North Carolina, combined the growing of 18 hogs with tobacco and cotton production to give a three-legged stool on which he is "sitting pretty." Sanders spent $92.25 for the pigs and $58.80 for purchased feeds. He sold 3,525 pounds of hogs for $487.80 and this left him $336.40 for his labor and the feed which he grew on his own farm.

GUARD AGAINST ACCIDENTS

Farmers who spend some time during the winter months finding and correcting accident hazards may prevent painful injuries and loss of time during the busy season, the U. S. Department of Agriculture suggests.

Follow the safety rule, "A place for everything and everything in its place." If alleyways and work areas in the barn are obstructed with feed, harness, tools and other equipment, find a place for these things.

Falls and falling objects cause a large portion of accidents which occur in barns. Avoid storing loose material overhead on the rafters, and see that forks, scrapers, and other farm equipment are kept where they will not cause accidents.

Many barns filled with hay, feed and valuable equipment are destroyed each year by fire. Do not smoke or strike matches in the barn. Light the lantern before entering the barn and fix hooks to hang the lantern on, so that it won't get knocked over and start a fire.

COLORED KENTUCKY YOUTH MAKES GOOD AT FARMING

As a result of his 4-H Club activities, John C. Sears, Negro farm youth in Barren County, Ky., made a profit of $1,498 in the past four years. He produced four acres of Kentucky 41 A tobacco, 20 acres of U. S. 13 hybrid corn, 12 acres of hay, grass and lespedeza, and eight acres of soybeans for hay. Raising registered Chester White hogs, he sold three sows and two gilts and has on hand 11 head at the percent time. He also sold calves for $125 and cream for $150 previous to last April when a cow and team of mules were killed by lightning. Young Sears has contracted to operate a farm of 199 acres this year.

TRAIN SCHOOL LUNCH WORKERS

Training school lunch workers is one of the newer aspects of the school lunch program, designed to raise the nutritional level of growing children. Increase in the number of school lunch programs, which last year numbered 30,000, has created a need for workers trained in large quantity cookery and in getting along with others. Large city systems employing paid workers, and county-wide organizations of small schools where volunteer workers are the rule, are giving in-service training in the planning and preparation of school lunches, through lecture-demonstrations and workshops, with assistance from health and food specialists.

NEW SEWING BULLETIN

Just off the press—ready to help the nation's homemakers plan for their pre-spring sewing—is a new bulletin, "Dresses and Aprons for Work in the Home," prepared by clothing specialists of the USDA. Besides illustrations of scientifically designed house dresses and aprons, the bulletin gives principles of good design and construction, and pointers on selecting a pattern or ready-made for home work. For a free copy of the bulletin, write to USDA, Washington, (25) D. C., requesting Farmers' Bulletin No. 1963.

WAX SAVES HOSERY

The old European custom of rubbing wax on stocking heels and toes is worth reviving in wartime America, the Department of Agriculture suggests. Stocking feet which have been waxed will wear four times as long as those which have not been treated, according to results of experiments in the textile laboratories of the Department. Simplest and most effective of the methods tried for applying wax was merely to rub a piece of ordinary candle or paraffin on heel and toe areas of the stocking.

COLORED FARMERS GET READY FOR ANOTHER RECORD CROP

Negro farm and home agents and the emergency workers provided by the War Food Administration are helping the colored farmers to put their farm facilities in good condition for another record crop, according to State Extension Service reports received by the U. S. Department of Agriculture.

The reports indicate that in several States the Extension Service farm and home agents, as well as the emergency assistants are conducting workstock, pressure cooker and farm machinery clinics. The farmes bring their workstock and farm machinery to the clinics where they are carefully examined. Workstock needing medical attention are treated by experienced veterinarians. Farm machinery and pressure cookers are repaired either by the farm and home agents or by mechanics.

These clinics also serve to teach the farm people how to administer some treatments to their livestock and also how to repair their farm machinery.

COLORED MD. FARMERS EXHIBIT 3,000 ARTICLES; 4-H'ERS GET AWARDS

A total of 3,000 articles of farm and home products were exhibited by colored farm families in six Southern Maryland counties, who participated in 16 community fairs held at the close of the 1944 crop season, Martin G. Bailey, colored county agent with headquarters at Seat Pleasant, disclosed this week. The exhibits were attended by approximately 4,000 visitors. Cash awards were made from funds appropriated by the Maryland State Fair Board.

Schools, churches, and community leaders cooperated with the Agricultural Extension Service at the University of Maryland, in sponsoring the fairs. Each fair was composed of an exhibit of home canning, fresh vegetables, field crops, poultry products, sewing, baking, and handicraft. In addition to the exhibits, educational programs were furnished by agricultural specialists from the University of Maryland and Washington, D. C.

The close of the 1944 crop year in Maryland was also marked by the recognition of outstanding food production achievements by colored 4-H club members. County Agent Bailey points out that 43 colored 4-H'ers received cash awards from the Fair board.

Eleven of the contest winners won special recognition in 4-H project work by producing enough food to feed a fighting man for a year. These club members were awarded "Feed a Fighter" certificates signed by M. L. Wilson, director of Extension for the U. S. Department of Agriculture, Dr. H. C. Byrd, president of the University of Maryland, and by Dr. T. B. Symons, director of the Maryland Extension Service.

Members receiving certificates are: Clyde Jones, Jr., Wardell Taylor and Vietta Holland, all of Owings; Joseph A. Proctor, John Ralph Newman and Joseph M. Proctor of Brandywine; Alfred Braxton of Muirkirk; Harold Forbes, James Proctor, and Leon Henry of Mitchellville; and Alphonso Mathews of Harmons.

ADEQUATE SEEDS AND SUPPLIES FOR 45 VICTORY GARDENERS

Supplies of seeds, fertilizer and insecticides, while not extra plentiful, promise to be adequate for this year's Victory gardens, according to the U. S. Department of Agriculture.

Gardeners are advised to order their seeds as early as possible, because shortage of help may mean a delay in shipment of orders that arrive during the eleventh hour rush.

It is indicated that while fertilizer supplies are not quite so large as last year, they are still large enough to meet Victory garden needs. Insecticide supplies will be about as large this year as last.

Looking back at last year's Victory gardens, the U. S. Department of Agriculture points out that these gardens furnished a large share of the home-canned fruits and vegetables which are now being served on the family dinner table.

Over half the families in this country—as estimated 18,500,000—cultivated home gardens last year. Of these gardening families, 99 percent of those living on farms, and 89 percent of those living in cities did some home-canning last year. It is estimated the average output of each family who canned was about 136 quarts.

HELP WIN WAR AND UP INCOME THROUGH FOREST PRODUCTS

Mississippi Extension Service is urging the farmers in that State not to overlook forest products in making their plans for 1945 agricultural goals, according to an Extension report received by the U. S. Department of Agriculture.

The report points out that about eight million of the 16 million acres in farm ownership in Mississippi is in woodland and that this land is now bringing an estimated annual income of from only 10 cents to 25 cents per acre. In a short period with proper handling, it is said that farmers could realize from $2 to $5 per acre. According to the 1940 census, Negro farm owners in Mississippi have about 573,000 acres in woodland.

Forest products are urgently needed for gunpowder, gunstocks, ships, planes, shipping boxes and crates and for other purposes.

NEGRO FARMER SELLS 43,000 EGGS

Negro farmers in North Carolina are finding that poultry and egg production offer one of the best methods of diversifying farm activities and adding to the family income, say reports from officials of the North Carolina Extension Service.

G. C. Crudup of the Gethsemane neighborhood in Franklin County has been selected as a good example of progressive poultry practices in that section. Negro Farm Agent H. H. Price reports that Crudup sold 43,297 eggs and 3,024 pounds of fryers in the first eleven months of 1944, and that he now has 330 layers and 1,750 baby chicks. Crudup plans to further expand his poultry this year.

9 Colored Women Present At Radio Conference In D. C.

WASHINGTON,— (ANP) —Nine Negro women were among those from 15 countries who attended the association of women directors of the National Association of broadcasters here last week when Mrs. Franklin D. Roosevelt broadcast a reply to Queen Wilhelmina of the Netherlands on the contribution of women to final victory.

Those present at the affair, held in the grand ballroom of the Hotel Roosevelt here, were Mrs. Dora Lee, Mrs. Constance Daniels and Mrs. Daisy George, of New York; Mrs. Mame Mason Higgins, personal secretary to Mrs. Mary McLeod Bethune; Mrs. Ednah Boutte, president New York Metropolitan council; Mrs. Bertell Collins Wright, honorary president, N. J. Metropolitan council and Mrs. Dorothy Lymas, associate editor of the Afro-American Woman's Journal NCNW and national journalist for Delta Sigma Theta Sorority.

Mrs. Ruth Handy, president of the National Federation of Negro Business and Professional women and Mrs. Jeanneta Welch Brown.

STFU Prosecutes Usury Cases

Planter Charged with Excessive Credit Charges

An Arkansas planter was today charged with usury in four lawsuits filed in the Cross County Circuit Court by K. T. Sutton of Helena, Ark., Attorney for the Southern Tenant Farmers Union.

The usury cases are against W. E. Fallas, prominent planter of Wynne, Ark., and were filed on behalf of Will Jones, John Allen Jones, Willie Jones and Jessie Carson, all members of the Union who made sharecrops on the Fallas plantation in 1944.

In making the announcement, H. L. Mitchell, President of the Southern Tenant Farmers Union, headquarters in Memphis, stated. "It is a common practice for cotton plantation owners to collect 10c on the dollar for crop advances made to tenants and sharecroppers. The yearly interest rate often runs as high as 20 to 40 per cent. Rarely, if ever, are the state laws forbidding the charging of illegal interest rates by plantation owners enforced. The Arkansas law provides that 10 per cent per annum may be charged on contract and in the opinion of our attorney, a flat 10c on the dollar interest rate; constitutes usury. If Fallas is convicted of usury, the entire principal and interest charged in these cases will be voided and he will be forced to pay double the amount back to the sharecroppers he defrauded."

Mitchell continued by saying that these cases are of utmost importance to all southern sharecroppers. If the practice of charging a flat 10c on the dollar as interest is held to be usury by Arkansas courts, then millions of dollars will be saved by the little people on the cotton plantations each year through enforcement of the laws.

Mitchell also said that the Southern Tenant Farmers Union retains attorneys the year round to fight for the legal rights of all types of farm labor and while the service is primarily for Union members, all tenants, sharecroppers or farm laborers who believe they are being defrauded on crop settlements, wage accounts, and deprived of other rights, may secure free legal advice by getting in touch with the Union representatives in the field or at the Union office in Memphis.

"Must" Training For Youth In Military Tactics Discussed

"Compulsory military training is not needed in a democracy. If it were needed, the time of war is not the time to make such a decision," writes Dr. David D. Jones, president of Bennett College, in the exclusive HEADLINES Poll of Negro college presidents on the vital issue of peace-time conscription.

Dr. Jones also says, "I write as a father who has two sons in the armed forces. Therefore, I have strong convictions on the matter of compulsory military training. There are enough forces in American life which are tending toward totalitarianism in our nation. . . If, in addition to the hobbles already existing, we add the control which would come through compulsory military service for youth, we make it to easy for an American Hitler to emerge."

On the other side of the question is Dr. Frederick D. Patterson, president of Tuskegee Institute who answers, "I am inclined to regard it no less than the patriotic responsibility of every American citizen to go along with this recommendation. That there are dangers to be feared in terms of regimentation, one cannot doubt. There are also certain assets, however, in terms of physical development and training, even in vocational and other non-military ways which would greatly benefit Negro youth. . . "

Bank Quarters

The Citizens Savings Bank & Trust Company is located in this magnificent four-story brick building at the corner of Fourth and Charlotte Avenues in Nashville, Tenn.

YOU MAY OPEN A DEPOSIT IN THIS BANK **BY MAIL**

Every Deposit Insured Up To Five Thousand Dollars By The Federal Deposit Insurance Corporation

Forty years of banking service is the unimpeachable record of the Citizens Savings Bank And Trust Company of Nashville, Tenn. Not a single depositor has lost one penny in this banking institution since it opened its doors back in 1904.

We pay interest on savings accounts. We have regular commercial department. We can act as executors, guardians and trust agents.

Lay aside something for the future. Start a savings account in this bank at once. We are as near you as your post office.

Work or Go to Jail

(Continued from Page 1.)

through Congress that made it impossible for even the Federal Government to recruit labor for work where it would be needed unless this was aprpoved by local authorities. The result was that no labor was recruited legally.

Then South Carolina passed a "work or fight" law so that any person who was caught without a South Carolina job could be forced to work or go to the army. Negro sharecroppers had to stay where they were or get clear out of the state before they were caught.

In Sandersville, Ga., all Negroes have to wear badges to show the names of their employers and their work credentials. All Negroes working in the town MUST report every Wednesday morning during harvest season to work on farms. In Columbus, Ga., ten Negro men and women found in pool rooms and other recreation places were given $50 fines or 60 days in jail.

And so it goes, and we don't have to stay in Georgia for cares.

Negroes in this war cannot be accused of not being patriotic. There are not many Negro families who do not have members in the armed forces. They are contributing according to their means to the war effort.

Negro farmers, in particular, have been praised by the War Food Administration and the Secretary of Agriculture for the fine showing they have made in increasing their food production.

But they do not wish to be told that, although there are war jobs in Detroit, Omaha, San Francisco or New York, **where they can earn more money because they can do more for the war effort**, they must stay here in Alabama or South Carolina.

Must this sort of peonage go on for the benefit of those same land barons who just a few months ago didn't care what happened to them. These same planters are placing their order now for cotton picking machines for the postwar, so that they can do without more Negroes.

A Federal "work or jail" law may be needed in most parts of the country or in industry, but in Southern agriculture it is not. It would simply give governmental sanction to a nefarious business that is part and parcel with what is wrong in the South.

Negro farmers and their leadership fear a "work or go to jail" law. It is not difficult to understand why.

IT CAN BE DONE

BY A FRIEND OF FARMERS

The Foreign Labor We Do Not Need

Labor is as much a commodity as food, cotton or fuel, and as such should be able to sell its services on a free market.

In many areas in this country, farm labor is not free. In these areas the farm labor market is a series of monopolies, established and controlled by organized groups who have thrived—so far, on the profits from cheap labor.

These groups can and have fenced in farm labor with bad laws, and by crude methods, so that the price of farm labor has been forced down below the point where it can buy the goods needed for recent living.

It is often argued, without much conviction, that labor laws such as Public Law 45 have not frozen labor—that farm labor is still free to move if it wants to. There are a number of things that tend to keep most of the underemployed, underpaid Southern farm workers from trying to move however much they may want to.

The basis of the argument that the law does not harm is that the law says only that Federal Funds may not be used to transport farm labor.

The emptiness of such argument lies in the many thinly-veiled resorts to force which have been used to bolster the law, such as the refusal of bus and railroad station agents to sell north bound tickets to farm workers; black-listing by planters, the closing of Negro schools and the free-for-all application of vagrancy laws. Added to such attempts to halt movement by outside pressures is the fact that the hand-to-mouth worker even in areas which have topped for the moment, his "radical" demand for 30 cents an hour for the hours worked, is seldom able to scrape together enough of his own money to move more than one or two counties away. It is estimated that moving to nearby localities cost a farm worker between $50 and $60.

That is why the Farm Security Administration was detailed to work out a plan through which farm labor could be moved about the country, voluntarily but at government expense and under government direction, to points of actual need—not, necessarily, the points from which the cries of "shortage" came loudest. The government-sponsored, follows the crops program was put to work and had begun to produce results when it was killed by P. L. 45, born in the South where the farm labor shortage was least, and resistance to increased farm wages greatest.

And will those who have heard that the farm wage bill rose 46 percent between 1940 and 1942 bear in mind that net farm income rose 110 percent in the same period, **while the percentage of farm wages to farm cash income dropped steadily.**

The public, generally, cannot tell when cries for help come from nickel-squeezing growers ignoring regular workers, and when they come from honest farmers in times of real need.

Without screening, these cries may bring volunteer labor to the worthy and meet a national need, or they may help the unworthy to support private greed.

Organized Farm Workers Could Provide That Screening.

The use of prisoners of war labor is limited to the war period, and is not important to the basic farm labor problem, but **Government importation of foreign labor is an unnecessary evil.**

In the first palce, competent estimates show enough domestic labor to meet all of our agricultural needs for years to come, **if that labor is assisted with funds now denied to it** to flow freely over the country in the direction of **investigated requests.**

Greed froze American farm labor and brought in foreign labor (easily discontinued) under conditions-of-work arrangements that American labor, black or white, never got.

True enough, the draft has thinned American farm labor ranks but except for a few short months before someone decided that the FSA labor program was "coddling" American labor with leak-proof shelters and some nearby water spigots, **domestic farm labor never had a chance. The Jamaican, Bahaman and other agreements commit growers to certain basic decencies for foreign workers only.**

These workers were not brought in because they were "spiritual" or to set new and better patterns for agricultural labor. They were pressed in to defeat the demands of domestic workers and so help to preserve old patterns.

Foreign labor we do not need. Free domestic labor in a free market we must have. Organization is the first step.

AND PAY THAT POLL TAX

ON MR. WALLACE AND MR. WILLIAMS

The fight is on again. The President has appointed Henry A. Wallace as Secretary of Commerce and Aubry Williams as Administrator of the Rural Electrification Administration. These sparks immediately set off anew the explosion which could be expected between liberals and conservatives in the Congress, in the Press and on the Radio.

The scrap over senate confirmation of these appointments is not primarily a party fight. There are liberal republicans who are generally for confirmation. On the other hand there is the conservative, anti-labor and anti-small farmer, pro-plantation democratic minority who are against confirmation.

Negro farmers and their leadership should be particularly interested in what happens, regarding these two men. Mr. Wallace, as Secretary of Agriculture, established and supported the agencies and policies which have meant more to small farmers, including Negro farmers, than any other in the history of American agriculture. He promoted and supported the Farm Security Administration, the Soil Conservation Service and Rural Electrification. He managed to bring the Farm Credit Administration under the Department of Agriculture so that it's credit policies could be liberalized to reach and serve the needs of farmers in the lower income groups.

Mr. Wallace advocated the employment of trained and capable Negroes in all branches of the agricultural department and the paying of equal salaries for equal work regardless of race or sex. As a candidate for the Vice-Presidency he advocated abolition of the poll tax and abolition of restriction on voting which kept millions of poor people in the South from voting.

Mr. Williams is well known to Negroes in his advocation of fair play while administering Relief Agencies and as Administrator of the National Youth Administration. He saw to it that federal funds for practical youth training dispensed in the South reached thousands of Negro youth for the first time in history. Training Negroes received from N. Y. A. placed thousands in positions to take war jobs in industrial plants at good pay.

The whole outlook for a better position for the common man in particular, and Negro farmers in particular, in the Postwar era depends upon our ability to keep such men as Wallace and Williams in responsible positions in Washington where they can do the most good.

Whether we are Republican or Democratic in our political affiliations does not matter here. These are men who have fought for us in the past and who can be expected to fight for us in the future. Negroes should support them.

Texas FSA Farmer

Thaw Labor Now Frozen

(Continued from Page 1.)

decent working conditions of every available farm worker where needed, with a minimum of lost work days;

"5. Immediate step-up on the production of farm machinery, now behind schedule.

"6. Assurance to farmers and labor of measure for postwar security comparable to conversion legislation assuring industry of quick and liberal contract termination settlements and tax refunds to offset postwar losses.

"Pending decision on new manpower policies, and particularly null we have the exact up-to-date facts about the use and waste of manpower, our future food requirements seem to require suspension of inductions of farm men, who in the judgment of County War Boards, are essential to food production."

Candidate: "How did you like my speech on the agricultural situation and problems last night?"

Farmer: "Wasn't bad, but a good day's rain would do a lot more good."—Metuchen, N. J., Dairy Farmers' Digest.

Part-time Schooling

By GEORGE S. MITCHELL

In country neighborhoods all over the South a great many boys and girls quit school after the fourth or fifth grade. They have been going to poor one-room schools and from lack of interest or sickness or other causes, they may have failed to get promoted a time or two. When they get fourteen or fifteen years old, and get a mind of their own, the best persuading their parents can do often won't hold them in school. They are big and strong, most of the other children in school are smaller, they can work usefully at home or they can make pretty good money working for others. The result is they quit. Even if they are "called" being in school, they may be marking time, and learning lot less than they ought. This isn't true in every family, or in every school, or in every neighborhood. Many families get their children on through High school, and some to College. But everywhere you go, you find young boys and young girls that did quit early.

School people will tell you that a child who learns to read and write and gets along well until say the fourth grade, and then goes to work, is apt to lose most of what he learned, and end up a grown man or woman not really able to read or write or figure.

The Army has found a lot of young men like this, who have to be taught all over again. Industries keep finding them, and ordinary times, they either give such people low pay or they drop them.

In spite of our schools, we have in the South a whole group of people who have come along generation after generation without the benefit of modern education.

Here is a proposal that would do something about this, and that would also teach everybody the skills needed to do high-class, better-paid work. In England they have made it compulsory for all young persons, after the war, who are out of school and not yet twenty years old to take about five hours of schooling each week If they have factory jobs, they work five hours less a week than grown people, and put in the five hours in a training school, something like a vocational high school. They can take regular subjects, as well as shop work. The employer pays them for the five hours, as though they were at work. All employers benefit in the end, because they get a labor force that is skilled, and able to do better work.

For the farms, perhaps we could fix it so that an agricultural teacher is at Cool Spring on Monday morning and at Fork Church Tuesday morning, and so on around the district during the week. The farm boys and girls would come in to the half-day of schooling for their neighborhood. They could learn about fertilizers, and taking care of the land, and livestock, and about farm carpentering, as well as about history and general subjects. If they are living at home, they would go on their father's time: if they are working for another farmer, that farmer would be required to pay for the half-day a week, as though it had been put in at his place.

If we had something like this, that took in all the boys and girls up till twenty or twenty-one, we could get everybody brought up to scratch in one generation. And the cost of the extra teaching could easily be made up in better tax yields from a population that knew more, and therefore earned more.

Girl: "I'm telling you for the last time that you can't kiss me."

Sailor: "Fine! I knew you would weaken sooner or later."

USDA Report Shows 1945 Machinery Prospect

During the 1945 crop year American farmers will probably receive considerably less farm machinery than they did in the previous year, the Office of War Information said today in a report on farm machinery production and distribution.

While schedules call for approximately the same amount of machinery and attachments, and some $20,000,000 more in repair parts than was produced in the last 12 months, most recent available reports show that production is running some 25 per cent behind schedule, because of severe manpower shortages and difficulty in obtaining malleable and grey iron castings and other critical component parts.

The supply probably will fall short of greatly expanded demands, the report added.

Data for the comprehensive report were supplied by the War Food Administration War Production Board, Bureau of Agricultural Economics of the Department of Agriculture and the Foreign Economic Administration.

Highlights of the report follow:

(1) Approximately 90 per cent of the new farm machines (except tractors) rolling off assembly lines in the United States during the 1945 production year (July 1, 1944, to June 30, 1945) will be available to American farmers.

Approximately 10 per cent will go abroad— approximately seven per cent in commercial exports, and three per cent through Lend-Lease, according to the Foreign Economic Administration.

(2) For the 1945 production year, farm machinery companies have scheduled slightly more production in dollar value—a total of $697,000,000—of new machines, repair parts and attachments for domestic and foreign use than they had in 1944, WPB reported.

The 1945 production program is divided as follows: $455,000,000 for new machines; $204,000,000 for repair parts and $38,000,000 for attachments. This compares with scheduled manufacture in the previous production year (1944) when the total was $682,000,000. The 1944 total included: $465,000,000 for new machines; $185,000,000 for repair parts and $32,000,000 for attachments.

(3) As long as the war continues, farmers will not be able to buy as much new farm machinery as they will need in order to maintain their facilities at greatest efficiency, the War Food Administration reported.

WFA said that in 1945 supplies of new farm machinery, even if manufacturing schedules are met, will not meet essential demands. No more new tractors, side delivery rakes, combines or other haying and harvesting machinery will be available during the 1945 crop year than were available during the 1944 crop year.

Because emphasis is on military production, no action has been taken on the supplementary farm machinery production program as submitted by WFA to meet farm machinery needs that had developed among American farmers after the present production schedules were set, WFA reported.

Current problems of farm machinery manufacture are indicated by the fact that for the first quarter of the 1945 production year (July, August and September, 1944) production of new farm machinery, exclusive of wheel tractors, repair parts and attachments, was approximately 25 per cent behind schedule, according to the War Production Board.

This lag in production was caused by manpower shortages and the difficulty in obtaining components, chiefly malleable and gray iron castings. In the Middle West, where the bulk of the American farm machines are made, the labor supply is very inadequate and is likely to remain so while urgent war production continues, WPB said.

A large farm machinery concern reported in October 1944, that by March 1945, it would need approximately 6,000 additional workers to keep production up to schedule, WPB said.

(4) Production of new farm machinery units is now at an annual volume that approximates that of 1941, the largest postwar production year. During the 1943-44 census year (November 1, 1943, to October 31, 1944), however, American manufacturers of farm machinery nearly doubled the dollar value of total production as compared with the 1942-43 census year. Annual production, as classified by new units, repair parts and attachments, on the basis of the 1943 price level, was reported by WPB as follows:

Census Year 1943-44—Total Production, $705,600,000, New Units, $469,900,000, Repair Parts, $199,800,000; Attachments, $35,900,000.

Census Year, 1942-43—Total Production, $363,813,222; New Units, $232,497,641; Repair Parts, $115,241,663; Attachments, $16,073,918.

Census Year—1941-42—Total Production, $467,748,818; New Units, $327,428,832; Repair Parts, $114,887,763; Attachments, $25,432,223.

FARM MACHINES, FARM LABOR AND FOOD OUTPUT

American farmers are making greater use of individual farm machines during the war. The exchange and cooperative use of some machines, such as tractors and combines, has increased markedly. One corn picker, for example, might be used to harvest as much as 1,200 acres of corn in a year. Combines have been hauled a thousand miles to harvest crops on farms in county after county, the Bureau of Agricultural Economics reported.

The custom use (operation for hire) of other farm machinery, especially combines, corn pickers and windrow pick-up balers, also has increased. Many farmers who brought new equipment while machinery was rationed during 1943 and the first nine months of 1944, agreed to share use of the machines with others as a condition of obtaining purchases certificates. Some tractors have been equipped with headlights, and have been used around the clock, the drivers working in three shifts, the Bureau said.

More intensive use of existing farm machinery is one factor that has helped to increase wartime food production in the United States. The food output reached an all-time high in 1944. More than one-third more food was produced during 1944 than in the pre-war period of 1935-39, although farmers were handicapped by shortages of farm machinery and labor, the War Food Administration reported.

Farmers were able to increase crop production because of several other important factors. Among them were

(1) Harder work and longer working hours. The crop output per farm worker was 28 per cent higher in 1944 than it was in 1940. Labor-saving machinery helped in this accomplishment. The total number of farm workers was augmented also by seasonable help, particularly during harvest periods, from about 3,000,000 persons. A large number of these were older men and women, besides high school students from villages and cities.

(2)More favorable weather; (3) increased use of fertilizer and lime: (4) use of improved varieties and conservation practices; and (5) increased crop acreage. Acreage devoted to crops increased five per cent in 1944 over 1940, WFA reported.

Twenty- per cent more farm commodities were produced in 1944 than in 1940 with five per cent fewer workers. The average annual employment on American farms decreased from 10,585,000 in 1940 to 10,037,000 in 1944. Approximately 4,000,000 workers have left agriculture for war industries or the armed forces. Approximately 1,700,000 farm men had entered the military service up to January 1, 1945, WFA estimated. The Department of Agriculture reported that the farm manpower supply has fallen to the lowest point in 35 years.

Up to December 1, 1944, draft deferments were given to 1,508,000 farmers. An additional 127,000 men classified as 4-F are holding agricultural jobs. Up to January 1, 1945, of the farmers deferred, approximately 364,000 were between the ages of 18 and 26, the Selective Service Headquarters reported.

In January, 1945, Selective Service directed local draft boards to re-examine the deferments of the 364,000 agricultural workers 18 to 26, as well as deferments of 4-F farm men. What effect the reclassifications will have on the already depleted supply of experienced farm labor remains to be seen, WF Asaid.

MORE MILKING MACHINES, TRACTORS, PEANUT PICKERS IN USE

The number of milking machines that were on U. S. farms on January 1, 1945, were nearly 50 per cent above the number which were in use on January 1, 1942; combine harvesters, 23 per cent; windrow pick-up balers, 67 per cent; corn pickers, 29 per cent. Manufacture of these types of machines comprised a larger share of total production during the war than before the war, although production of farm machinery in general has been restricted since 1942.

There were approximately 12 per cent more tractors on farms on January 1, 1945, than there were on the same date in 1942. Percentage increases in the number of tractor cultivators and tractor row crop planters were greater than for farm tractors. But the production of most machines for preparing and seeding of land increased less rapidly than the output of tractors, the Bureau of Agricultural Economics estimated.

Production of manure spreaders, either horse or tractor-drawn, has not been sufficient to cover replacements. The number of farms in 1945 will be slightly less than in 1942, the Bureau said.

The Bureau estimated that there were approximately 32 per cent more peanut pickers on farms on January 1, 1945, than there were on the same date in 1942. More peanut pickers were manufactured during the war than before the war because increased production of peanuts was necessary. The Japanese advance into the South Pacific had cut the imports of cocoanut, palm, palm kernel and soy bean oils.

To supply the oil for oleomargarine, industrial products, soap, lineoleum, varnish and paint, American farmers were asked to increase the production of soybeans, flax and peanuts. Peanut acreage alone was expanded to 4,169,000 acreas in 1944, in comparison with the 2,173,000 acreas in the 1935-39 period, WFA said.

The following table, provided by the War Production Board's Farm Machinery and Equipment Division, shows the production of specified items of farm equipment made during various peak years, especially disclosing the great increase in the output of combines, corn pickers, pick-up hay balers, potato diggers and two-row tractor cultivators:

Combines, 1937, 29,403; 1941, 54,296; 1944, 62,807.

Corn Pickers, 1937, 13,586; 1941, 15,958; 1944, 32,668.

Pick-up Hay Balers, 1937 **; 1941, 8,962; 1944, 16,218.

Field Hay Choppers, 1937, **; 1941, 751; 1944, 2,759.

Combination Hay Stackers, 1937, 450; 1941, 2,740; 1944, 2,965.

Peanut Pickers, 1937, 960; 1941, 1944, 1,677.

Blower Eleveators, 1937, **; 1941, 2,111; 1944, 3,935.

Potato Diggers, 1937, 5,703; 1941, 2,740 :1944, 7,262.

Two Row Tractor Cultivators, 1937, 121,158; 1941, 138,381; 1944, 168,352.

Scheduled for year 1943-44; includes some items distributed in the fall of 1943.

** Very small production in 1937.

Colored Soldiers Urge 'Just Peace' For Germany and Japan

By GEORGE COLEMAN MOORE

Somewhere in Luxenbourg, (ANP)—With the Red Army smash opening the "second phase" of its winter offensive along the Oder river heralding a possible early victory in 1945, enlisted men of the 626th Ord. (Am.) Co., are considering the question, "What to do about Germany?"

That members of the crack 3rd Army unit rushed here to support the resistance during the German counter-attack are giving serious thought to the problem is evidenced by the wide range of ideas expressed. Among them is every opinion from the firm but just dealing advocated by Orsen Wells and the Free World Association, to the extreme Vansittart Plan with a fair portion of subscribers to the Morgenthau small farm idea.

"We ought to be tough with Germany to make her know she's lost this one," declared Pfc. S. D. Farrington of Houston, Tex. "But at the same time we must be fair. If we break up the country into small farms that virtually would be slavery, to kill 'em all off, un-moral. We should be severe in punishment but just."

Pfc. Warren Brown, Shreveport, La., wants to see Germany divided like all Gaul into three parts with Russia, England and the U. S. in control for an indefinite number of years. "That's the only way to do it, occupy her not for a year or so but for 10 to 15. Otherwise everything we've fought for will prove futile and 25 years hence it'll be the same old bloodthirsty story."

Charles Williams, another Pfc. from Houston, agreed except that he'd like to see Russia handle German affairs convinced that Stalin would for all times crush Nazi military ambitions.

Pvt. Lewis Webber, New York City, cut in, "There's been too much blood shed already and no problems can be solved by visiting drastic vengeance upon Germany, but by so doing newer and more terrible problems may be created."

"War criminals like Hitler, Goering and Goebbles must be tried and convicted but the German people need only be re-educated," said Pfc C. L. Collins, Beaseley, Texas.

What enlisted men think about the question of Germany may not affect final solutions but that they are interested in the problem is clearly demonstrated by their discussions. They realize peace is a responsibility as well as a privilege They've earned it. They expect to make it stick.

India Watching Way Democracy Is Practiced In U. S.

New York—The people of India measure the democracy of United States' foreign policy by the degree of democracy which is extended by the American government and people to the Negro minority within their midst, declared Kumar Goshal, Indian scholar in his lecture, "The People of India and the Negro Question" last Saturday at the Schomburg Collection of Negro Literature of the New York Public Library. This discussion was part of the weekly series, "A WORLD VIEW OF THE NEGRO QUESTION."

Mr. Goshel, who was born in Calcutta, India and is the author of the popular book, THE PEOPLE OF INDIA, gave a bold economic analysis of imperialistic forces which have reduced the people of Africa and the people of India to a dependent status. Africa & India had many trade and cultural relations during ancient and medieval times ,the speaker said. According to the plan of dividing colonial peoples East Indians were imported into Africa and were sometimes used as policemen in the same manner that East Indians were imported into Hong Kong, China. Despite it all, the people of India have become increasingly conscious of their common destiny with the people of Africa and African peoples everywhere.

Mr. Goshal pointed out how Gandhi and Nehru had always brought up the African question and that the resolutions of the All-India Nationalist Congress included protests which later resulted in demonstrations against the invasion of Ethiopia.

During the lively question period Mr. Goshal pointed out the futility of expecting the voluntary giving up of rich colonies by the empire states of Europe. The only hope, he felt, for a durable peace would be to permit the colonial areas to develop themselves economically and politically so that they would become consumers for the surplus in the world market. Otherwise there would be a mad scramble among the big powers for raw materials and markets. Meanwhile revolutions among the colonial peoples would surely come in security and freedom are longer denied them.

Hybrid Corn Tests by Negro Farmers Successful in Anson County

Due to the high yield reputation hybrid corn possesses and request of information about it by Negro farmers in Anson County, William C. Cooper, Negro County Agent, received the cooperation of six farmers in carrying out comparative yield result demonstration during 1944. These tests were to compare the yield of the farmer's own seed with that of hybrid seed when grown under the same conditions.

Each of the demonstrators bought seven pounds of yellow hybrid from a local producer. The hybrid was planted alongside the farmer's own variety in the same field. All of each particular farmer's corn was planted at the same time, fertilized, cultivated, and otherwise treated the same. The cooperators and comparative acre yields in bushels were as follows:

John P. Harris, own (Jarvis) 62.91, hybrid 72.29; Tommy Johnson, own 27.57, hybrid 29.43; Elijah McCoy, own 45.85, hybrid 68.14; J. D. McCoy, own 38.4; hybrid, 46.49; D. L. McLendon, own 39.2; hybrid 53.24; W. F. Ratliff and Robert Huntley, own 18.07, hybrid 35.64. All figures are based on measured land and weights.

North Carolina farmers fail by several hundred thousand tons each year in producing hay and grain for livestock on the farms. (Anson County farmers are no exception). Such demonstrations as above are a part of the Extension Service program to teach farmers improved practices and recommendations to help them overcome their feed deficit. It is advised that farmers desiring to plant hybrid corn should study the varity recommended by Specialists for the section in which they live and also consult the local county agent.

Pvt. Houston Rollens To Take Special Training Course

INDIANTOWN GAP, Pa., Feb. 28—Pvt. Houston Rollens of 3024 Indiana avenue, Nashville, Tenn., has been selected to attend an 8-week course at the Cooks and Bakers School, Indiantown Gap Military Reservation, Pa.

Pvt. Rollens entered the service Jan., 1943 and was stationed previously at Ft. Leonard Wood, Mo,, and Ft. Benning, Ga.

Sad: "She sure gave you a dirty look."

Sack: "Who?"

Sad: "Mother Nature!"

The story about the motor stall-here," says the rookie on ing is out-of-date. "Let's park leave, "and save gas for the offensive."

Surplus Army Trucks Sold to Farmers

By November 25, 1944, the Army had declared 49,782 military trucks as surplus. Of these, 36,604 had been sold by the Office of Surplus Property of the Treasury Department through its 11 regional officcs. The Treasury disposes of surplus trucks after consulting ODT in the areas where the transportation problcm is critical. A sizable proportion of the surplus trucks has been sold for agricultural purposes. The War Food Administration's state and county AAA Committees cooperate with Treasury regional offices so that trucks may be distributed to meet the most critical agricultural needs. Quick sales were made to farmers during the Fall harvesting period.

The largest number of trucks were allocated to the Sixth Region-Alabama, Tennessee, Florida, Georgia, Mississippi and South Carolina. In this area 8,422 trucks were sold.

Lend-Lease shipments for the entire year of 1944, when the figures are completed, may total approximately 3.2 per cent of the dollar value of the estimated new production of farm machines in the country.

Farm machinery under Lend-Lease has been exported principally to the British Isles as well as to Australia and New Zealand.

The British Isles, under reverse Lend-Lease, supplies approximately 20 per cent of the food consumed by American troops stationed in that area, while Australia and New Zealand have provided virtually all the food consumed by American forces in the Southwest Pacific, according to FEA.

Before the war Canada was the largest commercial customer for American farm machinery, taking approximately half of that which was exported. The British Isles and other sections in the British empire, Argentina, Mexico and Chile followed. In 1942, however, export to the British Isles was increased slightly.

Spend $500,000 at Tuskegee to Fight Polio

NEW YORK—(ANP)—More than half a million dollars for treatment of Negro victims of infantile paralysis has been spent at Tuskegee Institute, Alabama, during the past four years, Basil O'Connor president of the National Foundation for Infantile Paralysis, announced.

Patients from communities in 13 states without proper facilities for their local care have received treatment at the Tuskegee Infantile Paralysis center. The National Foundation has since 1941 granted $414,-356.69 to the center from funds collected in the annual March of Dimes. Local chapters have made additional grants, totaling some $100,000 besides paying for treatment of patients in their own communities.

Vocational rehabilitation of patients and education of child sufferers of the disease are also provided at Tuskegee. A boy from Georgia who was stricken with poliomyelitis learned commercial photography while undergoing treatment at Tuskegee. A young man from Oklahoma makes his living as a linotype operator as a result of his training at the infantile paralysis center. Patients have their choice of all the regular vocational courses offered at Tuskegee.

The Tuskegee Infantile Paralysis center is one of the few medical centers where Negro physicians and nurses can gain experience as specialists in various departments of medicine and surgery and where the best and latest facilities and findings in medical science are available to them. It is intended that the center will become one of the great Negro medical science training centers.

The infantile paralysis center, housed in a modern, three-story, fireproof building which was erected in 1941 at a cost of $172,256, is a special unit in the hospital services of the John A. Andrew Memorial hospital at Tuskegee. The staff of the center consists of the head orthopedic surgeon, an assistant to the orthopedic surgeon, a laboratory technician, two physical therapists, two Kenny treatment packers, six graduate nurses, a dietician, six attendants, four orderlies, a housekeeper, an administrative assistant, and the maintenance engineer.

A 20,000-gallon, temperature controlled pool is a feature of the physical therapy facilities which occupy the first floor of the center. Laboratories, treatment rooms, a brace-fitting room, classrooms and offices are on the second floor. Rooms and wards, with 33 beds for patients, a model diet kitchen, utility rooms and sanitary facilities are on the third floor.

Additional facilities are under construction to reduce the need for maintaining a waiting list. Patients are referred to Tuskegee by the National Foundation for Infantile Paralysis. A few apply direct to the Tuskegee center.

The educational work at the center is a joint venture of Tuskegee and the Alabama State Department of Education. Vocational rehabilitation of patients is achieved through cooperation of the institute with the vocational rehabilitation departments and state in the patients' home states.

The age range of patients at the center has been from one year to 36 years. They have come from Georgia, Kentucky, New York, Tennessee, Mississippi, Oklahoma, Maryland, Louisiana, Virginia, Florida, Ohio, Alabama, and South Carolina. No victim of the disease has been denied care for lack of funds.

WFA Calls on Negro Farmers to up Hog Production in '45

The South's 570,000 Negro farmers, few of whom have raised hogs commercially, but many of whom have raised them as a part of their general crop program, are included in the recent appeal of the War Food Administration for farmers to keep additional sows available for farrowing next spring to help meet the goal for spring pigs.

Although these farmers have not gone in for commercial production to any great extent, their individual meat production has done much to help the war effort in local areas by providing meat for family consumption, thereby releasing other meat stocks for war purposes.

In order to reach the goal, hog producers would need to increase the number of sows farrowing next spring by about 11 per cent over the number planned, as indicated by the December pig crop report.

War Food Administrator Marvin Jones says, "the continued high lev el of demand for meat for war need makes it imperative that hog producers meet the goal of 57,500,000 spring pigs. I am concerned about the prospect of a pig crop next spring smaller than last spring. We shall need more hogs than now appear will be marketed next fall and winter. The feed grain supplies available will feed more hogs than would be produced from next spring's pig crop, according to present indications. I am asking all War Food Administration agencies with field staffs to make every effort to let farmers know that we shall need additional pigs."

WFA Takes Step to Further Assure Chicken for Army

To be further assured that Army requirements will be met, the War Food Administration order, requiring that 100 per cent of the chickens produced and processed be set aside for purchase by the Army Quartermaster, has been extended to seven Georgia counties and 16 counties in Arkansas, Oklahoma and Missouri, according to a recent War Food Administration announcement.

The order originally applied to the Del-Mar-Va area (Delaware—Maryland—Virginia) and certain sections of West Virginia. Since it appears that the supply from this area will not meet the requirements, extension of the order is in line with WFA's original announcement that the set-aside might be put into effect in other heavy chicken producing areas.

This set-aside order which went into effect in the Georgia area on January 8 and in Arkansas area on January 15, may create temporary table shortages for civilians in such cities as New Orleans, Miami, Birmingham, Atlanta, Nashville, and other cities in these areas.

Such cities as Chicago and Kansas City, however, may not feel the shortage so acutely, because much of their chicken supply comes from other nearby areas.

According to military authorities, the armed forces face a shortage of 100 million pounds of chicken. And to avert this shortage, WFA has cooperated by issuing the order which holds chicken first for the fighting forces.

643 Million Pounds of Food Went to U. S. Carribbean Islands in 1944

Delivery of food and other agricultural products for shipment to Puerto Rico and the Virgin Islands during 1944 totaled 643,965,793 pounds, the War Food Administration announced.

Food shipments to Puerto Rico and the Virgin Islands are made on a cash sale basis under agreements with the War Food Administration, the Department of Interior and the island governments.

Monthly deliveries varied but the general average for the year was a little over 53 million pounds per month.

Lowest 1944 deliveries were in June, when only 15, 426, 278 pound of foodstuff were delivered. Peak shipments were in May, when the total reached 86,258,540 pounds.

Foodstuffs delivered for shipment included 41, 810, 155 pounds of dairy and poultry products; meat and meat products, 65, 727,-786 pounds of which 28,556, 980 pounds were cured pork and 35,-901, 885 pounds were lard; fats and oils, 15,286, 400 pounds, of which 14, 316,400 pounds were soap; grain and cereal products, 461, 601, 344 pounds were rice and 96,538,000 were white flour; dry beans totaled 46,374,700 pounds, and there were 9,018,062 pounds of garbanzos, a small pea-bean. Potatoes totaled 9,146,000 pounds and onions 8,832,-000 pounds. About 11,250,000 pounds of canned fish and 28,988,108 pounds of cured fish were also delivered for shipment.

Plan Negro Farm Projects in Illinois, Michigan, Indiana and Wisconsin

CHICAGO (ANP)—Negro farm projects are being launched in Michigan, Wisconsin, Illinois and Indiana by the Dunbar Farm movement as a part of its 1945 social welfare program for the security of colored families, according to an announcement last week by Hermes Zimmerman, president.

Rated as the only social welfare movement of its kind in America, the Dunbar Farm movement plans to assure a job for every colored man in America by making it possible for him to own his own home in the country as insurance in times of depression or old age.

"The village developer of Chicago," a strong organization of city builders, will build communities in Michigan, Wisconsin, Illinois and Indiana where colored families may purchase small garden tracts for gardening and poultry raising, said Mrs. Iva G. Stout, secretary. The sites, she pointed out, will be near enough to industrial centers to secure work in large manufacturing plants.

Schools, churches, community centers and Negro businesses are included in the plans, she added. Similar movements may be attempted in other metropolitan centers to relieve congested conditions.

"Only the Strong Can Be Free"

Before the war, a favoritc topic of the discussion was the danger involved when government lived beyond its income. In those days, a billion-dollar-deficit in the Federal budget brought cries of alarm from every corner of the nation. A thirty or forty-billion-dollar Federal debt was considered ominously big. Now we have a debt many times that, and the annual deficit is a breathtaking fifty or sixty billion. Yet, few even bother mentioning it, and fewer still express alarm. However, this should delude no one into believing that the fears of former days were groundless.

Figures now show that bank deposits, notes in circulation and public debt in the United States have far outstripped similar figures for France and Belgium, from the standpoint of percentage increases during the war. We think of France and Belgium as on the verge of financial collapse. So where does that leave us?

The things that can save this country from the financial plight of Europe are its natural resources and great productive capacity. The combination of these two can develop enough commerce, enough jobs, and enough income to support a great debt. But we must not forget that, while our wealth in the form of natural resources is an act of providence, the tools to exploit those resources were developed by enterprising men. The industries of oil, power, mining, transportation, and farming, as we know them in this country, came from the work and organization of individuals. Because they are owned and operated by millions of individuals, they are called private enterprises. As long as they remain private enterprises, they will continue to expand and grow in the future as they have in the past. If given the opportunity, they will bring new strength to America, for America is a young nation. Her people and her industries can overcome the problems of a gigantic war debt.

Our greatest hazard is that through fear of the effects of debt and inflation on prices, we will abandon freedom in favor of permanent strait-jacket regulation and a planned lowered standard of living—regulation that will lead to oppression, destruction of private enterprise, and eventually our ability to produce.

We should remember that fear can destroy freedom. We should also remember, now as never before, the words of a great statesman who warned that only the strong can be free and only the productive can be strong.

A Better America, Not a New One

Most of us have been so busy arguing over plans to provide a greater quantity of medical care to the people, that the all-important item of quality has been neglected. However the attention of medical men has been centered on both quality and quantity.

One medical authority points out that the advance of medicine has not been halted in the United States in the war period, but rather has proceeded with an intensity that is the amazement of all of the other nations of the world.

We have seen the death rate for pneumonia among American troops drop from 28 per cent in World War I, to a fraction of 1 per cent in this war. We have seen the death rate from meningitis drop from something like 80 per cent 35 years ago, to 3 to 5 percent at this time. And recently a physician at the Great Lakes Naval Training Station reported 75 consecutive recoveries from meningitis—not one death until the seventy-sixth case!

It has been said that opponents of revolutionary changes in our form of government seek a better America, not a new one. And that certainly applies to the medical profession. It opposes the sweeping away of a medical system that has brought such great benefits to the nation. It believes that the system can be improved and the benefits retained. Its approach to new schemes rests on the simple query, Will they improve and extend medical service? If, through experience and experiment, they are found wanting, the doctors can be counted upon to make a last ditch fight against them.

Now They Know How the Farmer Feels

Consumers who recently had the coupons in their food ration books summarily invalidated, can appreciate the problem that faces the farmer under 57 varieties of regulations and restrictions.

Ordinarily the farmer plans production schedules years in advance. Investments in crops are made on the basis of probable prices at harvest time. Long experience with the laws of supply and demand teach the farmer what he must grow if he is to stay out of bankruptcy. At least that is the way the farmer operated before the age of regulation and subsidies descended upon him. Now, like the consumer, he knows not what to expect next. A government directive may cut his acreage, reduce prices when his crop is ready to harvest, or put him out of business. It is not a pleasant way to live.

Behind the Glamour

Government agencies by the score are planning how the people of the United States are to live when peace returns. The inference is that the people are incapable of planning on their own hook. Whole industries are threatened with having their future laid out for them by public officials who have striven to create the impression that they are endowed with a degree of competence not possessed by the ordinary citizen.

Behind this official glamour there is nothing to inspire the belief that government officials are super-beings. For instance, they did not make it possible for this country to produce five times as much coal per man per day as do the miners of Britain. They did not make it possible for the coal industry to turn out a record 625,000,000 tons of coal during 1944 with 200,000 fewer workers than in 1918. Machinery made this record possible, machinery installed by the coal mining industry over a period of many years.

It would be hard to find a politician who encouraged the mechanized mining that has saved the United States from a tragic coal famine. And yet these same politicians who know nothing about coal mining, and a few years ago were far too busy with other matters to suggest ways of stimulating coal production, today presume to know more about its future than the coal mine operators. They sit in Washington and compile figures based on current industrial performance while out in the field industry is relentlessly searching for new methods, for shortcuts, for greater efficiency; things that make hash of statistics. The history of the coal industry is typical of American initiative.

The only way central government authority can blueprint the future is to freeze industry to present standards and prohibit further invention. This could work providing the people can be convinced that government planning is more important than production. But God help us if we ever get into another war!

Swapping Freedom for Groceries

Reports indicate that consumer-labor groups are bringing organized pressure to bear in favor of tightened price and rationing control. If this is the result of patriotic concern for the war effort, no fault can be found, but there are ample grounds for suspecting that furthering the cause of victory is not the major factor in such pressure group maneuvering. Apparently it is an attempt to escape the squeeze of inflation by turning to increasingly stringent government regulation. If this process was occurring in peacetime, these groups would be guilty of attempting to barter away the people's freedom for a bag of groceries, a swap that history has demonstrated cannot be made.

After the war, the people will have to make up their minds to reestablish the unregulated ways of peace, regardless of temporary hardship. They cannot expect government to set the price of everything they wear and eat, and tell the producers and distributors how and when to operate, and still preserve a representative form of government.

Hundreds of thousands of retail distributors willingly surrendered the right to carry on business as independent individuals, because they believed they were helping the war effort. They did not surrender that right for the convenience of any pressure group. And when the war is over, they will eventually demand that the management of the distribution industry be returned to those who bear the responsibility for its successful operation—the store owners themselves.

Efficiency and volume are the by-words of every modern chain or independent merchant. The high standard of living which the country now takes for granted, depends upon the maintenance of this volume and this efficiency. Cumbersome centralized regulation, carried on indefinitely, will result in less goods for the consumer, not more, as competition is stifled and the incentive to serve is blotted out.

Yes, we can keep freedom or we can lose freedom, but we can't swap it for groceries.

Keep 'Em Rolling

The bulk of America's civilian automobiles must be kept running if a national breakdown in transportation is to be avoided. The tendency to neglect such details as recapping tires in time to salvage casings, can be calamitous.

The American Automobile Association states that passenger cars registered in 1941 totaled approximately 29,000,000. The registration figures for the end of 1944 is estimated at a little over 25,000,000. That means there has been a loss of approximately 4,000,000 cars since Pearl Harbor.

According to a recent reliable survey, automobiles are now going off the road at the rate of more than 3,000 a day. Twenty-five per cent of the cars remaining on the road are 11 years of age or older; 58 percent of the total are 7 years of age or older. If greater numbers in these groups are taken from the highways in coming months, we may quickly descend to, or below, the 20,000,000 level which has been estimated as the rock-bottom figure for essential needs. The situation becomes all the more compelling because there is no likelihood of getting new car production in the spring of 1945, as was freely predicted a few months ago. We shall be lucky if we get production in the latter part of 1945.

Every automobile owner has a definite obligation to keep his car in the best possible condition and to hoard the priceless miles on his speedometer.

CRACKING WISE

"How are you this morning?"

"All right."

"Well, you ought to notify your face then."

New York Farm-Labor Camps Hit in

(Continued from Page 1)

hand, so that the pickers and their growing children usually subsist on bread, beans, canned goods and soft drinks."

No "Pampering"

The report says that out of 375 permanent farm camps, only 19 had child-care centers last summer and that "most of the farm operators look upon this wise provision for small children as a form of pampering."

"Where no centers are provided, young children remain in camp alone every day, or else accompany their parents to the fields 'to help Mama pick.'

"These youngsters are often urged by the families to speed up, since work is usually paid for on a piecework basis. At one camp, 60 school-age boys and girls were counted in the fields in the fall after the public schools had opened.

"No working permits are issued, however, nor asked for by the operators, and no truant officer ever appears to see that the pickers' children receive the benefits of our compulsory education system. The children are never listed on the operator's books, but everyone in camp older than six is considered a picker.

Work 60 Hours

"The usual work week is 60 hours for men, women, and often for children—10 hours a day for six days—but the hours vary according to the demands of the crop, sometimes running to 12 and 14 hours a day. At least one camp had a work week of 10 hours, seven days a week."

The survey found wages averaging around 50 cents a bushel for peas and beans, the bushel ranging from 30 to 34 pounds. Some of the crops the report says, paid 65 cents an hour for men and 50 cents for women, with total crop earnings varying widely, "especially because pickers can earn nothing when waiting for crop ripening or because of bad weather. Some families in the state, the survey found, made as small as $75 in six weeks last summer, while others made $300 or more.

"Large numbers of the pickers are women who go to the farm without their husbands to earn a few extra dollars," the report continues. "Many come from Pennsylvania and near-by states; others as far away as Florida.

Roosevelt Greets Haile Selassie; Discuss Ethiopia

Washington—(ANP)—The theme of the conversation between President Roosevelt and Emperor Haile Selassie was reported last week to be closer collaboration between the United States and Ethiopia.

Conferring with the Ethiopian ruler aboard a warship anchored in Great Bitter lake in the Suez Canal zone, the President is reported to have expressed a desire for the two countries to be closely united.

"In talking with the emporer," a White House announcement stated, "the President stressed communication between the United States and Ethiopia and said he hoped, with improvements of communications, particularly by air, the two countries would come to know each other better. The emperor told the President of many improvements recently made in Abyssinia and enthusiastically endorsed the President's hope for closer relations."

The conversation between the President and Emperor Haile Selassie was in French. The Ethiopian emperor was accompanied by United States Minister J. K. Caldwell, Ras Kassa, president of the Crown council; Ato Aklilou Habto Wold, vice minister of foreign affairs; Ato Yilmo Deressa vice minister of finance, together with other advisers.

Africans Tell Trade Union Conference Needs Of Colonials

By RUDOLPH DUNBAR

London, (ANP)—Negro delegates at the World Trade Union conference have made a great impression. The white delegates were astonished to see that they were so well equipped to stand up to such a great occasion.

There was an usual atmosphere of cordiality and comradeship at the conference. I was just in time to listen to the brilliant speech made by J. S. Annan of the Gold Coast who is the president of the Gold Coast Railway Civil Servants and Technical Workers' union. When he finished a number of the white delegates rushed to shake his hand and congratulate him. His speech was entitled: "Immediate Trade Union Demands And Post-war Reconstruction." This is what he said:

"We come now to a pressing domestice problem, the immediate demands of the world's organized labor and the plans for postwar reconstruction. This conference has gathered at a time when victory over Nazi tyranny is looming forth on the horizon, and it is only natural that the various organized bodies of the world are proclaiming their needs and plans. The church, political parties, social organizations, etc., all are planning.

"Organized labor must also raise it voice in this matter. This Conference must assure the working classes of the world of progressive plans for social security, raising their standard of living, extending medical and educational facilities to industry, increasing the social services wherein they can live and develop their individuality and personality for the common good.

"One immediate demand will be the reconstruction of these Trade unions that have fallen under the yoke of the axis. It will be our moral and social duty to give every help to these countries to rebuild their labor movements once more, backed by their own traditions and customs, run on domestic principles and thus making their individual national contributions to the heritage of the trade union international. A second and obvious demand is the immediate establishment of the preliminary machinery to set up the trade union international to work for international solidarity among workers of the world.

"So far I have spoken on general terms and now I desire to be more specific. I must, of course, present the point of view of the colonies. Among the pressing needs of the organization which I represent, I wish to make the following representations:

"On the Gold Coast we immediately need the setting up of a wage board with powers to examine and fix adequate minimum wage standards to cope with the enormous rise in the standard of living of the working class. Every worker should earn enough to provide himself with at least, the bare necessities of life. On the Gold Coast, and I believe in other parts of British West Africa the average laborer and laborers—form the bulk of the trade unions. They earn very little and are thereby denied even the bare necessities of life. The agreement that the standard of living of the workers is low and therefore must be paid such inhuman wages is mischievous and pernicious; no laborer can live decently on such pay.

"The principles of equal pay for equal work must be enforced. The existing enormous disparity between the salaries of the European and the African, who is in many cases better qualified, should discontinue if happy and congenial relations are to exist between the two classes of labor on the coast.

"Secondly, we require at once labor representation on the legislative council of the government, this is vitally important. The native members on the legislative council are too busy with other things to take labor problems. The labor seat on the council must be filled by a candidate elected by the workers. We believe that if labor has cooperated with government in war time, it must also cooperate with it in peace time. A progressive plan for social insurance must be worked out by the Government for the workers.

Thirdly, we desire to stabilize our internal economy; for this we consider it necessary that a heavier form of taxation should be imposed on the income of the mines, the commercial houses and all others engaged in private enterprise on the coast. This increased taxation must be used to expand the social services of the country. Then also genuine encouragement should be given to such native industries as the cocoa industry.

"Fourthly, we require a competent international board of trade to be set up to regulate control and distribute the tropical and other natural resources of the world. Labor must be represented on this board. We must no longer allow a situation to arise when the Gold Coast should again burn large quantities of cocoa beans whereas other countries of the world stand in need of them. The world has seen enough of this waste of natural resources. Are we going to permit the financiers and capitalists to toss th eworld market about?

This is the time when organized labor should strengthen its sinews to fight against vested interests. When we come to consider our postwar reconstruction we have a lot of things in commoan with the lot of the world. Our first aim is to plan for an efficient organization of Labor, unity among the working class of people and to form a regional federation of the 4 national unions of British West Africa. This will necessitate the training of the necessary personnel in labor movement and we shall require the assistance of the bigger national bodies. Technical schools will be needed to train the nation to take positions in the higher grades of industry: educational facilities are to be expanded to provide free and compulsory education for all classes of people; medical facilities should be multiplied to combat disease and to relieve suffering; a progressive scheme for the clearance of slums, squaler and dirt must be set up; an extensive housing scheme to accomodate the working classes and to relieve overcrowding.

"There are the broad outlines of our plans whose implementation shall require the cooperation and the goodwill of all organized labor in the world, for it is absolutely necessary to remember that in the great family of the trade union international we must all fully share in the needs and bounty of one another. There can be no greater responsibility for this conference."

Sidney Hillman And Russians Flay Bias In Labor

LONDON,—(ANP)—Sidney Hillman, American labor delegate, joined Russian delegates in endorsing an anti-bias labor code during the final sessions of the World Trade Union conference.

The proposal, offered by Sir Walter Citrine, general secretary of the conference, called for abolition of discrimination of workers based upon race, creed, color and sex. Citrine's proposal resulted in a free exchange of views from many colonial delegates.

Forty-one members have been assigned the task of reducing the work of the conference to the handling point and also the work of drafting of the constitution and other procedures looking toward a later conference this year. Although 18 members were originally assigned this task, the number was increased to 41 with a larger representation permitted the British Commonwealth apart from certain designated countries which enjoy representation on a zone basis.

Jamaima Trades Union council representative, K. Hill, was appointed from the Caribbean zone. The names of other colonial delegates are H. H. Critchlow, British Guiana Trades Union council; Tabankelo Matokunbon, Nigerian Trades Union congress; I. A. T. Wallace Johnson, Sierra Leone All Seamen's Union; I. F. Small and I. L. A. Houmpa, Gambia Labor union; J. Sannam, Gold Coast Railway Civil Servants and Technical Workers union.

Opening on Feb. 6, the conference called for furtherance of the allied war effort, the crystallization of labor's view toward peace; the settlement of a basis for a new world trade federation and the expression of a viewpoint regarding "principles for social and economic demands in the nation and international fields." Inadequate figures made it impossible to estimate the number of darker peoples included among the total number of 60 million workers.

Wickard Says Over

(Continued from Page 1.)

most migrant farm workers are on an even lower level.

"Adequate steps to improve farm housing would advance the health, happines, and general effectiveness of millions of farm people. Also the resulting volume of new construction and repairs would contribute greatly to national employment and general business activity in the years after the war."

Offering some indirect steps which may be taken to help solve the rural housing situation, Secretary Wickard said, 'Before everything else, it seems to me, it is necessary to recognize that housing programs, in themselves, never will be enough to solve the farm housing problem. Generally speaking, the farm families with the lowest incomes and the poorest prospects of increasing their incomes live in the worst houses.

"We are dealing with a long-neglected problem whose roots run back far into the nation's past. The only broad permanent solution can come through a combination of stable and adequate farm income and full and continuing industrial employment. Better housing for farm people depends largely on better opportunities in agriculture or outside of it. We must have no more industrial depressions that drive people back to the land in tarpaper shacks."

Among the direct approaches to the problem of farm housing, the Secretary pointed to specialized credit, government insurance of mortgage loans, further extension of the rural electrification program, expansion of Farm Security's tenant-purchase program, and an educational program which would help landlords realize the importance of better homes for tenants and day laborers.

Different Skin

I am the person who was born to live in a skin with a different color from yours.

I could not choose my parents, nor you yours.

Thus, the color pigments embedded by the unchangeable hands of nature in your skin are perchance white, while mine are black, or brown, or yellow.

But underneath I am just like you.

My muscles ripple in the same waves of power, and thrill to the same throb of joyous action.

My mind has the same functions as yours.

I reach out, just as you do, in aspirations of the soul.

I love and hate, hope and despair, rejoice and suffer, along with you.

When my children lose their fair chances at life, and become aware of the bitter road of prejudice they must tread, then I know what my color has cost.

I offer you my hand in rebuilding an unjust world, that you and I can make better than we have found it.

I am the person in a different skin.

Somebody once said "a kiss is a stoppage of speech where speech is unnecessary."

Friend: "Why did you leave your last position?"

Sweet Young Thing: "Illness. They got sick on me."

WOMAN'S PAGE

WRITTEN ON CAGGAGE LEAVES

By THYRA EDWARDS

The fame of Negro cooking is as widespread as the legend of southern hospitality.

But what is Negro cooking Is there really a style of cooking, a trick of combining ingredients and blending seasonings, a group of dishes we can claim as distinctly our own?

I maintain there is. And, what is more, that it has influenced American food habits, American kitchen art more than the cooking of any other people.

Let's have a look at our pantries. You'll find salt pork on the kitchen shelves of the tiniest lean-to cabin. From the pig, grunting and rooting under the pecan trees, we've created cracklings and crackling bread; pigs' feet, boiled to tender, juicy succulence; pig tails with black-eyed peas, seasoned with pods of red pepper and served with rice; pigs' knuckles; fresh pork with boiled turnips; baked spareribs with sweet potatoes; chitterlings—chitterlings with corn bread and persimmon beer.

Recently, the Gold Coast has discovered our salt pork, dubbed it with bacon and new cabbage and salt pork and pot licker are a gourmet's item.

These are all dishes to be eaten with corn bread or hoe cake—does anyone dispute that corn bread is our adaptation of the American Indian's maize—and balanced off with sweet potatoes baked in their skins or served up as sweet potatoes pone or delectable sweet potatoe pie—and washed down with fresh churned buttermilk.

That's a convincing list, isn't it? And that's only the beginning.

I am not overlooking the many interesting dishes peoples of Europe, the Near East and the Orient have brought here. But these are confined almost exclusively to their own homes and their native neighborhood restaurants. Americans try them when they go slumming—to the Armenian restaurant to eat pilaf and shishkabab; or they have lemon soup and meat balls wrapped in grape leaves at the Greek's; chow mein in Chinatown; enchiladas at Mexican Joe's; borsht at the Russian Bear; gefilte fish at a Jewish restaurant and pizzeria at Guiseppe's.

But these dishes remain occasions. They are isolated from the regular routine meals. You won't find them in everyday American home cooking. They are not integrated into the family three-a-day. They are not moving along the production belt lines of processed foods, as our chitterlings can boast. They have not arrived on the display shelves of neighborhood chain stores, as witness our corn bread, batter eakes and biscuits, glamorized in the bright packages and trade labels of corn meal mixes, paneake quickies and short cuts to biscuits.

These and many more culinary treasures have travelled via the plantation cabin straight to the dining salons of the Gold Coast.

Out of the economy of barren poverty, our ancestors bequeathed us a heritage of rich and flavorable dishes. Here in this column from week to week I should like to conjure up from the food cellars of your memory and mine some of these old favorites. They will stand us in good stead against the demands of a war rationing economy. At the same time we will add from time to time new recipes and some dishes from other countries.

Here is an old-timer—and my favorite spring menu—point free.

Mustard Greens with Salt Pork (spinach is too bland for such a union), Baked Sweet Potatoes, Salad Bowl of Tomatoes, Garden Lettuee, Green Onions with French Dressing, Corn Sticks, Egg Custard with Coffee Caramel Sauce, Buttermilk or Beer.

Mustard Greens with Salt Pork. Wash and cut 1 pound salt pork in small pieces, cover with 1 quart cold water, add 2 red peppers. Let boil until meat is tender and liquid is reduced one-half. Add 3 pounds well washed, tender young greens. They will fill the pot at first, but shrink rapidly. Cover and let boil for 20 minutes. Do not add salt. Serves 4 to 6 persons.

Corn Sticks. Sift together 1 cup white corn meal, 3-4 cup flour, 2 teaspoons baking powder, 1 teaspoon salt. Stir in 1 cup milk or enough to make a batter not too thin. Add 1 egg, 3 tablespoons bacon drippings. Pour the batter into an iron corn stick mold already greased and heated. Bake in a hot oven, about 500 degrees for 20 minutes or until brown. Makes 12, will serve six.

Coffee Caramel Sauce. Pour 1 cup granulated sugar in a pre-heated iron skillet, stir constantly until it melts into a thick brown syrup. Add 3-4 cup hot coffee gradually, stirring constantly. Serve hot or cold, poured over cup custard.

Kitchen Barbecue: The process goes under your broiler. Wipe the meat off with a damp cloth, place on the broiler rack and start for 20 minutes in the broiler pre-heated to 500 degrees, turning and basting with barbecue sauce as it browns. Lower the heat to 350 degrees and let it continue to cook for an hour or until done. Baste frequently with the sauce and turn from time to time. Place the meat 2 inches (for ribs) or 3 inches (for fleshier cuts) from the flame. Allow 1 pound spare ribs per serving, 1-2 to 1-4 pound chicken, according to size, and 1-2 pound for other meats.

The process is the same whatever the meat. But each meat requires a different type of sauce. Serve the barbecue with sauce and drippings, strained but not thickened.

Barbecue Sauce for Pork or Beef: In 2 tablespoons butter heated, brown lightly, 1 medium sized onion chopped, 1 quarter garlic chopped. Add 1 cup canned tomatoes, 1 cup catsup, 1 tablespoon West Indian Hot Sauce, 1 tablespoon Worceshire sauce, 1 tablespoon soy sauce (optional), 2 bay leaves, 1 cup vinegar, 1 cup water, 1-4 teaspoon salt, 1-4 teaspoon thyme, 1-4 teaspoon grated ginger root, 1-4 teaspoon mustard, 3 celery stalks with leaves chopped. Let simmer 15 to 20 minutes and strain. As the meat cooks add 1-2 cup drippings from it.

Barbecue Sauce for Chicken.

In 1-2 cup butter or margarine brown lightly 1 tablespoon grated union, 1 clove garlic crushed (optional) and 1 celery stalk finely chopped. Add 1-2 cup white vinegar, 1-4 cup sherry wine. Season with 1-2 teaspoon salt, 1-2 teaspoon crushed red pepper, 1-4 teaspoon ginger root. Let simmer for 15 dry mustard, 1-4 teaspoon grated minutes. Tomato may be added if desired. As the chicken progresses add the drippings to the sauce.

Serve barbecued spare ribs with a green relish bowl of carrot and celery curls, radish, radish tops—and corn bread and buttermilk or beer. The New York rotisseries serve spaghetti or French fries, but I find that a heavy combination.

With barbecued chicken serve pilaf (a Greek recipe for rice which I'll give you another time), water cress salad, ginger ale or dry club soda, French bread, or hard rolls and fresh pineapple for dessert.

With barbecued lamb I suggest baked egg-plant and tomato, pilaf, green salad of romaine lettuce, green onions and radish, ginger ale, and for dessert, lime or lemon ice.

MOLASSES DROPS

½ cup shortening
1 cup brown sugar
1 teaspoon vinegar
½ cup molasses
½ cup sour milk
2½ cups sifted enriched flour
1 teaspoon soda
½ teaspoon salt
½ teaspoon ginger
½ teaspoon cinnamon
Chocolate bits

Cream together shortening and sugar until light and fluffy. Add vinegar and blend well. Combine molasses and sour milk. Sift together flour, soda, salt, ginger, and cinnamon. Add to cream mixture alternately with milk and molasses Drop by teaspoonsful on greased baking sheets. Place chocolate bits in center of cookies. Bake in moderate oven (350 degrees F.) 10 to 13 minutes.

Yield: About 6 dozen small cookies.

COFFEE OATMEAL COOKIES

1½ cups sifted flour
1 teaspoon salt
½ teaspoon baking powder
2 teaspoons cinnamon or allspice
½ cup shotening
½ cup sugar
½ cup molasses
1 egg, unbeaten
¼ cup coffee
1½ cups rolled oats
1 cup seeded raisins or figs
½ cup chopped nutmeats
1 cup seeded raisins or figs

Mix and sift flour, salt, baking soda, and cinnamon or allspice. Blend shortening and sugar. Add molasses and blend. Add egg and beat well. Stir in coffee and add oats, nuts, and raisins or figs. Drop from tablespoon on greased baking sheets. Bake in moderate oven (350 degrees F) about 15 minutes. Yield: about 2 dozen large cookies.

MEAT LOAF

1½ lbs. chopped chuck
3 slices hard stale bread
Warm milk
Salt and pepper
½ lb. mushrooms
1 egg
1 egg yolk
1 large onion
1 tablespoon margarine
1 teaspoon chopped parsley
4 hard-cooked eggs

Soak the stale bread in warm milk and squeeze dry. Chop onion and saute lightly in margarine. Combine chopped chuck, the whole egg, beaten, soaked bread, onion and seasonings. Mix well. Shape meat into a loaf putting the hard-cooked eggs in the center of the loaf. Wet hands with water to keep meat from sticking to fingers. Roll the loaf in flour. Place in a greased roasting pan and spread top of loaf with the egg yolk mixed with a little water. Brown quickly in hot oven. Reduce heat and cook until tender or approximately one hour, adding a cup of water to the pan when the heat is reduced. Fifteen minutes before loaf is done add mushrooms which have been peeled and sliced. After removing loaf from pan, thicken the mushroom gravy with a little flour. Serves 4.

Asked to write an essay on the life of Benjamin Franklin, a little girl wrote this gem: "He was born in Boston, traveled to Philadelphia, met a lady on the street, she laugh- at him, he married her and discovered electricity."—Wichita, Kansas, Democrat.

Helpful Hints to Housewives

STAINS SHOULD BE QUICKLY REMOVED

Most homemakers agree that no matter how simple they may keep their table settings during the year, they want the holiday season table banquet tablecloth and napkins to be "extra special." The best none too good.

Good table linen is practically irreplacable right now, so homemakers are wise if they take extra care to avoid stains. A large napkin placed under a child's plate will protect the cloth underneath, and a dainty teacloth placed under the platter will take care of grease splatters when the head of the house carves the turkey. However, if there are accidents—a blob of cranberry jelly on the cloth or lipstick stain on the napkin—some quick work right after dinner will make everything all right again.

Here are some of the usual stains, and what can be done about them. **Fruit and berry stains:** Stretch over a bowl, then pour boiling water from a height; dry in the sun to bleach. If the stains has "set", and the cloth is white cotton or linen, follow the boiling water with a chlorine bleach and rinse promptly and thoroughly.

Coffee, chocolate, cocoa: First, soak in cold water for several hours, then pour boiling water through from a height, and wash as usual. If the stains have become "set," apply a paste of borax and cold water. Rub in well, rinse, and wash In warm suds.

Mustard: Rud lightly with thick soapsuds before the cloth is washed.

Candle wax: Scrape off the surface with a blunt knife. Place a piece of white blotting paper or brown wrapping paper over the spots and press with a hot iron, moving the paper frequently. Remaining dye stains can be treated with chlorine bleach, if the cloth is white.

Lipstick smears: These are not too difficult to remove. Usually laundering is sufficient. If the lipstick is "indelible," try rubbing with kerosene, washing in hot suds, and bleaching the remaining stain with hydrogen peroxide. Sponging lipstick stains with cardon tetrachloride (purchased at the drug store) is often successful too.

Obscene Books

Mrs. Walter Ferguson

Sometimes you wonder just how popular many of our best selling books would be if all the obscene language were left out.

Many of those hailed as literary masterpieces by the critics contain passages that wouldn't have been tolerated by the most disreputable livery stable manager when I was a child.

Before World War 1 the nation generally held to puritan standards. Sex was necessary, but remained naughty until we moved into the '20s, when it became the chief topic of conversation in our cultured as well as our uncultured sets. A great deal of present-day writing in books put out for home consumption read in spots like the behind-hand whisperings of the village moron in the good old days.

Strangely, women furnish the largest markets for dirty books. When men want smut they go after the genuine sort—pornography—for they have no patience with the insipid warmed-over stuff that poses as such in our modern novels. It's the unexpurgated editions for them, which they consider too raw for their wives to see.

Yet is it not true that the masculine attitude on sex is invariably healthier than ours? Are they not more realistic in their approach to evil than we are? Most of us would agree on that, I'm sure.

Book banning, such as that practiced in Boston, has done far more harm than good. It only increases the sale sof the offensive volumes, and causes thousands of women and girls to read things they would never otherwise think of doing.

Smutty literature, dirty stories, books that offend by their emphasis on lust, are only another sign of the soul sickness of our time. In extenuation some people explain that many other periods of history have witnessed similar plagues. But what they fail to say is that in such periods the nations became decadent and the people lost their ruggedness. This trend has always preceded revolutionary changes. — Memphis Press Scimitar.

Try This Sometime

HARD WATER SCALE

Cooking utensils are frequently victims of the lime deposits from water or hard water scale which makes it difficult to use the utensils. Should the scale form, it can be removed easily. Simply boil a mild solution of bicardonate of soda and water in the utensil and watch the scale disappear.

TRY THIS SOMETIME

Poached eggs become quite a fancy luncheon or supper dish, each served on top of a rather large flat, savory biscuit with a sauce poured over all. Make biscuits by any basic recipe, mixing into dough ½ cup diced ham and 1 teaspoon grated onion. Roll dough fairly thin cutting in circular pieces, each large enough to hold a poached egg; then bake the biscuit. Place a poached egg on each, cover with mushroom or tomato sauce

Plump, tender dumplings go well with stewed chicken. Let their delicate flavor become part of your next dinner.

Tartwine jelly sauce adds delicious flavor and delightful piquancy to rich prune pudding. Serve sauce and pudding piping hot for company dinner dessert.

A bit of ginger and cinnamon added to Confectioners Sugar Icing gives warmth to a rolled molasses cookie when the icing is used as filling for cookies in "sandwich" fashion.

To conserve paper, dry your paper towels on rack and use for soiled dishes or cooking utensils.

When writing or sewing or performing any other manual task, place lamp at left if you are right-handed, and at the right if you are left-handed to avoid shadows.

General Booth's Rules of Christian Living

1. Consider your body as the temple of the Holy Spirit and treat it with reverence and care.
2. Keep your mind active. Stimulate it with thoughts of others that lead to doing something.
3. Take time to be holy with daily Bible reading and prayer.
4. Support the church of your faith. Mingle with others.
5. Cultivate the presence of God. He wants to enter your life and will as far as you let him.
6. Take God into the details of your life. You naturally call upon him in trouble and for the bigger things.
7. Pray for this troubled war-threatened world and the leaders who hold the destinies of the various nations.
8. Have a thankful spirit for the blessings of God—country, home, friends, and numerous other blessings.
9. Work as if everything depended upon work, and pray as if everything depended upon prayer.
10. Think of death not as something to be dreaded, but as a great and new experience where loved ones are met and ambitions realized. —The Broadcaster.

THE MODERN FARMER

VOL. XVIII. NASHVILLE, TENN., MARCH 15, 1945 No. 2.

The Road Up

TOO FEW READY

By GILES A. HUBERT

The untimely death of Tom Roberts brings us dramatically face to face with a situation which we may have realized before but without due concern.

Within the last few months, several important positions held by Negroes in Washington in the Department of Agriculture have been vacated for one reason or another. Jerome J. Robinson, who was Placement Officer in the Personnel Division of FSA, has gone over to the United Nations Relief and Rehabilitation Administration. Frank Pinder, FSA's Negro farm ownership and project manager expert, left his job to go to Liberia for the State Department.

Laurence Hicks has vacated a job in the Rural Rehabilitation Division of FSA. Announcements in the papers have it that Cornelius King may leave the Farm Credit Administration to become President of Alcorn College. Now Tom Roberts has succumbed while he was by way of accomplishing one of the most important jobs in the Government, so far as Negroes are concerned. **Where are we to find replacements for these men?** This does not take into consideration the new jobs that are being constantly opened up.

What of the Future? If the present trend continues, (thanks in a great part to Mr. Robert's efforts) there may be increasing need for Negro agricultural technicians, agricultural economists, foresters, conservation experts, rural sociologists and other specialists who are competent in their fields and can stand their ground in fast company—and it is fast company.

There are few good men on the staff of our colleges. But, if they leave for government employment, what will the colleges do? "Goodness" knows the number of competent teachers in these fields is small enough.

The fact that, as yet, we do not have one good crack-shot school of agriculture, which could compare even with the good average colleges available to whites in the South or North, bears witness to our deficiency in this regard.

Now, to take the very few good men that we have and place them all in government jobs would make it virtually impossible to provide the training which would maintain and increase the flow of trained and competent leadership so vitally needed for Negroes in agriculture. Yet, we are in a dilemma. We cannot well afford not to provide personnel for the Federal and State Agencies as these jobs open up.

What shall we do? I would say let us do the best we can about the job placements right now from available personnel in field activities. On the other hand, let us

TOM ROBERTS DIES IN WASHINGTON, D. C.

FSA HELPS VETERAN GET STARTED

Robert G. Milliner, a World War II veteran who is getting a start in farming with help from the U. S. Department of Agriculture's Farm Security Administration, is shown here with his wife, on their small farm near Wetumpka, Alabama. When Mr. Milliner received a medical discharge from the Army two years ago, he had almost no farming equipment to make a crop. With an FSA loan of $412, he bought a mule, plow, feed, seed, and other supplies. Last year he made a good crop and paid off a substantial part of the loan. According to a recent Army survey, seven percent, or 50,000, of the colored enlisted men definitely plan to enter farming after the war.

FSA Helps Returning Veterans Get Sound Start As Farmers

WASHINGTON, D. C.—Nearly 1,500 white and colored veterans of World War II are already getting a sound start in farming with loans and other aids from the Farm Security Administration, the U. S. Department of Agriculture reports.

The veterans received rehabilitation loans for the purchase of

R. H. Brown Celebrates 25th Year As County Agent

Mr. R. H. Brown, Negro County Agent of Shelby County, is honored by community, county, farm, and professional leaders on his 25th anniversary of extension work. Mr. Brown was employed by the Extension Service of Tennessee, December 18, 1919, and assigned to Shelby County, Tennessee, where he has worked faithfully and untiringly ever since.

During these years of service, he has seen many of his first 4-H

Legislative Battle Over FSA Ahead

Cooley Bill and Agitation To Combine With FCA., Both Factors

The fight in the new Congress for FSA and a revised general farm program was touched off this week when Congressman Harold Cooley, N. C., offered his revised bill for permanent legislation for FSA.

Coming on the heels of the Thomas and Pace bills designed to change the parity formula and accompanied by the Flanagan resolution authorizing the long-awaited investigation of distribution of farm products, the Cooley bill appeared to be the opening gun in the legislative struggle in this Congress, so far as farmers are concerned.

Congressman Cooley's bill would transfer all FSA functions to the Farmers Home Corporation authorized in the Bankhead-Jones Act, as proposed by NFU more than a year ago. Also transferred to that corporation would be the feed and seed loan activities of the FCA and what is left of the RACC.

CRIPPLE FSA

But the measure still has a number of crippling changes, as compared with the present law. It would lift the present 3 per cent rate on tenant purchase loans to 4 per cent, severely handicapping tenants who are chosen for FSA home ownership loans, and virtually eliminate the variable payment plan, so highly praised, under which good and bad years could be balanced against each other in repaying loans.

Moreover, it sets an upper limit of $3,500 on the amount that can be owed the government by a borrower and allows no borrower to owe the government for more than 5 years. Both of these limitations will greatly curtail the FSA program outside the South. Finally, the bill would eliminate FSA regional offices.

It is uncertain yet what the Agriculture Committee will do with the Cooley bill. The Cooley Committee has been virtually ended under Chairman Flanagan's dispensation as head of the House Agriculture Committee. Flanagan has announced that such hearings as those

Funeral At Tuskegee Attended By Many Notables

Thomas N. Roberts, who has served for several years as assistant to the Director of Personnel in the U. S. Department of Agriculture, died in Freedman's Hospital on March 3. Mr. Roberts had recently returned to his office after several months' illness. Apparently well on the way to recovery, he suffered a relapse which resulted in his death.

Mr. Roberts was one of the very few Negro agricultural economists in the country. A former student of Morehouse College, Mr. Roberts received his B. S. degree in agriculture at Hampton Institute. From Hampton he went to the University of Wisconsin, where he majored in agricultural economics, emphasizing cooperative marketing and purchasing in his studies. He received his master of arts degree in 1932.

Managed 10,000 Acre Land Use Project

Mr. Roberts served as teacher trainer for vocational agriculture and assistant professor of agricultural economics at Georgia State Industrial College for seven years, ending this connection in 1935. In 1936 he became project manager of the Tuskegee Land Use Development Project, the only such project in the country, under the management of Negroes. The project consisted of some 10,000 acres of worn out and eroded lands of Alabama which were converted to scientific forestry, pasturage and recreational uses under Mr. Roberts' direction.

For his foreseeing and capable management of this project, Mr. Roberts received nation-wide renown and commendation from the highest authorities.

WFA Appoints Eleven Colored Recreation Counselors

WASHINGTON, D. C., Feb. 26, 1945—What may be the beginning of a much needed rural recreation program for colored farm people took form recently when the War Food Administration's Office of Labor appointed 11 Negro recreation counselors through a grant of funds under the Lanham Act, to serve the farm labor supply centers in Florida, where 10,000 colored Jamaican, Bahamian, and American workers are cultivating and harvesting important food crops.

Orientated through a week's special training course at Bethune-Cookman college, Daytona Beach, Florida, the counselors have been assigned to labor supply centers and are now rapidly developing a recreation program for the farm workers and their families.

Among other things, the recreation counselors will direct games, present plays, provide for dancing and other forms of recreation, and they also will arrange religious services for the workers.

The counselors and the centers where they are stationed are as follows: William Merryweather, Ft. Pierce and Vero Beach centers; Barrington Dunbar, Everglades and Pahokee centers; Stanleigh Murrell, Okeechobee's permanent, and mobile centers; James A. Forchion, Pahokee and Canal Point centers; Thomas Flanhagan, Deerfield and Dania; Charles Whittaker, Palmetto and Sarasota; J. Herbert King, Zellwood and Sanford; Miss Lauretta C. Whitehead, Gotha; Mrs. Ella W. Griffin, Goulds; and Viggs Wallace and Frank Veney, Camp Murphy at Hobe Sound, Fla. This latter camp is a repatriation center for West Indies workers who are ready to return home.

Merland L. Medlin, white, will supervise the program. He is sta-

Legislative Battle Over FSA Ahead

(Continued from Page 1)

conducted in the past by the Cooley Committee hereafter will be held by the full Agriculture Committee.

This procedure probably means a new determination by the Agriculture Committee to assert itself in House deliberations.

In view of the agitation for consolidation of FSA and FCA it is unlikely the committee will report out the Cooley bill until after the FCA investigation, scheduled for this session.

—From the National Union Farmer.

Tom Roberts Dies in Washington

(Continued from Page 1.)

In 1941, in recognition of his services and accomplihsments, Mr. Roberts was granted a Rosenwald Fellowship to Wisconsin to continue his studies in agricultural economics and land utilization.

Received Washington Appointment

It was while pursuing his studies that Mr. Roberts was called to take the high position he held in the Department of Agriculture in Washington.

As assistant to the Director of Personnel, Mr. Roberts assumed the leadership in the fight to secure increased integration of Negroes in all phases of the department's activities. In this he did an outstanding job. Negro employees were increased in number and status. In the various bureaus competent Negroes were employed as experts. Negroes became to assume administration positions as section chiefs and assistant directors. Negroes in the clerical staffs were greatly increased to say nothing of an enormous increase of messengers, etc.

Mr. Roberts' tenure of office will mark a milestone in the history of federal employment of Negroes and especially with regard to the Department of Agriculture. His position will be hard to fill as he has set a high pattern of competence, tactfulness and achievement. It is hoped that his good work will be continued.

Mr. Roberts is survived by his wife and daughter, a father and brothers and a whole host of friends and associates. His funeral at Tuskegee was attended by such notables as Dr. T. Ray Reid, Director of Personnel, U. S. Dept. of Agriculture; Mr. Claude Barnette, Director of the Associated Negro Press and assistant to the Secretary of Agriculture; Mr. Sherman Briscoe of the Agricultural Press Service, Mr. Giles A. Hubert, professor of economics, Fisk University, and many former associates at Tuskegee Institute, Alabama. The Rev. Kelly of Tuskegee, Alabama, delivered the funeral address.

FSA Helps Returning

(Continued from Page 1)

livestock and operating equipment, or farm ownership loans to cover the full purchase price of a family-sized farm. In addition, they are receiving guidance from FSA in their farming operations. More than 5,600 veterans filed applications for assistance at Farm Security county offices before the first of the year.

Department officials point out that Farm Security loans to veterans are made under regular FSA programs and are not related to loans made under the provisions of the GI Bill of Rights. Most FSA loans to veterans are made to those unable to obtain credit from other sources on reasonable terms.

Veterans now in farming represent only a few of those who will turn to agriculture after the war. officials say. According to an Army survey, seven per cent, or 50,000 of the colored enlisted men definitely plan to farm.

Among the 1,500 discharged fighting men who have been approved for FSA loans is Robert G. Milliner, 33, of Wetumpka, Alabama, a colored veteran. (see picture). Milliner received his medical discharge in June, 1943, and returned home to his wife with plans to get started in farming again. He had little to go on but a lifetime of farming experience, a few household furnishings, some chickens, a pig—and a $22 debt.

He tried working in the Wetumpka planer mill, but found that he was unable to put in regular hours because of his asthmatic condition.

Veteran Milliner knew that he could make his way on a farm once he got started. With that idea in mind, he applied at the county Farm Security office for a loan. FSA surveyed his situation and loaned him $412 to pay off his old debt, buy his operating needs, and provide a subsistence for himself and his wife until they could harvest their first crop.

Last year the Milliners made a good crop of cotton, corn, sweet potatoes and hay.

Elijah Kennedy of Kingstree, South Carolina, is another colored veteran of this war who has been helped by FSA. After his army discharge a year and a half ago, he applied to Farm Security for a loan to buy a farm. With the loan, the 26-year-old veteran purchased the farm that his father had worked as a tenant for many years.

Kennedy says his father wanted to buy the farm himself, but was never able to save enough to make a down payment on it. When FSA was about to make a farm ownership loan to the father four years ago, the senior Kennedy died.

On his 282-acre farm, Kennedy is raising crops to meet war food and fibre needs. At present he has 40 acres under cultivation and is clearing 15 additional acres.

Last year the young veteran harvested 14 acres of cotton, 15 acres of corn, five acres of oats, three of wheat, and smaller acreages of sweet potatoes, tobacco, and Irish potatoes. He also raised six hogs, 100 chickens, including 30 layers, and milked two cows.

Joe Thornton, another colored veteran who has been helped by FSA, is also making a contribution to the nation's wartime farm production program. After his discharge from the Army, FSA loaned him $525 to put a 210-acre farm near Cusseta, Georgia, into operation. Thornton bought a cow, a brood sow, some chicks, a mule, and farming equipment with his loan. He used his $200 mustering-out pay to purchase furniture and other household goods.

"I've always wanted to be a real farmer, not a half-hand," Thornton says. "Now the Government is giving me a real chance."

Last yar he harvested 15 acres of peanuts to help meet the nation's vegetable oil shortage, as well as 12 acres of corn, two acres of truck crops, and raised six pigs.

Negroes Make Good At Front, Officer Says

By DON WHITEHEAD

WITH THE U. S. FIRST ARMY EAST OF THE RHINE, March 21. (AP)—Negro infantrymen who left their jobs in rear echelons and volunteered for combat duty are fighting on the First Army's bridgehead east of the Rhine—the first time Negro troops have been used in combat on the western front.

Early reports made by white officers say that the Negro troops have given a good account of themselves in their initial action alongside white troops.

The Army is keeping close check on the Negro platoons, since this is the first time they have been placed in the same divisions with white soldiers on the fighting front. Weekly reports are to be made on their morale, fighting ability, casualties and the number of Germans they capture.

"All our reports so far have been good," said Capt. Edward Finnegan of 3038 Hull avenue, The Bronx, New York.

The Army has moved cautiously in breaking its long established tradition of keeping white and Negro units separated, and the Negro rifle platoons are being fed into divisions gradually, with one platoon to each regiment now in action.

These Negro Doughboys asked for the chance to fight. Many of them voluntarily gave up their stripes as staff and technical sergeants to get into the fighting.

They are fighting as platoons under white officers who have had combat experience.

USDA Sees Improving Rural Health As a Major Job in Post war Era

With four. million farm families ill housed, 850,000 rural homes having no toilet facilities, some rural counties having only one physician for each 10,000 of its population, and with 1,400 of America's 3,070 counties, most of them rural, having no fulltime health department, the U. S. Department of Agriculture considers providing better rural health facilities a major postwar job for rural communities of this country.

In addition to providing the physicians, dentists, nurses, hospital and sanitation facilities that are so badly needed in some rural areas, general education in the use of health facilities will also be an important function which must be performed, according to the Department. It is pointed out that too many rural people still view the hospital as a place to "die in" and physician as a man to avoid.

A publication issued in December by the department of rural sociology, of the North Carolina Agricultural Experiment Station shows that in the South where 98 percent of all rural Negroes live, there is an average of only one colored physician to every 5,000 Negroes, and in one State there is only one colored physician for every 20,000 colored residents. As for colored dentists, the ratio was one to 12,500 Negroes.

While the figures for white doctors and dentists among the white population of the South should be upped somewhat to reach national average, they are considerably higher than those for Negroes, there being one white physician for every 850 white residents of the South and one white dentist for every 2,500 whites. Of course, the actual service ratio for whites is lowered a good deal when it is taken into account that many white physicians and dentists also treat colored patients.

In discussing the death rate in rural and urban areas, the Department points out that in 1900 the rural death rate was 50 percent lower than urban, but in 1940 it was only 10 percent less than the urban rate. Thus, during the 40 year period the health of urban people improved rapidly, while that of rural people improved relatively slowly.

Listing the health needs of rural communities as of 1940, the Department reports that in some rural areas there was only one doctor to each 5,000 and sometimes 10,000 persons living in a county. Approximately 1,200 counties with a 1940 population in excess of 15,000,000 had no recognized hospital facilities. About 1,400 counties had no fulltime health departments. Over 5,290,000 rural homes needed new or improved water supplies, 5,100,000 needed new or improved sanitary privies; of these 850,000 had no toilet facilities, and over 4,000,000 farm homes needed to be repaired or rebuilt entirely.

Secretary of Agriculture Claude R. Wickard, appearing before the Senate Subcommittee on Housing and Urban Redevelopment recently, said, "Adequate steps to improve farm housing would advance health, happiness, and the general effectiveness of millions of farm people."

The causes of inadequate health services and facilities are said to be many. Among them is the fact that many rural people cannot afford medical and hospital treatment and care, because their incomes are low. In 1939 nearly three million, or about half the farmers produced less than $600 worth of farm products.

Another factor is the distance that some rural people live from doctors and hospitals. This often prevents them from obtaining medical aid and hospitalization. To help improve their rural hospital and clinic services, some of the states are already putting in their bids for such medical and dental equipment as may be disposed of by the Army and Navy after the war.

Steps are being taken also by the Department's Farm Security Administration, and other public and private agencies to help improve rural health. FSA fosters voluntary cooperation between its borrowers and local doctors, dentists and hospitals. Borrower families who wish to participate in a prepayment medical care plan pay an annual membership fee in advance and they work out an arrangement with the local doctors, dentists and hospitals covering services to be provided and the terms of payment.

Last June the FSA health service plan was being operated in 1,012 counties of the States and Puerto Rico. The membership totaled 70,000 families, or 363,000 persons.

The FSA also supervises the Department of Agriculture's "experimental" rural health program, under which there are six county-wide experimental health associations open to all families earning most of their income from agriculture. White and colored alike are welcomed into these plans. Financial assistance is extended to the associations to enable low-income farm families to participate.

Another aid to rural health has been FSA's assistance to low-income farmers in improving sanitation facilities. About 100,000 farm families have been helped to get new sanitary privies, to improve the water supply or to screen their homes.

Still another program designed to improve certain rural health conditions is the one conducted by the War Food Administration's Office of Labor. Started originally by FSA to help tens of thousands of migrants in California and other points of seasonal farm labor concentration, the program is now providing medical and dental services for thousands of interstate and foreign farm workers. It is operated through six regional Agricultural Workers Health Associations, nonprofit medical service corporations financed entirely by WFA.

Through these services, thousands of rural people have been helped and hundreds of communities have learned valuable lessons about organizing better health services; lessons that should be of help to the whole nation. However, the Department points out that the services provided both by the government and by private agencies are hardly scratching the surface of the problem.

FARM PRODUCTION BIG PROBLEM

The government expects farmers to again break crop records in 1945. Fred H. Sexauer, President of the Dairymen's League Cooperative Association, says the average age of farm operators is 59 years. They work 12 to 16 hours a day, 7 days a week, against industrial workers' 7½ hours per day. Drafting most of the 18-to-25-year-old farm help will put a big question mark on new crop records. With worn-out machinery, and principally older men to do the job, we will be lucky if there is not a drop in farm production.

"BE IT EVER SO HUMBLE"

"'The right of ownership is more important than ownership itself!'

"True enough!" says W. J. Blake, owner of the Putnam County, New York, Republican. "Yet how important is ownership—something tangible and of benefit to the family! Give me a family—or, even, only an individual—whose fixed objective is a home, a house and some land of their own, and I will then see reason to hope for the future of the family. Better a nation of such families than one of any other dominating form of prosperity. 'Be it ever so humble, there's no place like home.' Millions who live in rented quarters—houses, hall rooms, and what not—are an unstabilizing force in our national life. The cry is—or should be—more home ownership and less hoboism in the American ways of living. To that end let press, pulpit and the schools of our beloved land raise a united voice."

R. H. Brown

(Continued from page 1)

Club members grow into adult farmers, farm owners, teachers, leaders, and workers in various professions. His 4-H Club enrollment has grown from 200 members, the first year to 2,250 in 1944. He has trained 45,000 boys and girls in the twenty-five years of work.

Mr. Brown is well known, liked and respected by all people in the county. The value of his work cannot be estimated in dollars and cents. He has consecrated himself to the good of the rural people. This county has more than 5,000 Negro farm operators who value the advice of Professor Brown as the "last word" in what is right or should be done.

WFA Appoints 11

(Continued from Page 1.)

tioned at Atlanta, Georgia. Two white recreation workers are to be placed on his staff to serve white families in Florida centers.

THE NEW LINK IN TRANSPORTATION CHAIN

Few industries will enter the postwar era with a wider field of operation before them, than will air transport. For increased business, the world is its market. No longer will it be confined to one country. This fact, however, will create problems because the companies will become subject to a multiplicity of regulations by various governments.

In spite of the hurdles that lie ahead, the industry plans to keep the United States in the lead in the field of air activity. Air cargo transport will accelerate the entire tempo of postwar merchandising, in fields of fashions, speciality goods, perishable foods and exports, in the opinion of Major Benjamin H. Namm, first vice-president of the National Retail Dry Goods Association. Mr. Namm visions entirely new markets opened up.

The coordination of airplanes with existing methods of transportation, including trucks, express, railroads, steamships, and storage warehouses, is essential to give our nation the last word in transport service. The people of the United States are such great travelers and shippers that it will take the combined facilities of every agency to meet their needs. The airplane will add the last link to give the super service.

PETROLEUM PROMISES!

"There are still a great many people who take promises seriously—who neither make them glibly with indifferent intent, nor readily condone the violation of pledges made by others," says William R. Boyd, Jr., Chairman, Petroleum Industry War Council.

"In the vast growing American Petroleum Industry there exists a firm determination to accept responsibilities that have been thrust upon it by the essentiality of its products to modern society." With this responsibility in mind, says Mr. Boyd, it promises:

1. Its continued and complete devotion to America's first and greatest task today—the winning of the war and the securing of an enduring peace.

2. Its unending effort to serve the American people with an adequate supply of those countless petroleum products that have become so necessary to modern living.

3. Its unceasing acceptance of its responsibility in maintaining and improving the already high standards of employment and opportunity in the petroleum industry.

4. Its unreserved realization and proper discharge of its duties as one of the great basic elements of the nation's economy.

5. Its constant and continued search for new and greater sources of petroleum, more and better petroleum products, and greater opportunities for employment and service.

ON THE AGRICULTURE FRONT

4 NEGRO CURB MARKETS GROSS OVER $16,000

The four Negro curb markets in North Carolina sold $16,706.78 worth of farm products last year, according to a report received from the State Extension Service by the U. S. Department of Agriculture.

The four markets, situated in Tarboro, Rocky Mount, Wilson, and Goldsboro, sold fruits, vegetables, poultry eggs, butter, and meat. The Tarboro market grossed $4,271.73; the Rocky Mount market, $6,293.-05; the Wilson market, $4,080.84, and the Goldsboro market which opened only four months ago, $2,061.16.

The colored county agents of North Carolina point out that this is only a small part of what can be realized by farmers from surpluses grown at home.

KY. COLORED FARMERS INCREASE FARM OUTPUT

The colored farmers of two Kentucky counties, who are preparing to increase their crops again this year, set a wartime record in crop production and home improvement in 1944, according to reports received last week by the U. S. Department of Agriculture.

Assisted and encouraged by Negro County Agent Bennett K. Brown, the colored farmers of Logan and Simpson counties planted 1,800 acres of hybrid corn and harvested an average of 46.3 bushels per acre. Joining up in a drive to grow more of their food at home, 229 families raised their first purebred poultry, 217 families produced for the first time enough garden vegetables to meet their year-round vegetable needs, 189 families raised enough hogs to meet all of their pork needs, and 130 farm families secured milk cows to provide their own milk supply.

These Kentucky farm families not only produced extra supplies of food, but also conserved it. The women canned 329,656 quarts of meat, vegetables, and fruits; and the men built six storage pits, and 10 smoke-houses to preserve their meats and other products.

The 4-H'ers, numbering more than 700, joined in the drive too. Projects were completed by 659 of the club members. They raised 1,929 chickens, canned 1,368 quarts of food, harvested 122 acres of hybrid corn, and raised 24 head of beef cattle.

One of the outstanding achievements in home improvement was the development of oil stain from burnt motor oil for coating barns, poultry houses, and fence pailing. Farmers throughout the two counties used the stain.

VICTORY GARDEN LEADERS

Victory Garden headquarters at the U. S. Department of Agriculture is depending this year on a continuation of the good working relations between the less experienced gardeners and the "old timers" who as leaders and advisers have been so effective in making Victory Gardening really productive of the quantities of good food that are needed in wartime.

Rallying the food supply forces, President Roosevelt said recently: "I call upon the millions of Victory Gardners who have done so much to swell the nation's food supply in the war years to continue their good work." He also remarked, "It is essential for every man and woman to do everything to help in the huge task of getting the food produced and seeing that it is conserved and shared."

Reports reveal some of the helpfulness of the garden leaders, but those most familiar with gardening activities of 1943 and 1944 know that records never can tell half of what these volunteers have actually accomplished in the garden campaigns. These leaders have encouraged the beginners and have headed off mistakes and waste of effort. They have taken on organization chores that needed doing; arranged permission for use of vacant lots; organized groups to finance plowing of tracts; tipped dealers as to coming demands for seeds, fertilizers, and insecticides; coached garden planners; furnished practical advice based on experience; have encouraged opening of canning centers; and have rallied those whose spirit tended to flag.

3 BIG REASONS TO KEEP ON CANNING

Patriotic and foresighted home canners, who are launching plans right now to "do it again" this summer, have three good reasons for at least matching their 1944 efforts, when they accounted for nearly half the total civilian supply of canned vegetables and two-thirds of the canned fruits. Main reasons to "keep on canning" this year will be:

1. Home canning is more necessary to the war effort than ever. Military requirements are increasing so that even with the near-record commercial canned fruit and vegetable production in 1944, the supply for civilians is now less than at any other time during the war.

2. With home preserved food, it is easier to give the family good, nutritious meals the year round

3. Especially for families with home gardens, canning saves money and ration points as well as food.

Since Victory Gardening is the starting point for home canning, home economics of the U. S. Department of Agriculture recommend planning for canning along with the garden seed list. Expert advice on home food preservation may be obtained from the local nutrition committee, home demonstration agent, State Agricultural College, or the U. S. Department of agriculture, Washington 25, D. C.

COTTON CLOTHING FOR WARMTH

Development of special military fabrics is likely to benefit civilians after the war, says a special report on postwar marketing of cotton prepared by an inter-bureau committee of the U. S. Department of Agriculture. The report refers particularly to light-weight, wind-resistant, and water-repellant cotton fabrics that have been developed by the Quartermaster Corps. It is expected that in the postwar period, when manufacturers can supply such fabrics to civilian buyers, they will be used in quantity for all types of overclothing, and particularly for winter work clothing.

BAHAMIAN FARM WORKERS SEND $1,000,000 HOME

Bahamian farm workers, who have been brought to this country by the War Food Administration to help relieve the farm labor shortage, have sent home nearly 250,000 pounds, or about a million dollars to be used by their families or to be placed in savings accounts, according to reports received by WFA.

Since April 1943 1943 Bahamians have been sending home 75 cents for every day they worked. The number of workers varied from 3,000 to 5,000 during this period. At present there are nearly 5,000 Bahamians in Florida, cultivating and harvesting fruit and vegetable crops.

TEXAS COLORED FARMERS INCREASE SIRUP PRODUCTION

The colored farmers of Texas increased their production of home-cooked sirup last year, according to reports received by U. S. Department of Agriculture.

In one county the farmers cooked more than 750 gallons of sirup during a single demonstration; in another they cooked 400 gallons, and in others from 200 and 300 gallons. Texas county agents report that the farmers are selling the sirup at $1.50 per gallon and have received more orders than they can fill.

N. C. COLORED FARMERS BUY MORE MILK COWS

In order to help the nation reach its 1945 wartime milk goal of 120,582,000,000 pounds, and also provide their families with more milk for home use, the colored farmers of North Carolina are buying more high grade dairy heifers, according to reports received by the U. S. Department of Agriculture.

The report points out that during November and December of last year, the colored farmers of the eastern section of North Carolina purchased 320 high grade dairy heifers. J. W. Jeffries, colored livestock specialist of the State says that most of the animals came from Mississippi.

NEGRO EXTENSION WORK INCREASED IN THEM

The Negro Extension personnel in Tennessee has increased through the years from five to 29 farm and home agents, according to a recent issue of the Tennessee Extension Review.

The Review points out that among other things, these workers have been highly successful in helping the colored farmers to increase their production and conservation of food crops, and also in helping them to improve their health and their homes.

USDA RESEARCH HIGHLIGHTS

During 1944 the Agricultural Research Administration made notable contributions to better farming, better use of farm products, and to saving human life. While most of the developments relate to urgent war problems, many of them are also of lasting value in peacetime.

Among other things insecticides containing DDT were developed for the armed services and proved to be spectacularly successful in controlling lice and mosquitoes. Further progress was made in improving techniques for large-scale production of the life-saving drug, penicillin. Plant breeders released more than 40 new, improved varieties of plants for American farmers.

The use of phenothiazine as a worm medicine, already preventing losses that would cost livestock producers many millions of dollars a year, was further extended. Information on six methods for making lactose—important in penicillin production—from cheese whey, was made available to the industry. A new method was developed for rapidly determining certain amino acids in foods, thereby speeding up advances in knowledge of food proteins.

ABC'S OF VICTORY GARDENING

The U. S. Department of Agriculture says that success for Victory gardeners is considerably more probable if they will observe five simple rules: (1) Make good plans and make them well in advance; (2) have everything ready before the garden season opens; (3) get an early start and plant early crops early; (4) feed the crops and protect them from insects and disease; and (5) insure against drought injury.

"Anybody seen Pete?"
"Pete who?"
"Petroleum."
"Kerosene him yesterday but he hasn't benzine since."

Farmer Business Men Committees to Guide Veterans Returning to the Soil

Where a veteran is not familiar with farming conditions, or available land in the community in which he wishes to settle, his first contact should be with a veterans' advisory committee. This committee will function in conjunction with the county agent's office. These committees which will give free advice to interested veterans, will consist of successful farmers and business men who are thoroughly familiar with local conditions. This committee will operate primarily to protect veterans from unwise investments.

Southern Editors and Writers Meet to Extend Democracy

Page 6

One of the most significant meetings ever to be held in the South was that of December 21, 1944, when 43 white and eight Negro editors and writers from all parts of the South met in Atlanta, Georgia at the Biltmore Hotel to discuss the matter of extending the frontiers of democracy in the South.

The immediate point of attack was the Poll Tax which eight southern states still held to as one of the prerequisites for voting. (Since the meeting Georgia has repealed its Poll Tax law).

Cooly and dispassionately writer after writer told how the Poll Tax interfered with citizens exercising the franchise, and many of the devices other than the Poll Tax used to keep Negroes from registering and voting.

No resolutions were passed, no recommendations were made, but at the end of the meeting at least three things were clear: (1) That the progressive elements in the South recognize the fact that in order for the South to take its rightful place along with other sections of the country it must relinquish the Poll Tax, for which there is no longer a semblance of an excuse for keeping. (2) That for democracy to become more of a reality, all citizens in the South, colored and white, must be permitted to vote without artificial restrictions. (3) That the people who have charge of the southern press might well take the leadership in broadening and strengthening democracy.

Outstanding on the program of speakers was Mr. Roscoe Dunjee, president of the National Negro Business League, and editor of The Black Dispatch.

The Department of Records and Research, Tuskegee Institute, was represented by Mrs. Jessie P. Guzman, acting dirctor.

Reprint from **The Tuskegee Messenger**

Last Rites Held for Booker Washington Junior

Booker T. Washington, Jr., son of the distinguished Founder of Tuskegee Institute, died in Chicago on Monday, February 5th.

Funeral services were held in the Institute Chapel on Tuesday, February 13th. Friends of the family and those here who knew him, gathered to give a token of respect to the son of our great leader. Flowers were banked high around the casket and uniformed cadets stood at attention as friends filed silently by to view the remains.

Promptly at 2:00 P. M., Mrs. Alberta L. Simms at the organ played softly "Sometimes I Feel Like a Motherless Child," after which the congregation sang "Abide With Me."

Reverend Raymond F. Harvey, acting Institute chaplain, conducted the devotionals and Mrs. Sadie P. Delaney read the obituary and messages to members of the family.

The Tuskegee Institute choir, with William L. Dawson conducting, sang "Lead Me Lord, In Thy Righteousness." Other musical selections were rendered by the Tuskegee Institute Quartet, Messrs Neely, Brown, Wiley and McCray.

Remarks by President F. D. Patterson and the Funeral Sermon by Reverend Charles W. Kelley completed the simple and impressive service.

Postwar Job Surveys Aid Colored Workers

Colored workers are being aided by the postwar job surveys which the U. S. Department of Agriculture is helping small cities and towns in farming areas to make in order to determine the employment opportunities and the effective demand for goods and services after the war, according to the findings of the Anderson County, S. C., study.

An analysis of the survey completed in Anderson County recently reveals that the city of Anderson expects to have jobs for 10,-435 whites and 2,712 colored after the war. The study also shows, however, that the total white labor force expected to be available will number about 12,200, and the colored labor force about 4,300 or a total of 3,300 in excess of the number of jobs that are expected to be available.

Recognizing that some 3,000 white and colored workers may be jobless after the war, citizens of Anderson have set about to provide some additional jobs. Already plans have been completed for establishing two new cotton mills, and other industries are planned. Some of the unemployed may find work in nearby farming areas and in other towns.

With respect to the effective demand for goods after the war, the survey shows that for the first two years after the cessation of hostilities more white families in Greater Anderson will buy new automobiles, radios and phonographs, furniture, washing machines and new houses than any other items. First on the shopping lists of colored families are kitchen stoves, rugs and linoleum, automobiles, mechanical refrigerators, new houses and house repairs, furniture, radios and phonographs.

Coming to the amount of money involved in these expenditures, the survey shows that the white families will spend $5,436,936 of which $2,500,000 will go for new houses and house repairs. This is about a million more than they present for housing in the pre-war years of 1939-40. They will also spend $1,500,000 for new and used cars, or $200,000 more than during the prewar years; $117,000 for washing machines and ironing equipment, or $100,000 more than in prewar; and $97,500 for radios and phonographs, or $40,000 more than they spent for these items in 1939-40.

The colored families will spend a total of a little over $600,000. About $220,000 will go for new and used cars. This is $20,000 less than was spent for cars during the prewar years. They will also spend $214,000 for new houses and house repairs, or $185,000 more than before the war; $56,700 for furniture, or $25,000 less than in the prewar years; $18,750 for ice boxes and mechanical refrigerators, or $20,-000 less than before the war; and they will spend $18,300 for radios and phonographs, or $9,000 less than they spent for these items in the prewar years.

The whites will pay 58 percent of their bill in cash,—some from their bank accounts, come from the sale of war bonds, and some from the value of trade-ins.

It is thought significant that the colored families will have saved enough to plunk down $160,000 in cash and war bonds making their purchases, because the survey shows that the annual income of 40 percent of these families was less than $500 in 1943. Only 15 percent received $1,500 or more in '43, while more than 70 percent received $1,500 or more.

As for farmers in Anderson County, they will spend $4,070,000 during the first two years after the war for buildings, fences, tractors, truck, and other equipment. Of this amount, tenants will spend $1,487,000; and owners, $2,583,000.

Some people are not worth nearly as much money as they have.

Religion should be a rule of life, not a casual incident of it.

The Road Up

(Continued from Page 1.)

give our greatest efforts and concentration on the development of at least one good first-class school of agriculture on the collegiate and graduate-professional levels. Let's try to strengthen the agricultural staffs of our Land Grant Colleges.

It is a sad thing not to get jobs where we need them. But, it is considerably more regretful for the jobs to come and we do not have persons available for them.

Tom Roberts has done a splendid job of pioneering in making jobs available. We are falling down on our job, if, as farmers and teachers, we are not making it possible for more and more men and women to be prepared for competent and intelligent leadership in this general field.

It has been a long time now since I have been a **really competent** agriculturist, rural economist or sociologist, forester, etc., who did not have his choice of good jobs.

A JOB WELL DONE

We have supplied gasoline, fuel oil, lubricants, and hundreds of other petroleum products to our fighting men and our allies throughout the world in quantities beyond comprehension. The Office of War Information estimated recently that it requires 6,480,800 gallons of petroleum products for an initial invasion of 250,000 men in a given area, and 32,424,000 gallons to maintain this force for 30 days. This gives an idea of the tremendous job the American petroleum industry is doing in seeing that our armed forces never lack oil.

How it has supplied our military demands and kept the wheels turning at home, is a story of accomplishment almost without parallel. While meeting the demands of war, the industry is not failing to think in terms of peace, and its obligation to maintain unending reserves for the greatest oil using nation in the world.

We are just discovering, as it were, the vast potentials of our great natural resource, oil, that has transformed our way of living—discoveries brought about by individual initiative and spurred on by free competition.

A Fundamental Philosophy

"The soil is the most precious gift of the Creator to mankind. . .

"Ownership of the land is to be considered a stewardship not for yesterday or today alone but for the long tomorrow as well. Practically all of the world's food supply comes directly from the soil.

"We, today's stewards, have a right to use the land and the fruits thereof for our benefit, but we also have a duty to hand it down to future generations not dispoiled but enriched just as the human culture and traditions to which we have fallen heir must be richer tomorrow because we of today have lived.

"The good earth was never intended by the all-loving Creator to be a source of benefit to a few and a mere means of servile labor to others.

"The human rights of the individual and family living on the land must have the first attention, consideration and protection of civil law because natural law so postulates it.

"Ownership of productive property is essential to economic freedom, hence to political freedom. And we, unhesitatingly, state that ownership of land by the family that lives upon it and operates it is the best way to secure and retain these manifold freedoms and thus achieve permanency for the free, democratic institutions we cherish."

Quoted from foreword 'Report and Recommendations of the Farm Tenancy Committee,' Iowa State Planning Board, Des Moines, Iowa, October, 1938.

Labor View

By GEORGE F. McCRAY
For ANP

THE COTTON PICKER AND UNEMPLOYMENT

Even with 60 million jobs after the war, tens of thousands of whites and Negro workers will be unable to find employment. These workers will be the victims of the newly perfected machines which will be used extensively after the war to raise cotton. Those who think the Northward migration of Negro labor will stop after the war, are going to be sadly disappointed. Such migration is certain to increase.

The reasons are basically economic. The long critical shortage of farm field hands in the south has speeded up the search for ways to enable one worker to do the same work previously done by many others. Moreover, the fear of American planters that after the war American grown cotton will be undersold by cheaper cotton from Egypt, India, Russia and China is forcing these planters into a desperate search for means to slash costs. Thousands of acres of cotton went unpicked in a number of southern states last year because the planters could not afford to pay a sufficiently attractive wage to pickers.

CHEAPER COTTON

This drive to reduce costs to enable American cotton to compete in the world market, seems certain of success. Under conditions which prevail over large areas of the south it is being demonstrated that Machinery can be used in all phases of cotton raising. Development of the machinery is being rushed by the McCormick-Deering Co., the Alis Chalmers Co., and the John Deere Co.

In Clarksdale, Miss., during the past season 2,000 acres of cotton on the Hopson plantation were completely cultivated by machinery This included preparation of the ground, planting, application of fertilizer and "bug killers;" weeding, defoliation, and picking. Obviously some of these methods are not new, but are mentioned here to complete the mechanization picture, but the climination of hand picking and chopping is new and revolutionary.

The mechanical cotton picker already picks as much in one day as do 60 men. Other improvements are certain to follow. Use of this picker after all allowances for dirt, trash, leaves, etc., represented a saving of five cents on the pound or 25 per cent of the present selling price of cotton. This cost reduction is definitely a menace to the thousands of small cotton raisers who lack capital or level land.

CHOPPERS TO GO

Thousands of Negro and white cotton choppers will be completely driven out of these areas where conditions are favorable for the use of mechanical flame weeders. This machine moved rapidly down the rows throwing an oil burning flame close to the ground on weeds, grass, and even the cotton plant. The young cotton plants remain practically undamaged, but the weeds and grass are completely destroyed.

Just as dusts and liquids are sprayed on plants and in orchards to kill bugs and other insects and parasites, chemicals have been developed which when sprayed on plants cause them to shed their leaves thus making it possible to improve the quality of the cotton picked.

PROGRESSIVE DEVELOPMENT

It is quite possible that the ultimate effect of these inventions are likely to be as far reaching on the south and upon the lives of Negroes as was Eli Whitney's cotton gin and the long list of inventions which made cotton textiles cheap and profitable .

When production per worker in the cotton field failed to keep step with production per worker in cotton textiles the Civil war became almost unavoidable and with it one of the ugliest race relations situations in the world. The demand for more and more cotton caused the use of farming methods which nearly ruined the richest agricultural region in the country. Eventually a few could live comfortably only through the heartless exploitation of millions of white and Negro farm labor. This is the basic fact underlying most of the reaction, the hate and the interracial bitterness in the South today.

In the long run the mechanization of cotton raising, increasing productivity per worker and thus reducing labor costs will strengthen democracy and ease interracial tensions. Without planning, however, the period of readjustment, the period when the sharecropper, the day workers, and the tenant farmers will be told to leave the land, will be one of intense suffering and hardship. Most of these displaced workers will find their way into northern industrial centers. Big question is will they find welcomes or riots?

Two United States soldiers, sightseeing in London, were walking down Whitehall. They wanted to see the war office but did not know on which side of the street to look. They hailed a passing Tommy and asked: "Which side is the war office on?" The Tommy thought a startled moment and replied, "Gorblimey! Ours, I think!"— Wichita (Kans.) Democrat.

Democratic Farming

By GEORGE S. MITCHELL

A lot of people still have the old timey idea of the farmer as a man who does his work behind his own fences and is not bothered much about what his neighbors do.

Farming has become a modern business, and modern business can't run without the democratic process.

Much of the work of the New Deal agricultural agencies has been helping farmers to build out in the country the habits and machinery of self-management of their joint affairs.

Farming under the old competitive methods had run on the rocks. The Government came in , and working with what organizations of farmers that existed, set up crop control and national programs to get the land built up, and support prices. It set standards for rural housing, and provided a way for scores of thousands of tenants to prove that with reasonable credit and some teaching they could become farm owners. It arranged crop insurance and made special public provision for management of the problem of farm labor.

In the last dozen years farm neighborhoods have become organized neighborhoods. Farmers meet in school houses and country churches to talk about and vote about local and national administration of farms. They pick their leaders to sit on AAA committees, and run soil conservation districts, and decide who shall get special farm loans, and plan for better farming and better farm living.

Often this new rural democracy does not go all the way down to the poorest farmers. Croppers and tenants and small owners feel their dependence, and hold back to let the bigger men run things. Often the bigger men use their own organizations to tighten their control of the situation, but the little fellows are the most. They have a right to be consulted. The machinery of consulting them is theirs for the using. and they are learning how to use it.

Perhaps the next step will be independent organization of the smaller farmers. When that occurs. the voice of the many who are poor, will be heard in State Legislatures and in Congress.

Southern farmers have learned a lot about how to work together for agriculture's good. There is more to learn, but the pattern of democracy is set. Democratic farm organizations and democratic labor organizations working together can make a democratic South.

LOAFERS AND HOARDERS

The Mead Committee has made public glaring examples of loafing on the job and labor hoarding.

Stories of a similar nature from unofficial sources have long been common knowledge. Private citizens can recount from their own experience, disgraceful examples of deliberate loafing on war jobs. Many conscientious workers have quit war jobs because they could not stand the waste of time they were required to endure.

The answer to criticism of labor loafing and labor hoarding is always, "We have produced the goods." That may be true, but at what a price! How much more could have been produced otherwise! We have now reached the point where both money and man-hours are growing scarcer. Let us hope that if the Mead Committee is not able to penalize or punish labor loafers or labor hoarders, that revelations which it can make will arouse the nation and shame the offenders into a correction of their ways.

Girl: "I'm telling you for the last time that you can't kiss me."

Sailor: "Fine! I knew you would weaken sooner or later."

THE RACES OF MAN

Early Man lacking means of wide travel and communication developed into varied types which we call races. People then needed to keep peace with few neighbors. Today all men are neighbors and with all men in time we can and we must live in peace.

Dear Reader:

This is the first of a series of reproductions from the Cranbrook Exhibit on **The Races of Man** which will run in consecutive issues of the **Modern Farmer.** Watch for others to follow.

The original large exhibits are being distributed by the Race Relations Division of the American Missionary Association. Should you be interested in securing this exhibit for your school, lodge, club or assocaition, write for particulars to:

The Race Relations Division,
American Missionary Association
Fisk University,
Nashville 8, Tennessee.

Sincerely yours,
Giles A. Hubert, Editor.

Anglo-American Group Visits Nigeria To Study Education and Agriculture

GROUP INCLUDES AFRO-AMERICAN AUTHOR

Now in Logas to make a study of education, agriculture and rural life in Nigeria, as they will do in two other British colonies in Africa, the Anglo-American Group have been united on this mission by the Foreign Missions Conference of North America and the Conference of Missionary Societies in Great Britain and Ireland.

This group, headed by Dr. Jackson Davis of the Rockefeller Foundation of New York, includes Miss Margaret Wrong of the International Committee on Christian Literature for Africa and Mr. Thomas Monroe Campbell, Afamerican, who is Field Agent, Extension Service of the U. S. Department of Agriculture.

In his book, "The Movable School Goes to the Negro Farmer," Mr. Campbell reveals the thrilling history of the development of rural Dixieland.

Described as a semi-autobiography, the first three chapters of his opus deal with Mr. Campbell's childhood and early struggles and his trip to Tuskegee where he left a heritage for his children who later came to be connected with the Institute.

In part two of the book, he writes about the late Dr. Booker T. Washington and how that patriot championed the Negro farmer, the growth and expansion of the movable school, exemplary achievements and prospects of rural life among Negroes.

Mr. Campbell is the only Negro member of the group now in this country.

One phase of the purpose of this body's visit to West Africa can be summarised as follows:

To observe the progress of agricultural and food production programs among the African people in villages and in rural areas as fostered by government and the various missionary societies.

To study methods used by Africans in soil preparations and erop rotation. To get information of types of subsistence farming equipment used and sources of labour supply. To see if simple agricultural literature is being distributed among the Africans. To see research and experiment stations and gain information on how solutions to farm problems are passed on to the African population.

To visit market places and observe varieties of food as produced and brought in by Africans from rural areas. To learn something of African food habits in regard to health and nutrition.

Finally the group will try to find out the next step for the development of agriculture in Africa.

The following is a report of a radio broadcast of an interview given by Mr. Campbell while in Nigeria.

Lagos Radio Rediffusion Program
Friday 26th January, 1945

J. M. LEWARS: Well, Mr. Campbell, I need hardly offer you, at this date, a cordial welcome to Nigeria; for during our tour in the last three weeks, I have already seen the enthusiasm that your visit has aroused.

T. M. Campbell: Mr. Lewars, and friends of the Radio audience, I am happy to say a word of greeting to the people of Nigeria—This is my first visit to your great country. Coming from America as I do and being of African descent I am deeply interested in the future of the African people; especially in regard to food production, food habits, health and education.

J. M. LEWARS: Am I right in describing you as Field Agent for the U. S. Department of Agriculture supervising Cooperative Extension work, in Agriculture and Home Economics, among Negro farmers?

T. M. CAMPBELL: You're quite right, and I work in seven of the Southern States in America with headquarters in Alabama.

J. M. LEWARS: Were you born in Alabama then?

T. M. CAMPBELL: No, I was born on a farm in the State of Georgia adjoining the State of Alabama.

J. M. LEWARS: When did you receive your training?

T. M. CAMPBELL: I received my formal training at Tuskegee Institute, Alabama.

J. M. LEWARS: Won't you tell us a little more about Tuskegee and its founder?

T. M. CAMPBELL: In the first place, Tuskegee Institute is a good demonstration of inter-racial cooperation between Negroes and white people in America. It is a matter of history that a Negro exslave by the name of Adams and a white exslave owner by the name of Campbell—both of Tuskegee, called on General Armstrong of Hampton Institute in Virginia to send them a good man to start a school at Tuskegee. Fortunately that man was Booker T. Washington. In a book which he wrote titled "Up From Slavery" Dr. Washington said: "On July 4, 1881, I opened school in a one room shanty in the town of Tuskegee." Thus you can see the school was originally planned to serve the village in which it is located; but news of the type of training it gave (from the beginning) spread over Alabama, and soon over all the Southern States. It was through a press report of a famous address delivered by Dr. Washington in Georgia, my home State, that I heard of Tuskegee Institute—the subject of that address was "Cast down your bucket where you are."

J. M. LEWARS: And so you ran away from home and eventually worked your way to Tuskegee.

T. M. CAMPBELL: That's right; and as a student at Tuskegee I knew Dr. Washington personally. He was truly one of America's great men. With his many duties as principal of Tuskegee he never lost touch with the common people and rural life, the churches and preachers, the schools, teachers and farmers.

In conferences, he urged them to build **better** churches and schools; buy land and erect more comfortable homes, to raise enough food for the family and a surplus for sale. Save their money, look after their health, educate their children and above **all** live clean moral lives.

J. M. LEWARS: And what has that village school developed into now?

T. M. CAMPBELL: Tuskegee Institute, during a period of 63 years, has grown from a one room school house to the largest educational institution in the world operated **by** and **for** Negroes. It stands today in the heart of the deep South, as a living monument to Booker T. Washington and those who worked with him. Dr. F. D. Patterson is now President of Tuskegee.

J. M. LEWARS: Then you must have known Dr. George Carver also?

T. M. CAMPBELL: Yes, the late Dr. George Carver was another outstanding American Negro, born during slavery. After working his way through school and college, he was invited by Booker T. Washington to come to Tuskegee during its early history, and there he spent all of his professional life, in Agricultural Research. He made a great contribution to Southern agriculture through the discovery of new uses for the peanut, or as you would call it the ground nut; the sweet potato and the cowpea. Dr. Carver was one of my teachers.

J. M. LEWARS: Could you summarise in a sentence what Tuskegee stands for, and what you and your hundreds of men and women travelling agents are striving to achieve?

T. M. CAMPBELL: Booker T. Washington uttered a great truth when he said: "We shall prosper in proportion as we learn to dignify labor and put brains and skill into the common occupations of life." Thousands of Negro men and women trained at Tuskegee in the three H's—head, heart, and hand have gone out into the world and are helping to make it a better place in which to live.

J. M. LEWARS: Well now, what has brought you to Nigeria?

T. M. CAMPBELL: Leave of absence was granted me by the United States Department of Agriculture to join Dr. Jackson Davis of the Rockefeller Foundation of New York and Miss Margaret Wrong of the International Committee on Christian Literature for Africa. They had been invited by the Foreign Missions Conference of North America and the Conference of Missionary Societies in Great Britain and Ireland, to make a study of Education, Agriculture and rural life in the British and other West African Colonies.

J. M. LEWARS: And a strenuous tour it has been in Nigeria. During our travels together I have watched you hold spellbound the pupils, the students and the lepers who have been privileged to hear you sing your own Negro Spirituals. Won't you sing us one of them now? "Go Down Moses" perhaps?

J. M. LEWARS: In spite of your grey hairs one would hardly suspect that you had five sons and daughters serving with the Forces. Before you return to Tuskegee we trust you may be able to make contact with your doctor son, serving in England and perhaps also with your boy fighting in the Air Force in Italy.

T. M. CAMPBELL: Thank you.

J. M. LEWARS: Thank you Mr. Campbell, safe journey; and may you come back some other time to Nigeria.

Wallace To Commerce Department

Vote of 56-32 Confirms Former Vice President After Price Paid

It's "Secretary of Commerce" Wallace now.

Henry A. Wallace, the man whose face is set resolutely toward full production for farmers, full employment for non-farm people and a better deal for all people after this war, was confirmed as secretary of commerce by a senate vote of 56-32.

"Jobs for all" will be the battle cry of the century, Wallace declared during his fight for the commerce post. He was expected soon after confirmation to announce plans to strengthen the postwar position of small businesses, along with workers and farmers after the war.

Paid a Price

The price Wallace and his backers had to pay for confirmation was separation of RFC and other lending agencies from the commerce department. This was accomplished by passage of the George bill.

Progressive Robert M. LaFollette, Wis., 10 Republicans and 45 Democrats voted for Wallace, twenty-seven Republicans and five Democrats voted against.

Republicans supporting the former vice president included Aiken, Vt.; Ball, Minn.; Brewster, Maine; Hart, Conn.; Langer, N. D. Saltonstall, Mass.; Shipstead, Minn.; Toby, .NH.; Wilson, Iowa; and Morse, Ore.

"STORM SIGNALS"

Farmers "are warily watching the economic weathercock for signs of a postwar depression storm," says Ray Anderson in the Farm Journal, "and they are taking little stock in political promises of succor. Very few are counting on what the government may do, or what schemes industry and labor may come up with. They are putting their faith in themselves, and their ability to get in shape now for whatever the future may have in store."

This growing attitude is in a large measure the result of the helplessness many farmers feel under farm subsidy programs which are ostensibly to hold down the cost of living, but which, in reality, make the farmer depend on government as the costs of production advance, and the subsidies which the farmer must aceept in lieu of the true production price for his erops, are added to the growing tax burden of the nation.

Farmers are smart enough to know that this process is but a makeshift, and that sooner or later it will leave them high and dry, or else they will become merely farm tenants of the government with their income entirely subject to political manipulation.

Expanded Extension Program Helps Colored Farmers Up Food Production

Colored farmers are being assisted in making a larger contribution to wartime food production through the expansion of the Cooperative Extension Service program, says Director M. L. Wilson in his annual report to War Food Administrator Marvin Jones.

Pointing to the achievements of colored farmers, Director Wilson says that not only have these farmers produced large quantities of food and provided more adequate diets for their families, but they also have taken an active part in various war activities, including buying bonds and collecting scrap. In one Alabama county Negro Americans purchased $140,000 worth of bonds.

In discussing the expansion of Extension work, the director points out that of the 420 eounties in the South which have 450 or more colored farm families each, 295 of them have called agents to serve these families. Through the emergency war food fund, nearly 400 additional farm and home agents, and clerks have been added to the Extension foree in the Southern States to help the eolored farmers increase their production and conservation of food. These workers represent 17 percent of the total emergency war food personnel appointed.

The director points out also that the number of home demonstration clubs increased from 4,524 to 5,289 between 1942 and 1943. The number of persons in these clubs inereased from 120,706 to 145,300, and 4-H'ers increased to the record total of 254,614.

FLORIDA COLORED 4-H'ERS COMPLETE 800 PROJECTS

The Jackson County, Florida, colored 4-H club boys completed 861 projeets last year, the Florida State Extension Service reports. Under the guidance of Negro County Agent Thomas A. Harris, the clubbers produeed food and feed crops on 971 aeres, raised 1,063 chickens, 415 hogs, and cared for 36 cows.

Wallace Wins Southern Support In Battle for Full Employment

Outstanding representatives of Southern business and labor joined in support of Henry A. Wallace for Secretary of Commerce this month as the first round in the fight for full employment neared victory in the Senate.

After a bitter fight in both Houses, in which Southern Congressmen split to lead both sides of the debate, Wallace appears to have the votes necessary for confirmation.

The opposition of the overwhelming majority of the nation's press and those who fight the President's program for full postwar production, sixty million jobs and implementation of the Economic Bill of Rights was strong. But Wallace received the support of even more powerful forces—a coalition of farseeing businessmen, small and large, labor and farm groups, who recognize Wallace as a fighter for real postwar prosperity.

Businessmen For Wallace

Spontaneously a Business Man's Committee for Wallace sprang up, with two of the South's most important industrial figures as leaders: Andrew J. Higgins, Higgins Industries, New Orleans, and Lewis J. Reynolds, Reynolds Metals Co., Richmond, plus hundreds of other Southern businessmen. Letters and telegrams poured into Southern Congressional offices "Pappy" O'Daniel received so many he had to mimeograph his answers.

The split of Southerners in the test Senate and House votes reflected this groundswell of pro-Wallace sentiment. In the House attempt to scuttle the George Bill to prevent Wallace's confirmation, twenty-three Southerners led by Cox, Smith and Rankin, deserted their party; but Texan Sam Rayburn led the fight for Wallace. The best speeches of the debate were made by Oklahoman Mike Monroney and North Carolina's Cooley; and over eighty Southerners stood firmly behind Wallace.

In the Senate, the test vote which is given here, came on a motion to consider the confirmation of Wallace before the George Bill.

Congressmen not listed below did not vote.

THE HOUSE VOTE:
For Wallace:

Alabama: Grant, Hobbs, Manasco, Rains, Jarman, Sparkman, Patrick.
Arkansas: Mills,, Norrell, Hays, Harris, Trimble.
Florida: Peterson, Sikes, Price, Cannon, Hendricks.
Georgia: Peterson, Pace, Camp, Wood, Brown, Rampspeck, Vinson, Tarver.
Kentucky: Chapman, May, Gregory, Clements, O'Neal Chelf, Spence, Bates.
Louisiana: Hebert, Malony, Morrison, Allen, Brooks.
Mississippi: Whittington.
North Carolina: Doughton, Clark, Bonner, Folger, Cooley, Durham, Burgin, Ervin, Bulwinkle, Weaver, Barden.
Oklahoma: Stigler, Monroney, Wickersham, Johnson.
South Carolina: Riley, Bryson, Richards.
Tennessee: Cooper, Davis, Earthman, Priest, Kefauver, Courtney.
Texas: Beckworth, Worley, Mahon, Kilday, Fisher, Patman, Combs, Pickett, Thomason, Mansfield, Lyle, Poage, Johnson, L. B. Summers.
Virginia: Bland, Woodrum, Burch, Flannagan, Daughton, Drewry.

Against Wallace

Alabama: Boykin, Andrews.
Arkansas: Gathings, Cravens.
Georgia: Cox, Gibson.
Kentucky: Robsion.
Louisiana: McKenzie.
Mississippi: Rankin, Whittier, Abernethy, Winstead, McGehee.
Oklahoma: Stewart, Rizley.
South Carolina: Rivers.
Tennessee: Murray, Reece, Jennings.
Texas: Lanham, Gossett, West.
Virginia: Smith.

THE SENATE VOTE:
For Wallace

Alabama: Hill. Arkansas: Fullbright. Florida: Pepper. Georgia: Russel. Kentucky: Barkley. Louisiana: Ellender, Overton. Mississippi: Bilbo, Eastland. Oklahoma: Thomas. South Carolina: Maybank, Johnston.

Against Wallace

Alabama: Bankhead. Arkansas: McClellan. Georgia: George. North Carolina: Bailey, Hoey, Oklahoma: Moore, Tennessee: McKellar, Stewart. Texas: Connally, O'Daniel. Virginia: Byrd.

COMPARATIVE SIZE OF FINANCIAL OPERATIONS OF R. F. C., AND AGRICULTURE DEPARTMENT, CALENDAR YEAR OF 1940

	Agriculture Department	R. F. C.	R. F. C. as Percentage Agriculture
Amounts advanced	$1,551,093,000	$ 453,239,000	29.2%
Repayments received	1,261,882,000	345,087,000	27.3%
Repayments as percentage of advanced	81.4%	76.1%	
Number of loans made	285,507	1,303	0.5%
Amt. outstanding at end of yr.	4,289,818,000	1,712,639,000	39.9%

Georgia County Agent Writes News Letter

S. H. Lee, Farm Agent, Urges Farmers To Lay In Large Food Supplies. His January Letter follows:

"Watchman, What of the Night?" I don't know, but let's look at a few things: (1), The war outlook; (2), twelve million people; (3) The food and feed outlook; (4) Winter crops; (5) Labor outlook; (6) The 4-H club outlook .

The War Outlook:

Early on the morning of January 2, this writer heard a prominent radio commentator announce that there are now 11 million 9 hundred thousand men in the armed forces, with over 8 million of these in the U. S. Army; the others in the Navy, Coast Guard and other services. And Mr. Byrnes says that all draft boards must step up inductions over 50 thousand a month. In other words, the flint hard facts are that by mid summer there will be well over 12 million men and women out of all kinds of productive employment absolutely dependent upon the farmer for every pound of food they eat and every shred of wool, cotton and leather they wear. And, to this 12 million fighters we can safely add another two million officers, office personnel, and just plain laborers, to direct, and keep supplies moving to this vast army.

12 MILLION PEOPLE:

Dear Reader, neither you nor I can imagine the bigness of 12 million people. But here are just two comparisons: Greater New York is said to be the world's largest city—population around 4 million, just a third of that of our armed forces. **And get this one:** the 1940 U. S. Census report gives the total farm population of 10 Southern States as 12,039,555. Now, that means the number of all people living on farms in these ten states, including both old people and small children. The states referred to are—Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Oklahoma, and Texas. Indeed 12 million is some host of mouths to feed, and bodies to clothe. And mind you, I haven't said a word about food and clothing obligations of our allies, war prisoners and people of the liberated countries!

Food and Feed Outlook:

Can you buy a pound of cured meat in the stores now? How long has it been since you could buy it? When will you again be able to find a streak 'o lean and a streak o' fat at the corner grocery store, or the country general supply store? Only God knows!!! And what is true of meat is already largely true of butter and will soon be true of dressed poultry. How about cotton seed meal and hulls? How much do you have to pay right now for a bushel of corn? **Honestly, Do You Get The Hint?**

Winter Crops:

Did you or did you not plant some? If you didn't, for the sake of your own hide and your livestock's bellies, you had better get some in the ground this month.

Labor Outlook:

You and I may think that draft boards have already cut farm labor supply to the bone. But did you know that the radio and daily papers are saying that draft boards must take another look at all deferments, 4 F's and possibly men over 38? Does this mean anything to you Mr. Farmer?

4-H Club Outlook:

During the last six weeks I have visited practically every school in Bibb and Twiggs counties. In only one have I found a fairly goodly number of large size boys. But to you who are in school, and to those out of school but at home in the afternoons and at night, lets join in with our whole soul and body in helping to produce the tons and tons of food and feed that must be produced this year of our Lord, 1945 to cut shorter the war, and bring our loved ones back home the quicker.

North Carolina Farmers' Curb Market

Wilson, N. C.—Pictured above is the Wilson County (N.C.) Negro Farm and Home Curb Market owned and operated by a group of farmers of this county. The market was organized in June, 1940 and has been in operation since that time. Sales are held every Saturday morning.

Total sales during the first year of operation amounted to $2,362.83. Last year (1944) the farmers sold $4,095.23 in products through their market. Products marketed included fresh and canned vegetables, meats, fruits, potatoes, eggs, chickens, butter, meal and home products.

The market is under the supervision of Mrs. J. A. Boyd, Home Demonstration Agent and C. W. Foster, County Agent.

Ethiopian Farmers Fight Soil Erosion

Despite centuries of cultivation, the soil of Ethiopia has been remarkably well conserved against erosion and fertility depletion by hard-working Ethiopian farmers, according to an article in a recent issue of Soil Conservation, a U. S. Department of Agriculture publication.

Written by A. T. Semple, an animal husbandry specialist attached to the Foreign Economic Administration's American Technical Mission to Ethiopia, the article describes soil conservation practices as carried out in Ethiopia.

Although terracing, contouring, strip-cropping, rotating crops, the planting of cover crops and diversified farming may be relatively new to some American farmers these practices in crude form are as old as the hills in Ethiopia. Plowing on the contour with a yoke of oxen and a moldboardless plow that looks more like a stick, the Ethiopian farmer cultivates his small farm of five or perhaps 10 acres with a technique similar to Edward H. Faulkner's trash-farming here in America.

Because the Ethiopian farmers' plow does not have a moldboard, the topsoil is not turned over and there grass roots and crop residues remain on top to increase the rate of rainfull absorption and reduce erosion. The author points out that if the modern American farming practices were followed on a wide scale in Ethiopia, irreparable damage would be done before the farmer could develop adequate conservation methods. He says that modernization in Ethiopia must be accompanied by a sound soil conservation program, or similar soil damages will occur in Ethiopia as have occurred here and in South America.

Through the centuries, by contouring on the slopes, building bench terraces on the steeper hillsides, rotating their crops, and by plowing their land carefully Ethiopian farmers have fought off erosion and cultivated teff, maize, grain sorghums, barley, wheat, flax, cotton, peas, nouk, and other products. However, in some areas there is much erosion, and soil depletion, and in others the land is severely overgrazed by the vast herds but, by and large, the soil has been conserved under a blanket of grass.

Migrant Labor Problem

Disgraceful conditions have existed for a long time among migrant laborers brought into the State for seasonal occupations. They are engaged mainly by farmers in picking potatoes and harvesting crops, and in canneries. It has been the custom for several years for farmers to drive trucks into the South, get a load of Negroes and bring them back to work in the fields. The only difference between this practice and slavery is that the workers come voluntarily, are paid for their services and are free to quit when they please.

These Negroes, and not a few "whites," see in this voluntary servitude a chance to get North. After serving out the season few ever go back. They drift into the cities where they create not only a race problem, but add to the unemployed. They are to be found on relief rolls in large numbers. Being only temporarily employed in the country little attention has been given to the manner in which these people live. Men, women and children are crowded together in hovels, often without sanitary arrangements and with little discrimination between sex.

Local authorities are unwilling or unable to cope with the situation. They look upon these migrants as non-residents. They feel they have no obligation toward them. The matter has become such a scandal that the State has felt compelled to act. Governor Edge, in his annual message, called for a remedy. It is now provided in a bill introduced by Assemblyman Huhn, of Essex County. The astonishing feature in this proposed legislation is that it calls for an appropriation of $100,000. Apparently the State plans to assume the responsibility of those who bring this kind of labor into New Jersey. It would seem enforcement of the law, particularly regarding sanitation, would be sufficient.

Mr. Huhn's bill provides for planning and building labor camps, and frequent inspection when occupied. There would be an educational program and medical care for the itinerant laborers. This is paternalism in the extreme. As a matter of fact all that is necessary is to compel those who bring this migrant labor into the State to provide decent living conditions for the workers. The State Police who constantly patrol the country districts could attend to that.

Under the stress of war the housing problem is acute and some temporary remedies may be necessary. But the kind of migrant labor complains of is not temporary. It was going on before the war started, and will probably continue after peace is declared. Employers of such labor should not be allowed to transfer their duties to the State. The bill now before the Legislature simply adds another agency to the Government with its numerous employees all piling additional expense on the taxpayers.

SHORT-CIRCUITING PRODUCTION

In the drive for postwar production and jobs, the manufacturers and retailers of the United States are preparing ambitious plans. Washington authorities urge greater production to create more jobs, but there can be no greater production without greater distribution and sale of goods.

In the face of these self-evident facts, a bill has been introduced in Congress that would limit production by a confiscatory tax on larger chain stores.

The theory of the bill is that it would aid so-called independents, whereas it would prevent an independent from ever hoping to grow beyond a certain size because, in addition to confiscatory tax penalties on size, it would limit the number of stores that could be owned by any one company in a given area, and it would specify the distance from the home office that these stores could be located.

The bill seems almost too childish to consider but there it is to take up the time of Congress. And there it is to help block production and jobs through limiting the opportunities for distribution through certain retail outlets, and preventing other retail outlets from growing in size to take the place of those destroyed.

Such impractical measures can short-circuit the development of constructive Congressional plans for postwar expansion in all fields of activity in which retailing must be the key to successful increased production.

Mrs. Flatt: "My husband is clever to say the least."

Mrs. Sharp: "Well, he'd have to be more than clever to say the most."

A PRIZE WINNER

A bill introduced in the last session of Congress to provide for a Rural Telephone Administration with some hundred million dollars to disburse in various ways, has been reintroduced as Senate Bill 73 in the present Congress. While the bill provides for loaning or expending public money for private or public telephone service in rural areas, its real objective appears to be to open the way for government agencies to get into the telephone business.

Just why public funds should be spent for this purpose, other than to increase the field of government competition with business, is hard to see. Before the war, the telephone industry, including thousands of independent and farmer lines, was the wonder of all nations, as it gave this country the greatest telephone service in the world.

Wartime manpower and material shortages slowed up expansion of telephone service. Using this unavoidable delay in construction as an excuse for spending taxpayers' money to build telephone lines, is not logical for government projects which use materials and manpower during the present emergency, would be as damaging to the war effort as would private construction. Once the emergency is over, the private industry can go ahead with a program already planned for rapid expansion, which does not require tax funds.

Of all the uncalled-for devices to tap the Federal treasury, a Rural Telephone Administration would seem to take the prize.

THE SCIENTIFIC APPROACH

The Senate Sub-committee on Wartime Health and Education, a sub-committee of the United States Senate Committee on Health and Labor, has issued an interim report. It discusses the use of government aid in the development of medical facilities, medical education, medical research, medical pre-payment plans, and government assistance in certain situations in which the needs are clearly apparent for preventive medicine, and planning toward a nationwide network of medical facilities. The report, while making no specific recommendation in regard to health insurance, considers voluntary prepayment plans, compulsory sickness insurance, tax-supported medical services or various combinations of these methods, and points out that some form of group financing is desirable. It says:

"In order to permit local initiative and control, state programs should be drawn up by state health planning commissions in cooperation with local authorities. In drawing up state plans, the commission should consider the needs of all sections of the State, should include in the plan all suitable existing public and voluntary hospitals, and should plot the new construction as well as the expansion or replacement of existing facilities needed for adequate service. Before Federal funds could be granted, however, over-all State plans and individual projects should be reviewed and approved by the United States Public Health Service to make sure that they meet certain minimum standards of construction, operation and complete coordinated service. There should be reasonable assurance that a new facility will have enough patients to justify its existence. In communities where sufficient income from fees of individual patients does not otherwise appear probable, provision for group prepayment plans, or tax-supported service, or both, should be required."

The report is a more constructive, scientific and carefully considered document that has heretofore been available in this field, and is evidence of a desire to encourage the progressive initiative of American medicine.

Two small boys were engaged in earnest conversation. "I heard my mother reading about the ice jam," said one. "I wonder what it is."

"I guess," said the other, "It's the kind the little Eskimos eat."

Oklahomans Announce Junior Livestock Show

4-H Club and N. F. A. Members to Participate

The Board of Directors for the Oklahoma Negro Junior Livestock Show, in a meeting in Boley, Sunday, February 11, voted to hold the 1945 show for 4-H Club and N. F. A. members at Langston University during the month of October.

The first show of this kind for Negro youth of the State was held in October 1944 at Langston University and the results were very encouraging. More than fifty 4-H Club and N. F. A. members participated in this show and received over $2,000.00 in premiums and sales.

George Davis, an Aberdeen Angus Breeder of Boynton, Oklahoma is chairman of the Board of Directors; Forest Anderson of Earlsboro, a farm operator and President of the Farmers' State Bank of Boley, is treasurer; Ed Cox, a livestock farmer of Hughes County, is vice chairman. Other farmer members of the board are J. T. Armstrong of Luther; J. A. Rouce of Hitchcock and Robert Portridge of Boley.

Emphasis is being placed, this year on improving the quality of livestock shown and increasing the number of 4-H Club and N. F. A. members participating.

The Oklahoma Extension Service, the State Vacational Agricultural Department and Langston University are cooperating fully with the agricultural interests of the State in making this show a success.

LAST YEAR'S SHOW GREAT SUCCESS

The first annual livestock show for Negro 4-H Club and N. F. A. members of Oklahoma, was held at Langston University, October 24-25.

Sixty-nine animals were exhibited by 50 4-S and N. F. A. members for 9 N. F. A. chapters and 5 county 4-H Club groups.

A junior livestock judging contest and sale were held in connection with this show.

Results of Judging Contest are as follows:

Seminole County Team—J. G. Floyd, County Agt. 1st.

Oklahoma County Team—B. T. Robinson, Co. Agt. 2nd.

Muskogee County Team—J. M. Watlington, Co. Agt. 3rd.

High individuals were:

C. W. King, Seminole County, 1st.

Alonzo Ponder, Seminole County, 2nd.

Leslie Ivory, Lincoln County, 3rd.

N. F. A. Judging team winners were:

Luther N. F. A. Team, first, C. C. Cooper, Supervisor.

Sapulpa N. F. A. Team, second, R. T. Lewis, Supervisor.

Oklahoma City N. F. A. Team, J. M. Jenkins, Supervisor.

High individual scores:

Theopolis Dunlap, Sapulpa, 1st.

Willie Boone, Luther, 2nd.

Eddie Payne, Wewoka, 3rd.

Thirty market animals were sold which included 4 calves; one lamb and 25 hogs. Members of Oklahoma City Livestock Exchange and Guthrie Chamber of Commerce were heavy buyers at this sale, which netted the sellers more than $300.00 above market price.

$1,000 in premium money was provided by Negroes in this state to promote this show, according to Paul O. Brooks, District Agent, Langston University, who is also President of the show. Other show officers are D. C. Jones, Langston University, Vice President; Geo. Davis, Boynton, Chairman of Board of Directors; Ed. Cox, Wetumpka, Vice Chairman; Forest Anderson, Earlsboro, treasurer and L. G. Ashley, Boley, Secretary. Proffessor S. H. Settler, Langston University was show manager.

Prof. Carl Thompson, Oklahoma A. and M. College, served as chief judge of the show and the winners are as follows:

The grand champion fat steer of the show was exhibited by Alfred Robinson, 4-H member of Oklahoma County. The grand champion fat barrow of the show, which was a cross breed animal, was also exhibited by Alfred Robinson.

Breeding Classes:

Hereford Heifers

1st, James Sharpe, Chandler, N. F. A.

2nd, Joyce Hymes, Watonga, N. F. A.

3rd, Isaac Fowler, Chandler, N. F. A.

4th, Harris Swarmager, Watonga, N. F. A.

5th, James Moore, Chandler, N. F. A.

6th, Ovid Brown, Lincoln County 4-H.

7th, Othola Luster, Oklahoma City N. F. A.

8th Augalino Haynes, Logan County 4-H.

9th, Ronell Nichols, Hennessey N. F. A.

Shorthorn Heifers:

1st, Willie Boone, Luther, N. F. A.

2nd, Clifford Brown, Sapulpa, N. F. A.

3rd, Bishop Chapman, Sapulpa, N. F. A.

4th Clyde Harris, Dover, N. F. A.

5th, Robert Nichols, Oklahoma County 4-H.

6th, Ossie Scott, Loban County 4-H.

Brooks states that plans are already in the making for another show next year with an improvement in the quality of animals shown and an increase in number of entries.

More than 500 people visited the show during the two days, many of whom have never before visited a show of this kind.

Room for All

The railroads are America's basic form of transportation. Without them commerce would be stopped dead in its tracks. Thus all of us, even the rails' competitors, must work for the maintenance of a transportation system which gives the railroads a fair and equal chance to carry that part of the total traffic for which they are economically best fitted on the basis of true costs and service.

Of all the various forms of transportation, ranging from barge canals to airlines, trucks and steamships, none is as near 100 per cent a self-supporting private endeavor as the railroads. Government barge canals, for example, are neither self supporting nor taxpaying.

Favoring one particular form of transport over another is utter folly. In a nation of 3,000,000 square miles, all forms are needed. Prejudiced enthusiasts who try to cling to special tax and regulatory benefits fo their pet method of conveyance, whether it be land, sea or air, are simply cutting their own throats in the long run. Trucks could not begin to fill the shoes of the railroads, and anyone visualizing the airlines as capable of assuming the mass transportation now being borne by rail is doomed to disillusionment, just as are the railroad men who kid themselves into the idea that by making a Pullman look like the fuselage of an air transport they can take business away from the airlines.

This country has the best transportation system in the world. The reason it is the best is because in the main it is a development of competitive private industry, the backbone of which is the railroads. Any transportation worth the name must stand on its own feet and be coordinated with all other means of transportation so as to render the greatest public service.

CIGARETTES COST MORE THAN ELECTRIC SERVICE

The American public spends almost 50 per cent more on cigarettes than on electric service. According to figures published recently by the Securities and Exchange Commission, the gross revenues of the six largest cigarette manufacturers in the United States in 1943 totaled $1,553,032,000. During the same period the revenues received by all American electric utilities—privately-owned and publicly-owned—for residential and farm service totaled $1,100,000,000, or nearly half a billion dollars less than the receipts of the cigarette manufacturers.

"I told her that each hour I spent with her was like a pearl to me."

"And did that impress her?"

"No, she told me to quit stringing her."

From Rural Education And Race Relations

By Mabel Carney

NEGRO A. AND M. COLLEGES

Under the dual system of education for Negroes and Whites characteristic of the South, seventeen southern states maintain separate state colleges of agriculture for Negroes. Negro Agricultural and Mechanical Colleges, however, are always three institutions in one: a Land Grant College of Agriculture, a State Teachers College, and a Liberal Arts College. This makes them among the most difficult of all institutions of Higher Education to administer effectively. Moreover, they often fare less well than white institutions in the proportionate distribution of state funds. Under these circumstances the services of most Negro State Colleges to Rural Education of general type, while never fully adequate, are highly commendable.

All Negro A. and M. Colleges, in common with white Land Grant Colleges must meet Federal standards for vocational education in agriculture, home economics, and trades through both residence courses and extension work, to receive State and Federal subsidy under the Morrill Act. This study, however, as previously explained, is concerned not with vocational training, but with what State-supported institutions, both white and colored, are doing for country children, youth and adults in the non-vocational aspects of life.

In another of their functions as Land Grant Colleges of Agriculture, all Negro A. and M. Colleges sharing in Purnell Funds, offer courses in Rural Sociology and conduct some research in the study of Negro rural life in their respective states. Some studies of this type, as some from white institutions, supply valuable social and economic background for the reorganization and teaching of small rural schools. Such a research, for example, is the recent survey by Langston University, Oklahoma, of its surrounding community and county (11). Rural Life Clubs for student leadership training are occasionally organied also, as to Lincoln University, Jefferson City, Mo.

As Teachers Colleges, Negro A. and M. Colleges participate further not only in the preparation of teachers and principals for secondary schools but also in the training of teachers for elementary schools. Negro life in the South is still predominately agricultural and the vast majority of Negro schools are of the one to four-teacher type. This puts a heavy obligation upon Negro A. and M. Colleges for the improvement of small rural schools. To meet this responsibility most of these institutions now offer courses, practice teaching and extension activities in the teaching and direction of one-teacher schools, County training schools, and rural high schools. Provisions of this type for one and two-teacher schools have been especially well developed at Frankfort, Kentucky, by Mrs. Mayme L. Copeland; at Lincoln University by M. C. Langford; at Virginia State College by Wilhelmina Hamlin and others; and also in summer sessions at Greensboro, North Carolina; Langston, Oklahoma; and Normal Alabama.

For practical, effective service to rural education and country life, no public institution of the South, white or colored, seems to surpass Prairie View State College at Prairie View, Texas, under the direction of Principal W. R. Banks and the able faculty he has assembled. Among the special rural activities fostered at Prairie View are the following: (a) A series of State Conferences on Rural Life and Education extending back over a period of years; (b) county and local surveys of Negro rural life to supply data for these conferences and for general curriculum adaptation; (c) extension services in Veterinay Science, Auto-motive Mechanics, Hospital Nursing, etc., so superior that they have attracted the patrons of white citizens as well as colored, thereby leading to (d) most amicable race relations; (e) close cooperation over many years with the Jeanes System of the State resulting finally in a mutual tie-up with the local county of Waller through which this county is used for demonstration purposes of every type with a joint College instructor and part-time Jeanes Supervisor (Mrs. Annie C. Preston) employed to guide these services. More recent rural activities of note at Prairie View include (f) two field projects in Community Education with all the teachers of two counties participating (Brazos and Walker); and (g) two Cooperative Community Education Workshops in which three other Colleges of Texas (Bishop, Texas, and Wiley) also the General Education Board and the Texas Tuberculosis Association have joined forces. (Reference 19.)

Prairie View, however, is not alone in good rural deeds. Pioneering in this field for several years past has been Georgia State College, Savannah, where President B. F. Hubert and his brothers, members of Georgia's most noted Negro family, have developed a Log Cabin Community Center (near Mayfield) in memory of of their remarkable parents (14). Georgia State College is also headquarters for Negro membership in the American Country Life Association. (2)

Virginia State College, another pioneer in rural education service, besides superior work as noted above, has recently conducted three off-campus workshops for rural teachers and, as reported by Dr. Edna M. Colson, is continuing a four-year reading project for adults in Chesterfield County.

Alcorn A. and M. College, Alcorn, Mississippi, located in the very heart of the Rural South, employs four faculty members designated as specialists in Rural Education and has recently conducted a summer Workshop for High School Principals, also two off-campus workshops for rural school teachers. Reports on these highly successful projects may be obtained from Dean W. B. Nelson.

Pine Bluff, Arkansas, through the efforts of Mrs. Anna M. P. Strong, former Assistant State Jeanes Supervisor, initiated an organization of "Key Teachers" some years ago to demonstrate better rural teaching practices over the State. Such key teachers are now used as Extension instructors by the A. and M. College, and a workshop course for their benefit, also another workshop in Community School Development, were directed here in the summer of 1914 by Mr. Ed. McCuistion. white State Supervisor of Negro Education. The College also maintains a standing faculty Committee on the Study of Rural Conditions.

The State A. and M. College at Orangeburg, S. C., enjoys the unique distinction of a tie-up with noted Penn School on St. Helena Island, S. C. Under this "Cooperative Teacher-Education Program" initiated in 1937 by Principals Rossa B. Cooley and Grace B. House of Penn School, four groups of seniors are now sent annually to the Island for periods of six weeks each in rural practice teaching. This program, well developed by Trudell Wimbush, Supervisor; and Miss Rosamond A. Alston of the College Education Department, has proved a distinct contribution to rural-teacher education in general. (7).

Southern University, Baton Rouge, Louisiana, under the direction of President Felton G. Clark and Dean John B. Cade continues its long-standing interest in Rural Education through regular course offerings and several special projects of larger import. Four such projects have been developed during the past two years. One of these was concerned with in-service teacher education for the Negro teachers of Washington Parish. A second and third were the School Work Conferences developed during the summers of 1943 and 1944 in cooperation with the Negro Normal School at Grambling and the State Department of Education (18) The fourth was a distinctive, weeklong "Rural Leadership Conference for Negroes of Louisiana" convening November 13-18, 1944, originated by President Clark and sponsored jointly by Southern University, the State Department of Education, and the General Education Board.

No Common Man

In a very human article on the labor question, the Reverend Norman Vincent Peale, D. D., pastor of Marble Collegiate church, Fifth Avenue, New York City, says:

"This writer favors labor unionism. As a Christian minister, I am, of course, a champion of the rights of man. (I refuse to use the term, "common man,' for I do not believe that any man is 'common.') . . . It is a good thing for labor that there is an institution like the Church that plays no favorites, that stands for justice to all men. And justice demands that one support unionism, the right of working to organize and bargain and advance their economic interests. Labor is fortunate that there is an institution like the Church that fears neither labor leaders nor capitalists. . .

"America gave one original principle to the world: The idea that the citizens and not the state is master. Today, forces are in motion which would reverse this American principle and again make big government supreme. Those espousing this reversal call themselves 'Liberals,' but really they are 'Reactionaries' of the worst sort, for they would take us back to a system where the individual is the serf of the state or of overlords.

"Union members ought to watch carefully lest they permit leaders to arise who assume that the union is merely a vehicle to advance them to personal power . . . If, as has been charged, some capitalists have at times crushed men in their upward rise, so can individual union members be crushed by ruthless men who are imbued with the same selfish desires, but who merely take the labor-leader route instead of the capitalist route. Both are predatory egotists under the skin.

"Greater democracy is needed among union members, a democracy that will say to the leaders: 'Leadership is based on service—leadership is not a special privilege—it is not to build up arrogant super-men, drunk with power.' The rank and file should demand and elect leaders who are happy in the distinction of being servants, not masters . . . If the labor movement should become a transmission belt of the master state concept, it will contribute to the ultimate destruction of free unionism. It will help destroy the most sacred principle in human life, the sacredness and supreme value of the individual man. Working-men hold to your dignity—you are masters, not servants."

"WE GOT POWER—NOT ALIBIS"

". . . . The end product of the utility industry is service. Your service is not less important but it is less tangible than fabricated materials. For this reason, and this reason alone, the magnificent contributions of your industry, for the most part, have gone unheralded. . . . You have served best, perhaps, when the least attention is called to your services—when they are supplied in such an unfailing way that they are taken as a matter of course. We, of the Army Engineers, know of your work at first hand—know it and appreciate it. . ."—Maj. Gen. Eugene Reybold, Chief of U. S. Army Engineers.

Husband: "I wonder when you'll learn to make bread like mother used to make."

Wife: "Probably by the time you make the dough father used to make."—Seneca, S. D., Journal.

Henry: Did you hear what they do with ferry boats when they're late?

Bill: No. What?

Henry: Dock them.

WOMAN'S PAGE

Helpful Hints to Housewives

BETTINA'S RICE PUDDING

3 eggs, beaten
2 c. milk
1-3 cup sugar
1-4 teaspoon salt
1 teaspoon grated orange rind
1teaspoon grated lemon rind
1 teaspoon vanilla
1 1-2 cups boiled rice
2 tablespoons butter, melted
1-2 teaspoon cinnamon
Dash of nutmeg
1-2 cup raisins

Mix together eggs, milk, sugar, salt, rinds, vanilla and rice. Add rest of ingredients and pour into buttered baking dish. Bake 35 minutes in pan of hot water at 350 degrees. Serve hot or cold.

SHRIMP LUNCHEON DISH

An excellent way to serve shrimp is Shrimp Pocketbooks. These peppy fish sandwiches make most satisfying luncheon food. To make Shrimp Pocketbooks, melt 1-4 cup margarine or butter. Add 1-4 cup chopped onion, 1-4 cup diced green pepper, and 1 cup chopped celery. Cook slowly in covered skillet until tender. Add 1 cup grated cheese and stir mixture until blended. Add 1 cup chopped shrimp and salt and pepper to season. Place generous amounts of shrimp mixture on rectangular-shaped unbaked pastry. 4x6 inches. Fold pastry and press together edges with tines of fork. Brush with milk and bake in moderately hot oven (400 degrees F.) 12 to 15 minutes.

RHUBARD SAUCE

3 cups rhubarb
1 cup honey
1 tablespoon grated rind of orange

Wash rhubarb. If tender do not peel. Cut in 1-2-inch pieces. Place in sauce pan with just enough water to keep it from burning Cook until soft. Add honey and grated rind of orange.

ORANGE PEEK-A-BOOS

2 cups sifted flour
3 teaspoons baking powder
1 teaspoon salt
1-4 cup shortening
1 tablespoon grated orange rind
2-3 to 3-4 cup milk
16 orange sections
1-2 cup sugar

Sift together flour, baking powder and salt. Cut or rub in shortening. Add orange rind. Add milk, stirring only enough to moisten flour. Turn out on lightly floured board and knead 1-2 minutes. Roll out to square sheet 1-4 inch thick. With pastry wheel or knife, cut in 3-inch squares. Roll orange sections in sugar. Place each section diagonally across center of square. Fold corner of biscuit over orange section, pressing tips of biscuit together. Place on greased baking sheets. Bake in hot oven (450 degrees F). about 12 minutes. Serve hot. Yield; About 16 biscuits.

CREAMED ONIONS AND PEAS

12 small onions
2 cups peas, canned of cooked
2 tablespoons butter or substitute
2 tablespoons flour
1 cup milk
1-2 cup liquor from peas

Cook onions in salt water until tender. Drain, Melt butter in saucepan. Remove from stove. Add flour making smooth paste. Return to flame, add milk and liquor from peas and stir constantly until sauce thickens. Place onion and peas in baking dish. Pour sauce over all. Cover with breadcrumbs and bake at 350 degrees 20 minutes. Serves four.

OYSTER CRISPS

Since March is still one of the r-months, oysters can add their goodness to menu planning. Serve them casserole style as Oyster Crisps. Drain fresh oysters and place in greased quart casserole, generously covering bottom of casserole. Pour 1 cup medium white sauce over oysters and top sauce with croutons. Bake in moderately hot oven (400 degrees F.) about 25 minutes. Serve with a crisp vegetable salad.

OATMEAL SOUFFLE WITH MEXICANA SAUCE

2-3 cup milk
1 cup oatmeal
2 to 3 drops onion juice
1-2 teaspoon salt
Dash of pepper
2 eggs

Heat milk and combine with oatmeal, cook about 3 minutes, stirring occasionally. Remove from heat, cool slightly, stir in grated cheese and seasonings. Separate eggs and beat yolks slightly. Blend about 1-4 cup of the oatmeal mixture with egg yolks; then add to remainder of oatmeal mixture. Beat egg whites until stiff and fold into first mixture. Pour into greased baking dish. Place in pan of hot water and bake in slow oven (325 degrees F.) for about 1 hour or until an inserted knife will come out clean. Yield 4 to 6 servings.

Serve with Mexicana Sauce or vary your favorite white sauce with addition of chopped onion, chives, cheese and celery, or mushrooms.

Mexicana Sauce

1 tablespoon chopped onion
1 tablespoon chopped green pepper
2 tablespoons shortening
2 cups stewed tomatoes.
1-2 teaspoon salt
Dash of pepper

Cook slowly onions and green pepper in shortening about 5 minutes; add tomatoes, salt, and pepper, and simmer until sauce is thick.

CHERRY TURNOVERS

2 1-2 cups sifted flour
3-4 teaspoon salt
2-3 cup lard
1-3 cup cold water (about)
2 cups drained sour cherries
1-2 cup sugar
2 tablespoons constarch
1 cup diced marshmallows

Make pastry from first four ingredients. Roll out 1-4-inch thick and cut in 4-inch squares. Mix rest of ingredients. Place 2 tablespoons of cherry mixture on half of each square. Wet edges with cold water and fold over to form triangle or rectangle or turn up to form tricorn. Press edges together with floured fork, prick top and chill. Bake at 450 degrees F. 15 minutes or until lightly browned. Serves 8 or 9.

SNOW DRIFT LAMB LOAF

1 1-2 pounds ground lamb (shoulder or neck meat)
2 teaspoons salt
1-3 cup chopped onion
1 cup milk
3-4 cup medium fine cracker crumbs
1 egg
3 cups seasoned mashed potatoes

Combine all ingredients except mashed potatoes. Pack in loaf pan and bake in 325-degree oven for 1 hour and 20 minutes. When baked, turn out onto cookie sheet or flat pan and frost with hot mashed potatoes. Place under broiler long enough to brown potatoes. Serves 6 or 7.

CHICKEN PIE

1-2 cup chicken stock, cold
6 tablespoons flour
2 cups milk, scalded
2 1-2 cups chicken, cut in large pieces
1 cup diced celery
1 cup drained canned peas
1 teaspoon salt
1-8 teaspoon pepper

Combine chicken stock and flour and blend; gradually add the milk while stirring and cook until smooth and thickened. Combine with chicken, celery, peas and seasonings and turn into a 1 1-2 quart buttered casserole.

Topping

1 cup flour
2 teaspoons baking powder
1-4 teaspoon salt
3 tablespoons lard
1-3 cup milk

Sift flour, measure, and re-sift, with-baking powder and salt. Cut in shortening, using a pastry blender; add milk all at once, stirring with a fork until dough stiffens Turn onto floured board, knead a few times, roll out to make a circular shape to fit top of casserole, about 8 1-2 inches in diameter and 1-4 inch thick. Cut holes in top using a chicken cutter to allow steam to escape and place on top of filled casserole. Crimp or flute edge of dough, pressing firmly to casserole edge. Bake in a hot oven, 425 degrees F., for 20 minutes, until browned. Serves 6.

FIG FLUFF

1 tablespoon gelatin
1-3 cup water
2 egg yolks
1-4 cup sugar
Grated rind and juice of one lemon
1-2 teaspoon salt
2-3 cup thinly sliced figs
3 egg whites, stiffly beaten
1-2 cup chilled and whipped evaporated milk

Soften gelatin in cold water, then beat egg yolks, add suggar, grated lemon rind and juice, and salt. Cook in a double boiler, stirring constantly, until thick. Remove from the stove. Add gelatin and figs. When mixture cools and thickens fold in the beaten egg whites and whipped evaporated milk. Turn into a mold that has been dipped in cold water. Chill for several hours before serving.

CHERRY ROLL

2 cups sifted enriched flour
3 teaspoons baking powder
1-2 teaspoon salt
2 tablespoons sugar
1-2 cup shortening
1-2 to 3-4 cup milk
2 1-2 cups fresh or canned sweetened cherries, drained
2 cups cherry juice and water

Sift together flour, baking powder, salt, and sugar. Cut or rub in shortening. Add milk to make soft dough. Toss out on lightly floured board and knead gently 1-2 minute. Roll into rectangular sheet 1-4 inch thick. Spread cherries over dough and roll jellyroll fashion. Cut 1 1-2 inch slices and place cut side down close together in greased deep baking dish 8x12 inches. Heat cherry juice and water and dissolve 1-2 cup sugar in it. Pour over rolls. Bake in moderate oven (375 degrees F.) 45 minutes.

Yield: 1 dozen rolls.

Cherry Glaze Dessert has a party look. It has a party flavor too. It is really a delightful dinner dessert dressed elegantly for the most special of occasions. Cherry Glaze Dessert is one of Uncle Sam's red, white, and blue desserts. It makes wise use of victory foods—enriched flour, egg, milk, and fruit, and introduces their good vitamins and minerals and other food essentials to the family in a most pleasing way.

BANANA GLACE COFFEE CAKE

With bananas still a bit rare, though appearing more often, fill this Valentine's Day with special warmth by serving the favorite man in uniform Banana Glace Coffee cake. This luscious fruit coffee cake is one easy way of winning many flattering compliments through the art of cookery.

Banana Glace Coffee Cake takes advantage of the pleasing combination of mellow bananas and citrus fruit rinds. These inviting flavors make tasty contrast for their tender coffee cake foundation. This luscious fruit topping needs only 2 tablespoons sugar to make it a favorite for the sweet-toothed folks. The sweetness of plump banana slices gives the coffee cake its candy-like goodness.

Serve Banana Glace Coffee Cake at any occasions. For a breakfast bread, sift together the dry ingredients the night before. Cut or rub in shortening. The cinnamon sugar topping may also be prepared at this time. In the morning add liquid ingredients to flour mixture and put on the coffee cake's glamourous banana and sugar topping. Now it is ready to bake while the rest of breakfast is being prepared. Banana Glace Coffee Cake is elegant as either hot bread for Sunday brunch or as luncheon or dinner dessert.

QUICK TANGERINE JAM -

2 cups tangerines, pulp and juice
1 teasp. grated tangerine rind
1 lemon, pulp and juice
3-4 cup sugar
1 cup corn syrup

Peel tangerines, separate into sections, and remove seeds. Cut sections, and halves; holding over a bowl to catch all the juice. Measure two cups (pulp and juice) and combine with other ingredients. Boil rapidly for 15 minutes, or until sirupy and clear.

Try This Sometime

A dash of salt added to egg whites makes them whip more easily and helps to form a stiffer foam. When making an angel food cake, always add the salt called for in the recipte to the egg whites before beating.

To clean a waffle iron, scrub grids with a fine wire brush, then brush them with a non-salted oil. Heat iron for 10 minutes. The excess oil may be soaked up by a piece of bread placed between the grids.

Weight for weight, white potatoes have one-fourth as much Vitamin C as oranges or lemons, and supply some Vitamin A thiamine; and riboflavin. They are also a good source of phosphorous and iron.

Bright left-over bits of wool can be used to embroider the brim of a felt hat to match your latest sweater.

Meat loaves can be extended by mixing with bread, oatmeal, ground carrots, mashed potatoes, or cooked rice.

Dough for rolled or sliced cookies may be kept in the refrigerator for some time, if well wrapped in waxed paper. Portions of a basic refrigerator cookie may be used at different times, thus giving the opportunity to use different flavorings, fruits, or nuts at each baking.

Two teaspoons help in the making of drop cookies. Use one teaspoon to lift the dough from the mixing bowl, and the other spoon to push the dough from the spoon to the baking sheet. Or use a spoon and a rubber pusher.

Immediately after removal from the oven, cookies should be lifted off the baking sheet with a spatula, and allowed to cool on a cake cooler or wire frame.

Like cakes and pastries, cookies should cool completely before storing in covered jar or box.

Airtight boxes or jars make handy containers for keeping Cookies fresh Waxed paper between the layers keeps the cookies from sticking together.

Salt will corrode silver very quickly. Open salt dishes and shakers should be emptied and washed thoroughly after each use.

JOBS THAT COUNT

A representative of the National Association of Food Chains states that: "This year ahead may see the demobilization of as many as two million soldiers for a variety of reasons. More and more men will be returning to food chain companies that will welcome these people back to their organizations with attention to their individual needs. . . . It seems probable that the re-adjustment can and will be made without jeopardizing the jobs and security of those who, by ability and loyal service, have earned permanent positions.

"Many food chains are planning expansion programs to provide increased employment and better service far customers. These plans include new warehouse construction designed for low operating costs and the remodeling of stores and building of new stores with improved layout and equipment.

". . . Most food chain companies have developed training programs to cover some or all jobs. Most operators will consider the extension of training programs a 'must' for 1945."

Here is the stuff of which real jobs are made, the hopes and plans of taxpaying competitive enterprise. In the long run, these are the only kind of jobs that will count because they are the only kind of jobs that are productive. The comment of this food chain spokesman is typical of our nation's progressive retail distribution industry.

IT MAKES THE WIRES HUM

Few people realize the part coal plays in producing the electric light and power with which this nation is so abundantly supplied. For example, in October, 1944, according to the Federal Power Commission, fuel burning electric generating plants produced 13,450,394,000 kilowatt hours of electricity; water power plants produced 5,771,352,000.

The coal industry can be justly proud of the fact that 55 per cent of all this electric energy is generated from bituminous coal. Last year, for electric utilities, railroads, factories, homes and farms, over 600,000,000 tons of coal were produced.

The industry is now working to provide postwar coal for home heating in more uniform sizes and practically dustless. No wonder the United States has outstripped the world in all manner of production when it has industries that, while meeting abnormal demands, plan ahead to give constantly improved service when conditions become normal.

THE MODERN FARMER

VOL. XVIII. NASHVILLE, TENN., APRIL 16, 1945 No. 3.

The Road Up

WILL WE BECOME "NOT NEEDED"

By

GILES A. HUBERT

I was down to Atlanta the other day attending a conference on "The South's Postwar Economy." Such occasions always frighten me. I remember having the same feeling last Spring when I participated in the American Country Life Conference. Likewise that crawling feeling in the region of my backbone was always prominent when I attended a meeting of the big boys in the Department of Agriculture.

The thing that frightens me is the feeling of Negroes being so far behind the trend of things. It is a feeling of dispair and frustration and fear that some day we Negro leaders are going to wake up and find we and our people are "NOT NEEDED" any more in this civilization—not needed because we are no longer useful—we don't fit.

There in these meetings were the organizers, the experts, the business men who help determine national and regional policy. There were representatives of farmers' organizations getting together with technicians and political leaders to draw up plans and proposals for the future of American and Southern agriculture.

They talk about foreign markets, technical and mechanical improvements, congressional committees, freight rate structure, new industries and employment problems. They discuss the empact of the cotton picking machine and multiple tenancy of industrial plants.

The thing that frightens is the realization of how few Negroes attend these meetings. I look around and see perhaps two, three or four. I think of the many, many other conferences, board meetings and committee sessions where the important things are being decided and anticipated and where there are no Negroes participating at all.

Let's take a case in point. At the Atlanta meeting, Mordecai Ezekiel who is Economic Advisor to the Secretary of Agriculture delivered a paper which discussed the reconversion which will be necessary in Southern agriculture after the war. Following the program outlined, about three-fourths of the people engaged as tenants, sharecroppers and laborers on cotton plantations will not be needed because of improved mechanization.

If the South reorganizes the remainder of its farms into economic family units with balanced farming programs, one-fourth to one-half of the families on the non-plantation farms will not be needed. This is in line with the program being sponsored before Congress now by the Secretary of Agriculture. Where is all this population going?

Well, the supposition is that it will enter industrial and commercial occupations. Now, many of the displaced families from agriculture will be white—more probably than Negro families. If we follow the usual pattern of training, apprenticeship and job giving, the whites will receive preferance over Negroes. That is, Negroes will not get the jobs that white people want. The usual pressures will be applied to employ all employable white labor first. Training will be provided for white people first and most adequately. Negroes will receive little effective training or in many cases none at all.

Now unless there is a phenomenal growth in industrial employment which will absorb all available white labor and still need additional workers, Negroes will be left to eke out an existence as best they can. They will be the "NOT NEEDED" element—one-half to two-thirds of the present Negro farm population.

How many of our agricultural leadership are vitally concerned with this problem? How many are becoming well enough informed about these matters to be in position to offer guidance and assistance in the difficult years immediately before us? How many Negro farm families can our leadership prevent from falling into the "NOT NEEDED" column?

These things give me a sinking feeling. We had best become concerned or we and our people will find ourselves "NOT NEEDED."

Negro Farmers Mourn Death of President

FSA Gets $25,000,000 Boost

House Bill Provides Fund For Veterans

The House of Representatives last month approved a boost of $25,000,000 in funds for the Farm Security Administration for farm ownership loans. The sum is to be spent exclusively for farms for veterans. This is in addition to FSA's regular funds for Tenant Purchase loans.

Administrative funds for the agency remains virtually unchanged and rehabilitation loan authorizations are $67,500,000. FSA officials hope the Senate will raise this fund to $125,000,000, the original sum sought by the agency.

The Farm Bureau is still striving to force all agricultural agencies (including FSA and the Farm Credit Administration) under a single board and to have all remaining activities of FSA subject, in each state, to a five man board nominated by the Extension Director. Chairman Flanagan of the House Agriculture Committee has announced his intention to report such a bill.

FRANKLIN D. ROOSEVELT

President of the United States was born January 30, 1882 and died April 12, 1945, age 63 years 2 months and 12 days. He had served 12 years, 1 month, and 8 days as president—longer than any other man in the history of the Republic.

Negro Farmers From New Jersey to Texas And From Kansas To Florida Join In Mourning For The Loss Of President Franklin D. Roosevelt

The death of President Franklin D. Roosevelt is a great and widely felt loss to the small family farmer. Negro farmers, most of whom fall in this class, are practically griefstricken over the loss of the President.

Sharecroppers and farm laborers feel also that they have lost a President sympathetic to their problems and needs.

Hundreds of thousands of Negro farmers remember him through the AAA checks they have received, through lands that have been terraced and provided with lime. They remember him through new cover crops and soil conserving crops which they have been able to plant, and through the new milk cows that provide the family with daily milk and butter. To thousands more the new white houses that they now live in are monuments to Mr. Roosevelts' far-seeing humanitarian interests in their welfare. They think of him in the years when they were brought from the depths of despair with loans and grants which gave them a new chance and a new hope. To thousands of Negro farmers, Mr. Roosevelt was something akin to a Messiah sent from heaven itself.

In hundreds of their little churches scattered throughout the South, Negro farmers, their wives and their children bowed their heads in prayer and lifted their voices in supplication for the great chieftain in whom they had so much faith.

Southern Council Holds Meeting On South's Postwar Economy

The Southern Regional Council sponsored a conference on "The South's Postwar Economy" in Atlanta on April 11-12. The meeting was held at the Atlanta Biltmore Hotel.

Because of ODT regulations attendance from outside Atlanta was limited to a small number of specially invited persons from various points in the South.

Negroes in attendance included Professors Charles Gomillian of Tuskegee Institute and Giles A. Hubert of Fisk University. Mr. Charles Lawrence of the AMA and Mr. John Hope of FEPC also participated in the meeting. Dr. Ira De A. Reid Associate Director of the Council was likewise present and jointly responsible for the program. The meeting was under the chairmanship of Dr. Guy B. Johnson, Director of the Southern Regional Council.

The program included discussions on foreign trade, postwar markets, labor and agricultural problems. Discussions were also directed to the problems of freight rates and industrial expansion and postwar housing. Speakers included Judge Edgar Watkins of Atlanta, Dr. Mordecai Ezekiel, Economic Advisor, U. S. Dept. of Agriculture; Mr. A. F. Hinricks, Acting Commissioner of Labor Statistics and many other nationally known experts.

The proceedings of the conference will be published and will be made available soon by the Southern Regional Council. Agricultural people will be keenly interested in the analysis by Dr. Ezekiel and Dr. Hinricks of the postwar position of the Southern economy and the problems of reconversion to peace time operations.

Conservatives Ready to Make Concessions to Little People

Patton Reports On Inter-American Conference

(Reprint from the National Union Farmer)

By James G. Patton
Pres. National Farmers Union

The American delegation to the inter-American Conference divided into groups, and I participated in discussions and drafting of the "Economic Charter" of longtime economic arrangements we might be willing to enter into with the other countries of this hemisphere.

I gained the definite impression that the State Department of the United States is willing to go a great distance, so far as living standards and economic conditions in the Americas are concerned, to gain the following points:

1. Agreement on military security, which was later formalized in the Chapultepec Charter.

2. Endorsement of the Dumbarton Oaks proposals.

3. Avoid specific commitments as to responsibilities to the economies in South America.

Postwar Let-Down

During the war period we have bought billions of dollars of raw materials from South American countries. In many cases, the minute the war is over these countries will suffer very severely unless we have some kind of an economic program to help them shift from war to peace. This program must include some kind of a program of allocation of capital goods, so that Latin American countries can get their share of the manufacturing and processing machinery. The South American countries fear that all the machinery will go to Europe,

On the Agricultural Front

COLORED FARMERS TO GROW MORE CIGARETTE TOBACCO

Because of the heavy demands now being made on cigarette tobacco, the colored farmers of six tobacco growing counties of southern Maryland pledged in a recent wartime farm production meeting to increase their tobacco crops this year by 10 percent, according to a report received last week by the U. S. Department of Agriculture.

Meeting at an Upper Marlboro. Md., high school for a conference on farm production goals called by Colored County Agent Martin G. Bailey, the farmers were addressed by Dr. T. B. Symons, Maryland State Director of Extension Service. Dr. Symon pointed out the need for larger tobacco crops in view of the current tobacco shortage; he stressed also the importance of farmers growing more of their own food and feed.

The farmers pledged to increase their production of food, feed, and tobacco crops; and then they discussed plans for meeting the labor shortage. Among other things, the farmers agreed to make wider use of labor and machinery pools. Through these pools they share their tractors, other heavy equipment, and their labor force. Farmers without heavy farm machinery agreed to exchange day labor for the use of a neighbor's tractor, or double-row cultivator.

MITCHELL WILL VISIT 12 STATES TO PUSH FOOD PRODUCTION

John W. Mitchell, Federal Extension field agent with headquarters at Hampton Institute, is visiting 12 States for the purpose of conferring with State Extension directors, and colored Extension workers on the prospects of colored farmers increasing their production again this year to help assure attainment of the 1945 farm goals.

In the absence of T. M. Campbell, who is a member of a survey group now touring West Africa, Mr. Mitchell is carrying on the field work in the lower South, too. The States he is visiting on this trip include: North Carolina, South Carolina, Georgia, Alabama, Mississippi, Louisiana, Arkansas, Missouri, Tennessee, Kentucky, West Virginia, and Maryland.

VICTORY GARDENS OFF TO GOOD START

Victory gardens are off to a good start in the South, and in States along the Pacific Coast, according to reports which War Food Administration has received from State Extension Service directors.

Planting is well under way in Texas, Louisiana, Alabama, Florida, Mississippi, Arizona, and California. In two of these States the Governors have issued proclamations calling attention to the need for home gardens this year and setting goals to be reached.

Not only does Florida have more Victory gardens this year, but because of its warm climate, many gardners in that State are already eating delicious fresh vegetables out of their gardens.

Georgia reports that the prospects are good for an increased number of city and suburban gardens; Arkansas expects an increase of 10 percent in the number of city gardens in the State; and Mississippi is stressing year-round gardens.

California has set a goal of one million gardens this year, an increase of 250,000 over 1944; and Oklahoma has adopted the slogan: "A garden on every farm, and at every home in Oklahoma where suitable space is available."

PRESIDENT URGES 4-H'ERS TO CONTINUE FARM EFFORT

Rededication of their home front effort in behalf of victory in this crucial year of war is the request of President Roosevelt to the nation's 1,700,000 4-H'ers of whom 254,000 are colored farm boys and girls.

In making public the President's letter, the War Food Administration simultaneously named the week of March 3 to 11 as National 4-H Club Week. During this period in 75,000 local clubs the 4-H boys and girls and their volunteer local leaders will meet to talk over and get going on their 1945 program.

Again the 4-H Club members will pledge their own efforts and ask other boys and girls to join them in striving toward these wartime goals:

1. To produce and conserve food in order to keep the nation strong.
2. To aid in scrap collection and war bond drives.
3. To protect their own health and that of the community.
4. To serve wherever possible for those who have gone to war and to help other boys and girls adjust themselves to farm work.
5. To help interest war programs locally.
6. To practice democratic procedure and stimulate deeper appreciation of democratic ways.
7. To become informed on important social and economic forces now at work and help develop a good-neighbor spirit at home and abroad.

Since Pearl Harbor, according to M. L. Wilson, director of Extension work, the 4-H Club members have had 400,000 acres in Victory Gardens; canned 47,000,000 quarts of food; and raised 33,000,000 chickens, 1,600,000 meat animals, and 300,000 dairy cows. In addition, they have been collecting scraps, selling war bonds, and doing other war jobs on the home front. Shortage of farm labor, machinery, and other essentials make the part the farm boys and girls must play this year more important than ever.

CONSERVATION PROGRAM FOR PUERTO RICO

A 1945 agricultural conservation program to assist farmers in carrying out soil and water practices has been approved for Puerto Rico along with programs for Alaska and Hawaii, the War Food Administration announced recently.

While the programs are basically the same as last year, the new practices in the '45 Puerto Rico program are: planting of cover crops; use of leguminous crops for green manure; establishing check dams in gullies; and measures which conserve moisture and increase vegetative cover in coffee.

Under the AAA program, conservation payments up to about $1,000,000 will be available. Based on participation and allowances in past years, the money will be divided as follows: Puerto Rico, $860,000; Hawaii, $127,000; and Alaska, $13,000.

HAITI APPROVES FAO CONSTITUTION

Among the 18 nations which already have approved the constitution of the Food and Agriculture Organization of the United Nations is the Republic of Haiti, according to a report of the United Nations Interim Commission on Food and Agriculture.

The need for an international organization in food and agriculture was agreed upon unanimously by the delegates of the 44 United and Associated Nations at the United Nations food conference held at Hot Springs, Virginia, in May, 1943. That conference recommended the setting up of an Interim Commission to draft the constitution and outline the plan of a permanent food and agricultural organization.

MARVIN JONES, WFA HEAD, DISCUSSES FOOD SITUATION

I hope no one will be misled about the food situation. No one has gone hungry in this country. No one is going hungry. We have heard these things before. This storm will pass and certain facts will stand out:

1. In 1943 the American farmers produced 32 per cent more food than this or any other nation ever produced before the war.
2. In 1944 they upped this 5 per cent making a record increase of 37 per cent above prewar production.
3. This record was made in spite of the handicaps of war.
4. This year the farmers themselves set goals that call for an even greater crop acreage.
5. We have the best fed army and navy in the world. They have first call on our food.
6. Russian officials have told us that but for American food they could not have gone forward as they did in turning back the Germans. The same is true of England. All our allies are fighting in a common cause.
7. Our civilians during the war have eaten more food per capita than they did prewar.

Our armed forces will continue to be well fed. We will continue to help our fighting allies. Our own people will continue to have plenty of good wholesome food, and we will contribute our share to the relief of starving people, even if it means a new hitch in our belts. This is a practical matter and a part of the war itself.

The primary object of the War Food Administration is to aid in securing production of food. We are proud of the all time production in each of the war years. Credit for this goes primarily to the American producer. Anyone who sells the American farmer short makes a mistake.

In addition we have been buying five million dollars worth of food per day for lend-lease, and to supplement the needs of our armed forces. This food must be processed, stored, loaded, transported and delivered to shipside. Much of it is perishable.

The handling of this food is a gigantic task. It must be handled with speed. It must go forward every day. It must be kept flowing to the war fronts.

WAR FOOD ADMINISTRATOR URGES FULL CROP ACREAGE

Pointing out that food must be kept flowing in a never-failing stream to the fighting fronts, War Food Administrator Marvin Jones has appealed to the farmers white and colored, to plant the full acreage called for in this year's goals

Said Administrator Jones, "Regardless of the war developments, another record output of food and fiber crops is urgently needed."

Pledging the full cooperation of WFA, Judge Jones said that assistance will be given the farmers in obtaining the labor required for cultivating and harvesting all crops planted. In addition to Jamaicans, Bahamians, and other foreign workers, about 100,000 prisoners of war will be available for farm work this year, according to Judge Jones.

NEGRO COUNTY AGENT PROMOTED

Martin G. Bailey, agricultural agent who has been serving the colored farmers of four Maryland counties since 1939, was promoted recently to district agent, according to a report from the Maryland State Extension Service which the U. S. Department of Agriculture received last week.

Recognized for his excellent work in tobacco disease control, and for encouraging the farmers to grow more food, Mr. Bailey will now have charge of the Extension work among colored farmers throughout the State of Maryland. Nine county farm and home agents will work under his supervision.

Mr. Bailey was reared on a farm in New Jersey and received his training in agriculture at Hampton institute where he was assistant instructor in horticulture for two years, 1937-39.

COLORED FARMERS PRODUCING MORE FOOD

Colored farmers are producing more milk eggs, chickens, hogs, potatoes, fruits and vegetables, according to reports from State Extension Service Directors which the U. S. Department of Agriculture is receiving.

Realizing that they may shift from cotton production to designated war crops without losing their acreage allotments, many colored farmers are planning to increase their acreage of peanuts, food, and feed crops. Some are increasing acreage to conserve manpower and their production by cutting their using more fertilizer and better seed to increase their yields.

In Sumpter County, Alabama, Robert Binion is increasing his beef cattle again this year. Growing into the business from one pure-bred Angus sire and a herd of seven heifers of mixed breeding three years ago, Mr. Binion now has 26 cows from which he is expecting 26 calves this spring. He grows his own cattle feed.

North Carolina farmers are increasing their food output, and are doing a good job with their chief cash crops. too. Joseph Atkinson produced 9,075 pounds of tobacco on six acres last year. His average return was $654.85 per acre.

VICTORY GARDEN TIPS

Although your Victory garden may be small through extra care you may make it yield extra food for the family and for home canning, advises the Victory Garden headquarters at the U. S. Department of Agriculture.

Here are some of the extras that you can put into your garden to make it extra good: (1) Extra good planning which should continue throughout the gardening season, (2) start out by preparing the soil extra well; spade the seedbed thoroughly and get it into right condition, (3) the soil can yield only what's in it; so, extra fertilization will be helpful—use compost, or stable manure to supplement your commercial fertilizer, (4) cultivate your garden extra well and keep it properly watered, and take extra care to control insects and plant diseases.

Another important extra is the fact that you may obtain extra gasoline again this year to go to and from your Victory garden.

Here's a tip, don't let any army of insects win Victory in your garden. Get a copy of "Victory Garden Insect Guide," AWI-95, and be prepared for the first attack. This guide lists the insect enemies of the more important vegetables and explains how to control them. A copy of the guide may be obtained from the Office of Information of the U. S. Department of Agriculture.

FARMERS REPAY REHABILITATION LOANS:

Seventy-two percent of the amount advanced to farmers in rural rehabilitation loans since the start of the program in 1935 has been paid back to the Federal Government in principal and interest, according to Frank Hancock administrator of the Farm Security Administration.

Altogether, $868,216,369 had been advanced to farmers through 1944. They had repaid $539,935,802 in principal and $77,064,868 in interest. Payments amounted to $87.10 on every $100 that had fallen due. About 13 percent of the borrowers are colored farmers.

THE FREE WAY WAS BEST

The wearisome, endless controversy over prices and wages under our new regulated way of living, invites the question, What was wrong with the "good old days" which modern radical idealists heap high with scorn?

The current argument over meat is typical. There are quite a few farmers who would quickly return, if they could, to the good old days of free markets, regulated only by supply and demand. Then they were not considered bad citizens and accused of being lobbyists if they tried to adjust prices to cost of production. It was a matter solely between themselves and the American consumer. Usually a fair bargain was struck with the consumer getting his money's worth—and meat.

A corset is something to keep the waves out of the WAC's.—The Howitzer, Camp Howe, Texas.

Conservatives Ready

(Continued from Page 1.)

since there will be such great emergency and need in Europe.

Latin America has three or four billions of U. S. dollars with which to buy our manufactured goods and our manufacturing machinery. The Latin American countries very properly want to see these dollars spent for manufacturing equipment and capital goods such as railroad engines and power-making machinery rather than for consumer and luxury goods, which will not help them in the long run.

The United States is willing to make some very important commitments to Latin American countries. For hemispheric military security our country seems willing and I think properly, to enter into very specific agreements on military cooperation to protect the boundaries of any country attacked.

In order to assure ourselves of larger export markets for many of our products U. S. is quite willing to taper off our war purchases as slowly as possible.

We will no doubt be willing to extend sizeable credits to South American countries. We will take many steps to assure our southern neighbors their fair share of our capital goods production. We will also be very much interested in having agreements from both producing and consuming countries as to what commodity production controls are used. This incidentally raises the whole question of private and government cartels and state-owned trading companies.

Abundance Is Answer

We need more than ever before the good will and coopcration of Latin American countries.

I feel that the emphasis must be on increasing consumption rather than trying to limit production. The United States will undoubtedly go much further than we have ever gone before in doing something specific about labor standards, health, housing, nutrition and education in relation to Latin America. We will go that distance because intelligent conservatives like Will Clayton see that if there is to be any hope at all for saving capitalism in this hemisphere, that there must be increasing consumption, which means raising the level of living for all the people in the hemisphere as well as the rest of the world.

My own conviction is, of course, that for the long pull that agriculture can only be helped by building up purchasing power in our own U. S. A., Latin America and the world. This can be done by extending large credits and providing large volume of new, not used manufacturing and farming machinery. Modernization of farming is essential. As farming is modernized, as more and more manufacturing is done in these countries to our south, the more purchasing power the people in those countries will have.

Against Scarcity

I could not help but feel that the little people of this world were being heard in demands for more health, education, housing—in short, higher standards of living. I felt that some of the spokesmen really wanted the status quo and not the future they were asking for—but that they were intelligent enough to know that if they did not speak in terms of the real needs and desires of their people—then their people would seek others to be their spokesmen. The one message they all carried was, we want no more man-made scarcities—we want the abundance this war has demonstrated that we can produce.

It seemed to me that all over Latin America people were on the march—demanding a better living.

I came away from Mexico City with the feeling that those who believe in the future of common people must strike harder and with more daring than ever before.

SARGE GAVE UP

"On the right— form platoon!" roared the sergeant.

The recruits carried out some kind of maneuver which left the sergeant speechless.

He looked at them for a moment. Then his voice returned—and no words can describe the tone of it.

"All right—now take your partners for the dance."—Salt Lake City (Utah) Farmer.

Government Surplus Property Auctions Subject To Price Ceilings

WASHINGTON, D. C.—All farm auctions of Government surplus property by the Reconstruction Finance Corporation or its subsidiaries under War Food Administration auspices will be subject to price ceilings, the Office of Price Administration announced today.

As a further protection to farmers and other buyers, maximum prices of all items to be offered for sale must be posted at the auction site except where the value of single or similar items exceeds $1,000. Ceilings for items valued above $1,000 are set in a regulation, which does not require posting of the maximum prices.

Surplus Government property sold at farm auctions held by RFC or its subsidiaries covers a wide variety of items including hand tools, wire, nails, screws, and miscellaneous supplies useful to the farmer. At the present time such farm auctions are generally conducted by the Defense Plant Corporation, an RFC subsidiary.

Sales of Government surplus property where the price estimated to be obtainable for a single item, or substantially similar items, does not exceed $300 have been exempt from price control. A specified list of commodities also was exempt regardless of the value.

Under today's action, effective March 19, 1945, public auctions of RFC or its subsidiaries conducted under the auspices of WFA will be under price control regardless of the value of any item or group of items and regardless of any particular commodity exemption previously applying.

Elimination of the price control exemptions on farm auctions held by RFC or its subsidiaries conducted under WFA auspices results from the issuance today to the Reconstruction Finance Corporation of a simplified method of establishing ceiling prices for farm auctions where the value of single or substantially similar items does not exceed $1,000.

Where farm auction sales have items exceeding the $1,000 limit, and where other public auctions or sales have items exceeding the continuing $300 limit, the general order (Supplementary Order 94—Sales by Government Agencies and Resales by Certain Buyers) applies.

Under the simplified plan, ceilings on sales of new items to consumers will be the same dollar-and-cent retail ceilings already established for the items. Where no dollar-and-cent ceilings are available, the ceilings will be acquisition cost to the Government or the established retail price for the item in that locality.

On used articles, the ceilings will be the same dollar-and-cent retail ceilings already established for regular sales of the items. Where no dollar-and-cent ceilings are available, the ceilings will be 80 per cent of acquisition cost or 75 per cent of the recognized retail price for the item in that locality when sold new.

An exception is made in the case of a list of used farm equipment, which includes combines, tractors, etc., for which the ceilings will be 85 per cent of the recognized retail price when new, if sold within one year after sale as new, and 70 per cent of the recognized retail price when new if sold more than a year from sale as new.

So that dealers cannot outbid consumers at these auctions on the same price level, the plan specifies that no dealer can bid more than 75 per cent of the ceilings established for consumer buyers. Exceptions will be used typewriters, used household vacuum cleaners and used washing machines, for which the dealer's maximum bid cannot exceed the dollar-and-cent ceilings already established on sales of these three items to dealers. The percentage in these three cases is less than the 75 per cent applicable to other sales.

(Order No. L-7 under Supplementary Order 94—Sales by Government Agencies and Resales by Certain Buyers—effective March 19, 1945.)

Future of Colored Farmers Depends on Better Land Use—Patterson

The future of the Negro in agriculture is dependent upon continued education in proper land use, says Dr. F. D. Patterson, president of Tuskegee, in the spring issue of the U. S. Department of Agriculture's Land Policy Review.

Listing the factors which are helping colored farmers to use improved soil conservation practices, Dr. Patterson, who is also special assistant to the Secretary of Agriculture, indicates in his article that the outlook is encouraging. Among the forces at work, assisting and encouraging colored farmers, according to Dr. Patterson, are the agricultural agencies such as Extension Service, the Agricultural Adjustment Agency, Soil Conservation Service, Experiment Stations, Farm Credit, Farm Security, and the Rural Electrification Administration.

Other agencies and influences at work he includes are the Land-Grant colleges, the Office of Education, Jeanes Foundation, church organizations, and the changing attitude of plantation owners.

Pointing to results which may be achieved through wider use of sound conservation practices by colored farmers, the Tuskegee president listed improved nutrition and better health, improved churches and better community life. Said he, "One important postwar health job is to get more nutritional information out of classrooms and into pantries and onto the tables of the average home."

Discussing the question of migration which he says is draining the best element from southern farms, Dr. Patterson points out that youths trained at the South's expense go to the other areas to make their contribution largely because they feel that there is no inducement for them to remain in the South as tenants and sharecroppers and face the same farm drudgery that many of their parents have faced. He says that although low income is the immediate cause of migration from southern farms, improper land use is the basic cause.

Dr. Patterson concludes that effective land use programs provide a sound basis for sound farming and a sound agriculture. Says he, "They also aid the practical matter of more profitable returns from farming and these may be an added inducment to more of our trained young people and farm-experienced returning soldiers to become 'dirt' farmers and make the most of the land."

Labor Asks Lower Cost Farm Tools

The postwar planning committee of the United Farm Equipment and Metal Workers Union CIO, is working for lower farm equipment prices to farmers, after the war.

The committee members say in a pamphlet that they themselves want to be employed, after the war, and add that there can't be full employment for the union unless there is a 50 per cent increase in farm equipment sales.

They recall that the farm machinery trust stubbornly stuck to high prices all through the depression—and lost more business than any other division of industry.

There can't be any large growth in the farm-machinery market unless through the development of family farms, the pamphlet argues. This, they say, is the most neglected market, with all our present high prices and restriction policies tending to build up the corporation type farm, and drive the family-type farmer out of existence.

Union members argue for a farm equipment planning board to represent everyone interested—and to work for postwar plans through which family farmers can buy equipment at reasonable prices, and with a small down payment.

MARVIN JONES

War Food Administrator Explains Food Progam

The following statement was issued by Marvin Jones, War Food Administrator, concerning the basic facts in the food situation:

WASHINGTON, D. C., March 15—"In order that there may be no misunderstanding as to the food situation, certain basic facts should be remembered.

"1. The production of food in the United States has continued to be and is now at record levels. The farmers of America, despite the handicaps of war, have produced substantially more food in each of the war years than they did in peacetime. This was made possible by the ingenuity and determination of those who produce our food.

"2. There is still a good supply of food in this country. Certain items, such as meats, lard, fats, and sugar, are less than the over-all requirements, but other items are in plentiful supply; and even after taking into account those that are in short supply, there is sufficient if it is properly distributed and shared to assure our people a good, wholesome diet.

"3. The requirements of our armed forces are necessarily growing and everyone wants these requirements to be met.

"4. Only because of the food that we were able to furnish the Russians and our other fighting allies have they been able to carry on as they have in their military operations. This not only serves them, it serves ourselves as well.

"5. There are certain relief needs, especially in the wake of battle that must be met.

"6. The people of the United States, on a per capita basis, have been eating more than they did prior to the war.

"7. We are continuing to urge all-out production of the greatest possible amount of food. Congress has provided assistance by making available price supports as an assurance to farmers. Consumers can help by avoiding all possible waste and by playing fair in sharing our food.

I am sure, in the light of these facts, that the people of the United States will make every effort to be helpful in assuring an adequate supply for our armed forces and our fighting allies. We all realize the necessity of sharing this food and playing square with our neighbors, our fighting forces, and our allies.

"The sacrifices of our people have been cheerfully made. We can take a new hitch in our belts. We can consume less of these foods that are in short supply and substitute wherever possible with other foods that are more plentiful.

"I have every faith in the patriotism of our people and their willingness to make any essential sacrifices that may be necessary at this critical stage of the war and to do so uncomplainingly.

"Our people have never failed to meet the test in peace or in war. They will not do so now."

On March 21, Administrator Jones issued the following statement:

"I hope no one will be misled about the food situation. No one has gone hungry in this country. No one is going hungry. We have heard these things before. This storm will pass and certain facts will stand out:

"1. In 1943 the American farmers produced 32 per cent more food than this or any other nation ever produced before the war.

"2. In 1944 they upped this 5 per cent making a record increase of 37 per cent above prewar production.

"3. This record was made in spite of the handicaps of war.

"4. This year the farmers themselves set goals that call for an even greater crop acreage.

"5. We have the best fed army and navy in the world. They have first call on our food.

"6. Russian officials have told us that but for American food they could not have gone forward as they did in turning back the Germans. The same is true of England. All our allies are fighting in a common cause.

"7. Our civilians during the war have eaten more food per capita than they did prewar.

"Our armed forces will continue to be well fed. We will continue to help our fighting allies. Our own people will continue to have plenty of good, wholesome food, and we will contribute our share to the relief of starving people, even if it means a new hitch in our belts. This is a practical matter and a part of the war itself.

"The primary object of the War Food Administration is to aid in securing production of food. We are proud of the all time production in each of the war years. Credit for this goes primarily to the American producer. Anyone who sells the American farmer short makes a mistake.

"In addition we have been buying five million dollars worth of food per day for lend-lease, and to supplement the needs of our armed forces. This food must be processed, stored, loaded, transported and delivered to shipside. Much of it is perishable.

"The handling of this food is a gigantic task. It must be handled with speed. It must go forward every day. It must be kept flowing to the war fronts."

"PERFECT SHIPPING" NEEDS YOU

Transportation and shipping agencies have moved mountains of freight in these critical war years. The public and the military services generally feel that a good job has been done. But those in the transportation and shipping business are not satisfied. Just moving the goods is not enough. They must be moved without damage in transit. To cut down on needless destruction, thousands of shippers, through their Shippers' Advisory Boards, are conducting a month-long campaign during April in conjunction with the railroads and other forms of transport. Their goal is perfect shipping. The public, as well as those employed. Most damage results from improper packing and labeling of shipments. The following is the advice of shipping experts:

"If it's package goods, put it up as well as possible. That's the first 'ounce of prevention.'

"Use the most suitable container available. Your choice may be narrowed 'way down, but it's just as true as ever that square pegs don't fit in round holes.

"Make doubtful boxes better by reinforcing, padding, partitions and all such measures that take up shock.

"Make the finished package as damage-proof as possible. A good job can usually be done through proper use of adhesives, bummed tape, stitching, metal strap, rope, cord or twine, and, in wooden crates or boxes, enough of the right nails in the right places.

"Be careful to mark shipments accurately and plainly. Use complete address—name, street, number, city and state. Show your name and address also preceded by 'from.' Much delay, loss and disappointment is caused by illegible and faulty addressing.

"Be sure to remove old labels, tags and all previous markings."

This advice is not complicated. It can mean the saving of millions of dollars worth of freight if all of us will do our part.

Wickard Says Postwar Farm Programs Needed to Aid Veterans and Tenants

The need for special postwar farm programs to help veterans, farm laborers, and tenants to be more secure on the land was expressed by Secretary of Agriculture Claude R. Wickard at an agricultural achievement banquet in Indiana last week.

Taking as his theme, "Peacetime Opportunities for Farmers," the Secretary pointed out that a whole series of efforts will be needed after the war to bring about better distribution of farm income among farmers themselves and to strengthen the position of the family farm.

Said he, "Under our present distribution of national income even full employment will not mean that every family will have sufficient income to provide good diets for its members. It is not good Americanism to permit people to be undernourished when the farmers of the Nation have the ability and the desire to produce what is needed for a good diet for every family of the Nation. The School Lunch Program has proved its worth and should be expanded. Consideration should be given to a revival of the Stamp Plan or some modification of the Stamp Plan."

Pointing out on the other hand that production efficiency and good weather may cause temporary overproduction some years, Secretary Wickard indicated the continued need for the Ever Normal Granary and also the need for some farmers to shift their production from one crop to another and from one type of farming to another.

"Some farmers," the Secretary said, "will need to find new opportunities in agriculture and some outside agriculture. These shifts are as much in the national interest as in the individual farmer's interest. In making these shifts, farmers will need income protection and other positive assistance."

Continuing, he said, "Special programs will be needed to help veterans, and to help all farm laborers and tenants to be more secure on the land."

Turning to the peace that will come after victory Secretary Wickard declared that the farmers want a peace that will bring permanent prosperity to the whole nation.

Said the Secretary, "They want to build up the productive capacity of their land and their flocks. They want to repair or replace their equipment, their fences, and their farm buildings. Millions of farm people want better houses than they have now, and better roads to link them with each other and with nearby towns and cities. They want better hospitals and adequate medical care of all types to be within reach. They want greater security of tenure, greater security against old age. They want better schools in their communities and all the other advantages needed to give children good education and training."

The Secretary pointed out, however, that the attainment of these objectives is largely dependent upon full industrial employment.

A girl who went out with a flier said he danced in such close formation that she could practically read his dog tags in braille.—Flint Hills Peggy.

Is This The Beginning Of The End?

Negro farmers and their leadership are deeply concerned over the death of the President. They sincerely wonder if the era of liberal agricultural reform which he began is to be brought to an end.

Secretary Wallace has been side-tracked, Dr. Will Alexander has gone to the Rosenwald Fund, C. B. Baldwin and George Mitchell have gone to the C. I. O. Where Is Sam Bledsoe?

Many others who sponsored the liberal attitude of the Department of Agriculture toward the small farmer in the South have been maneuvered out of position where they could be of direct service. Now the "chieftain" is dead.

Under the sponsorship of this liberal element in the White House and in the Agricultural Department, many trained and capable Negro workers were employed to help do the job of improving the lot of Negro farmers in the AAA there was Albon L. Holsey, James Davis and Mrs. Morton.

The Farm Security Administration brought Giles Hubert, Constance Daniel, Frank Pinder, J. L. Reddix, Jerome Robinson, James Peterson and a field staff which once included more than two hundred trained Negro agriculturists, home economists, recreation workers, nurses and clerical employees. Most are now gone.

The late Tom Roberts was brought into the office of Personnel for the express purpose of increasing the services of the department to Negro farmers and their leadership. His death leaves an unfilled vacancy.

Thousands of Negro farmers during the Roosevelt administration were given the opportunity of securing good, well equipped farms. Projects were set up which were designed to find a way out for the small farmer in the South. Many of these included Negroes. Now they are being forced into liquidation by a Congress which has swung a long way over to reaction.

Many Negro farmers are not in position to hold onto the farms originally meant for their rehabilitation. They are being sold out to the highest bidders, many of whom are intent on preventing the progress of the family farmer and cooperative action in the South.

The "Chief" is dead. Does it mean that with his passing go all of the hopeful things which were being accomplished on behalf of the Negro farmer? The war emergency has been often given as the excuse for retrenchments and the cutting off of Negro personnel and for the disruption of progressive programs which were of direct aid to the little man including Negro farmers and farm workers.

Will replacements be made in the near future? Will projected programs be renewed? Or, is all this to be forgotten and southern agriculture to be returned entirely to the control of the big planters, the credit merchants and the county court house gangs?

Negro farmers and Negro farm leadership are frankly worried. If this is not the beginning of the end, then Negro farmers expect some assurances of the fact from the new government, and soon.

More Democracy —More Food

By GEORGE S. MITCHELL

Four years ago the Department of Agriculture was planning how to get the farmers in the country to raise the extra food that would be needed to win the war and write the peace.

The National Farmers Union said one important thing to do was to give as much of the job as possible to the small farmers. Farm labor was going to be scarce. Big operators would be pinched for help. Most big farmers were already getting the most they knew how out of their acres. They had good stock, good barns, limed fields, rich land and much machinery. They could step up production some, but each little fellow in proportion to what he had raised before could step up his production a lot. He would need credit for more cows and pigs and more work stock. Maybe he would need a cleaner and larger barn. He would need to buy or lease land other people were not going to use, and often he would need some intensive show-how.

Without these things he could contribute only a little to war food production; with them his fields and his labor would be geared right into the nation's needs.

The big farmers did not like that plan much. They told Congress to put the money on them and they would raise the food. The agencies which help the little fellow were cut back instead of expanded. Still the little fellows did amazingly well to raise the milk and beans and butter and eggs and flax that the War Food Administration wants. The big fellows can hardly expand at all now and the little fellow still could.

Food is needed now to make the peace — desperately needed. The game of the Germans is to hold the ports through which food might come, to keep up resistance while the Allies stretch their supply lines and drain their own food stocks more heavily. Their hope is that the liberated countries, finding themselves worse fed under the United Nations than under the Germans, will turn in desparation to Nazi tactics even after Germany's defeat. Food will win for us.

We will have to pinch at home and send more abroad. Meanwhile we can still raise more at home if we will give more of the job to family farmers. They have the labor and the will, but need more land, more credit, and more teaching. More democracy on the land will give us all more to eat and a quicker end to the shooting.

George S. Mitchell

used? With good bargaining can it answer, in part, the cry of the American farmer, big and not-so-big, that he cannot meet city-wage competition? Is there an answer in area agreements, the notice-to-quit-work arrangements, and the provisions for housing?

The details of these provisions are not too important. The German direction is usually toward too much detail, and what we need is not to imitate but to explore. Organizations established and in the making need to be open-minded and curious about the experiences of others, and keen enough to pick from these whatever is of value in reaching their own goals. And the same applies to not-quite-ready individuals.

A few years ago, American farm workers lost their bid for government-regulated farm wages and living standards. This note from Germany's lost freedom is worth remembering, as, without meanness or ill-will, we work to reach those same goals through organization for bargaining.

And Will you PLEASE Pay That Poll Tax!

It Can Be Done

ORGANIZATION FOR BARGAINING

A Lesson From Germany's Few Years of Free Government

The need for organization among farm workers is past the question stage. It is no longer a matter of "whether" there should be organization, but of how organization can best be brought about, and to what goals it should be directed.

A first lesson in organization for bargaining, on or off farms, is that bargaining—for goods, for pay, for working conditions—is not fighting. There are good and sorry employers—on plantations, in mines and in factories—as there are good and sorry workers. Conflict results from bad will, not from organization.

Before two boys swap marbles they look them over carefully, to make sure that neither is being "gypped." Good bargaining between workers and employers means that each is going to look over very carefully what the other has to offer, before a deal is made.

The Germans learned this after the last war, and, under their new republic, put the plan into practice and made it work—until the Nazis took over. Two months after the close of World War I, a bargaining group, the Federal Council of Farmers and Landowners, was organized in Germany, with government aid, because the Germans knew that their country could not live without a smooth and orderly flow of food and fiber from farms to homes and factories. They knew, also, that this orderly flow could only come if farm workers and farm employers—planters, managers or corporations—had some basis for bargaining.

The Germans went about the job of organizing in their own way, which is not our way. But basically they were on solid ground, and for ten of the fourteen years between the end of World War I and the rise to power of the whip-cracking Nazis, there was, by and large, peace and prosperity in German agriculture.

The Federal Council, made up of people whom we would call large farmers or planters, managers and farm workers, served as a kind of farm labor board, setting up general principles under which agreements between farm workers and farm employers were made. Under it a federation of employers' associations worked with farm labor and government groups to prevent strikes and improve output by arriving at fair agreements. Joint labor associations, also, put their shoulders to the wheel to reach better understanding through better bargaining, with the encouragement and help of the government.

A great many individual agreements suited to individual cases were drawn up within the broad outline of rules and principles set up by the councils to fit various farming areas. In the two-year period between January 1927 and January 1929, more than a million and a half German farm workers and their employers benefited from agreements of various types, which followed these rules. Wages, hours, vacations, rest on Sundays and holidays, housing, the filing of notice to leave employment, and meditation of disputes were points covered in most contracts. Also included were the matters of payment in cash or kind, the quality of payments in kind, and piece work rates in line with base wage rates already agreed upon.

Up to now, so far as its workers are concerned, American farming lacks what German farming had in its ten years of freedom. American agricultural workers are not well organized and therefore have less to say about the manner in which they live and work than any other working group in America. For today's America pays little heed to the unsupported views of lone citizens. It could hardly be otherwise in a country as vast as ours. So Americans who want their say-so to reach beyond their own front gates have learned to join their voices with those of their fellows, in organizations of people who think out their problems together, make their views known together, and bargain together.

The larger American farm owners and farm managers have had such organizations for many years, but farm **workers** have not had organizations of their own making and their own directing so there has been little or no bargaining between these two groups. The **directing** in existing organizations, has been one-sided, and the raising and marketing of American farm products has been disorderly, satisfying neither most workers nor most producers. Even the soil on which the crops are raised has suffered for lack of a sound basis for bargaining—for lack of a down-to-earth reason for a worker's interest in land owned and controlled by another.

The German experience need not be used as a pattern for American workers, but without question it has its points. How far can Americans profit by its overall plan in building their own organizations of farm workers and little farmers? How far, for example, can the matter of payments in cash or kind be

Nationalities Are Not Races

The commonest mistake in all discussions of race is the confusion of nationality with race. A white man may be a Frenchman, Russian, Brazilian, Australian, or South African. A black man may be from the Congo, New Guinea or Harlem. The yellow races are found in every country of the Americas, of Asia and many Pacific islands. Nations and races never completely coincide. The German nation is composed of several racial stocks in about the same percentage as is the French nation. When a man is asked for his racial stock he will often say, "I am French with some English and Scotch mixed in." This means nothing in race, for several racial groups are found in France, England and Scotland and the man may be almost anything.

Georgia Editor Decries Evasion Of Constitution

From the Macon (Ga.) Daily News

The cynical proposal of Speaker of the Georgia House of Representatives, Roy Harris, to circumvent the constitution and the laws in order to preserve the state's white primary, is not a pleasant thing for a good citizen to contemplate.

Last year the supreme court of the United States decided that the exclusion of Negroes from the primaries in Texas was a violation of the 15th amendment to the federal constitution, which provides that the right of citizens of the United States to vote shall not be denied or abridged on account of race or color.

There can be no doubt in any unprejudiced mind that this decision is right or that it has the same application in Georgia that it has in Texas. In both states there is no two-party system, the primaries are the real elections, and exclusion of Negroes from primaries is meant to be, and is, denial of the right to vote on account of race or color.

Mr. Harris and other southern politicians know this, and their concern is not to abide by the law, but to evade it; not to do right, but to do wrong and get away with it.

No other inference is possible from Harris' explanation of the Georgia scheme to the constitutional amendments committee of the house.

First, he says, it is proposed to eliminate all reference to primaries in the new constitution; this for the purpose of the utmost elasticity in evading whatever decision the supreme court may render in prospective litigation from Georgia.

Then in order to carry out the idea, Mr. Harris reveals, in language that makes Machiavelli look like a piker, what will be done further to nullify any such decision. He says:

"The way we plan to work it we will leave our primary laws intact after removing the constitutional reference, then if at the next primary some Negro carries his troubles to court, we go right on and hold our primary, and by the time he gets a decision it will be too late for him to vote.

If our system is held nonconstitutional at the next session, we will change the law at the next session of the legislature—but only by a period or comma. We will hold our primary just as white as a clean sheet.

If the supreme court invalidates that law too, then we will rewrite it again for the next primary. That will go on ad infinitum"

Thus no complaint can ever get a decision on the merits. The question is not what or just or decent, or even what a law is. The effort will be solely to evade and circumvent the constitution and the law by a lot of hypocritical shenanigan.

We can't go in this state denying political rights to large parts of the population while we are beating our breasts out about our country's effort to make democracy effective in all the world.

Our lip service to democracy is sheer mockery until we can show enough good faith to observe both in letter and spirit the provisions of the 15th amendment to the constitution of the United States. Whether our politicians know it or not, Georgia is now in the union and the constitution of the United States is the supreme law of the land, including Georgia. The observance of all its provisions is right. And no state or people can go wrong by doing right!

HIS EXPERIENCE

Mose had applied to the philosophic white gentleman for a loan. He was turned down. The gentleman said: "You are strong and healthy and work is plentiful. Why don't you get a job? Hard work never killed anybody."

Mose said: "You sho is wrong erbout dat, Boss. I'se done los' fou' wives from nuffin' else."—The Railroad Trainmen.

WE COULD BE LESS CARELESS

A heartrending story came from across the Pacific the other day. A bomber crashed and a member of the crew was hopelessly trapped in the flaming wreckage. After a number of futile attempts at rescue, an officer among the horrified spectators, unable to stand the victim's screams longer, stepped up and ended the doomed man's life painlessly with his service 5. The officer was later exonerated at a military trial.

The foregoing incident was a tragedy of war. Yet it differs from similar incidents that happen regularly in peacetime only in respect to the method by which the person dying in the flames was put out of his misery. The ten-thousand-odd souls who die by fire in this country every year do it the hard way. They simply scream until they are cooked.

If this sounds unnecessarily morbid and merciless, take a look at the nation's fire bill—upwards of half a billion dollars. When it comes to fire, America is grossly careless. We are careless in our homes. We are careless in our factories and around places of amusement. We are careless in our forests. The result is fire destruction on a scale of almost unbelievable proportions.

We could do something about fire if we wanted to. We could be less careless. We could heed the lessons of experience and fire prevention authorities, which tell us over and over that real fire prevention is a highly individual business—a question of detail, of putting out matches and cigarettes properly, cleaning up the basements and attics, keeping heating facilities in good order.

Most of these things could logically be done now. Spring is here and spring is clean-up time. Why not clean up right? Prevent fire, help save lives.

THE PROBLEM OF THE MINER

The coal shortage may run as high as 50,000,000 tons. This, while small in comparison to total output, is critical because coal is used in every phase of war production.

The wartime steel industry alone must have 1,743,000 tons of bituminous coal every week. Thirty-two thousand tons of coal go into the making of every superdreadnaught, 50 tons into every medium tank, and 18 tons into every 4-ton Army truck. High explosive chemicals are made in whole or in part from coal. Coal is also the base of 85 per cent of all war plastics. Hundreds of antiseptics, insecticides, and drugs—including the life-saving sulfas, synthetic quinine, and aspirin—are made from coal. So are chemicals for waterproofing and mildew-Proofing clothing. So are textiles, such as nylon for parachutes and rot-proof mosquito netting. The list is endless.

The coal industry has had to produce the coal for this endless list of war goods without fail. Each year it has succeeded in operating with great efficiency, to an extent that more than offset the steady drop in manpower and depreciating equipment. And it has endeavored, to the best of its ability, to hold costs at reasonable levels, thus assuring coal an equal competitive opportunity to secure a share of postwar markets.

This latter problem few persons give much thought to, outside of the coal business. It can mean the difference between a going industry and stagnation. It can mean the difference between hundreds of thousands of men having work, and not having work. Once the war demand for coal falls off, increased civilian consumption must step in to fill the gap, and the only thing that can persuade consumers to do that is a fair price. Up to now management has worried pretty much alone about holding the cost of producing coal to minimum levels. But from now on with wages soaring, it also becomes the problem of the miner himself—if he wishes a steady job.

Massachusetts Community Workers War Against Prejudice

THE SPRINGFIELD PLAN

In 1939 the community of Springfield, Massachusetts, inaugurated a method of inculcating racial tolerance and understanding, which has been called "a community's total war against prejudice."

The Plan is based on the assumption that prejudice can be prevented, and that mass phobias, manias and hysterias—contagious diseases of the body have been controlled.

The method is much the same: apply the same scientific-humane principles which in a lifetime have all but conquered small pox and typhoid: which since 1900 have reduced the tuberculosis death rate from 200 per 100,000 to less than 40. Once the germ has been isolated, a mass education campaign teaches not only the terrible cost of the plague, but also the breeding-places of the germ and the scientific way of eliminating them.

The Plan utilizes the methods of propaganda analysis developed under the leadership of Dr. Clyde R. Miller at Teachers College, Columbia University. School children and adults are taught how public opinion is formed, how to distinguish fact from opinion, how to avoid prejudice.

Following the inauguration of the Plan in the Springfield Public Schools children were given tests to determine their attitudes toward Jews, Negroes, the foreign-born and various religious groups. From these tests the school authorities ascertained that most of the prejudiced attitudes of children come from the parents or from other adults and even from adult institutions including—in some cases—the church. So particular emphasis is placed upon reaching the grown-ups.

HOW THE PLAN IS SET UP

In order to carry out such a program, two directing bodies were set up.

One to function in the schools, called the **Committee on Education for Democracy**, was appointed by Dr. John Granrud, Superintendent of schools. All educational levels in the school system, including supervisors, principals and classroom teachers, were represented and given the task of studying the problems involved in organizing the program in the schools.

The other is a **community committee for directing the community-wide program.** It is broadly representative. Its membership includes leading clergymen of various faiths, representatives of different organizations in the business community, the publishers of the newspapers, labor leaders, representatives of the social agencies, spokesmen of young people's organizations, the wife of a Negro minister, leading figures in civic and club activities, as well as Dr. Granrud and the Director of Adult Education who serves as secretary.

CHILDREN LEARN AND LIVE DEMOCRACY

As the pupil advances through the school system he is first given in the **elementary grades** an understanding of "living and learning together" and he develops from the outset a comprehension of some of the fundamental concepts of democracy. Each child is given an opportunity to make his contribution to the group. He learns what other peoples have contributed to our civilization, and he gets a first sense of the interdependence of nations.

When he reaches the **junior high school level** he is given an opportunity to develop an appreciation of the rich heritage of America. He is encouraged to build a sympathetic attitude toward all racial and nationality groups through understanding of their cultural patterns. Specifically, he obtains knowledge of the contributions of the various nationalities to the growth not only of the United States, but also to the growth of Springfield.

Senior high school students analyze current problems studying both the strengths and weaknesses of our democratic processes to determine how the latter can be corrected and democracy strengthened. They learn how to evaluate their own prejudices and biases, how to reach conclusions objectively. They study propaganda techniques.

Tests given at the end of each year have shown substantial progress at all levels in the school system.

THE GROWN-UPS LEARN, TOO

The community council sponsors free public forums in school buildings, and has introduced controversial subjects with competent authorities taking opposing positions. A film forum series covers many topics, including the problems of racial, religious and economic groups. The discussions following the films are led by experts, and are focused on **local problems**. Average attendance of public forums is 1,000. A series of ten "film forums" drew an average attendance of 800.

The New England town meeting came to life in modern form when non-partisan political meetings were sponsored in public school buildings in each of the wards. Opposing candidates speak from the same platform. People who haven't been in a school building for years renew their contact with the school system. One political rally drew an audience of 5,000.

SPRINGFIELD PRACTICES WHAT IT PREACHES

Training of Negroes for skilled occupations has been developed, and the School Placement Bureau is constantly working to break down discrimination in employment. The school system itself has set an example in its own employment standards, which are based strictly on merit. Three Negroes are now teaching in Springfield schools, though in no case do Negro pupils constitute more than one-fourth of the attendance. Other sectors of the community are likewise represented in appointment of new teachers.

THOSE WHO LEAD MUST ALSO LEARN

Special training courses for teachers and community leaders are given at Springfield College, with emphasis upon contemporary problems and the new tasks they impose on education.

Through newspapers, radio, meetings of all sorts of civic groups and through study courses given in parent-teacher meetings the work is carried to the entire community.

Several other communities, large and small, have already studied the Springfield Plan and have inaugurated similar programs. The Pittsburgh Plan, which went into operation on January first, makes several contributions of its own to democratic education. The Assistant Superintendent of Schools of New York City is planning to visit Springfield, according to press reports, with a view to adaptation in New York.

In its fifth year of successful operation the Springfield Plan deserves serious study by every community in the country. It offers one of the most significant contributions to education for meeting the problems of the war and of the postwar era.

A FARMER'S ANNUITY

Regular War Bond investments now will create an ideal annuity for old age. Bonds bought this month will be maturing 10 years later, returning Four Dollars for every three invested. If the money isn't needed, then it can always be reinvested so that cash will be available when wanted.

Few farmers during their productive years build up an annuity of any kind. They rely on their farm investment for old-age protection. A good farm free of debt does give a lot of protection, but experience has proven that some kind of an investment that will yield cash at regular intervals is a valuable supplement to the farm.

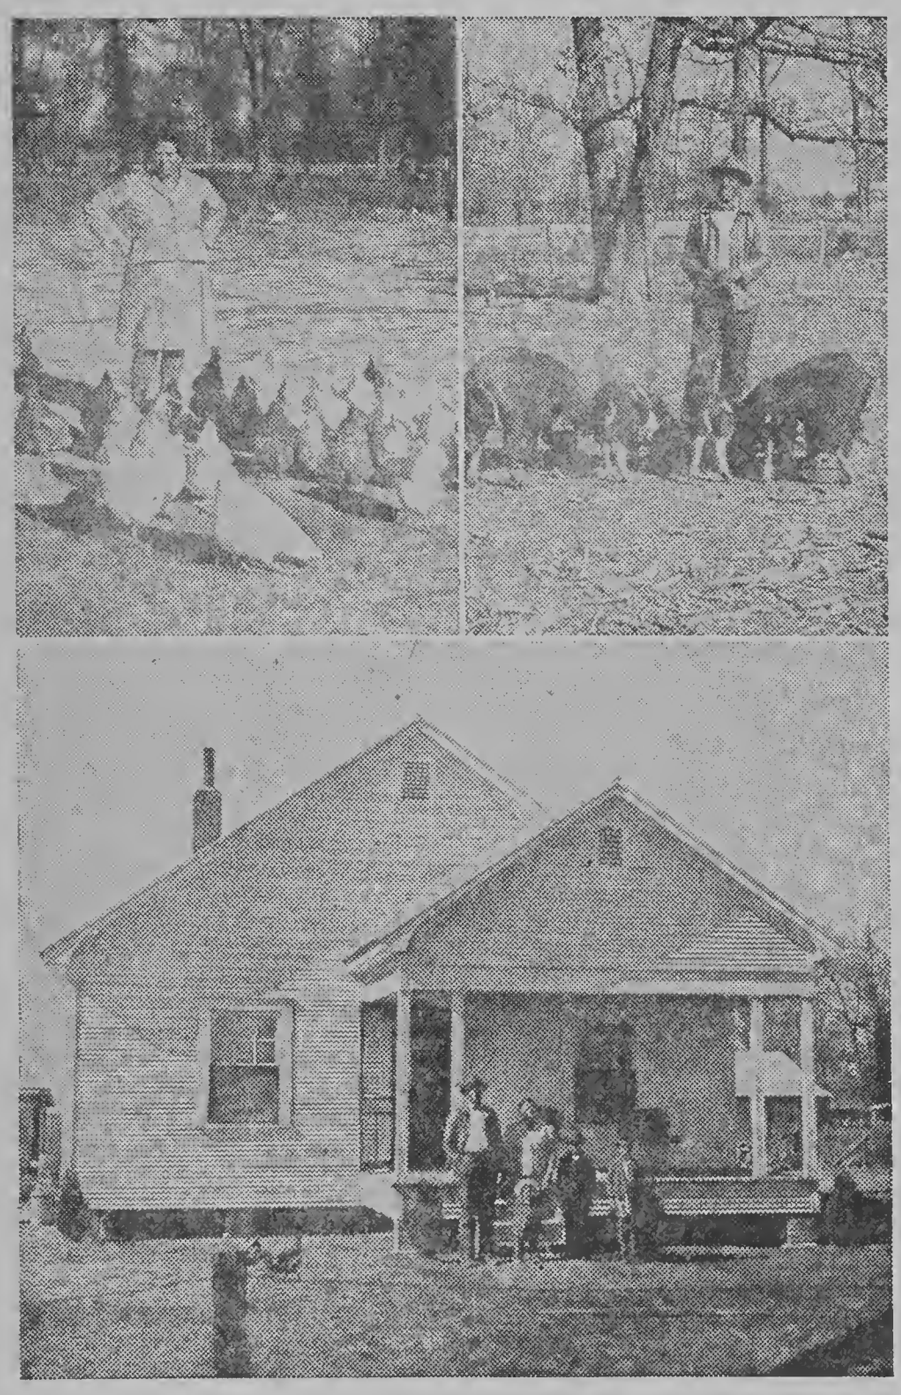
Too often the income from the rented farm is less certain than when the owner operated it. From a crop share lease—and that's the most popular way of renting farms—there is little or no net income in years of poor crops.

Many farmers will want to turn the farm over to a son when they retire. They'll want to give that son every opportunity to succeed—without being burdened too much by the support of mother and dad. In such cases the War Bond annuity will pay big dividends in satisfaction as well as protection.

It is easy for a farmer to create a War Bond annuity. No fixed regular premiums are required—though of course regular investments now mean regular payments 10 years later. The fact that the War Bonds also create a liquid farm financial reserve at the same time the annuity is being built up is another big advantage. In an emergency the bonds can be redeemed for cash without any loss.

A War Bond investment is the kind of an annuity that many farmers have been looking for.

The Jews Are Not a Race



Walter Sorrell, Mississippi Farmer, Named Model Farmer By FSA

JACKSON, Miss.—Hard work, good management, and thrift, enabled Walter Sorrell, Negro farmer and father of seven children, of Prentiss county, to pay for his 80-acre farm in six years to become the model Negro borrower of the Farm Security Administration in Mississippi.

Dallas C. Vandevere, State FSA director, announced today that Sorrell's outstanding progress had won for his family the title of Negro farm family of the year for the state in a contest conducted by FSA officials. Records of several thousand Negro borrowers were studied by the judging committees.

Sorrell paid no attention to the advice of some who told him that he never would be permitted to own his farm. He and his wife, Georgia, have won the admiration of white and colored citizens alike in their achievement. Since getting their FSA loan their net worth has increased ten times. Their debts are all paid, and they own a full set of farming equipment, workstoek, cattle, hogs, and chickens. Their home is well furnished. A smokehouse is stocked with an abundance of home-cured meat and the pantry holds more than 600 quarts of canned food.

Walter and Georgia Sorrell, shown above, have been designated by FSA officials as Negro farm family of the year in Mississippi. They were selected from several thousand outstanding Negro FSA families. Their home, shown below, and 80-acre farm is now owned, debt-free. When this picture was made, the older children were at school. There are seven children in the family.

For A "Bright" Post-War Agriculture

Reprint from FARM BOND AIDS

Farmers are looking forward to many new and wonderful eleetrically operated devices on their farms and in their homes after the war—devices which will save labor, increase income and raise standards of living. Millions of farm families hope to have these wonderful new things—and those who invest sufficiently in War Bonds now can be certain of having them soon after the war ends. And that applies to farm families who do not now have electrie service, as well as to those who do.

The Rural Eleetrification Administration expects 3,655,000 rural homes to be added to power lines within a five-year period after the war. It expeets that these newly electrified farms will want a great deal of wiring, plumbing, electrical appliances, and equipment. **Four and a half billion dollars is the amount which individual farmers will invest if they are to get full benefit from their new electric energy.**

REA urges the purchase of War Bonds now as a means of assuring the farmers' ability to make the necessary investment when the time comes to do it.

The program contemplates electrifieation of nonfarm residences in rural areas as well as farms. And this by no means eompletes the picture. Farmers who have already experienced the help and comfort of electricity will want to increase their investments in electrical equipment and appliances. They have found that electricity pays its own way for those who can invest in its working tools.

The total new investment for equipment on farms already electrified, it is estimated, will reach 2½ billion dollars. For this purpose many farmers have been earmarking War Bonds bought from the extra income which electricity is already earning for them. They will continue to buy War Bonds as an assurance that they will be able to acquire modern tools for better living and working conditions.

The research laboratories of manufacturers. the Federal Government, State Colleges. Experiment Stations, and others are full of new devices or improvements of old devices to make farming easier and more productive; to restore rural living to the comparative standard it held in earlier days. Investors in War Bonds will be able to aequire many of them without undue delay. Here are a few:

FARM FREEZER.—Many manufacturers have announeed new models of farm freezers, some models for the kitchen and others of the walking type. Prices will probably be around $250 to $350 for a "plug-in" eabinet type.

AIR-CONDITIONING.— New small portable types are in prospect.

GERMICIDAL LAMPS.—Speeial ultra-violet lamps that kill airborne bacteria, many of which causc poultry and other diseases—might be used in the home to eontrol such ailments as a eommon cold.

FEED GRINDERS.—The development of electrically operated feed grinders is continuing. The trend is toward installations with relatively low-powered motors, so arranged that no attention is required beyond putting into the hopper the proper quantity of grain.

These are only a few of the newer devices which have been discussed publicly. Many others are being worked on quietly. This list does not inelude any of the more eommon uses for electricity on the farm whieh are already making an outstanding contribution to better farm living. **A comfortable backlog of War Bonds will bring these conveniences to many farm homes.**

In Praise of the Horse

By JASPER B. SINCLAIR

MORE THAN ANY OTHER ANIMAL, THE HORSE HAS MADE HISTORY

The faithful old horse must lack song appeal. He has not inspired the song writers of the world to the same extent as the dog or many of our feathered friends. Yet he is not without his share of reminders in song, poetry and prose.

True, some of the Tin Pan Alley contributions border on the ludicrous. Particularly the "Horses, Horses, Horses" refrain and the equally fantastic lyrics about "The Horse with the Lavender Eyes." But even that is better than being wholly neglected.

The story of "Black Beauty," of course, is perhaps the finest of its kind ever written in any language, and one of the most widely read of all animal stories. "Black Beauty," like Longfellow's well-remembered poem, "The Bell of Atri," belongs to the ages.

The recent Hollywood version of "My Friend Flicka" and the Latin poet Virgil's verses in praise of the plodding farm horse span a couple of thousand years of literature dealing with Dobbin.

One of Shakespeare's kings would have gladly traded his kingdom for a horse. But that, after all, was no genuine compliment to the equine family. A horse at that moment was only a means of saving his own royal neek.

A lot of classical poetry would never have been written had it not been for the traditional association between man and horse. Longfellow, for example, could never have written "The Midnight Ride of Paul Revere" if the Boston patriot had been unable at the last moment to borrow a horse from Deacon Jones.

Without the horse, "Sheridan's Ride" could not have become one of our school-book classics, nor could Browning have penned the "Good News from Ghent." And it was the cavalry horse that made possible Tennyson's "Charge of the Light Brigade' 'and all the stirring cavalry selections that have become a part of our military band and symphonic music repertoire.

Mechanized warfare had at least that much to its credit—it has spared tens of thousands of horses the terrible tragedy of fighting battles that were no concern of the animals themselves.

In the past, the fate of the horse in wartime has deeply moved all right-thinking people. But nothing was ever done about it till gasoline motors finally spared these animals the perils of a man-made battlefield.

Some poet or song writer should pen a word of thanks for this. It is the least that can be done after all the centuries in which the horse has so unflinehingly played its hero's part in the front line of battle.

A county school teacher had forbidden the eating of candy and the chewing of gum during school hours. One day she became suspicious of a lump in Johnny's cheek. "Johnny," she demanded, "Are you eating candy or ehewing gum?" "No, ma'am," replied the pupil, "I'm just soaking a prune to eat at recess."—Wichita Eagle.

A Kansas farmer recently applying at his War Price and Rationing Board for two gallons of kerosene to be used as an insecticide was asked to fill in an application blank asking along with other things, what equipment was to be used. With great eare he wrote: "One pan, one rag, one stick to stir with."—Wilson (Kas.) World.

James H. Ferguson Of Clarksville Promoted to T-5

With A Fifteenth Air Foree Service Command Signal Construction Battalion—Italy: James H. Ferguson of 519 Kellog Street, Clarksville, Tennessee, has been promoted to Technician Fifth Grade, according to a recent announcement from his unit headquarters. T-5 Ferguson, who has been a member of the Army since November 1942, is the son of Mrs. Minerva Ferguson, 519 Kellog St., Clarksville.

T-5 Ferguson was a caterer prior to entering the service. He is now a cook for a signal construction battalion of the Fifteenth Air Force Service Command.

By,
SOL L. LESTER, M-SGT.

Every Person Needs A

SAFE DEPOSIT BOX

Citizens Savings Bank has placed an Order for a large number of these so that you may have one

PLAY SAFE! No one knows when fire will destroy his home or a burglar might break in and take your valuables. Our bank wants you to protect these valuable papers, insurance policies, wills, your diamonds and other jewelry. We can rent to you a safe deposit box, which is in our fire and burglar proof vault. The prices are within reach. You have your own individual key. Not even the bank officials can get in this box without you being present with your key.

Bloc Heads Get Millions for Processors; Farmers Hold the Sack

Washington.—A "Farm Bloc" victory over the Farmers Union a year ago has resulted in textile processors reaping millions of dollars in additional profits while farmers hold the sack.

In 1944, the Farmers Union vigorously opposed an amendment to the OPA act, directing an increase in cotton textile ceilings. The "Farm Bloc" (Bureau, Grange and Council of Farmer Co-operatives) supported it contending the textile processors would pay farmers parity for cotton. NFU said farmers wouldn't get the money, and advocated subsidies be paid direct to farmers instead. The Bloc Heads won.

The results are now known:

Prices were allowed to go up $100,000,000 to consumers.

Processors kept $80,000,000 to add to their profits, which were already swollen five times to $315,000,000 by the war.

Only $20,000,000 was even started down through the factors and brokers toward the farmer—and the amount he got was consequently practically nil.

"It is now known," OPA Administrator Chester Bowles told the Senate Banking and Currency Committee last week, "that at the time when the first increases were approved, the earnings of cotton textile mills were about $315,000,000 a year. This is five times the peace-time average.

"These price increases brought large fluctuations in the cotton market, but only small benefits to cotton growers.

"Meanwhile cotton textile mills were reaping huge windfalls under the ceiling prices that were computed on the assumption that they would pay parity prices for cotton.

"Market prices for cotton, however, remained below parity, and many mills had, and still have on hand, huge supplies of cotton, purchased far below recent market levels."

Prior to the enactment of the Bankhead amendment permitting cotton textile prices to rise, the Farm Bureau and Grange had held three meetings with processors, according to testimony before the Senate committee a year ago. The Bureau and Grange publicly declined to form a formal inflationary alliance with the processors after their meetings were publicly exposed by the National Union Farmer and PM, but the groups all continued to clamor for higher prices, and against subsidies.

The results, now known, might be summarized: the processors got the gravy— the farmers held the sack!

—From National Union Farmer.

School At Waverly Named In Honor Of Retiring Teachers

Waverly, Tenn.— In appreciation of the satisfactory services rendered as teachers of the colored public school here for a period of twelve consecutive years, the school board has named the school the Porch-Reed School, honoring Mrs. M. L. Porch who had served 13 years and Mrs. Myrtle B. Reed, who had served as principal for 12 years.

This action was taken on March 23, when the graduating exercises of the school took place. Ten young people were awarded diplomas. They made up the total of 45 graduates for the school during the 12 years Mrs. Reed and Mrs. Porch had served the school.

Mrs. Porch, a local citizen is retiring from the teaching profession after a long and successful career of service. Mrs. Reed, a graduate of Fisk University, is a resident of Nashville, and the wife of Dr. W. B. Reed a well-known dentist of that city. She resigned from her position so as to look after her duties at home.

MR. and MRS. CICERO WILLIAMS

Burke County (Ga.) Farmer Repays $4,000.00 Loan

Net Worth Now $7500

WAYNESBORO, Georgia—Cicero Williams, who lives five miles east of Waynesboro, recently became the first farmer in Burke County to pay for his farm purchased through the Farm Security Administration under the provisions of the Bankhead-Jones Farm Tenant Act.

He made only one share crop in his entire life. That was the year before he married Miss Susie Lawson. In 1914 he began renting land and continued renting until 1938 when the FSA Committee approved a loan for him from the Bankhead-Jones funds. The loan was for $4,075 with which he bought and improved the farm he was living on at the time.

The loan was payable at 3 percent interest over a period of 40 years. The farm consisted of 100 acres with 76 acres in cultivation.

At the time Mr. Williams was approved for a Farm Ownership loan, his inventory showed three mules, one cow, one calf, a few hogs and chickens and a small supply of farm tools. His net worth was approximately $1,500.

Today he has 3 mules, four cows, 20 hogs, a large flock of chickens, ample farm equipment, plenty of food for the family and feed or livestock, a car, $725 in cash, $600 in War Bonds and his own farm with a total net worth of $7,500.

Williams never had to borrow an operating loan from Farm Security. He and his family have always cooperated closely with FSA supervisors in practicing crop rotation and farm improvements. Mrs. Williams is an excellent homemaker. She always has a good garden and cans enough fruit and vegetables with her pressure cooker for family needs.

Until 1943 Williams had made a regular payment on his farm loan of only $176.29. That year he made an extremely good crop and paid $1,500 on his loan. He made another good crop in 1944 and was able to make another payment of $1,500 leaving a balance of $996.36 which was paid from money sent home by two of his sons now in the Army in Italy. Two younger sons are at home with their parents.

Mr. and Mrs. Cicero Williams feel that the Farm Security Administration has given them an opportunity to become farm owners and better citizens in their community.

They are active in community affairs and work for the betterment of their neighbors. They are members of the Bottsford Baptist Church of which Mr. Williams is a deacon.

He grows cotton, peanuts, peas and livestock for cash crops also corn, wheat, oats, cane, potatoes and vegetables for food and feed crops.

Pfc. Willie L. Patton Returns to States for Examination

Atlantic City, N. J.—The Second Air Service Command, located in the Hotel Dennis here, announces that Pfc. Willie Leon Patton, 29 of Decherd, Tenn., has been returned from overseas for examination to test if he will be fit for future assignments. He will also be given medical and dental examinations and occupational classification and be provided with entertainment and recreational activities for his leisure time.

Pfc. Patton served 33 months overseas and has decorations for good conduct and service. He was employed by Jack B. Luna at Pulaski, Tenn., before being drafted.

Bishop Rucker Stops by Nashville on Way to Southern Convention

Bishop J. L. Rucker and family were in the city Wednesday and Thursday of this week attending to business. While here he and family were the house guests of Eld. and Mrs. W. W. Olds on Jefferson St. Bishop Rucks is the bishop of the Churches of God, U. S. A. and foreign fields.

Bishop Rucks will preside over the Southern Ministers Convention which is now in session at Columbia Tenn., at the Church of God on E. 8th St. Eld Beasley host to convention. Bishop Rucker will be at general headquarters, 1037 Jefferson St. Tabernacle, Monday April 23, in his private office from 2 p. m., until 8 p. m., in the Dormitory Bldg.

John W. Cromwell Here on Business

Arriving here last week was Mr. John W. Cromwell, a public accountant of Washington, D. C., who came to the city on a business trip. He came to Nashville highly recommended, and brought letters of introduction from Mr. John T. Rhines, proprietor of the John T. Rhines Company, Morticians, 901 Third Street, N. W., in the nation's capital.

Mr. Rhines said Mr. Cromwell is one of the nation's capital's outstanding certified public accountants, that at one time he was instructor in the public schools of Washington, D. C., and later on was a member of the Howard University faculty.

Among the people whom he was recommended to by Mr. Rhines was Rev. Henry A. Boyd of this city. Accompanying Mr. Cromwell to this city was his assistant, and it is understood that they are at the A. M. E. Sunday School Union, headed by Mr. E. A. Selby, and that when this work is completed they will move on to other departments of the African Methodist Episcopal Church.

Famed Educator Says School "Center Of Living" In Community

Scotlandville, La.,—Dr. William H. Kilpatrick, emeritus professor of education, Columbia university, in delivering the second annual Future Teachers of America Lecture at Southern university, declared that he "would have the school think of itself as a center of living for children and as a community center for parents and citizens to come there after school and evenings and Saturdays."

"We would do all we could," continued Dr. Kilpatrick, "to have old and young learn to live better together, learning how to have finer and better homes and how to live better, how to cook a better diet, how to plant trees and shrubs, how to live with more consideration and more refinement in the homes; learning in the country, especially, to buy land to own, each family for itself, how to build to best advantage, how to save and spend, wisely."

Attacking the rigidity of custom in people, Dr. Kilpatrick said "because we live the culture it is hard to change. This is what keeps alive superstitions and the like. People live them and teach them to their children. Some will change them when they learn better. Some won't learn better because they are living the old and don't want to change it."

Stating that culture can be changed either unconsciously or by critical thinking. Dr. Kilpatrick asserted "critical thinking is our hope to effect desirable changes. We must learn better how to use it and to get more people to use it. Then we can hope better to get rid of prejudices and die-hard reactionaries."

Concluding, the speaker urged his listeners "to learn a better religion, a religion not to forget this world but to make it a better world to live in," and "to take conscious steps to make better living arrangements between white people and Negroes."

The complete program included an opening statement by Miss Eva Mae Davis, president of the Future Teachers of America club, musical selections by the university trio, comprising Misses Thelma Smith, Bessie Jackson, and Leora Bell, and introduction of the speaker by Dr. F. G. Clark, president, Southern university. Sponsor for the Future Teachers club is Dr. Reid E. Jackson, acting director, division of education.

City Teachers to Get Training in Health Problems

W. A. Bass, Superintendent of the City Schools, announced today that plans have been worked out with Vanderbilt University Medical School, Meharry Medical College and the State Department of Public Health for giving local teachers in service, training in health problems. It has been thought wise to attack tuberculosis as our Number One health problem. The work at Vanderbilt was initiated on April 2. The work at Meharry began on April 16. Each of the two projects will run for a period of four weeks. Specially arranged illustrative lectures are being given at Vanderbilt Medical School by Drs. William Frye, Alvin Keller, W. W. Hubbard and R. H. White. At the Meharry Medical School similar lectures are being given by representatives from the Meharry Medical Faculty.

This in-service training program is a part of the over-all school health service directed by Dr. Mary Baxter Cook, acting director of the local school health service.

Supt. Bass announced also that Dr. Howard E. Hamlin, Supervisor of Health and Narcotics Education of the state of Ohio would spend a week visiting and lecturing in Nashville schools and that he will make talks at Washington and Cameron Junior High and Pearl High on Friday of this week.

Another interesting announcement made by the city superintendent was that the Inter-American Affairs committee, Washington, D. C., has made available Dr. Robert Koch from April 22 to May 12. He will visit classes in Spanish at the high schools, giving instructions in Spanish literature, pronunciation, customs geography, history and related subjects. He is to have frequent conferences with teachers of Spanish, of social sciences and English. This service is being rendered in the interest of a better understanding among Americans, Supt. Bass states, and believes the local school system is fortunate to have it.

Still Champion

The internationalists and their kept press have done all they were capable enough to do to destroy John L. Lewis. But the leader of the nation's coal miners and founder of the CIO continues to loom as the most dpendable and unterrified leader of the working people of America the nation has. The way the miners are standing by him in his battle with the heartless coal operators is heartening to the masses of Americans. In the end, John L. Lewis is going to win more victories for the great army of exploited workers he represents than will ever be won by those labor leaders who consent to enslave their unions to government bureaucrats.

YMCA USO club News

Each second Tuesday night in the month is "Bring Your Record" night. If you have a favorite number that you would like for the soldiers to hear or dance by, bring it and join the fun. Remember the game nights featuring Bingo, Pokeno and Bridge every Tuesday and Thursday.

Rev. Otis Boatright, former Host in the YMCA Lounge will be the speaker at Vesper time, Sunday Special music will be rendered. The public is invited to this service.

The Vesper hour is 5 o'clock p. m.

Harry B. King Of Nashville Made Sergeant in Italy

A fifteenth Air Force Service Command Air Service Group—Italy: Harry B. King, son of Mr. and Mrs. J. M. Boyd, 1110 Cedar Street, Nashville, Tennessee has been promoted to the grade of Sergeant, according to a recent announcement by his commanding officer. Entering the United States Army Air Force at Fort Oglethorpe, Georgia in August, 1941, Sergeant King was sent overseas to Africa in January, 1943. Today he is a truck driver assigned to a quartermaster trucking company of the Fifteenth Air Force Service Command.

Pvt. George Morton Awarded Good Conduct Medal

Smokey Hill Army Air Field, Salina, Kansas.—Private George Morton, husband of Mrs. Effie Morton, 1405-a Ireland St., Nashville, Tenn., presently stationed at the Smoky Hill Army Air Field, Salina, Kansas, has been awarded the Army's Good Conduct Medal, it was announced by Col. Ralph W. Bodieck, Station Commandant of the Field.

WOMAN'S PAGE

Helpful Household Hints

COOKED SALAD DRESSING

Beat together 1 or 2 eggs and 2 tablespoons vinegar until smooth. Add 1-3 cup milk, 1 tablespoon table fat or drippings, ½ teaspoon salt, ½ teaspoon sugar, ½ teaspoon mustard, ⅛ teaspoon celery seed, and a dash of paprika. Cook over hot water, stirring constantly until the mixture has thickened.

RHUBARB HONEY CREAM PIE

3 Cups rhubard
3 tablespoons flour
1 cup honey
½ tsp. cinnamon
2 eggs

Wash and peel rhubard. Cut in ½-inch pieces. Place in uncooked pastry shell. Combine flour, beaten eggs and honey. Pour over rhubarb. Sprinkle with cinnamon and dot with butter. Top with pastry cut into small circles or other design. Bake in hot oven 425 degrees F. for 10 minutes. Reduce temperature to 350 degres F. and bake 30 to 40 minutes.

SAVORY CARROTS

Carrots, now so plentiful on markets generally, offer much in appetizing color, fine flavor, and nutritive value. Variety in seasoning helps prevent monotony if carrots are served frequently. A little lemon juice over the top, chopped parsley, or tender onion sprouts or chopped onion heated in a little fat are favorite seasonings for this vegetable. Left over drippings from cooking meat are good poured over carrots.

MARBLE TARTS

1 package prepared chocolate pudding
1package prepared vanilla pudding
3½ cups milk
Tart shells

Prepare puddings as directed on packages, reducing milk in each recipe to 1¾ cups. Cool to luke warm. Put by tablespoons into cold tart shells, alternating light and dark puddings. Then with knife or spatula, cut through filling zigzag course; repeat in opposite direction. Chill. Makes 1 to 12 tarts.

Tart Shells

2½ cups sifted flour
¼ teaspoon double-acting baking powder
¼ to 1 teaspoon salt
2-3 cup cold shortening
1-3 cup cold water (about)

Sift flour once, measure, add baking powder and salt, and sift again Cut in shortening until pieces are about the size of small peas. Add water, a small amount at a time, mixing lightly with fork. Handle as little as possible. Wrap in waxed paper and chill thoroughly before rolling. Roll pastry ⅛ inch thick on lightly floured board. Cut with floured four or five-inch round cutter and fit carefully on outside of upside-down tart or muffin pans. Trim edges. Prick with fork. Bake in hot oven (450 degrees) ten to 15 minutes, or until slightly browned.

GINGERSNAP LEMON PUDDING

¼ cup flour
2 tbsp. cornstarch
1 cup sugar
2 cups boiling water
3 egg yolks
1 tbsp butter
¼ tsp. salt
⅜ cup lemon juice
2 tsp. grated lemon rind
1 cup finely crushed gingersnaps

Thoroughly mix the flour, cornstarch, and sugar. Slowly add boiling water, stirring to prevent lumping. Cook over low heat in the top of a double boiler for about 15 minutes or until thickened. Beat egg yolks slightly. Pour a portion of the mixture on the yolks, then combine the two mixtures and cook two more minutes. Remove from heat, add butter, salt, lemon juice, and lemon rind. Mix well and cool. Fold in gingersnap crumbs and chill in a covered jar until ready to serve. Serves six to eight.

MAYONNAISE VEAL LOAF

3 cups diced cooked veal
3 tablespoons gelatin
3 tablespoons water
1¼ cups hot veal stock
½ cup diced celery
½ cup sliced olives
1 cup peas
3 diced hard-cooked eggs
1 cup mayonnaise

Purchase shoulder of veal or use left-over veal; trim off any fat or cartilage. Soak gelatin in water and dissolve in meat stock. Cool. Add remaining ingredients to diced veal. When gelatin mixture begins to congeal, combine with fat mixture and pour into loaf pan or ring mold. Place in refrigerator and let stand until very firm. Unmold on large platter; garnish with lettuce and radish roses or stuffed tomatoes. Serves 8 to 10.

VEGETABLE CURRY

Wash ½ cup rice and cook in 2 quarts of boiling salted water until tender. Drain, rinse, and let stand over steam until the grains swell and separate. Cook 1 cup diced onion, 1 cup diced celery 1 cup diced carrots in a little water and just before removing from stove add 1 cup of canned peas. To the liquid from the vegetables add 4 tablespoons fat, ½ teaspoon salt, ¼ teaspoon curry powder, and 2 teaspoons Worchestershire sauce. Make a ring of the cooked rice on a hot platter, pile the vegetables in the center, pour the liquid mixture over them, and serve at once. Six servings.

LITTLE SPICE CAKES

2 cups sifted cake flour
1 teaspoon baking powder
½ teaspoon baking soda
½ teaspoon salt
1 teaspoon ginger
1 teaspoon cinnamon or allspice
½ teaspoon cloves
¼ cup shortening
½ cup sugar
1 egg, well beaten
½ cup molasses
¾ cup buttermilk or sour milk

Mix and sift flour, baking powder soda salt and spices. Cream shortening add sugar slowly, and cream until fluffy. Stir in well-beaten egg and molasses. Add sifted dry ingredients alternately with milk, stirring well after each addition. Bake in tart or muffin pans about 20 or 25 minutes in a moderate oven (350 degrees F.) Serve hot or cold. Yield: About two dozen cakes.

FRIED ONIONS

Simmer sliced onions in a little fat in a closely covered pan until almost tender. Then uncover and let brown, or add two or three tablespoons of water and cook them uncovered. The water will evaporate as the onions cook and they will brown when the water has disappeared.

A NEW MEAT PIE

Here's novelty and glamour in a meat pie! Make chop suey, put in a baking dish, and top with a cornbread crust. It's something like a tamale pie, only different. The combination of flavors is plenty good.

The nutritional value of vegetables is better preserved by baking than boiling. Cook them in their own skins when possible.

REMOVE COVER

Cellophane should be removed from a lampshade as soon as it is put into use. Otherwise heat may shrink the cellophane and bend the frame out of shape.

A shoe bag hung in the kitchen is a convenient place to keep children's mittens, caps, and overshoes.

DOUBLE THE SERVING

Tomato juice serving should be about double those of citrus fruit to obtain the same vitamin benefit.

AVOID PERFUME WASTE

When transferring perfume from one bottle or vial to another, immerse a drinking straw in the perfume bottle and close the upper end with one finger. This will hold the perfume long enough to make the transfer and prevent any from being wasted.

WEIGHTS VERSUS PINS

To save time and do a more accurate job of cutting, weights sometimes are better than pins for holding the paper pattern on the fabric. If the fabric is thick, pins make it "buckle," so that exact cutting is difficult. When it is necessary to cut through two thicknesses of fabric, the pinning may cause so much buckling that one place comes out a different size from the other.

Weights allow the fabric to lie flat and anchor it against shifting. Lay the weights far enough away from the edge of the pattern to allow for easy cutting.

For cutting out medium or lightweight fabric, pins generally are better than weights.

You can avoid ironing seersuckers by hanging them on the line from the waistband, keeping skirt and blouse in a straight line.

Place sprinkled and rolled-up clothes for ironing on a warm radiator for a short time before ironing.

IRONING SUGGESTION

Keep a supply of clean coat hangers handy while you iron dresses, blouses, jackets, or the men's shirts. As each garment is finished slip it on a hanger. This prevents wrinkles and saves folding time. When you are through, you can hang the garments away without further handling.

When you send a package overseas a coating of colorless nail polish over the address will keep it from becoming blurred.

WITH THE GRAIN

When using sandpaper to smooth off wood before applying new paints, varnish or enamel, rub with the grain of the wood for best results and wipe with a soft cloth before repainting.

EGG AND CABBAGE SALAD

Mash the yolks of 6 hard-cooked eggs and blend with 1 teaspoon sugar, dash of paprika, 2 teaspoons prepared mustard, ½ teaspoon salt, 2 tablespoons mayonnaise, and 1 tablespoon vinegar. Combine this mixture with the chopped egg whites, 2 cups of shredded cabbage, and 4 tablespoons chopped sweet pickles.

SANDWICH FILLING SUGGESTIONS

Top peanut butter sandwiches with orange slices. Toast bread first. Serve for lunch or supper treat.

To cream cheese or deviled egg fillings, add lemon juice and chopped ripe olives; to peanut butter, add orange juice and chopped raw carrots; to cottage cheese, add chopped beets, which have been pickled in sweetened lemon juice; to butter or margarine, add lemon juice and minced watercress, celery leaves, or parsley.

LEMON DRESSINGS SAVE SALAD OIL

Serve lemon juice and salt as a salad dressing on lettuce, tossed salad greens, tomatoes, avocados, and combination vegetable salads.

Serve lemon juice and sugar on lettuce.

Serve lemon juice and honey on carrot and raisin salad and on fruit salads of all kinds.

Serve lemon juice and whipped avocado seasoned with salt and perhaps a little onion juice on sliced tomatoes and on fruit salads.

CEREAL MOLASSES CRISPS

½ cup corn syrup
¼ cup molasses
1 tablespoon salt
⅛ teaspoon salt
1 tablespoon butter or margarine
6 cups crisp rice or corn cereal

Mix corn syrup, molasses, vinegar and salt. Heat to boil,, stirring constantly; boil slowly, stirring occasionally to 240 degrees F. (or when a little dropped into cold water forms semi-firm ball). Remove from heat; add butter or margarine. Pour quickly over crisp rice or corn cereal in large shallow bowl mixing well. Form lightly into balls; cool on waxed paper. Makes 16 balls about 1 inch in diameter.

CARROTT-CELERY SOUFFLE

1 cup dry bread crumbs
Milk
1¼ cups cooked carrots, mashed
½ cup chopped celery
2 tablespoons minced onion
2 eggs, separated
½ teaspoon salt
⅛ teaspoon pepper

Soak bread crumbs in enough milk to moisten; add carrots, celery, onion, and beaten egg yolks. Beat egg whites until stiff and fold into mixture; season with salt and pepper. Pour into greased baking dish and bake in moderate oven (350 degrees) 30 to 40 minutes Serves 6 to 8.

POINTERS GIVEN ON HOME CANNING OF ASPARAGUS

For home canners who have asparagus in the garden, or can obtain it from a neighborhood patch, home economists of the United States Department of Agriculture suggest some pointers on putting up this springtime favorite.

Only fresh, tender asparagus rates canning. The "two hours from the garden to can" rule is especially important with asparagus, because it may get stringy and will lose flavor when it waits and wilts. If asparagus must be held even a few hours before canning, keep it cold and moist.

For asparagus at its very best, harvest it in the early morning, before it has had a chance to dry out and toughen in the heat of the day. Since asparagus grows rapidly, it needs to be cut every day in warm weather—and therefore canned in small batches. Generally the shoots should be cut off about 2 inches below ground when they are from 6 to 7 inches high.

Because it is a non-acid vegetable, asparagus is canned safely at home only in a steam pressure canner.

To prepare for canning, first wash asparagus thoroughly—preferably in cold running water. Trim off the scales along the stalks as well as any tough, woody ends. The scales are pockets for sand and dirt in which may be lurking dangerous, spoilage-causing bacteria.

Cut the stalks into inch pieces, cover with boiling water, and boil 2 or 3 minutes. Pack hot into clean hot jars and cover with hot cooking liquid, leaving ½-inch headspace at top of jars. Add 1 teaspoon salt to each quart when packed. Process at 10 pounds pressure: Pint jars, 35 minutes; quart jars, 40 minutes.

If whole asparagus is desired, trim the stalks so they fit upright in jars, allowing for ¾-inch headspace. Tie in uniform bundles, and stand upright in kettle in 3 or 4 inches of boiling water. Cover tightly and boil 2 or 3 minutes. Pack the hot asparagus into clean hot jars, salt, and process as for asparagus pieces. Any tender portions left on the trimmed ends may be cut up to be cooked and eaten, or canned separately.

HARD KNOCKS

If all the days were sunny days,
And raindrops never fell,
How could the tiny grass seed sprout,
How could the leaf buds swell
Until they burst into new life
With each returning spring?
The blessing of the rain-drops
Is a very wondrous thing.

If skies were always sunny
And hail-stones never beat
Against the surface of the earth,
If neither snow nor sleet,
Descended on the dormant bulbs
To waken them to grow,
The beauty of Spring's lovely flowers,
I'm sure we'd never know!

If all our years were prosperous,
With every want supplied,
How many latent powers would be
Undeveloped and untried!
If "hard knocks" never came to us
To challenge us to fight,
Our unexpected resources
Would never come to light.

The sunshine's warmth is pleasanter
Than sleet and hail and rain;
Abundant ease is more desired,
Than struggle, toil and pain.
—Laura Gruetzemacher.

Red Cross Offers To Train Nurse's Aides; Begin May 1

Volunteers are urgently needed for a Red Cross Nurse's Aide Class which will be held at Hubbard Hospital, starting May 1 and meeting over a period of 7 or 8 weeks, it was announced by Mrs. Robert S. Cheek, chairman, Nurse's Aide Committee of the Nashville-Davidson County Chapter, American Red Cross.

Those who wish to enroll in the class may register on April 23 and 24 from 10:30 to 12 noon and from 4 to 6 p. m., at the Student Residence, 1005 Eighteenth Avenue, North. Mrs. Henrie Dixon, R. N., will be the instructor for the class.

On completion of the 35 hours of lecture work and 45 hours of practice work on the wards at Hubbard Hospital, the Nurse's Aides will assist nurses at the hospital. Nurses' Aides must be between the ages of 18 and 50, must have a high school education or its equivalent and be able to meet certain physical requirements. They must agree to serve 150 hours each year.

Plan now to help the critical nursing shortage in our community by enrolling in this class and becoming a nurse's aide. You will be helping your serviceman, your community, and yourself!

James F. Hunt

With the Army Air Force Command in Italy— James F. Hunt, of Nashville, Tenn., a Technician Fifth Grade in an Aviation engineer unit in the Mediterranean Theater of war, was recently awarded the Driver's Bar for qualification as an outstanding army truck driver. He is the husband of Mrs. Mattie Hunt, 1929 Forster Ave., Chicago and brother of Miss Sadie Mae Hunt, 114 Bower St., Roxbury, Mass. He has spent 25 months overseas.

THE MODERN FARMER

VOL. XVIII. NASHVILLE, TENN., MAY 15, 1945 No. 4

The Road Up

Business Men Can AID Farmers

By GILES A. HUBERT

Several months ago the Secretary of Agriculture presented a plan for the reconversion of Southern Agriculture. "Mechanization of cotton production is inevitable," said the Secretary, "We can't stop it and we should not try."

Thousands of people will have to leave agriculture and the hope is that full industrial employment will be able to absorb these people. One-third of the South's farm families must find other jobs —so we are told by Dr. Mordecai Ezekiel, Mr. Wickard's economic advisor.

According to the Secretary, effort to keep the domestic price of cotton above the world market price should be abandoned, as it perpetuates an unsound economic situation which the Nation must continually pay for. This means that the cotton farmer, with mechanization and scientific cultivation, must fight it out with the rest of the cotton producing world.

Any subsidy, says Mr. Wickard, should go toward helping the cotton farmer make the transition as rapidly and painlessly as possible and should be extended over a limited period of time. Farmers must learn to use all the machinery and technical developments that are possible in their particular localities and adaptable to the type of farms they operate. Thousands of farmers must turn toward new types of farming and production of new products.

The growing urbanization and increased non-farm population of the South would create an enlarged market for food supplies provided it is employed in industry and supplimental occupations. This would open up the way for a modern and diversified agriculture.

Negro farmers are going to be at a serious disadvantage in this change. The educational advantage of his competitors will be a telling one. The lack of capital resources will be another handicap in meeting competition. They are likely to suffer in the struggle for survival and be forced out of the only primary industry in which the Negro is a producer on a mass scale

Negro business men can help. Their leadership is needed in helping Negro farmers re-organize to participate in an advanced mechanical and commercial agriculture. The contribution that the business man can make is in providing farmers with the essential services which will enable them to compete on equal basis with other farmers.

Business men could organize the grading, packing, processing and storage facilities that will be needed. They could provide bookkeeping and accounting services for farmers on a community ba-

AAA Appoints New Contact Representative

Campbell Proposes Movable Schools For Africa

Thomas M. Campbell, Extension Service field agent of the U. S. Department of Agriculture, who has just returned from a six month educational survey of West Africa with an Anglo-American mission, told Secretary Claude R. Wickard last week that a chain of movable schools is needed in Africa to carry education and health improvement methods to the people there.

Because of his wide experience in southern agriculture and in the operation of movable schools, having been the first operator of Tuskegee's school on wheels, Mr. Campbell was loaned to the General Education Board by the Department last year to join the survey mission. He and Dr. Jackson Davis, associated director of GEB, left last September for Liberia where they were joined by the third member of the mission, Miss Margaret Wrong of Britain.

Traveling by plane, by rail, by boat, by auto, and on foot, the mission toured more than 10,000 miles within the interior of Liberia, Nigeria, Sierra Leone, Belgium Congo, French Cameroon, and Gold Coast.

Getting close to the African people so that he could discover their needs, and find out how best they could be met, Mr. Campbell talked with the people in their village market places, and in their homes, he coddled their children on his knees, sang to the people at their meetings, and over their local radio stations, joined their tribes, wore their costumes, and studied their agricultural production methods, their health and nutritional standards.

Mr. Campbell told Secretary Wickard that the people of Africa could help themselves if given adequate assistance in the way of nurses, doctors, tools, and agricultural technicians to guide them in modern farming practices.

He envisions scores of movable schools in Africa, staffed by trained agriculturalists, nurses, and home economists, winding their

Louisiana FSA "Family of the Year"

CHAMPIONS—After 38 years of sharecropping, Mr. and Mrs. Geo. Johnson now own their modern six-room house and 50-acre farm. They got a 40-year FSA loan to buy the place, but expect to pay out in one-fourth the time allowed. Farm Security selected the Johnsons as Negro FSA Farm Family of the Year in Louisiana. They have nine children, two in service, and 16 grandchildren.

Baton Rouge, La.— Because of their all-around farm progress the past year George and Emma Johnson, Negro farm couple of Caldwell parish, have been selected by Farm Security Administration officials as the Negro "farm family of the year' 'in Louisiana.

F. L. Spencer, state FSA Director, said the selection was made by a committee of state and district officials who made a careful study of the records of Negro borrowers.

Both Mr. and Mrs. Johnson are past threescore years of age. They have nine children and 16 grandchildren. Two sons and one grandson are in service. Before buying their own 50-acre farm four years ago with an FSA loan, they had farmed as sharecroppers and tenants for 38 years, and had moved 10 times.

At the present rate of repayments, their farm, located 13 miles North of Columbia, will be paid out in less than 10 years, although they are allowed 40 years. Income is largely from cotton, supplemented by other enterprises which afford the family a good living, including dairy cows, hogs chickens, turkeys, geese, a large garden, peas sweet potatoes, peanuts, a young orchard with 134 assorted fruit trees, feed crops, and sugar cane for syrup. They no longer have to borrow for farming expenses. With FSA assistance, they have increased their net worth sevenfold.

Mr. Johnson is improving his soil with cover crops and legumes, each spring turning under austrian peas and vetch ahead of cot-

Lanier Appointment Is Number Seven

The appointment of C. C. Lanier, former colored county agricultural agent, to the post of State AAA contact representative for Alabama was announced last week by C. D. Walker, director of the Southern division of the Agricultural Adjustment Agency.

The addition of Mr. Lanier brings to seven the total number of Negro State AAA contact representatives. Other States having such personnel are Georgia, Mississippi, Arkansas, Louisiana, Texas and Oklahoma.

As colored AAA contact representative, Mr. Lanier will work very closely with county agents, vocational agriculture teachers, soil conservationists, Farm Security Administration supervisors, ministers, business and professional leaders, and Jeanes supervisors in helping colored farmers of Alabama to carry out sound conservation practices.

Mr. Lanier was graduated from Tuskegee with a B. S. in agriculture in 1934. From the year of his graduation until 1941 he served as vocational agriculture teacher and project director at Rockford, Alabama. From that time until his appointment to the Triple-A he was Agricultural Extension county agent in Sumter County, Alabama.

Negro To Go On Ky. Education Board

Frankfort, Ky.—(Spl.)— O. M. Travis, business man and religious leader of Montecellor, Ky., and who is a member of the Republican State Central Committee, is expected to be rewarded with the appointment to the State Board of Education, the first member of his race ever so honored in this state. Gov. Simeon S. Williams, Republican, made an announcement at a luncheon in his honor here on April 29 that he intended to appoint a colored citizen to member-

Bricks Holds School For Town And Country Pastors

McLean And Underwood Co-directors

Bricks, N. C.—The Bricks Rural Life School has announced a special school for town and country pastors to be held on the school's campus, June 4 to 13. The school will be held in cooperation with the Home Missions Council, representing 23 different denominations.

The school, it is announced, is intended for all qualified pastors and scholarships covering cost of meals and lodging are available for the first 49 pastors who apply.

The theme of the school will be "The Kingdom of God in the Countryside" and the discussion will largely emphasize the practical aspects of religion and the church in the development of rural life.

Subjects include: "The Program of the Rural Church," "An appreciation of Cooperative Rural Life," and "Religious Education and Work with Rural Youth." Leaders for these discussions include Mr. Will A. McLean, Director of the Bricks Rural Life School; Rev. Harry Richardson, Chaplain of Tuskegee Institute; J. T. McMillan of Drew Theological Seminary; William K. Fox of Southern Christian Institute and others.

Agriculturists who will serve as guest lecturers include Mr. R. E. Jones, Director, Negro Division, Agricultural Extension Service of North Carolina; Mr. S. B. Simmons, Supervisor, Vocational Agriculture Department of A. & T. College; and Mr. J. W. Mitchell, Field Agent, U. S. Dept. of Agriculture, Washington, D. C. Mr. Fred R. Brownlee, of the

LOUISIANA FSA "FAMILY OF THE YEAR"

(Continued from Page 1.)

ton. In this way he raised 18 bales of cotton last year on 14 acres without the use of fertilizer. All fences and buildings are kept in good repair. The modern six-room house is neat, well furnished and conveniently arranged.

L. Cullen Shows, parish FSA supervisor, and Miss Edith Harrison, associate supervisor, attribute the progress of the Johnsons to hard work, sound planning, thrift, and good management. A family record book is kept up to date, showing an itemized account of all expenses and receipts.

Johnson, in cooperation with five of his neighbors, has found a solution to one of the most perplexing problems common to family-type operators, that of adapting mechanized equipment to their small units. The six are joint owners of a tractor and tractor equipment, hay press, mowing machine and hay rakes, and a combine. Not one of the six could afford to own the machinery alone, but together they find the joint arrangement a paying proposition.

The judges for the contest found it difficult to pick the winners. Mr. Spencer said, since so many of the families had made good records with FSA help.

NEGRO TO GO ON KENTUCKY EDUCATION BOARD

(Continued from page 1)

ship on the State Education Board and also that he had recommended to the State Attorney General that he appoint a colored lawyer as an assistant Attorney General of the State.

It is forecast by the Louisville Leader that Dennis Henderson a competent and successful young lawyer of Louisville will get the appointment as assistant attorney general.

The precedent-breaking appointments to be made to colored citizens are recognized as coming in appreciation for the decisive support colored Kentuckians gave the Grand Old Party in 1943, when Gov. Willis and the Republican ticket were swept into office.

Johnny: "If Baby swallowed a tadpole, Mother, would it kill him?"

Mother: "I think it might, Dear."

Johnny: "But it didn't, Mother?

1,000 Attend Wilson County Field Day

Approximately 1,000 persons were in attendance at the annual field day which was held at the Wilson County Training School, Lebanon, Tennessee, on Saturday, April 21st, sponsored by Mrs. Cordelia Norris, Jeanes Teacher and Supervisor in Wilson County.

One of the most outstanding features of this celebration was the "One Day Farmer's Institute" under the direction of Hazo W. Carter, Assistant County Agent in Negro Work. During the morning program the following leaders in the fields of agriculture and home economics appeared: Mr. W. H. Williamson, Assistant State Agent in Negro Work; Miss Myrtle Bond, Assistant Home Demonstration Agent in Negro Work (Rutherford County) who gave a demonstration on "Dairy Dishes"; Prof. W. A. Flowers of A. and I. State College who gave two demonstrations pertaining to "Simple Repair and Maintenance on the Farm"; and Miss Sara E. Payne also of A. and I. State College who spoke on "The New Homemakers in Tennessee."

The afternoon program consisted of a playlet entitled "Food and Power" which was given by the 4-H Club of Seay's Chapel. Musical numbers were rendered by groups from 4-H Clubs of Corona and Needmore communities. Mr. W. H. Williamson addressed this group on "The 4-H Club Program in Tennessee." One of the most impressive parts of the entire program was the march of 150 or more 4-H Club boys and girls of 22 Wilson County communities, in uniform, and their rendition of the 4-H Club pledge in unison.

Among the many visitors at these programs were: Mr. James E. Ward, County Agricultural Agent in Wilson County; Mr. J. T. Vantine, Soil Conservationist; Prof. and Mrs. Merl R. Eppse and daughter, A. and I. State College; Mrs. Eva Myers Lee, Jeanes Supervisor in Williamson County; Prof. Cain Lee, also of Williamson County; Miss Laverne Eppse, Assistant Home Demonstration Agent in Williamson County; Mrs. Nannie G. Rucker, a teacher in Rutherford County; and Mrs. Mary Forbes Carter of A. and I. State College.

Mr. H. W. Carter, who is just concluding his first year's work in Wilson County, is a graduate of Tennessee A. and I. State College.

"What The Negro Wants" Told By Group Of Leading Commentators

A Review by Michael Turner

So generally competent a job is the recently published symposium, "What the Negro Wants," that it has achieved the ultimate in its field—it has done away with all excuses for anyone ever again to ask the foolish question which it answers. Those people who are forever professing a great inner agitation over the Negro's unhappy plight need no longer be deterred because of ignorance of his aims—everything the colored man is or hopes to be is right in this volume. Indeed, the fourteen contributors have revealed him so clearly that, by the same token, it should henceforth be a cinch to identify his friends.

Herein the puzzled and perplexed will discover that what the Negro wants, quite simply, is what every American citizen has a right to expect — unconditional citizenship; that is, full and complete equality. Like the white man, he wants to live, work and play with but the two inevitable limitations—the Constitution and his own abilities. He asks no special rewards for his virtues nor any particular tolerance of his faults. He expects to labor for his livelihood, or risk the poorhouse; to keep within the law, or be halted by the constabulary; to advance himself culturally, or be left behind in the march of progress — precisely as the white American faces these choices, and stands or falls accordingly.

"What the Negro Wants" ought to be the last word on the colored man's hopes and aspirations as a citizen. Each contributor is, in the best sense of the term, an expert, and together they make an eminently respectable group—wise, far-seeing W. E. D. DuBois; aggressively frank CIO leader Willard Townsend; militant A. Philip Randolph of AFL; impishly analytical George Schuyler; sagacious President Patterson of Tuskegee; and so on of all the others. Without a doubt, "What the Negro Wants" is what the white man wants—if he would know the Negro. Even the publishers, the University of North Carolina Press, admit their own amazed enlightenment upon reading the manuscripts. (WDL)

Should one really appeal to people to lend their money for profit at a time when young men do not have to be appealed to for the free offering of their lives? Should one sing of the merits of a safe investment over a long-term future when for millions of our boys safety is a matter of flesh and blood today and tomorrow? I think I would rather remind people to buy War Bonds—remind them that the country needs their money, and needs it more than ever now that the big battles are in progress.

—James Hilton.

Negro Troops Handle Army Communications

6TH ARMY GROUP, Germany—Almost 200 miles of vital telephone lines tying the Allied forces together from the Normandy beaches to deep within crumbling Germany are the work of the Negro men and white officers of the 459th Signal Heavy Construction Battalion, which supports General Jacob L. Devers' 6th Army Group.

The battalion came into Normandy beachhead on July 8 and then kept pace with the break-through from the beaches. The men were given the task, with two other battalions, of establishing the main lines of communications behind the lightning advances of the Allied Armies to Paris and Metz.

The battalion was shelled at Metz when the advance was momentarily halted. Then came another assignment. The construction men of the battalion turned north and built their telephone lines up through Luxembourg to Holland. Now they are heading east again.

When the 459th was activated in August, 1942, it was one of a few almost-experimental Negro signal battalions. The men were given intensive training before they came overseas to England, in December, 1943. How well they learned their lessons and how effectively they have worked has been shown in the friendly competition they have held with other signal units. The 459th has rarely been beaten in these contests.

"They're top-notch men, non-coms and soldiers." one of the battalion officers said. "They work hard, have high morale, and do a job that is vital."

Personnel of the battalion include:

South Carolina

Bamberg: Cpl. Robert Williams, 240 Weimer street.

Cowards: Cpl. Shavers Lucas, Rt. 1.

Florence: Cpl. Lonnie Richardson, Jr., 601 N. Commander St.

Laurens: Cpl. Tommie Golden.

Walterboro: Cpl. Leroy F. Francis, 18 Savage street.

Tennessee:

Chattanooga: Cpl. Preston Simpson, 804 Baldwin street; Pfc. Merryll Boyd, 2526 Williams St., Pfc. Fred Spring, 322 Wichl St.

Jackson: Pfc. Aussie Brooks, Jr., 416 Institute St.

Johnson City: Sgt. Charles L. Shearer, 212 Myrtle St.

Memphis: Sgt. Ernest Hall, 161 E. Carolina St., Cpl. Edward L. Alexander, 510 High street: S. Sgt. Henderson R. Anthony, 568 Alston St.; Cpl. Eddie Buchanan, 692 Ayes St.; Cpl. Charles R. Adams, 1300 N. Willette street; Pfc. Joseph H. McKinley, 480 Carpenter street.

Springfield: Pfc. James H. Couts, 1509 Looth street; Sgt. Cephas M. Williams, Route 7.

Virginia

Alexandria: Pfc. Milford Willis, 403 Princess street.

Bristol: Pvt. James C. Hollins, 426 Buchanan street.

Charles City: S. Sgt. Walter Barber.

Chase City: Pfc. James C. Wright.

Church View: Pvt. Rexford S. Braxton, Route 17.

Eastville: Sgt. Walter W. Jarvis.

Elmington: Pvt. John L. Wiley.

Exmore: Pfc. Andrew P. Upshure.

Franklin: Pfc. John R. Rose, 419 Marshall street.

Hickory: Cpl. Doyle A. Reid, Rte. 2.

Lessburgh: Pfc. Thomas A. Stinger, 426 W. Loudoun St.

Lowmoor: Cpl. George A. Moore

McLean: Pvt. Howard L. Jackson.

Meadowview: Sgt. Philip M. Jones.

Norfolk: Pvt. Henry Brown, 427 E. Bute Street.

Petersburg: Cpl. Ernest E. Chambliss, 94 Washington avenue; Sgt. Henry W. Griffin, Jr., 643 Pegram street; Pfc. Horace W. Buggs, 439 Cross street.

Richmond: Cpl. Leslie E. Quirley, 409 E. Ladies Mile Rd.; Sgt. Clarence E. Beal, Jr., 1728 Jacqueline St.; Pvt. Daniel Smith, 1414 N. First street; Pfc. Philip B. Shelton, 1012 W. Catherine St.

Roanoke: Pvt. James L. Yancy, 906 4th avenue, N. W.

Stony Creek: Pvt. Robert T. Urquhart, Route 2.

Upperville: Pfc. Richard H. Gaskins, Jr.

West Virginia

Carolina: Pvt. William Butler.

Institute: Pvt. Edward Mitchell; Pvt. Burnett P. Eddens.

Montgomery: S. Sgt. Richard N. Gwinn.

Williamson: S. Sgt. Robert L. McKay.

Wisconsin

Almond: 1st Lt. Charles L. Weise.

Milwaukee: Pfc. Ernest Waters, 502 W. Vine St.; Pfc. James C. Vernon, 1727 N. 3rd street.

Utah

Ogden: Cpl. Basil L. Richards, 132 W. 27th street.

Since Pearl Harbor 4-H Clubs have bought and sold $140,000,000 worth of War Bonds! During 1944, in New York alone, these boys and girls sold bonds to the tune of $2,153,660 and made bond and stamp purchases of their own from project money that totaled $1,052,922.

Dewey Picks Anti-Bias Board of 5 to Bar All Job Discriminations

ALBANY, June 6.—Governor Dewey appointed today the five members of the State Commission Against Discrimination, which will enforce the new law making it a crime after July 1, to discriminate in employment because of race, color, creed or national origin.

Henry C. Turner of New York City, lawyer and former president of the New York City Board of Education, is named as chairman of the commission. Other members are:

Elmer A. Carter of New York City, a director of the National Association for the Advancement of Colored People.

Edward W. Edwards of Albany, a labor leader.

Julian J. Reiss, of Lake Placid, director of the International Tailoring Company of New York City.

Mrs. Leopold K. Simon of New York City, an attorney and a member of the State Workmen's Compensation Board.

Each of the commissioners will receive $10,000 a year. Offices will be established in Albany and New York and wherever else they are necessary.

Says He Believes Law Will Work

Mr. Turner, who was head of the New York City Board of Education from 1936 to 1938, said he and his colleagues were convinced that "the law can be made to work."

"We are prepared to give to it the best thought we can, wholly conscious of the fact that we have no precedents to guide us," he said. "The obligation is upon us to create our own precedent and procedure."

While the law empowers the commission to take punitive action against employers who refuse to abide by its decisions in matters involving discrimination, both Governor Dewey and Mr. Turner emphasized that the primary function of the commission would be education in employer-employe relations and that the statute itself provided exhaustive means for conference and conciliation before recourse to the punitive provisions.

"The commission," said Governor Dewey," has a primary task of education in the whole field of employer-employe relations. The members are deeply conscious that the educational aspects are of first importance. The State is most fortunate to procure the services of such a distinguished group of people. Their acceptance of membership on the commission is a happy indication that its purposes, in assuring equality of opportunity for employment, can and will be achieved."

Mr. Carter said the New York law and its administration would be watched carefully throughout the United States. He expressed hope that New York would lead the way in the "betterment of race relations in America."

"In the whole field of racial relations," he added, "this is the most important step since the Emancipation Proclamation."

Mrs. Simon and Mr. Reiss agreed that the commission would need the understanding and support of the public, and Mr. Edwards said the commission was assuming a greater responsibility than any branch of State government in history.

"We will deal with a burning question," he said, "and there will be a great many delicate situations. There is a great need for education."

New Commission Is Praised

The newly appointed Commission Against Discrimination appears to be a good one which can in no sense be called political, Roy Wilkins, assistant secretary of the Association for the Advancement of Colored People, said last night. He expressed particular pleasure at the inclusion of Elmer A. Carter in the commissions' membership.

Henry C. Turner, the chairman, is a former Grand Master of the Grand Lodge, Free and Accepted Masons of New York State. He is a trustee of the Congregational Home for the Aged.

Mr. Carter, a Negro, is editor of the magazine "Opportunity," organ of the National Urban League. In 1937 he was appointed by former Governor Lehman as a member of the Unemployment Insurance Appeal Board. He is a member of the State War Council and its committee on discrimination in employment, and a director of Town Hall. For many years he has campaigned against discrimination against Negroes in employment, arguing that this policy "dries up ambition among Negroes, stimulates anti-social attitudes and is one of the primary causes for the rate of delinquency in Negro neighborhoods."

Edward W. Edwards, known to his friends in the American Federation of Labor as "Bill," is secretary-treasurer of the State Labor Federation and its representative in dealing with the Legislature. He is also a member of the State War Council.

Mrs. Leopold K. Simon is a member of the State Industrial Board. She is chairman of the Board of Governors of the Women's City Club and chairman of its committee on correction and prevention. Mrs. Simon headed volunteer group activities in the Second Civilian Defense Region. She was one of the leaders in the campaign to permit women to serve as jurors and was the first woman to be chosen for a Blue Ribbon panel. She is also executive secretary of the New York section of the National Council of Jewish Women and headed the women's division of Governor Dewey's campaign committees in 1937 and 1938.

CAMPBELL PROPOSES MOVABLE SCHOOLS FOR AFRICA

(Continued from Page 1)

way along the narrow trails from village to village, carrying education and health improvement practices to the people. He pointed out to Secretary Wickard that Charles Trout, former county agent of Alabama, whom the Department loaned to the Liberian Government last year, is doing an excellent job of helping the people there to grow more food and also to develop their commercial crops.

Plans for establishing a chain of movable schools in Africa have been discussed also by Mr. Campbell with the Agricultural Missions of North America. The Missions, assisted by the General Education Board, may take steps to carry out the plan.

McLEAN AND UNDERWOOD CO-DIRECTORS

(Continued from page 1)

American Missionary Association, will also be a guest lecturer.

Many will remember Bricks as the locale of several "Southwestern Fireside Chats." The school and the Bricks community of substantial and progressive Negro farmers will be a fine setting for the ministers to study and plan rural programs for the Church. A large FSA Project is nearby and the pastors will be able to observe several cooperative enterprises which are going concerns.

Mr. Will A. McLean, well known cooperative expert, and Rev. R. W. Underwood will serve as co-directors of the institute.

A salesman became tired of his job and joined the police force. Several months later a friend asked how he liked his new position. "Well," he replied, "the pay is fair and the hours satisfactory, but what I like best is the fact that the customer is always wrong."

Hubert To Study West Indies

To Visit Haiti, Puerto Rico And Virgin Islands

Giles A. Hubert, Editor of THE MODERN FARMER, and professor of economics at Fisk university, will spend part of the summer months in Haiti and other West Indian countries. Mr. Hubert will be a member of a faculty group from Fisk university, who will study social, cultural and economic phases of life in the Republic of Haiti.

The group will work in cooperation with the office of the coordinator of Inter-American Affairs of the U. S. Department of State and the Haitian Government. Mr. Hubert will be interested particularly in agricultural and commercial organization in the area. Dr. Mark Hanna Watkins, Fisk anthropologist and Professor John N. Work, Fisk music instructor and composer of note, will be the other members of the group. Dr. Watkins will study the linguistic and cultural problems of Haiti, while Professor Work will be interested in Haitian music and artistic interpretation.

In addition to his observations in Haiti, Mr. Hubert plans to visit Puerto Rico and the Virgin Islands, where he will study the progress of the Farm Security Administration program in those U. S. possessions. He will be serving in his capacity as consultant to the FSA of which agency he was formerly a member.

Mr. Hubert believes that mutual interest and understanding should be developed between the Negro people of this country and those of the West Indies. He will write several columns for THE MODERN FARMER while abroad regarding his experiences in the Islands.

Victorious Living, Radio Program Now Being Broadcast

Chicago— VICTORIOUS LIVING, new radio program series produced by the International Council of Religious Education and now being broadcast over 88 stations in 27 states by transcription, has been selected winner of a religious broadcast "Oscar" by the Ninth American Exhibition of Education Radio Programs sponsored by the Sixteenth Institute for Education by Radio, Ohio State University, Columbus, according to word received today by Miss Pearl Rosser, director of radio education of the Council.

Awarded one of the three citations in the field of religious broadcasts, one of 12 classifications in the contest, VICTORIOUS LIVING was commended "for the effective use of simple, authentic stories by which to convey religious principles and for the format which makes for wide usability," the announcement declared. Contest judges, professional radio experts, declared that "the series is a worthy one and unique in the field of religious education. It utilizes a modern medium intelligently to do a public service job for its audience."

One judge commented that "it is possible the program would have definite effect on the daily living of listeners." In discussing the program's audience-getter qualities, the judges stated that "several features insure the program's appeal for a . . . . general audience: length of program (five minutes), story-telling technique, and simplicity of structure and content."

A five-minute dramatic broadcast of factual religious experiences happening in everyday life, VICTORIOUS LIVING is written and narrated by the Rev. E. Jerry Walker, director of radio production of the International Council It is presented six days a week through the auspices of the Council and 15 of its member denomination publishing houses and Boards of education, in cooperation with local ministerial associations, laymen's inter-church organizations, and state and city councils of churches and Christian education.

On The Agricultural Front

4-H CLUBBERS WORK FOR WAR AND PEACE

Not only are the colored 4-H club boys and girls increasing their projects again this year with the hope of helping to assure adequate food for our fighting men and for civilian war workers here at home, but they are also planning for the peace, according to reports received by the U. S. Department of Agriculture from State Extension Service directors.

The reports indicate that the colorcd 4-H'ers of North Carolina are preparing to hold their first Statewide dairy calf show during the early part of September.

The youngsters are expected to exhibit over 100 purebred dairy cows and heifers. The aim of the show is to encourage the raising of better strains of dairy cattle both for increased wartime production of milk and also for higher nutritional standards in rural and urban areas after the war.

Georgia colored 4-H'ers are looking forward to the erection of a club camp on a 30-acre site near Dublin, Georgia, after the war. There are some 34,000 colored 4-H club members in Georgia, and already they have raised nearly $3,000 for the building of the camp. One building-- a community canning plant-- has already been erected on the camp site. The canning plant is being used for wartime conservation of food.

WAR ON CUTWORMS TO SAVE YOUR VICTORY GARDEN

The Victory Gardener who hesitates at the first threat of insect pests has to engage in a real fight later. Victory Garden headquarters at the U. S. Department of Agriculture reminds gardeners that one of the early season pests is the cutworm, and suggests methods of war on cutworms, one of the most widely distributed garden pests.

Cutworms attack plants freshly transplanted—often the first night they are in the garden—and some other plants—particularly sweet corn—in the day or two after they push above the soil surface.

For small gardens, paper collars will provide good protection. Paper about the size of a penny postcard and about as stiff makes a good collar if bent into a cylinder and pinned or tied to hold its shape. With deft fingers and a little practice, collars can be set without pinning or tying. An anti-cutworm collar should extend an inch into the soil and about two inches above the surface.

For larger gardens, cutworm bait is the standard remedy for cutworm trouble. The worms prefer bran evcn to tomato or cabbage plants. A good wartime bait is made from 5 pounds of bran and 4 ounces of sodium fluosilicate well mixed and moistened with enough water to make it a crumbly mass- 3 to 4 quarts. Mix the bait in the morning and scatter it in early evening, before the night-working worms start their attacks. Spread the bait freely after transplanting, or—better still, say the Federal entomologists—bait the area for two or three nights before transplanting.

WICKARD FAVORS MORE RURAL ELECTRIFICATION

In a statement before a Senate Subcommittee last week on the Rural Electrification Act of 1945, Secretary of Agriculture Claude R. Wickard said that S. 89, introduced by Senator Lucas, had his complete approval.

Continuing, Secretary Wickard said, "If we are to complete the job of electrifying rural America in an efficient and economical manner, I believe that S. 89 is equally as important a piece of legislation as the original REA act.

"Great strides have been made under the original REA Act. The number of electrified farms has increasecd from 10 percent to 43 percent since the creation of REA. But there are still more than six million rural homes and establishments without this modern convenience."

WFA HEAD URGES PERMANENT SCHOOL LUNCH PROGRAM

Appearing before the House Committee on Agriculture recently to make a statement with respect to the School Lunch Bill, Marvin Jones, War Food Administrator, urged permanent legislation for the school lunch program.

Said Judge Jones, "Permanent (school lunch) legislation at this time is most desirable for several reasons: Lack of permanent legislation naturally hampers the War Food Administration in its planning for the distribution of food to schools. Right now, before school closes for this year, we should be laying our plans for next year's program. But, because we do not know what form our authorization for next year will take we are unable to do so.

"Schools, too, in planning for their next year's operation, must face the fact that Federal assistance may be materially changed or, indeed, cut off altogether. This inability to plan their programs ahead keeps many schools, particularly the poorer ones, from working toward the kind of program they would like to have and the kind we would like to see them have.

"Finally lack of a permanent program of Federal assistance has deterred many State governments from actively entering into the school lunch programs, other States have been deterred from setting up a well-rounded plan and an adequate staff by the impermanence of Federal assistance.

"I believe the legislation proposed in H. R. 2673 permanently establishes Federal assistance to school lunch programs on a firm base. It sets as the policy of Congress the dual objective that we feel the school lunch program should be designed to accomplish: expanding the markets for agricultural commodities by encouraging their domestic consumption and improving the nutritional status of the Nation's children through providing foods for a school lunch program. We believe that these objectives are inseparable.

"It goes without saying that the proper distribution of food so that everybody in the Nation will be adequately fed is not only to the benefit of the people who are under-nourished, but also to the benefit of the farmer, whose economy can never be really stable until the whole population is well fed. Of course, the Department of Agriculture and the War Food Administration have been, and will continue to be, vitally interested in programs contributing to this end."

MORE CHICKEN IN SIGHT

Through a program announced last week by the War Food Administration, slightly more poultry will flow into civilian channels of consumption. . Chicken processing plants in the broiler producing areas affected by the chicken set-aside order have been given weekly goals.

Under the set-aside order operating in designated areas of Delaware, Virginia, West Virginia, Georgia, Oklahoma, Missouri and Arkansas, many colored poultry farmers are helping to supply chicken to the Armed Forces.

FARMERS PLANTING MORE TOBACCO

Because of the increased demand for tobacco, farmers are increasing their tobacco acreage this year by about 70,000 acres, according to a recent report of the Crop Reporting Board of the U. S. Department of Agriculture.

Last year farmers harvested 1,712,000 acres of tobacco; this year they are planting 1,782,000 acres.

INSURANCE FOR TOBACCO

All-risk crop insurance on burley and fluc-cured tobacco, starting with the 1945 crop, is being tried by the Federal Crop Insurance Corporation of the U. S. Department of Agriculture in all representative tobacco producing counties.

Two types of crop protection will be tried on tobacco: (1) Yield-quality protection with coverage up to 75 percent of the farm's average yield adjusted for the average quality of its production in recent years, and (2) investment protection in cash up to 75 percent of the cost of producing the crop.

WFA ASSURES CONTINUED SUPPLY OF BUTTER

Urban residents, colored and white. who depend on local grocers for food supplies will receive about the same amount of butter and other manufactured dairy products during the April-June period as they received in the January-March period. This is in line with the second quarter allocation of dairy products announced by the War Food Administration.

Civilian supplies of butter may be slightly smaller than they were during the first quarter of 1945, but supplies of evaporated milk are expected to be about the same during the next three months as during the past three months. More condensed milk will be available for civilians and the supplies of fluid milk, cream, cottage cheese and ice cream are due to increase seasonally.

WFA officials say that the small decline in butter supplies may be traced to two factors: first, butter production this spring, while higher than during the winter months, will not be as high as usual for this time of the year; and second, of the smaller quantity produced, war agencies must take a larger share. War requirements of other dairy products also are higher this year than last, but since production of these commodities is also rising, civilian supplies can more nearly be maintained.

Great Task is Before The Christians

San Francisco, May 4—"Human sense of justice, ladies and gentlemen, is a living thing. It can help to establish right order, and right can make the world what it ought to be, and what we want it to be . . . It is not, of course, by some magic declaration of principles implemented by international machinery that order and right will reign paramount in our tormented world. It is through faith, universal faith, in what we set before us to do, through democratic governing, through long and sustained efforts that make for wholesome and continuous evolution."

In these words the Prime Minister of Syria expressed the predominating thought brought out in speeches of delegates from 46 nations in plenary sessions of the United Nations Conference at San Francisco.

During the first day chief representatives of the four inviting Powers spoke. From then on speeches by some 35 representatives of the smaller nations were heard. From this parade of speakers representative of a wide variety of people, these three impressions of the United Nations became inescapable:

1. **The United Nations is a COMMUNITY OF SUFFERING.** In this universal fact the distinction between Great Powers and small nations is meaningless. For example, out of her teeming population, the military dead of China numbers over 10,000,000. In small-sized New Zealand (population 1,640,000) one out of every 150 has been killed in the war.

2. **The United Nations is a COMMUNITY OF DREAD OF ANOTHER WORLD WAR.** "It is for us to prevent this monstrous physical possibility and to make it a moral impossibility." About this point the Elder Statesman Field Marshall Smuts of South Africa who helped form the League of Nations, and Brigadier General Romulo of the Phillipine Commonwealth were equally eloquent.

3. **The United Nations is a COMMUNITY OF HOPE IN THE MORAL ORDER.** While the term "moral order," was not once mentioned, it was assumed in every talk by a representative of a small nation. He appealed to moral principles as against political expediency. He called for the reliance upon the spiritual power that lies in justice, and in the regard for law as against reliance upon military force as the basis for collective security.

Give And Take In Important Issues

Before it could concentrate on its major task of organizing the world of nations, the Conference had to spend time in organizing itself. It had to take into account certain situations which it had inherited. From the Yalta Conference came the recommendation that the White Russian and Ukrainian Republics be invited as members of the Conference. This was accepted. Mr. Molotov's request that the present Polish government be invited was rejected, because it was felt that this government does not meet the requirements set forth by the Yalta Conference.

On the other hand, Argentina had accepted the terms formulated by the Mexico City Conference. This fact, as against the fact of her undemocratic regime as argued by Mr. Molotov, won her admittance to the San Francisco Conference.

A fourth issue rose over the chairmanships of the Conference. The result was a compromise. The Russian view prevailed in the election of four co-presidents, presiding in rotation as chairman of the plenary sessions. The American and British views prevailed through the election of Mr. Stettinius as chairman of both the important Steering and Executive Committees.

It will be seen, therefore, that there has been a real give and take. No group or bloc has won all or lost all. Issues have been squarely raised and faced; each side has used the opportunity to present its case; a vote has been taken—and the Conference has gone on. This shows a spirit and a procedure that are reassuring.

Gold Point Home Demonstration Club Has Exhibit

The Martin County, Gold Point Home Demonstration Club met with Mrs. Lelah Brady, Route 2, Robersonville, N. C., Monday, April 9, 1945.

Mrs. Dussie Briley, the Project Leader, had an exhibit of work, members had accomplished. Included in this exhibit were, three old garments made new, one of which made by Mrs. Sally Ann Wynne from a black dress bought fifteen years ago. This garment was demonstrated by Mrs. Wynne, and is a neat usable garment.

One, a child's coat made by the leader, from an old cape. The others gave the many uses of fertilizer and feed bags. This was shown in dresses, suits, bedspreads,, men's shirts, BVD's, ladies slips, and panties, children's garments, scarfs, vanity sets, 3-piece chair sets, and a beautiful center piece crocheted from used tobacco twine.

The Home Demonstration Agent, Mrs. Cleopatra A. Tyner, gave a demonstration on "Color, Convenience, and Comforts In the Home".

There were eighteen club women present.

With approval of 93 percent of the Georgia peach growers voting in a recent referendum, WFA will continue in effect the Federal marketing agreement and order regulating the handling of fresh Georgia-grown peaches. Under provisions of the agreement which requires a biennial referendum, Georgia growers balloted during an 11-day period in January. The 93 percent of growers favoring continuance of the program represented 96 percent of the tonnage voted.

THE FORUM

The Modern Farmer

Published monthly by the Modern Farmer at Nashville 3, Tennessee.

Giles A. Hubert ----------Editor
Sadie Wilson ---------- Secretary
Henry Allen Boyd.---- Publisher
Office, 403 Charlotte Avenue.

Devoted to the interests of the Farmer, Truck Gardner, Livestock and Poultry, Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929. at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer, should be addressed to The Modern Farmer, 403 Charlotte Avenue, Nashville 3, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

Business Men Can Aid Farmers

(Continued from Page 1)

sis. They could provide hospitals and clinics to keep people healthy and energetic.

Business men could provide farm machinery pools, thus making available to groups of farmers necessary machinery which a small farmer could not afford to own and operate individually. In cotton country, a pool might consist of tractors and tractor equipment, cotton pickers, flame choppers, dusting equipment ditching and drainage equipment, etc.

In a food producing, diversified farming area, the machinery pool would include tractors and tractor equipment, harvesting and threshing equipment combines, hay-balers, terracing equipment, movable saw-mills, grist mills, syrup mills, etc. Machinery repair plants will be equally necessary.

Farm people would appreciate honest and progressive leadership in these directions. Adequately organized and promoted, such enterprize would not only aid the farmer in adapting his economy to the new demands but it would also bring satisfactory returns to the enterprizes.

Marketing, credit, purchasing and machinery cooperatives need organizers, accountants and managers. Young men could make jobs for themselves in this manner.

The people are there. The land is there. The government will help. But what we need as much as anything else is some honest to God pioneering spirit of enterprise. Somebody is going to do this job. Shall we let others do it? Our place in a basic industry is at stake. We can lose out entirely within the next fifteen years.

Mose had applied to the philosophic white gentleman for a loan. He was turned down. The gentleman said: "You are strong and healthy and work is plentiful. Why don't you get a job? Hard work never killed anybody."

Mose said: "You sho is wrong erbout dat Boss. I'se done los' fou' wives from nuffin' else."—The Railroad Trainmen.

First The Farms

Though the multiplication of independent agencies and commissions of government in general violates sound principles of political administration, there are a number of reasons why the vote of the senate to reestablish the Rural Electrification Administration as an independent unit should be applauded.

Under the Department of Agriculture the REA has had to play a minor role. If the house approves the Shipstead amendment, the REA will be accorded a far greater freedom to pursue its policy of extending electricity to the farm homes of America. Like the TVA and the RFC, it is a major agency of government. It will require a much larger operating fund if it fulfills the purposes for which it was created. Independence will advance it to the new level of responsibility and confidence which it deserves.

If the favorable congressional interest accorded the REA presages a more kindly attitude toward an even more important farm agency, the Farm Security Administration, then there is more reason than ever to hail the senate vote.

It is important to carry electricity to farms, but it is even more important to see that there are farm homes to which electricity can be carried. Tenantry in the South runs as high as seventy per cent in several states. Two-thirds of all the tenants in the nation are in the South. One-half of these tenants move annually. Few stay more than three or four years at the same place. In a single year 163,000 tenants applied to the FSA for loans to buy farms under the tenant-purchase act. The FSA had funds to aid slightly over four thousand. yet in that very year the number of the nation's tenants increased 40,000.

In 1929 fifty-one percent of the nation's farmers produced eighty-nine per cent of all the farm goods commercially sold. The remaining forty-nine per cent produced only eleven per cent. It is with this huge army totaling nearly fifteen million souls that the FSA with its limited authority and pitifully small funds is working. If the food producing potential of this group had been only half realizing during the current war, there would be few shortages today. As it is, a commendable part of the egg, chicken, pork, and beef increase is attributable to the bottom-rung farmers who doubled and trebled their production through aid extended by the FSA.

The AAA in some ways has been the savior of American agriculture. But most of its benefits have gone to the upper fifty per cent of the farmers and its greatest benefits have been reaped by the comparatively few factory farmers. Tenants and day laborers have often suffered from AAA policies. The services of the REA go largely to those on the higher rungs of the agricultural ladder. Very properly both agencies are permanent features of our government's agricultural policy. But neither goes to the root of the agricultural problem as a great and independent FSA could.

The Jeffersonian ideal of independent small-farm ownership must not be allowed to die. Rural slums must be eradicated. Agricultural peonage and chronic poverty must be resisted. Agricultural isolationism must be broken down through cooperatives. It these evils are allowed to root themselves deeper in American soil and spread, they will guarantee the instability of the social and economic order that tolerates them.

—Reprint from the Nashville Tennessean.

Skill Vs. Inherited Motions

By GEORGE S. MITCHELL

It is a country saying that farming in the South is a set of inherited motions. For centuries most of the people who work the land of the South have used only the simplest skills. Our staple crops have called for gang labor; plowing, chopping, picking. For cotton and corn we only work a couple of hundred days in the year at the most. For a little more than half a year's work at simple jobs we get poor pay naturally.

We will earn more from our farming when we farm the year around, raising many kinds of crops, and keeping a lot of stock. Green crops to cover the land in the winter pay well. Dairy cattle and hogs and poultry use labor the year through and pay for it. Our problem is for millions of our farm people to learn how to raise other crops than the old crops. Also, we need something more than just the skills of hand and mind to raise new crops. We need community skills: the trust of a man in his neighbor which makes marketing cooperative work, arithmetic, ready reading, honest local government, all of these things that let a farming neighborhood run its farming business in democratic unity instead of in dumb obedience to a riding boss or in the pinching struggle of tenants against their landlords.

Our agricultural leaders have known for a long time about the new and prosperous ways to farm. Agricultural colleges have taught it; Agricultural Extension Service has preached it. So have the vocational teachers, so have the farm magazines. But it takes money and literacy and control of the land to farm the new way. Gradually southern farmers have divided into two groups; those who could and do grasp the new methods and get ahead, and those who couldn't and don't stay behind. Every year brings new machinery, new methods, new ways to make more. Mainly, by knowing more, by having better stock and tools, the men who have got ahead have bought the good land.

A few thousand southern farmers farm on good land by 1940 methods and do well; a few hundred thousand live in moderate prosperity with farming methods of the twenties and thirties; a million and more farm as men farmed a century ago and live but little better.

GEORGE S. MITCHELL.

High Yields And Profits

By J. R. OTIS
STATE LEADER, NEGRO EXTENSION WORK

Much is heard about high yields of corn, cotton, pasture grasses, and all other crops grown by Alabama farmers. Many farmers think this yield can be obtained wholly by the use of commercial fertilizer. The fact is, commercial fertilizer when used alone is the poorest of two methods to raise crop yields. The other method which is the better method, consists of planting and plowing under green manure crops. For these, fertilizer is equally as important as for cash crops.

The best yields are obtained from good soil regardless of the method used in getting them. Crops on good soil respond better to the application of commercial fertilizer than they do on poor soil. The important thing to do then is to build our soils to their highest level of fertility. This is a long and continuous program which can be accomplished by the combination of practices:

1. Proper terracing to control erosion.

2. Establishing a cropper system that pemits the practice of crop rotation.

3. Systematically following the planting and plowing under of green manure crops each year.

When green manure crops are used to build up the soil they can do a number of things that commercial fertilizer cannot do:

1. They add humus to the soil, which in turn holds more moisture and checks erosion. The presence of humus in the soil also sets up a favorable condition for certain important soil bacteria to work in while they unlock and make available certain of the plant food elements.

2. The plant food and humus added to the soil by green manure crops is not all made available the first or even the second year. Therefore, crops following green manure crops that have been plowed under are benefited by plant food that was plowed under as much as two or three years before.

3. The practice of plowing under green manure crops annually calls for a planned system of crop rotation such as will involve the growing of winter grain crops, especially oats. This leads us directly into a scoring position on two of our major farm objectives:

(a) Higher yields and greater profits.

(b) A combination of crops and livestock.

Alabama farmers do not grow enough winter oats and green manure crops to increase the fertility of their soil, and to provide the feed necessary to have their desired combination of livestock and crops. The day has come when the program of farm agents can be measured by the acres af winter crops (small grains and soil building legumes) grown by farmers in their counties. Farmers who do not tie into this program are asleep at the switch and must increasingly be considered the least progressive of farmers in the State.

Next month "Pasture and Livestock Development" will be discussed.

QUOTA FOR PROTECTIVE COATINGS, COATED FABRICS, AND FLOOR COVERINGS

Because linseed oil continues in short supply and military requirements remain heavy, WFA has amended WFO 42a to reduce from 50 to 40 percent (of average use in 1940 and 1941) the quantity of fats and oils available, beginning April 1, 1945, for the manufacture of protective coatings, coated fabrics, and floor coverings for U. S. civilians. If the consumption of linseed oil—the oil principally used in these products—were to continue at the present level, supplies would be reduced below minimum requirements for working stocks before the fall harvest of a new flaxseed crop. The 1944 production of flaxseed from which current supplies of linseed oil were crushed, was about 55 percent below 1943 production.

Straight Talk About The Seventh

The Seventh War Loan started May 14. It will end June 30. Americans as individuals are taking on their biggest quota to date—7 billion dollars, 4 billions in E bonds alone.

You may be wondering, "Why this biggest of all individuals quotas now? Haven't we already reached the peak, A fair question—requiring a straight answer.

The Battle of Japan has just begun. It must be backed up, paid for, fought for by a free people, intent on sweeping the Pacific clear of Fascist hate—forever.

With the war in the West our first and major concern, we have not yet been able to go all-out in the East. But neither has the Jap.

The war to crush Japan will be bigger, tougher, and longer than most Americans expect. The Allied Military Command has estimated that it will take years, not months.

The destruction of Japan's armies has not yet reached the annual rate of normal replacements—between 200,000 and 250,000 men a year. And the Jap, as our men in the Pacifie know, fights to the death.

As far as Japan is concerned, the outer Empire—and the men who defend it—are expendables. The Jap will fight the Battle of Japan from inside the inner Empire, of which Iwo Jima was an outpost. And Iwo Jima, according to Admiral Nimitz, was a pattern of the resistance our forces may expect to meet in future offensives.

The single greatest obstacle to our crushing Japan is distance. While in the battle of Europe, supply ships from our bases in England had only an overnight run to make, ships in the Pacific have long-reach round trips taking up to 5 months to make. To crush Japan will take time, heroic and backbreaking effort, overpowering equipment.

Millions of fighting men—freshly outfitted and equipped—will have to be moved from Europe halfway around the globe; and supplied day-in, day-in by hundreds of new ships now building. More of everything will be needed. More B—29's. More tanks, halftracks, jeeps, and trucks. More rockets, mortars, airborne radar.

A whole new air force is in creation—huge new bombers dwarfing the Superfortress—fast new jet propelled combat planes, the P-80 lines by thousands.

These are just some of the 101 or "Shooting Star," coming off the ways in which your dollars are needed more than ever to bring America's might to its full strength—so that we may crush our foe the faster, make an end of killing, and bring our men back home.

The sick, wounded, and disabled will require medical attention and care.

Many millions of dollars will be required for mustering-out pay and benefits voted by Congress to help our veterans get started in civilan life. That's the least we can do in return for what they've done for us.

There are other weighty reasons for supporting the Seventh War Loan—reasons that take us from the present to the future. By investing in the Seventh the patriotic American is safeguarding his own future; his country's future.

By putting every dollar over rock-bottom expense into the purchase of War Bonds, he is delivering a body blow to wartime inflation—thus putting a lid on the cost of living and maintaining intact the purchasing power of the dollar. At the same time, too, he is insuring the country and himself against the catastrophe of a possible postwar deflation — with its depression, unemployment, misery, and heartache.

So save for your country—save for yourseif. In helping your country, you are also helping yourself! Comes peace, we'll all need money for education, replacements, retirement, new homes, a new start—and we'll need a lot of it. And there isn't a better or safer highroad to your goal than United States Savings Bonds.

This year there will be only two War Loan drives, not three. But in those two drives the Government will have to raise almost as much money from individuals as in the three drives last year. That means bigger extra bonds in the Seventh. Because only by buying more can we make 2 take the place of 3.

The 27 million Americans who buy bonds on pay-roll savings are already off to a flying start. These patriotic men and women began their buying in April. And they will keep on buying extra bonds through May and June!

It's now up to the rest of us. It's our turn to swing in line. To raise the vast sum needed every American will have to dig deeper into cash reserves. Only by buying bigger extra bonds can we stretch 2 into 3!

Let all Americans do their part—for their own sake, for their country's.

Texans, Negro and White, Learn Unity as Captives

By Tom O'Connor

Four men from Texas came back from Europe yesterday on the Liberty ship **William Blount.** They were liberated prisoners of the Germans, part of the cargo of 1431 repatriated soldiers disembarked from four converted freighters at Staten Island.

The four men had been buddies on the ship, and they stuck together on the dock, waiting for transportation to Camp Kilmer. Their names were Staff Sgt. Elias M. Green, 27; Pvt. George Punch, 25; Pfc. Orlan D. Stanphill, 21, and Pfc. Charles B. Rettler, 25. Green is from Houston, Punch from Fort Worth, Stanphill from Texarkana, Rettler from Jefferson. They stood there on the dock talking and laughing, and comparing notes on how little they had to eat while prisoners of the Nazis.

Men from Texas

There was nothing to distinguish this quartet particularly from any other knot of soldiers—except that all four were talking with Southern accents, and two were white and two were black.

"I take it," this reporter said to Green, a tall, good-looking chap with a blond mustache, "that you're from the South?"

"Texas," he said, "Houston. All us four are from Texas."

The other three gave their names, outfits, homes. Green and Rettler, the Negroes, were from the 214th Tank Destroyer Battalion. Stanphill was with the 35th Combat Engineers, Green the 120th Infantry.

"Interesting," this reporter said, "that you guys get along so well."

"If you mean," said Green, "white fellows being friends with colored fellows—hell, you get a lot of new ideas over there. Everybody gets along swell. The colored soldiers are wonderful guys."

"Did you think that way before?"

"No . . . of course not. And my family and my wife's family can't understand why I think so now. But you learn a lot in the Army."

"You mean you learn a lot in a Jerry prison camp," said Stanphill. "That was when I figured it out. You learn a lot when you're starving."

"Mister, you got to understand we was all equal when the Jerries had us," said Punch, a coal-black Negro who had been captured for 94 days and spent all of it on the march across Germany toward the Russians, back toward the Americans, north to the Baltic. "The colored fellows, they didn't especially hang together. Every colored prisoner I know of, his buddy was white."

"I thought colored was dirt when I went in the Army," said Standphill. "Know when I started to figure it out? We were prisoners, on the road, and if you fell out you got shot. We didn't have practically anything to eat—six men on a loaf of bread. Yes, I went four days on one slice of bread. But what I'm telling you, there was this white fellow, he couldn't make it any more, he had to have help. If he fell out, the Krauts would give it to him. But most guys figured it was all they could do to make it themselves. Well, I saw white guys pass this guy up, and I saw a colored guy help him. He helped him, and he made it. Well, you figure out a lot from things like that."

"Colored and white never had no trouble over there," said Rettler.

"My wife's family," said Green, "they don't understand. But if you want to quote me, you say I'm from Houston, Texas, and that some of the best soldiers and bravest men I ever saw were colored."

'I Got a Break'

"Funny thing, though," said Punch. "I was born in Texas and grew up in Texas. Then I got a break. I went to California, and I saw colored and white being friends and equals. Then I got another break. I went in the Army and went overseas.

"Well, over there, everybody was O. K. As far as discrimination went, I never saw any. Then we were captured, and Negroes and Southern whites and Northern whites was all mixed up and all in the same boat, all starving, and nobody thought about color.

"Then on the ship coming back, we all slept together, ate together, did everything together. Now here we are back"—and he gave kind of quick, apologetic, half-smile—"and I'm going back to Texas. You know what it'll be like there."

There was a little uncomfortable silence. This reporter, unable to resist stepping out of his reportorial role, turned to Green and said:

"You know, it's up to guys like you to take care of that."

"You're damn tootin'," said Green. "I got it all figured out."

—P. M.

An army mule named Maggie was buried and the following inscription appeared on the tomb: "In memory of Maggie, who in her lifetime kicked 1 general, 4 colonels, 2 majors, 10 captains, 24 lieutenants, 42 sergeants, 545 privates, and 1 bomb."

Hold Those Bonds

Farmers who might need temporary financing to cover any seasonal farm operations will usually find it more profitable to borrow money rather than cash any of their War Bonds. That's because a War Bond increases in value most during the last 4 years. The fellow who cashes bonds to finance a crop with the idea of buying more bonds after harvest is putting off the day when his investment will return handsome dividends.

This is what happens when you pay $75 for a $100 War Bond (Series E):

	Redemption value	Increase in value	Interest return	By cashing you sacrifice an investment yielding
			Percent	Percent
After 2 years	$76.50	$.50	0.99	3.38
After 4 years	80.00	5.00	1.62	3.75
After 6 years	84.00	9.00	1.90	4.41
After 8 years	92.00	17.00	2.57	4.21
In 10 years	100.00	25.00	2.90	

Note that until maturity date the longer you hold the bond the faster its cash value increases. The total increase in the first 4 years is $5, while the increase in the 4 years immediately preceding maturity is $16. For example, after holding a War Bond for 6 years, and with only 4 years to run before maturity, the investor is sacrificing a 4.41 per cent return by redeeming his bond.

The only way to get this high rate of return is to hold on to the bonds. It would be good business to borrow money for 3 to 6 months, or even longer, to finance a crop or feed out a bunch of cattle rather than cash any bonds. Most farmers can now get money for 5 to 6 percent. Five percent money for 6 months only figures 2½ percent on an annual basis.

In this way a farmer will be using his War Bond investment as a financial reserve—credit insurance you might call it. If necessary in an emergency he can always cash the bonds, but most of the time it will pay to borrow for temporary needs.

We who sell War Bonds to farmers should make this clear. It is one of our best arguments for holding bonds. At first you might think it would hurt sales to point out that these bonds increase in value most during the last four years. But it doesn't work out that way.

All along we have been saying that War Bonds make an ideal farm financial reserve. These facts give us another opportunity to back up that statement. Too many farmers who have bought bonds fail to realize the many ways in which a War Bond investment can be used.

These economic advantages of holding War Bonds are of course in addition to the patriotic motive of financing the war. Always make it clear that the person who leaves his money in these bonds buys the most war material for the boys at the front.

John D. Rockefeller, Jr., Urges Aid For Negro College Fund

New York—John D. Rockefeller, Jr., appealed to "men and women of enlightenment and good will everywhere" to support the United Negro College Fund 1945 campaign for $1,550,000 in a nationwide Blue Network broadcast last week (May 9).

Mr. Rockefeller, who is chairman of the national advisory committee of the Fund, stressed the war record of the 32 private Negro colleges participating in the campaign.

He said that in recognition of the contribution that Negroes have made to the war effort, "both on the battlefront and in the factory, the least we, the citizens of this great nation can do is to provide for these institutions of higher learning the $1,550,000 now needed to meet modest requirements."

"When war broke out," he said, "it became increasingly evident that these Negro colleges were a national asset. They furnished the educational background that equipped many to answer the call of their country for service in the ranks, as officers and in other responsible positions."

Mr. Rockefeller, who seldom appears before the microphone, stated that "those who over the years have watched the persistent efforts of our Negro citizens to further their self-development have observed with satisfaction the growth in the number and quality of the Negro colleges and universities."

The text, in part, of Mr. Rockefeller's talk follows:

"With deep pride they have seen the graduates of these colleges, year after year, taking their places in the community as teachers, lawyers, physicians, dentists, nurses, agriculturists, and leaders in many other walks of life. Thus has this steady stream of trained young people elevated the educational standing and general welfare of their fellow citizens. Thus has it helped to raise the level of the life of the nation."

"Practically all privately supported educational institutions have had financial problems during these difficult times. That has been especially true of the Negro colleges since their income, even in normal times, is extremely limited. The situation became a matter of such concern to the presidents of twenty-seven of these colleges, which number is now increased to thirty-two, that in 1943 they decided to pool their fund-raising efforts and make a joint, cooperative appeal to the nation as a whole. Thus it was that the United Negro College Fund movement was instituted.

"Built, as these thirty-two colleges are, on a foundation of mutual good will and a sound educational policy, in their perpetuation lies the greatest guarantee of an America united irrespective of color or race."

"This year Mr. Thomas A. Morgan, a leading industrialist and president of the Sperry Corporation, has accepted the national chairmanship of the campaign."

What Color Is Cotton?

By Grace E. M. White

What color is cotton? What color is hay--------an apple? What difference does it make, anyhow, in the marketing of agricultural, commodities?

Well, in cotton for example it might make the difference between Middling 1 1-16-inch cotton and the next grade below. Today that would be around $8 a bale. And that—a difference of about 7 percent on the sales price—is not, as the saying goes, hay.

Color is a factor in grading agricultural commodities because it is tied in with their price, quality, nutritive value, and salability. In cotton, color has much to do with grade. Cotton left long in the field becomes stained, and particles of leaf and trash are blown into the cotton bolls. Removal of the stain with bleaches is expensive; the small leaf particles cut the cotton and spoil its quality. There are a number of cotton grades. The cost of processing them varies considerably, affecting the price. And textiles made from low grades of cotton cannot match the appearance and color of textiles made from the better grades.

In hay, the greener the product the greater its nutritive value in animal feed. Experiments by the Bureau of Dairy Industry showed that dairy cows fed on high-grade hay (No. 1 Timothy) remained in good health and produced normally, but that when fed for 6 months or more on a ration of low-grade hay (No. 3 Timothy) the cows usually dropped immature, weak, or dead calves. When milk from cows that received the low-grade ration was fed to calves normal at birth the calves died within 3 months. Hay discoloration is due to maturity, sun bleach, dew, rain, or other damage.

Color differences are also a very important indication of the relative success of different methods of freezing and dehydrating food.

Standards have been set up for use in grading most agricultural products, to insure fair and satisfactory marketing. Grades formulated in the United States Department of Agriculture often include color, and when standards for these grades are developed color is a factor. Grading service is maintained for cotton, hay, butter, cheese, eggs, fruits and vegetables (fresh, canned, frozen and dried), honey, tobacco, cereal grains, meats, and rosin. Color—and that means the color by daylight—is important in classifying each of these commodities. Since the color gradations are usually very fine, some exact system must be used to decide the grade.

Color Terminology

That is where color terminology comes in. Certain color terms are in common commercial use. The trade describes cotton as being creamy, bloomy, bright, gray dull, spotted, tinged, and stained. Official standards include color differences within and between grades of White, Extra White, Gray, Spotted, Tinged and Yellow Stained.

Other commodities also have distinctive color terminologies. So it's a good idea to relate color standards to the terms of the individual trade. The lean of beef may be described as bright cherry red or bright pink, moderately dark cherry red, and so on, in perhaps 10 degrees of red or pink. Beef fat may be white, creamy, or yellow in about 7 degrees. The laboratory worker who measures color and the practical grader must understand each other's language.

Color Charts Used For Grading

Some inspectors and graders base their color judgments on standards they carry in their heads—mental images. In a few cases color charts may be used if a standard has been established that matches a color chip on the chart. The Ridgeway charts developed in 1886 and enlarged in 1912 contain 1,113 colors, 36 hues reduced by regular proportions of white, gray, and black to give systematic groupings. The Maerz and Paul Dictionary of Color published in 1930 contains 7,056 colors on 56 charts; it is used in the Department of Agriculture in identifying color standards for canned fruits and vegetables because it contains the widest number of colors now available.

The Munsell color charts include a standard series of 20 or 40 hues graded through many steps of lightness and chroma (intensity). These charts are devised on a three-dimensional system of color description—hue, value, and chroma. Other available charts have no particular application to agricultural grading.

The use of color chips on a chart is usually not enough to specify the color in grading, however. A more exact system is necessary. In most cases measurement is needed only for specifying the standard against which samples are compared, but it may also be used on individual samples, particularly in border-line cases.

Through use of the Munsell method of color notation, developed in this country in the early part of this century, measurements may be made directly by comparison to Munsell charts, or the method may be used indirectly by converting I. C. I (International Commission on Illumination) notations into Munsell notations. In the Munsell notation, color is expressed in units of visual difference of the three psychological attributes—hue, lightness, and saturation (known in the Munsell system as hue, value, and chroma). The hue circuit is divided into 10 major hues: Red, yellow red, yellow, green yellow, green, blue green, blue, purple blue, purple, and red purple.

Disk Colorimetry

An early method of measuring color, developed in U. S. Department of Agriculture laboratories, made use of the Munsell system of notation and disk colorimetry. In disk colorimetry, disks cut with a radial slit (so that several may be slipped together, with portions of each visible, for use in spinning colors together) are spun by motor so rapidly that there is no flicker. Thus any color lying in the color solid within the areas bounded by the colors of the disks used may be matched.

In 1929, when the method was first published, Munsell disks were spun together and the resultant color was expressed in approximate Munsell terms by calculations involving percentages of the disks used and the Munsell notation for the hue, value, and chroma of each disk. In matching a cotton sample, the disk used may be yellow red, a yellow, a white, and a light gray. Most of the cotton colors are yellow red in hue, light in value, and weak in chroma, the color range being quite small.

The simplest instrumental set-up for disk colorimetry is a motor adjusted to disks on a central spindle, used with color disks that may be spun alongside the sample. The areas of the disks are adjusted until the color of the spinning disks matches that of the sample. Use of a neutral gray mask with openings of equal size—one placed over the sample, the other over the disks—provides standardization of background and size of comparison fields. The two fields are compared by eye, and th areas of disk segments are changed until the colors of the spinning disks and the sample match.

Colors of other agricultural products range from the purplish red of beets through reds for tomatoes and the yellow reds, yellows, and green yellows of many other vegetables. Greens, blues, and purples are seldom needed in agricultural color work; most of the greens, even of grass, are near to green yellow than to the green of the Munsell system.

Preparation of samples to be matched is important no matter what method of colorimetry is used. The problem is simple when a flat matte, opaque surface is to be measured, but most samples require preparation.

With raw cotton, surfaces of samples are generally prepared to resemble as nearly as possible the surface used in the standards against which thy are compared. With canned fruits, large areas cannot be attempted because parts of the fruits may appear glossy on account of their rounded surfaces. Sometimes a thin glass plate is used to press the surface of the fruit to a level with the liquid in order that a larger surface may be measured Special treatment is required to measure the color of liquids.

Newer Instruments for Measuring Color

--Instruments with moving optical parts— by which the necessity for spinning the disks is avoided—are available. Sample and disk illumination is provided by these instruments. The disks colorimeters were first made for use by the Department of Agriculture in matching samples ranging from 1 to 14 inches in diameter (for a large slug of hay). Recently, more compact and useful instruments have been developed.

Standardization of the various conditions of illumination and observation is a necessity. Differences in the angle of illumination used cause larger differences in the comparison of glossy samples than of matte samples. Changes in surrounding colors of background may cause differences in results, and differences between black and white uniforms worn by laboratory operators will cause significant differences if the light they deflect is not kept from the disk or sample surfaces. Size of the areas compared will affect judgment of a color match. Some tolerance in matching is allowed, but the goal is to cut this to the smallest size.

Artificial Daylight Illumination

The illumination may be natural or artificial day light. If natural daylight is used, light from a north window is preferable. When glossy samples are to be measured, the hanging of a canopy of black cloth above or behind the sample, so that black is imaged in the cover glass of the sample container, will eliminate the errors which would result from admixture of light reflected from lighter surrounding surfaces. Sometimes masks areused, with openings that allow placing the standard color sample next to the sample to be measured.

Good lighting is very important for cotton elassification, and the cotton industry goes to great lengths to provide good natural daylighting in classification rooms. Use of carefully specified artificial daylight illumination in which the quality, amount, and direction of light are standardized makes classification possible on all days under the same lighting conditions. The color laboratory has made a number of technical daylighting studies that make this illumination possible.

Flourescent light, incidentlly, has not been found suitable for color-grading work.

Inspectors or grades of products to be examined for color should of course have normal eolor vision. Most often the color-blind person is unable to recognize green and red; there is seldom any difficulty with blues and yellows. A hereditary defect, color-blindness shows up more often in men than women; it is estimated that about 1 male in 10 is more or less color deficient. There are various tests to discover such deficiencies. Apart from color deficiencies, some people are more apt at color work than others. A committee of the Inter-Society Color Council has recently developed a test designed to measure this aptitude for color-matching work.

Poultry Tips For April

By

H. W. Bennett—Ext. Poultryman

Athens, Ga.—Meat is the subject now. It has actually replaced the weather.

The back-yard flock owners really have the opportunity to help out in the war effort **now** and to benefit themselves.

Cull every hen that is not producing and sell them often. There is a ready market in every town with people who can't buy meats.

Sell only birds that you, yourself, would eat.

Now is the time to sell a good fat rooster. Hens will lay just as many eggs without the rooster as they will with them. Eggs will keep better without roosters in the flock.

It is much better to buy good chicks than it is to hatch them with hens. Ten years ago 36 per cent of Georgia chicks were bought from hatcheries. Last year 82 per cent were bought from hatcheries. This is a definite improvement.

All fryers should be grown out of 3½ pounds in order to furnish more meat to the meat hungry world.

We have definite proof that poultry meat from the Gainesville broiler area actually helped to feed the armed forces during the fight on Iwo Jima.

There are enough non-producing hens and roosters in Georgia to feed the State for a long time.

Now is the time for people in the country to develop regular customers in the cities for poultry products. Only good products will make a friend and keep a customer.

Over-crowding people causes diseases to break out. The same is true for chickens. Allow three-fourths of one square foot space for each day old chick in the broiler house.

When have you checked your hens for poultry lice? Check in the fluff just beneath the vent for big body lice. Sodium fluoride kills all lice and stays on the hen long enough to kill the mites when they hatch. See your agents for full instructions.

Wire pullets and hens out from under their roosts. This is the source of lots of poultry disease and parasites.

REFRESH WEARY FEET

For a quick pick-me-up, take a foot bath. Plunge the feet in a basin of warm water, then in a basin of cold water. Repeat three or four times, then add a little soap to the warm water and wash the feet thoroughly with a cloth. Rinse and wipe them dry. Dust a little powder between the toes, rub a bit of cream across the heel, put on clean stockings or socks, slip into a different pair of shoes and your feet will feel fit as a fiddle.

Medical men are astonished by a rare case just called to their attention: a man suffering from a cigarette cough.—Pittsburgh Press.

Every Person Needs A

SAFE DEPOSIT BOX

Citizens Savings Bank has placed an Order for a large number of these so that you may have one

PLAY SAFE! No one knows when fire will destroy his home or a burglar might break in and take your valuables. Our bank wants you to protect these valuable papers, insurance policies, wills, your diamonds and other jewelry. We can rent to you a safe deposit box, which is in our fire and burglar proof vault. The prices are within reach. You have your own individual key. Not even the bank officials can get in this box without you being present with your key.

4th Avenue North and Charlotte

St. Emma Cadets Study Auto Mechanics

ROCK CASTLE, VIRGINIA. Combining both an education with actual experience at the same time, these cadets of the St. Emma Military Academy, Cpl. Thomas Godeau, age 16, and Pfc. Clifford Stewart, age 15, are students in the auto mechanics course in the Trade School. The many varieties of motorized agricultural equipment on the 2300 acres of school farms provide plenty of practical experience for these active boys. Along with vocational work, they also have the regular academic studies at this boarding high school and are members of the Junior Reserve Officers Training Corps which the United States Army supervises at the St. Emma Military Academy.

Food Situation Shows Need For Growing Corn This Year

By DR. FLOYD BRALLIAR

Tennessean Garden Editor

To start with, we wish to call attention to the fact that many of the great corporations such as the Firestone, Henry Ford and several others have employed gardeners to write pamphlets on vegetable gardening. We have only seen three of these so far, but all of them are very much worth having and reading. We are calling attention to these because they can be secured from your local dealers who handle the products of these companies merely by asking for them—no charge. We advise scores of our readers to secure several of these, one of a kind, and read them carefully. What we have seen are up to date, simply written and written by someone who seems to have known his business.

True they are written either for the North and East or for the country in general rather than for the South, but if we will bear this in mind when we are reading them, we will find them very valuable indeed. This year every gardener—which should mean every citizen who can possibly do so should grow a garden—need the information that is offered free by these companies.

Serious Situation

The very fact that these companies have felt it the greatest service they could render the public to write and circulate these pamphlets on gardening is only one more proof that it is generally recognized that the food situation in the world is very serious. There is no reason for us to expect it not to become so with us before the new year.

Everything indicates that we shall not have nearly so large a supply of canned corn in our stores next year as we had this year so we are venturing to suggest that many of our readers plant an ample area of first class sweet corn and can their own, or if they prefer, dry it.

Choice of Breeds

In breeding field corn, the seed growers have made it a point to select varieties, or specimens, whose husks are very little if any longer than the ear, so open readily when ripe. This aids very greatly in shucking the corn. Likewise the breeders of sweet corn have mostly selected the same type of ear, for the great market for sweet corn is at the canning factories. The roasting ears are husked by hand in these factories and thus it saves much time to have short shucks.

As most all of the canning factories are either in the North or East where there are comparatively few corn ear worms this is all right, but we in the South have largely quit growing sweet corn because almost every ear has two or three worms in it. If we plant some of the varieties that have long, tight husks that extend an inch and a half or two inches beyond the ear we will have very little difficulty with worms. Two of the best varieties in flavor that have this characteristic type of husks are Iowa and Black Mexican. Both are very superb in quality and flavor.

TIME OF TRIAL

War is a time when everyone is supposed to do more with less. It is a time of trial. After three years of war, those who have met the challenge most successfully are beginning to stand out—also those who have not done so well. Among the latter are the non-military activities of the Federal government. Boards, bureaus and agencies have grown by leaps and bounds.

A representative coal company recently compared the wartime record of the coal industry with that of the Federal government from the standpoint of doing more with less of the most precious resource the nation possesses—man power. In 1918, there were 760,000 men employed in the coal mines. They produced 678,500,000 tons of coal. At the same time there were 1,000,000 government employes. In 1944, there were 479,000 miners employed and coal output was a staggering 684,500,000 tons. Government employees during this critical period rose to 3,250,000, with tens of thousands doing nothing more important than trying to unravel red tape.

FREE TO DREAM

"In spite of wars, depressions and disasters, the average American of today is better fed, better housed and better clothed than the people of any nation ever were in all the world's history. This condition is because our citizens have been free to dream and study and think and plan—and have been able to make their dreams come true."

The above remark was made by a man who knows whereof he speaks. His name is William R. Boyd. He is president of the American Petroleum Institute and, like countless other oil men, he started from the bottom.

Keeping our nation a land of opportunity for individuals with dreams should be the foremost postwar goal of all of us.

"The welfare of the farmer is a matter of vital concern to every division of commerce and industry. Agriculture provides virtually all of the nation's food supply and the greatest part of its industrial raw materials. It is the direct means of subsistence for a fifth of the population, and the money income it yields is a major factor in determining the demand for the products of mines and factories."—Guaranty Survey.

MILIED RICE SET-ASIDE INCREASED

WFA has amended WFO 10 to increase in both the Southern States and California the set-aside of milled rice from 60 to 100 percent.

The increased set-aside was necessary principally because of increased Government rice requirements in liberated areas of the South Pacific. At the current rate of consumption, however, rice for civilians was expected to meet normal demands through the crop year ending July 1945. Up to March 10, effective date of the action, civilians had received approximately 7½ million bags of rice since July 1, 1944, and current civilian allocations provided for approximately 1 million additional bags before July 1, 1945, making a total of 8½ million bags for the 12-month period. Arrangements had been made by the Comodity Credit Corporation to assure civilians their present allocated quantity of approximately 1 million bags. Arrangements have been made for foreign and other agencies also.

Transplanting Plants

Early plants of cabbage, tomato, eggplant and pepper should soon be ready to transplant to the Victory gardens. If plants are bought, they should be from a reliable vegetable grower of certified plants.

In transplanting plants, get the root system quickly re-established. First, balance the top or leaf surface with the reduced root system. This may be done on most plants by pinching off some of the lower leaves, and with plants like tomatoes. pinching back some of the leaves just below the bud cluster. The bud should not be disturbed. Beets and celery can be held in bunches and about half the tops cut back as the bud is below most of the leaf surface.

When water is used for transplanting, add about two pounds of nitrate of soda to 50 gallons of water, or a level tablespoonful to each gallon. If a complete fertilizer in soluble form is needed, make a stock solution of three pounds of superphosphate, two pounds of nitrate of soda, and one pound of muriate of potash dissolved in six gallons of water. Allow 24 or more hours for this to dissolve; then pour off water from the residue. Add two gallons of this solution to 50 gallons or one quart to six gallons of water for use in watering plants. For small gardens, a good victory garden fertilizer may be substituted for the above materials.

Many plants need shading. Small brush shades will do this. A better method, however, is to use ordinary wood shingles set in the ground two to three inches from the plant on the south side, leaning over the plant. This furnishes shade and allows free circulation of air. Shingles may be used several seasons if stored out of rain. Early plants should be protected from cutworms by paper collars or soft paper loosely wrapped several times around the stems of plants. Plants may be protected from pests by various types of coverings.

Practical Suggestions On Preaching

Rev. M. C. Allen, D. D., Addresses Baltimore Ministers

Baltimore, Md.—(Spl.)— Appearing before the Baptist Ministers' Alliance of Baltimore and Vicinity, Rev. M. C. Allen, A. B., D. D., pastor of the Leadenhall Bapt. church, editor of the "Expected" and one of the leaders of the State Convention here in Maryland as well as in Virginia, was the order of the day. In his address on "Practical Suggestions for Effective Preaching," he spoke on "An Ear to Hear In Effective Preaching." Dr. Allen said in part:

"To preach effectively, both the mind and the spirit of the preacher must be kept open, clear, and clean. An open mind and spirit are receptive. A clear and clean mind and a clear and clean spirit are free and fearless. Effective preaching is like effective shooting. Regardless of the aim, little is accomplished with a dirty gun.

The shooting of the gun makes it dirty or ineffective. "Pickled" prayers, sermons, hymns, and concepts of God and religion may close the mind and make foul the spirit of the preacher. For that reason, the prophets were stoned, Christ was crucified, and the apostles were persecuted by the religious leaders of their generations.

Accepted authority in organized religion is more largely responsible for ineffective preaching than all of the wickedness among men in high places. Preaching that preaches, "the preaching that I bid thee" condemns and convicts all that is weak and wicked in human authority.

Preaching that is accentuated with divine authority is authoritative preaching. Effective preaching never defends preaching nor the preacher. Effective preaching defends the preacher against wickedness in high places on the one hand, and saves and inspires men in the low places to step up into the glorious liberties of heavenly places in service to God and man, on the other.

When those in authority sent the soldiers of Rome to arrest Jesus, they ran into the authority of his preaching. The authority of their swords snapped and on their return they carried the report of having discovered supreme authority in the preacher's preaching—"Never a man spake like this man." "He speaketh not as the Scribes but as one having authority."

When-ever a preacher's preaching becomes like Professor Jack or Dr. Jones in content and delivery, it will be ineffective in transmitting God into human needs: Only God is capable of "delivering from evil"—sorrow, shame, fear, hate, revenge, bitterness, death.

An EAR TO HEAR: It is possible to live with but one of the five senses. The senses of seeing, hearing, smelling, and tasting maybe lost without the loss of life, but not so with the sense of feeling. All of the four senses referred to above, report their findings. Three of the five senses are of great value in effective preaching—seeing, hearing, feeling. In effective preaching, God and human needs must be definitely seen, heard or felt.

When-ever God and the spiritual needs of man come walking into the front door of the preacher's soul—seeing, hearing, or feeling—there is going to be some effective preaching done.—"Courage rises with danger and strength with strength opposes."

An effective preacher is a God transmitter. The ear can not transmit to the soul what it does not hear. "He that hath an ear to hear let him hear what the spirit saith unto the church." Emphasis is placed on hearing in these suggestions, not seeing but hearing.

Not seeing what is written in the books of authority but HEARING what the "spirit saith." Not unto the world, but unto the church. Effective preaching sustains the church spirit in the world. Condemned ships can not sink the effective preaching on board. Patmus Isle can not make lonesome the soul of an effective preacher, even on the Lord's Day. It is easy for a preacher's soul to become lonesome on Sunday in a land of no churches, but not so with a preacher who hath an ear to hear what the spirit says to those being tempted to deny the faith such as the Jewish and Roman persecutions were intended to do.

He that hath an ear to hear: not an ear to ache; not an ear for an abcess; not an ear for glory, popularity, and fame; not an ear for appeasement, compromise or "men pleasers," but an ear to hear God's whispers of great secrets and power in the aftermath of experiences that occur in the worst that fate and fortune can bring.

The sensitive soul of the Negro slave had an ear to hear: "My Lord calls me, He calls me by the thunder."—He heard God in the roar of thunder; "My Lord calls me, he calls me by the lightning."—He heard God in the silent lightning; "Green trees are bending. . . ."—He heard God in the twist of the wind; "Tombstones are bursting, sinner stands trembling." He heard God in death—in the grave— from eternity. And, **that is enough to hear from effective preaching."**

Telephone operator to new girl she was breaking in: "No, honey, you say, 'Just a moment, please,' not, 'Hang on to your pants, mister.' "—Colo. Springs (Colo.) Independent.

"Where is the head bookkeeper?" "Gone to the races, boss." "What? In the middle of our annual audit?" "Yes, sir. It was our only chance to balance the books."

OUTLINE FOR SMALL VICTORY GARDEN (APPROXIMATELY ½ ACRE)

Garden Crops	Varieties Recommended	Seeds or Plants Required	Space Required
Asparagus	Mary Washington	25 roots	50 ft.
Beans, Bush	Stringless Green Pod, Tendergreen	5 lbs.	500 ft.
Beans, Lima	Henderson Bush, Baby Potato	4 lbs.	400 ft.
Beets	Early Egyptian, Detroit Red	2 oz.	200 ft.
Cabbage	Wakefield, Copenhagen Market	1 pkt. or 200 plants	200 ft.
" (Chinese)	Chihili	1 pkt.	50 ft.
Carrot	Improved Chantenay, Imperator	1 pkt.	100 ft.
Chard	Giant Green, Lucullus	1 pkt.	50 ft.
Collards	Louisiana Sweet, Georgia	1 pkt.	100 ft.
Cucumber	A & C Long, Green, Pickling	2 pkt.	30 hills
Eggplant	Florida High Bush, Black Beauty	1 pkt.	50 ft.
Lettuce	Imperial No. 847, Great Lakes	1 pkt.	100 ft.
Mustard	Tendergreen, Giant Curled	2 oz.	200 ft.
Okra	Dwarf Green, Clemson Spineless	1 oz.	200 ft.
Onion	Ebenezer Creole, Bermuda	1 oz. seed or 1 gal. sets	200 ft.
Peas	Alaska, Laxtonian	4 lbs.	300 ft.
Parsley	Moss Curled, Paramount	1 pkt.	50 ft.
Peppers	Pimento, Cal., Wonder, Hot Var.	3 pkt.	150 ft.
Radish	Sparkler, Crimson Giant	1 pkt.	25 ft.
Spinach	Bloomsdale Long Standing, Viking	1 oz.	100 ft.
Squash	Y. Sum, Crookneck, Cocozelle	2 oz.	50 hills
Tomato	Scarlet Dawn, Marglobe, Rutgers	3 pkt.	300 ft.
Turnip	White Egg, Purple Top, 7-Top	3 oz.	500 ft.
Strawberry	Missionary Blakemore, Fairfax	250 plants	Bed

Rotate these crops in season throughout the year, and follow monthly garden map which will be sent on request. Persons following this outline can also get helpful suggestions from gardening pamphlets that can be secured from county and home demonstration agents or by writing direct to the Agricultural Extension Service, Athens, Georgia.

WOMAN'S PAGE

SALADS, VEGETABLE PLATES SUGGESTED FOR SPRING MENUS

By MARY LYLES WILSON

The first warm days of spring often find us feeling languid. Remember grandmother's spring tonic of sulphur 'n molasses? Even though it is supposed to be a true and tried favorite, we have found more pleasant ways to take a spring tonic than this dreaded dose.

One of the best "picker uppers" is a change of diet. A special interest in the preparation of foods as well as the appearance when served brings a rich reward in the real enjoyment of the family and the good feeling that follows. Warmer weather makes lighter foods take on greater importance.

Crisp salads, colorful vegetable plates, cream soups and fruit desserts.

Nutrition Needs

Nutrition needs are easily met with this kind of diet. Steaming bowls of hearty soup make nourishing fare for noon or night meals. A well seasoned soup, rich in meat flavor, served with a crisp salad, relishes, hot bread or rolls is a meal to satisfy the hungriest member of the family.

Experimenting with new soups is fun because there are so many delightful combinations. The thrifty homemaker saves the water from cooking vegetables and meats, stores it in a jar in the refrigerator and uses that for stock. The best buy from the vegetable counter, or perhaps some of your victory garden stock of canned vegetables, and an inexpensive cut of meat provide the makings. Keep a tasting spoon handy, for a good soup is seasoned just right. And always bring it to the table piping hot.

This vegetable soup with meat balls is a dish for epicures, tempting and yet it is satisfying.

VEGETABLE SOUP WITH MEAT BALLS

(Serves 4)

1 eup shredded celery and celery leaves
1 large onion
1 cup eanned or fresh tomatoes
2 medium carrots
1 eup diced potatoes
3 cups water
1 teaspoon salt
½ pound ground beef
2 slices bread
¼ cup milk
2 tablespoons drippings
¼ cup diced onion
1 egg
½ teaspoon salt

Dice all vegetables, add water and salt and simmer together 30 minutes. (Diced turnips, shredded outer leaves of lettuce or other vegetables may be used. Water in which vegetables or meat has been cooked may be used).

Combine ground beef and bread soaked in milk. Saute onion in drippings. Add onion, egg and salt to meat. Shape lightly into small balls. Drop into boiling soup, cover and simmer 10 minutes.

A bowl of cream of carrot soup—so colorful, delicious and nourishing—is a grand mainstay for springtime menus. And it is so easy to prepare. The rich milk together with fine bread crumbs provide a "just right" eonsistency, thus eliminating the preparation of a white sauce for this cream soup.

SOUTHERN CORN STICKS

2 cups corn meal
1 teaspoon salt
1 teaspoon soda
1 egg
2 eups buttermilk
¼ cup melted ham or bacon fat

Sift together corn meal, salt and soda. Beat egg; add buttermilk. Add to dry ingredients, stirring thoroughly. Add ham or bacon fat. Pour into piping hot greased corn stick pans. Bake in hot oven, 400 degrees F., 25-30 minutes. Makes 18 eorn sticks.

FISH-STUFFED POTATOES

4 baked potatoes
2-3 cup cooked fish
¼ eup hot milk or cream
1 tablespoon minced parsley
¼ teaspoon salt
⅛ tsp. pepper
Speck celery salt

Cut potatoes across tops and press out pulp. Mash; add rest of ingredients and beat until fluffy. Refill potato cases. Bake 15 minutes in moderate oven.

STRAWBERRY SHORTCAKE

1½ cups sifted all-purpose flour
1½ teaspoons baking powder
¼ teaspoon salt
1 tablespoon sugar
¼ cup butter, margarine, or shortening
6 tablespoons milk (about)
Melted butter or margarine
Sweetened halved strawberries
Cream

Sift together flour, baking powder, salt and sugar. Cut in butter, margarine or shortening with 2 knives or pastry blender. Gradually add enough milk to make soft, not sticky, dough which can be gathered on fork. Avoid too much flour, and overhandling dough. Roll out ¼ inch thick on lightly floured board. Cut in 8 4-inch circles. Place 4, ½ inch apart, on baking sheet. Brush tops generously with melted butter or margarine. Top with remaining circles. Brush with melted butter or margarine. Bake in hot oven, 450 degrees F., 20 minutes. Separate hot biscuits. Ladle strawberries over each bottom biscuit. Place top biscuit on top. Cover with strawberries. Pass pitcher of cream. Serves 4.

MINT JELLY

2 envelopes (2 tbsp.) unflavored gelatin
½ cup eold water
2½ cups boiling water
½ cup crushed mint leaves
½ eup sugar
⅛ teaspoon salt
½ cup lemon juice
⅛ teaspoon grated lemon rind
4-5 drops green food coloring

Soften gelatin in cold water. Pour boiling water over mint leaves; let stand 10 minutes. Strain; reheat. Add sugar and salt. Stir until dissolved. Pour over gelatin; stir until dissolved. Add lemon juice and lemon rind. Stir in eoloring. Pour into 4 6-ounce glasses. Chill until firm.

STRAWBERRY TURN-ABOUT

Spread 2 tablespoons melted margarine or butter over bottom of 9-inch cake pan. Sprinkle with ¼ cup sugar and arrange two eups sliced strawberries on sugar. Make a coffee cake batter by sifting together 1½ eups sifted flour, ½ eup sugar, 2 teaspoons baking powder, and ½ teaspoon salt. Beat an egg, and add ½ cup milk and 2 tablespoons melted shortening. Add to flour mixture, mixing until flour is moistened. Pour batter over the strawberries, and bake in moderately hot oven (400 degrees F.) 25 minutes. Serve plain or with cream or milk.

RICE STUFFED MEAT LOAF

Meat and rice is a favorite combination that is even more favored when served as a three-tiered loaf. This is an attractive and tasy way of stretching now precious ground meat.

Meat loaves are all-American meat dishes truly appealing to the eye and taste. Stuffed meat loaf is a new arrangement of an old flavor combination that has both these appealing qualities. Here's a flavorful way to make a pound and a half of ground beef serve 8 persons.

Another way to make your meat go farther is juicy stuffed meat loaves is a center layer of well-seasoned bread dressing and for more piquant flavor fill the loaf with apple and sweet potato dressing or onion dressing. First try this lightly flavored rice dressing.

Rice Stuffed Meat Loaf

1½ pounds ground beef
¼ cup minced onion
2-3 cup bread or cracker crumbs
2 slightly beaten eggs
½ cup milk
2 teaspoons salt
½ teaspoon sage
⅛ teaspoon pepper

Rice Stuffing

1 cup rice
1 teaspoon salt
¼ teaspoon pepper
½ teaspoon sage
¼ teaspoon thyme
1 beaten egg
½ cup milk

Mix ingredients for meat loaf thoroughly, but lightly. Cook rice for stuffing in a quart of boiling salted water about 20 minutes, or until tender. Drain and mix with remaining ingredients. In loaf pan, pat out half of meat loaf mixture. Pour in rice stuffing. Top with remaining meat loaf and bake at 325 degrees F., 1½ hours. Serves 8.

Creole Beef with Rice

½ to 1 pound ground beef
3 tablespoons lard
1 tablespoon onion, chopped
½ cup celery, chopped
2 cups tomatoes
1 cup water
1 tablespoon green pepper, chopped
½ teaspoon chili powder
1 teaspoon salt
1 teaspoon Worcestershire sauce

Brown the meat in melted lard. Add onion and celery and brown. Blend in flour and add tomatoes to make a sauce. Add remaining ingredients and cook slowly 10 minutes. Serve on hot cooked rice. Serves 6.

VITAMIN LOSS

If the cooked green beans have to stand and wait—when the family is late to dinner, for example, or in restaurants where they are cooked ahead and kept warm on a steam table—the vitamin C suffers.

Scientists have found that cooked frozen beans kept warm for an hour by holding in a double boiler over a low flame lost practically all of their vitamin C, but still held their thiamin and riboflavin.

CREOLE FISH FILLETS

1 pound fish fillets
4 tablespoons flour
½ teaspoon salt.
¼ teaspoon paprika
2 tablespoons minced onions
½ cup chili sauce
½ cup boiling water
1 tablespoon minced parsley
2 tablespoons butter or margarine, melted

Sprinkle fish with flour and seasonings. Place in shallow, greased baking pan. Add rest of ingredients and bake 35 minutes in moderate oven. Turn once, baste several times.

FRANKFURTER ROLL-UPS

Warm evenings suggest porch suppers and such feasts eall for frankfurter roll-ups. To make these meaty sandwiches, spread slices of bread sparingly with softened margarine or butter seasoned with a touch of prepared mustard. Roll each slice of bread around a frankfurter and fasten with toothpicks. Brush bread with melted margarine or butter and brown in moderately hot oven (400 degrees) until golden brown.

Serve as sandwiches or as a handsome entree topped with cooked asparagus in cream sauce.

MAKEUP NEEDS CLEAN BASE

One of the popular beauty aids is cake make-up. Properly applied, this cosmetic gives the skin a soft, petal-like surface and covers minor blemishes.

Like any other type of makeup, this kind should be applied only to a clean skin. A thorough face-wash with a good lather should always precede its use, and follow its removal. Rinse off the soap and dry the face thoroughly before putting on the make-up.

Girls with very dry skin will get more flattering results if the make-up is applied over a cream or liquid powder base.

REMOVE WITH ICE

Rub ice on eandle-drippings, that have fallen on wooden surfaces, till the wax squots turn brittle, then you can lift them off without scratching the finish. Rub ditto on chewing gum stuck on rugs or upholstery and the gum can be coaxed away with a little careful scraping or rubbing.

HELPFUL HOUSEHOLD HINTS REINFORCEMENTS LENGTHEN LIFE OF NEW GARMENTS

"Prepairs" are better than repairs if ready-made clothes need strengthening with a few well-placed stitches. Reinforcing before a garment is worn insures better service, especially now, when wartime production difficulties often mean poor workmanship. Clothing specialists of the Department of Agriculture suggest checking over a new garment to see if it needs any of the following reinforcements:

To strengthen a narrow or loosely stitched seam on an inexpensive garment—a house dress, for example, restitch seam about 1-16 inch deeper. Set machine at 14 to 16 stitches per inch. On a better garment, rip out and restitch any broken, knotty, drawn or crooked stitching. If material frays, run a row of machine stitching near cut edges. Lacking a machine or working with material that frays badly, overcasting may be done by hand.

Fasten off thread ends, pulling to the inside and tying securely, or run them through a needle and fasten with a few over-and-over stitches.

If a binding is sewed too close to the edge in some places, rip it and move it in a little deeper, being careful not to stretch the edge. If a hem is insecurely stitched, rehem with blind stitches that will not show on the right side.

Strengthen the end of a placket with extra stitches or sew tape stays across ends on underside. Snap or button tape plackets in new wartime garments can often be replaced with old zippers from discarded skirts or dresses.

For pockets on a blouse, reinforce stitching at corners of opening. To make dress and apron pockets more sturdy, lay a piece of tape on the underside of garment in line with pocket top. Stitch it in with the corners.

Rework raveled or weak buttonholes. Resew snaps or hooks and eyes securely, and resew loose buttons with strong thread, leaving a shank of thread so the buttonhole straining the cloth.

When rolling dough on waxed paper, moisten the table top first, then put the paper down. This prevents the paper from slipping.

To remove brown stains from teacups, wipe them with a little baking soda on a damp eloth. Wash in soapy water, rinse, and dry.

If grease in a frying pan should catch fire, use a handful of salt or soda to extinguish it. Water will spread the flame.

Scrambled eggs, cooked in the top of a double boiler are kept tender by cooking them at a low temperature.

Never apply a bleach without first testing your fabric.

PRESERVING TIPS

Fruit butters are the most sugar economical of the sweet spreads, requiring only half as much sugar as fruit pulp used. A pound of sugar will make about three pints of a butter.

In jam and preserve recipes that ordinarily call for equal parts by weight of sugar and fruit, the proportion can satisfactorily be eut to three-fourths as much sugar. With this proportion, 1 pound of sugar will make around 1½ to 2 pints, or 4 to 6 jelly glasses of jam.

A cracked egg can be boiled if it is rubbed with salt before putting it in the water as this will seal the crack.

If the windows work stiffly and it is difficult to run them up and down, rub paraffin on the window cords.

Office Boy: "Please, sir, may I have the afternoon off?"

Boss Man: "It's your grandmother again, I suppose?"

Office Boy: "Yes, sir. She's making her first parachute jump, you know."

UMBRELLA BEAUTY IS RENEWED BY CAREFUL WASHING

Light-colored umbrellas that become dingy or spotted with soil, often may be cleaned successfully at home by soapsuds shampoo. Before washing open the umbrella and brush the fabric with a clothes brush to remove loose dust or dry mud. Any spots which look like grease should be sponged with cleaning fluid.

The bathtub is a convenient place to wash, rinse and dry an umbrella. Hold the open umbrella over the tub and go over the outside with a soft brush dipped in thick, lukewarm suds of mild soap. Give special attention to the center fold of each section, where the fabric usually shows the most soil. Handle and wash gently, to avoid strain on the stretched fabric. An easy way to rinse the umbrella is to hold it under a spray of lukewarm water from the shower, or it may be rinsed by pouring clear water from a pan over it. Leave the umbrella open and stretched over the tub to dry.

An umbrella allowed to knock about the floor of a closet or automobile does not keep its good looks for long. To make it last and give good service, shake well after using in the rain, leave open until dry, then fold and hang it in a clean, dark closet to prevent fading. Umbrellas put away damp, especially in summer, are likely to mildew.

Use tongs to remove baked potatoes from the oven or to lift greens from the cooking water.

You can clean cotton corduroy by washing gently in lukewarm water and mild soapsuds. Squeeze suds through garment but do not twist or rub it. Rinse in lukewarm water, hang on wooden hangers to dry in shape and brush garment when almost dry to keep nap smooth.

Iodine stains can best be removed with ammonia which forms a colorless compound which can be completely rinsed from the fabric.

Keep a pot of chives in the kitchen and use them in salads, sprinkled on tomato soup, or whipped into mashed potatoes.

Leftover corn bread makes delicious stuffing.

SEWING MACHINE SHOULD HAVE SPRING CLEANING

Spring clean the sewing machine, to put it in top running condition for a busy sewing season, is the advice of economists of the Department of Agriculture.

A machine which had a thorough eleaning last fall will generally need just a light going over this spring, unless it has stood idle long enough for gummed oil and dirt to accumulate. They recommend flushing out dirt and gummed oil with a cleaning fluid, such as cleaning fluid obtained from gasoline dealers, kerosene, or carbon tetra-chloride.

Squirt the cleaning fluid (using a small oil ean) into oilholes and on bearings and other places customarily oiled. Run the machine while flushing out dirt and gummed oil until the machine runs smoothly. Then wipe carefully with a lintless cloth and let the machine stand several hours for cleaning fluid to dry. Caution: Since most cleaning fluids are inflammable, it is safest to run electric machines by hand rather than by motor until all cleaning fluid has evaporated.

After cleaning, oil the machine well and run a while to work oil into the bearings. Wipe excess oil off carefully so it won't collect dust. For later oilings, one drop of oil in each bearing and oilhole is enough. Oil after each day's work or after eight or ten hours' use. To prevent drying and gumming, oil machine occasionally, even when not in use.

The public is going to find out pretty soon just how much virtue there is in the diet that prohibits eating red meat.—Republic Bulletin.

VOL. XVIII. NASHVILLE, TENN., JUNE 15, 1945 No. 5.

The Road Up

FLYING DOWN TO HAITI

By

GILES A. HUBERT

The United Nations Security Charter has been signed. The representatives of 50 nations, large and small. participated in the construction of this document which can mean so much to the peace of the world. Among these 50 nations are many small countries that have a common interest in seeing to it that the United Nations Security organization operates on a democratic basis..

Many ot these nations are populated by the darker races of the world. Three of them, Haiti, Ethiopia and Liberia, are populated and controlled by black people. These three countries are relatively small and take only a small part in the politics and the economics of the world. But, they may very well prove the test of the fundamental strength and the democratic fiber of the entire Security organization.

It is through these three little countries that the black peoples of the world have their look-in on the councils of the world. It is important to the other small and middle sized nations (many of whom are of the darker and the exploited peoples) to see to it that these little black nations do have their say-so in the international councils. **Because if they do not, it will undermine the whole democratic position of the smaller nations in their struggle to prevent absolute and complete domination by the big nations or any one of them.**

It is important that these three black nations realize their position as the representatives and the spokesmen of the millions of black peoples of the earth. The intelligence, the forcefulness, the integrity and the finesse with which they carry out this responsible role will go a long way in determining the status of black people the world over in the postwar era.

Next week, I am **flying down to Haiti,** if present plans carry through. The generosity of Fisk university and the Julius Rosenwald Fund is providing the opportunity to spend several weeks during the summer studying the life and economic structure of the "Black Republic."

It is an excellent time to be visiting Haiti. It will be exceedingly interesting to see what reaction the Haitian people will take to the San Francisco Conference and to the prospect of world democratic security.

Haiti is a country of between 3½ and 4 million people located in the third part of the Island of Hispaniola, just east of Cuba, in the Caribbean Sea. The other two-thirds of the island are occupied by the Dominican Republic, yet it has only about 1½ million people. Haiti has a density of population of more than 255 people per square mile.

Port au Prince, Haiti's capital city, has a population of more than 150,000 people and has an excellent harbor on the Gulf of Lonaires It is also on the main line Pan American Airways route to South America and only five hours from Miami, Florida by plane. It is a fine city with beautiful public buildings. hotels, paved streets, electric services, running water and other public utilities. It has radio stations and is in constant touch with the outside world by cable and wireless communications.

The more wealthy business and professional people have lovely homes in the suburban hills surrounding the city and there are elegant clubs and places of recreation. But most of the people of Haiti are extremely poor by our standards. Most of them have an income of less than 80 dollars per year, and many much less than this.

But what they have is theirs,

NEW SECRETARY BIG RANCH OPERATOR

Barbadian Legislator Appointed BWI Labor Liaison Officer Here

The appointment of Jas. T. C. Ramsay, Barbadian legislator, as an area liaison officer of the British West Indies Central Labour Organization was announced last week by Herbert G. Macdonald, chief liaison officer.

Mr. Ramsay is to be stationed in Chicago where he will facilitate work arrangements, help assure adequate housing, and serve as counselor and supervisor for the Barbadian and Jamaican workers, who are in Illinois helping to relieve the wartime labor shortage. At present there are about 1,900 Jamaicans and about 500 Barbadians in that State working in foundries, in muniitons plants, and on farms.

Arriving by boat a few weeks ago along with 1,200 Barbadian and 400 Jamaican workers, Mr. Ramsay came directly to the War Food Administration here to confer with Mr. Macdonald before assuming his duties in Chicago.

Mr. Ramsay, who is a contractor and builder, had served in the Colonial Parliament for nearly five years when he resigned to come to the United States as an area labor liaison officer. There are 11 such liaison officers, three colored and eight white. The legislator is succeeding L. A. Chase, white, who wished to return to the Barbados.

BWI Legislator Named Labor Liaison Officer

JAS. T. C. RAMSAY, right, Barbadian legislator, who resigned his seat in the Colonial Parliament recently to come to the United States to serve as area labor liaison officer for West Indies workers, is shown conferring at the War Food Administration with Herbert G. Macdonald, left, chief liaison officer; and Colin Russell, center, assistant to Mr. Macdonald. Mr. Ramsay will supervise Barbadian and Jamaican workers in agriculture and industry in the entire State of Illinois.—USDA photo by Culver.

RETAIL SUCCESS THE SECRET OF

The typical American buyer is a woman and a homemaker. Therefore, any store that makes a success must please her. If it can figure out a method of doing this, its growth as an individual store or as a multiple unit system, in one town or many towns, is largely a matter of how far its management desires to expand.

And that, briefly, is the background of growth of every independent store or chain store. The development of chain stores probably did more to stabilize costs for the consumer than any other factor in retailing. They established a price standard that became nation-wide. It was used as a yardstick by the consumer in determining whether he wanted to pay higher or lower prices in competing stores, based on services rendered.

The remarkable part of chain store development is that it has not interfered with the growth of independent stores which do about three-quarters of the retail busi-

(Continued on Page 8. Col. 4)

Boy Scouts To Raise Half Million Gardens This Summer

New York, N. Y.—Backing up President Truman's appeal for more gardens, the nation's Boy Scouts are embarked in a program to raise a half million gardens this summer. As the war is now centered in the Pacific, home front attention is centered on the growing food crisis here and abroad.

The Boy Scouts of America with its membership of 1,916,637 boys and leaders, are furnishing a substantial part of the additional manpower needed by farmers and commercial producers. Last year more than 300,000 Boy Scouts worked on farms, and several hundred thousand Boys Scouts and Cub Scouts had their own gardens. Many groups of Scouts went out from towns and cities on "day hauls" to work on farms, returning at night.

President Appoints New Mexico Congressman To Replace Wickard

Representative Clinton P. Anderson, chairman of the House Food Committee was appointed Secretary of Agriculture last month to succeed Claude R. Wickard. Born in South Dakota, the new secretary is an owner of a large dairy and horsebreeding farm in New Mexico and two grain farms in South Dakota.

Mr. Anderson's father was born in Sweden and comes from a long line of farming people. Forty-nine years of age the new secretary was serving his third year in congress as representative from New Mexico. He has been an insurance man and has held several appointive public offices in his home state, including a session as chairman and executive director of the New Mexico Unemployment Compensation Commission.

Like the President, Mr. Henderson is fundamentally a party Democrat, although he voted with the Roosevelt Administration more often than not he voted against Roosevelt supported measures in certain important cases: One of these cases was when he voted for including labor costs in the parity formula, a measure fostered by the big-farm bloc in Congress. He voted for the State-rights Soldier voting bill after it had been denounced by Mr. Roosevelt. This kept thousands of Negro soldiers from Southern states from voting in the last election. He voted for the Dies Committee and for the Smith-Connally Anti-strike bill.

On the other hand, the new secretary voted for food subsidy payments in opposition to the farm bloc.

Mr. Anderson's service as chairman of the House Food Committee prepared the groundwork for his new position, the third war time Secretary of Agriculture.

Former Secretary Wickard was nominated by President Truman as

Agriculture And Industry In The Postwar South

Mordecai Ezekiel
Economic Adviser, U. S. Department of Agriculture

We must now begin to take steps to assure work for the boys when they come home. We have demonstrated how much we can produce for war. We must not fail to make equally full use of our resources for the far happier tasks of peace . . .

The first essential to Southern prosperity is prosperity for the nation as a whole. The South went ragged and underfed in the great depression of 1929; it shares today in increased incomes from full employment for war. No one section of the country can be prosperous by itself, any more than any one economic group—farmers, workers, or businessmen—can be prosperous by themselves. . .

In 1939, we had 45 million people at work and 8 million unemployed. Today, we have 52 million at work in civilian employment, less than 1 million unemployed, and about 12 million in the Armed Services. After the war we will need 57 or 58 millions of men and women at work if unemployment is to be held to a reasonable minimum. That means that the nation will need jobs for 12 million more people than were at work in 1939. We will need work for 5 million more than are engaged in civilian work today. Reconverting war industries and expanding peace-time industries offer new opportunities to every section of the country.

Need for Industrialization

The South needs industrialization. Lack of industrial development has

(Continued on page 2, Col. 1)

→ READ: South Carolina Farm Pays Out. P. 3

Agriculture and Industry In The Postwar South

(Continued from Page 1)

limited both farm and city . . . These limited Southern opportunities show up clearly in employment and in incomes. Before the war, half of all our farm workers were on Southern farms. Agricultural net income, however, was barely half as large—$380 per worker in the South, $710 per worker for the rest of the country.

The economy of the South has long been dominated by cotton and tobacco. These crops characteristically use much labor and little machinery. Their acre value has been relatively high, but their return per hour of labor has been low. . .

The Southern farmer could get by, despite the handicaps of few acres, little use of machinery, and low yields, so long as the South enjoyed a dominant position in world cotton markets . . The relatively high price of American cotton has been pricing it right out of its markets, while our cotton control program has been preventing the most efficient use of Southern farms. Twenty years ago, we produced around 55 per cent of the world's cotton, while today we produce only 43 per cent. Adding synthetic fibers and cotton together, our present cotton output is only 33 per cent of the world's annual production. . .

Reconversion

Many men and women have left Southern farms and cities for military service and defense work. After the war they will be looking for peace-time work again. In addition, nearly 2 million Southern workers were unemployed before the war. Population growth will add another million and a half workers during the next ten years. If the million or more people who would be released from farm work under the reconversion program are to find jobs in the South, there must be work for them and for these other people as well. To accomplish that, it would be necessary to increase nonfarm employment in the South from the prewar 8.2 millions to 13 millions by 1956—an increase of 60 per cent . . .

Industrialization means a balanced growth in all parts of the region's economy—in transportation, trade, professional service, personal service, clerical work, mining—as well as in manufacturing. Out of 5 million more jobs only about 1.7 million might be in manufacturing and construction, while the rest could be provided by other industries. . . .

South Has Resources

The South has the necessary resources—raw materials, fuels, power, labor force, enterprise, and markets. Much of the region's new war industries will be discontinued or greatly curtailed when the fighting ends. These industries offer a starting point for other permanent employment. They will provide plants for conversion and trained workers and managers. This nucleus of trained workers can help speed the needed large-scale regional development. . . .

The new facilities to industrialize the South will require the investment of many billions of dollars. War savings, both by individuals and by business and financial concerns, have been so large that most of this needed investment can be provided from local funds. If this is to be done, though, the individuals and businesses concerned will need to see the opportunities ahead, and move to take advantage of them fast enough to make new jobs as rapidly as the workers become available. . . .

Industrialization of the South also requires better education and better health for its workers, both white and colored. Increased funds are needed for more adequate general education, public health, and medical services, for the South. Investments in workers' minds and bodies can be even more productive than in plant and equipment. . . .

South's Opportunity

The years immediately after the war offer the South an exceptional opportunity to "get in on the ground floor" of the nation-wide industrial expansion. During that period, if we are **to achieve full** employment, the nation must create new peace-time work-places for many millions more workers than it ever employed in peace. If the South pushes industrialization vigorously in that period, it can expand its industry as part of the nation-wide expansion without having to steal industries from anywhere else. It can reorganize its agriculture for greater efficiency, and better incomes without public supports. Once that period is past and the new industries are created over the country as a whole, the South can expand further only in strong competition for markets and for workers with industries already established in other parts of the country. During the next few years the South can grow with the great national postwar expansion. Later on would be too late—such an opportunity may not come again this century.

Address before Conference on "The South's Postwar Economy" held by the Southern Regional Council, Atlanta, Georgia, April 11-12.

President Appoints

(Continued from Page 1.)

Administrator of the Rural Electrification Administration, but his appointment ran into stiff opposition in Congress and among members of the REA Cooperators.

Boy Scouts to

(Continued from page 1)

stitute has obtained General MacArthur's interest and is offering on his behalf a General MacArthur Medal to those Scouts who do an outstanding job with their individual gardens. Those winning this honor will need to successfully cultivate, care for, harvest and put to good use a reasonable variety of products from gardens at least 400 quare feet in size.

The 400 square foot requirement was arrived at on the basis that it represents a big enough job to warrant special recognition and that it is a large enough garden to be a major factor in the Food for Freedom program. Each garden will be inspected by a competent adult and the awards will be made not for "best" gardens but on the basis of meeting the high standards. The medal is for individual Scout gardens only. However, Scouts in a Troop or Patrol working together in a common garden plot will be eligible for the Green Thumb Certificate, which may be presented to all Scouts who produce for this year.

MORE THAN SKIN DEEP

They say beauty is only skin deep. Perhaps that is so. But much of it comes from mines hundreds of feet deep in the earth. Fashion models and American women generally, would be surprised to learn some of the weird chemical tricks that contribute to their breathtaking appearance. Most of these chemical tricks use coal. Nearly all textile dyes are derived from coal. Dozens of chemicals and resins obtained from coal are needed to process or finish fabrics. From coal come plastics for dress buttons, ornaments, shoe heels. Nylons are made of coal, air and water! "Accessories to match" also owe much to coal; colors for lipsticks and nail polish; scents for perfumes; plastics for costume jewelry, handbag frames, compacts—altogether, more than 200,000 useful products depend on coal—and many of them are used to glorify American women.

Here is an example of how the standard of existence which we accept as normal is actually a miracle, a miracle supported by an intricate industrial system requiring millions of persons to keep it running. Few of us realize that the slightest unbalance in this system does far more than deprive people of jobs. When vital industries such as coal are unable to operate smoothly and efficiently, the miracle begins to evaporate.

This is why everyone of us has so great a stake in helping to do what we can to keep industry running smoothly. Every one of us wants to see the miracle of American existence perpetuated forever.

one of the best ways in which to Simple prayer of thanksgiving is show our gratitude.

Select Awards for Boy Scout Gardens

A General MacArthur Garden Medal (above) will go to a limited number of Boy Scouts in each community who do superior jobs in raising and harvesting a variety of produce in gardens of at least 400 square feet. It is provided by the National Victory Garden Institute. Boy Scouts throughout the nation are not only planting gardens but will also work on farms. The Green Thumb Certificate (below) will go to every Scout raising food and reporting it to his Local Boy Scout Council.

S. E. Marshall Speaker at Nansemond County Picnic

Nansemond County, Va.—The 4-H clubs of Nansemond County held a picnic and program Saturday, May 12, at the Tidewater Fair Ground. The program was made up of numbers from various clubs of the county. The program included group singing, quartets, sextets, readings, recitations and duets.

Lorenza Davis president of Wilroy club presided at the program and Evelyn Sears song leader for Florence Graded club led the group singing. Mr. S. E. Marshall district agent was the speaker for this occasion.

Mr. Marshall's talk centered around the 4-H club Pledge which was very interesting.

The club members took active part in playing various games and races. The games were led by the Junior girls and leaders.

After the picnic and program the entire group attended the movies at the Carver Theater in Suffolk. The pictures shown were "The Soldier of the Soil," and "The Million Dollar Kid."

This group practically filled the theater. Approximately 40 club members and leaders attended this one day affair representing thirteen 4-H clubs of the county, which was 100 per cent representation of clubs. However there are 652 club members enrolled.

Mr. James Harris is the County Agent of Nansemond County.

COMMON SENSE AT LAST

Writing in Harper's Magazine, C. Hartley Grattan says factories cannot employ all the millions of persons in the armed forces and war production, but that this need not cause despair, for the first essential of a healthy postwar economy is that workers be properly distributed—a larger proportion in service industries than in factories.

Service industries must be given every opportunity. They include the wholesale and retail trade, transportation, communications, utilities, farming, bankers, brokers, insurance people, office workers, hotel keepers, domestic servants, teachers, publishers, newspapers, advertising, radio, amusements, all professional people, etc.

Mr. Grattan is correct. You can't build a peacetime economy on a wartime foundation.

HELP THE VOLUNTARY SYSTEM

It is interesting to note that most of the talk and agitation about so-called state medicine and socialized medicine, comes from sources that seek to curry public favor, and too often votes. The people are led to believe that they will get something for nothing under government control and subsidized medical and hospital plans.

The movement so vitally affects all the people, and it is so important that all individuals have proper medical attention, that the principles involved in plans to socialize medicine are apt to be overlooked. Fortunately, there has been resistance to the socializing process for medicine, because of the well-grounded fear, born of experience, that under bureaucratic control, democracy is promoted as individual initiative is stifled.

If the forces that seek to put government into the medical business, would, instead, help the medical profession perfect plans by which industries and individuals would be covered by voluntary programs for prepayment of medical and hospital bills on a monthly basis, they would be upholding the American tradition of private initiative, saving the taxpayers countless millions of dollars, and what is most important, they would be encouraging, rather than discouraging the expansion of medical service on a more sound basis than in any other manner.

Fortunately, the medical profession, industries and individuals have already worked out prepayment plans under which millions of people are now being cared for and millions more are being added as rapidly as they understand the advantages of such a system. They are acting as free citizens on a voluntary basis, and not under state compulsion with a new and arbitrary tax assessed against them whether or not they so desire it.

PAYING DIVIDENDS

The objective of the capital stock fire insurance companies in the United States is to have fewer destructive fires each year. One might ask, why should insurance try to prevent fires when there would be no necessity for fire insurance if there were no fires?

Even with the greatest care and every known safety device, it would be impossible to prevent all fires. But if it were not for constant fire prevention efforts, the loss of life and property from fire would be so gigantic that the average person could not afford to carry insurance. Therefore, as the result of the fire prevention work of fire insurance companies, in cooperation with fire departments, various state and county fire protection agencies and the public, the community in which you live, your home, the building in which you work, the factory or store that you own, is a safer place today than it was a generation ago.

Because of fire resistive construction promoted by fire insurance, including better electric wiring, safer heating plants, more effective fire doors, sprinkler systems, and improved safety devices and preventative measures of many kinds, fire losses and fire insurance rates have decreased steadily in the past thirty years—as losses go down, rates go down. So, fire prevention is a highly individual matter and cooperation in reducing fire losses pays direct dividends to every family in the land.

Cotton Planters Prepare Against Boll Weevil

Cotton growers should prepare now to get calcium arsenate to fight boll weevil this season wherever this pest has caused serious losses in past years, say entomologists of the USDA Research Administration. Growers should get their dusting machines in shape for use, and have available at least 10 to 15 pounds of **calcium arsenate** for each acre planted to cotton. Unless the weather turns hot and dry enough to kill a large proportion of the weevils, cotton will be seriously infested. Boll weevils in April were more numerous than they have been for many years. The large number of weevils that developed in the fields late in 1944, have largely survived the winter due to the mild temperatures that prevailed generally. Killing frosts came late in most areas and the cotton leaf worms did not defoliate the plants in most localities. Weevils had plenty of food and entered hibernation in good condition.

Striking Comparison

Since the war really got underway after Pearl Harbor, the railroads of the United States have been handling the traffic of the nation on a narrow margin of capacity.

As the strain of the war load increased, instead of being able to buy new equipment as needed, they had to patch up the old and get by in some way, in order that critical materials could go to build our fighting machine. In spite of such a situation, when tonnage doubled and the men to handle it dwindled, the railroads still met the demands.

But last winter, nature took a hand and visited the East with the worst storms in years. The orderly movement of cars to and from the West was interrupted; goods were held up at factories and terminals; grain piled up in the elevators, and car shortages occurred.

In spite of that, during the third week in April, the loading of Western grain and grain products was 10,028 cars above the corresponding week in 1944. The miracle is that with a famine of equipment and manpower the railroads have been able to get by with a negligible car and transportation shortage.

What would have happened to the nation if the shortage of cars had been on a par with butter, sugar, beef, pork and practically everything else the American consumer needs? If there had been any such shortage for transportation as exists for consumers of most other products, this nation would indeed have been flat on its back, and the effect on our war effort would have been a national catastrophe.

So, if you find the train crowded, or have to wait a little longer than you would like, to get a freight car, have patience and think how much better you are served with transportation than you are with the bulk of the products you consume.

FARM-TO-MARKET ROADS

Recently enacted Federal legislation has authorized funds for extension and improvement of secondary roads in the immediate postwar era. This Federal aid fund must be matched dollar for dollar by the states. If state laws do not permit such participation, they must be amended before the states can share in the Federal funds. The spread between the cost of operating over good roads and over bad is far greater than the average persons realizes.

For an idea of just how much difference there is in the cost, the National Rural Letter Carriers' Association has made available some remarkable figures. Thirty-two thousand rural carriers drive daily 1,500,000 miles. Most of this tremendous mileage is on secondary or farm-to-market roads. Records kept by carriers in Indiana and Iowa show the operating cost per mile for earth roads to be 7.8c; gravel roads, 4.5c; pavement, 3.8c.

Bad roads are an impressive economic waste and are an unanswerable argument for practical postwar road construction. You can hardly blame the rural letter carriers for being unanimous in favor of improving the highways they have to travel.

There are still 42 per cent of America's farms on dirt roads. Better rural roads will speed up shipment from farm to city and help hold down food costs.

South Carolina Farm Pays Out

Jim Chisholm Attributes Success To Year-round Income

Chester, South Carolina—Jim Chisholm, six years ago, arranged to rent a 86-acre farm and agreed to pay 800 pounds of lint cotton as rent, but he was hard pressed for operating funds. Chisholm called at the office of the Chester County Supervisor of the Farm Security Administration where he applied for and received a loan.

Today he is the paid-out owner of the farm he rented in 1939 and his place is known and recognized by agricultural leaders as one of the model family type farms in the State. Soil conservation experts call it a "dream farm" and diversification is practiced with a thoroughness found upon few, if any, farms.

Jim Chisholm, paid-out owner of one of the model family type farms in the South, and members of his family. With him are his wife, Maggie, his daughter, Elizabeth, and Tommy, seven year old adopted son. His annual gross income now is about $2,500 a year. His annual gross income before enrollment in the FSA program was $500 a year.

Mr. and Mrs. Chisholm spent much time each year just showing sightseers about the place. Among other things they see the following:

A neat white house of typical FSA construction, on a landscaped knoll, with shrubbery around it and the yard. There is a white arbor over the gateway and two white lawn swings in the yard: There is no trash or litter cluttering up the place.

Has Modern Kitchen

Inside one sees new furniture with attractive homemade coverings over the beds and chairs. The kitchen has built-in cabinets, an ice refrigerator and a wood range with water heater. On the walls are three certificates for better farm living signed by the Governor of South Carolina and the Director of the Extension Service, which were awarded to the family for three consecutive years. To win the certificate a family must produce more than 75 per cent of everything used for farm living. Also there are framed certificates awarded by the Farm Security Administration for outstanding accomplishments in producing food for war needs.

Back of the house are seven buildings. There is a storage building with concrete floor and lined with shelves on which are stored 800 quarts of meats, fruits and vegetables of all kinds. Mrs. Chisholm sells off some of her canned goods each year to make room for a fresh supply.

Next is the smokehouse, filled with cured hams, shoulders and side meat suspended from the rafters. It also has a concrete floor. Chisholm sells on an average of seven No. 1 hogs a year and $80 worth of meat. A diary house is equipped with a pump and modern milk-cooling equipment. It is kept spotless and meets all requirements of the county health service and the Borden Milk Company, which collects milk daily. Income from milk sales average $100 a month.

Has 35 Cows

Other buildings include a main barn and two large storage barns. The main barn houses three mules and 35 Guernsey cows and heifers. There are 20 cows and 16 are milked through the summer. Chisholm also has 15 heifers and a thoroughbred bull. To one side is a compost pen and the barn and cattle shelter are cleaned regularly. The garage is empty and will remain that way, Chisholm explained, until he gets enough money to buy a good car which probably will be after the war.

The storage barns which he built himself are used to store grain, feed and fertilizer, plow tools, a mower, rake and other equipment.

A chicken yard near the main barn is equipped with a shelter, feeding and watering place. There were 75 hens, 12 turkeys, 10 guineas and three geese in the chicken yard early in 1945. The family sold $312 worth of eggs in 1944 and $175 worth of turkeys.

Gross farm income in 1944 was in excess of $2,500. He sold ten bales of cotton, but exchanged his cotton seed for cow feed. He made 100 bushels of corn and 50 tons of hay. Crop sales brought him $1,400 and the remainder was from milk, livestock, poultry and egg sales.

Chisholm, who is 49, has lived in Chester County for the past 30 years. He began farming in 1917. He always rented prior to 1939 and the most he ever made in any one year was $240 in 1936. He moved seven times. In 1928 he lost everything except his household goods, through foreclosure. He picked cotton and saved enough money to buy a plug mule for $50, and did off farm work to buy feed for the mule.

When he applied to the Farm Security Administration for a rehabilitation loan, his net worth was about $1,900 which included the value of his household goods, seed, feed and food on hand.

His first rehabilitation loan was for $322. He received rehabilitation loans each year through 1942, and met the required payment each year. Chisholm's application to purchase the farm under the terms of the Bankhead-Jones Farm Tenant Act was approved by the county FSA committee in the fall of 1939. The total cost with initial buildings and improvements was $2,880 although the farm without the improvements was valued at only $900.

Although Chisholm had a maximum period of 40 years to repay the farm ownership loan at 3 per cent interest, he made a final payment in the fall of 1944. Today his net worth is estimated at $7,575.

The big difference between "farming with FSA" and farming as he once practiced it, Chisholm said, was in "living at home and having year-round income." He used to plant only cotton and corn, but after enrolling in the FSA program he "put in" wheat and oats and feed.

They have a daughter, Elizabeth, 23, and an adopted nine-year-old son to help them. After the war ends "maybe we can get an REA line through here and have some electricity and a telephone," Chrisholm said.

Jim Chisholm's home in Chester County, South Carolina, is one of the most attractive family type homes in the country. The grounds are landscaped. There is lots of shrubbery and the house is painted as often as painting is required.

A smoke house full of meat on the Jim Chisholm farm in Chester County, South Carolina. He kills about seven No. 1 hogs a year and sells about $80.00 worth of meat each year.

World Peace Can Not Be Won With Sword, Baptist Editor Contends

Baltimore, Md.—What real peace means and how world peace may be brought about are points emphasized in a stirring article of the June "Expected" religious magazine, which is published here and edited by Dr. M. C. Allen, gifted writer and speaker, and a prominent figure in the National Baptist Convention of America. The editorial is as follows:

The term "world peace" is a misnomer. PEACE is an individual thing. PEACE cannot be made with swords and guns, nor can enduring peace be written on paper under the seal of negotiating states.

Abiding PEACE is a philosophy of life—a sense of social justice, a culture. It is respect for the sacredness of personality wherever found.

Genuine peace is the law of life. It originates in cool judgment and dwells in a warm heart.

PEACE is made like armies. It is made up With individuals. It can not be negotiated. Take the individuals out of any army and you wreck it. The world attempted to negotiate PEACE at Versailles. Hitler, and individual, wrecked it.

The term WORLD PEACE is an illusion.

PEACE is moral—spiritual—humane—divine.

The world is material—the sword—the state.

The moral is superior.

The world is inferior.

The moral is life functioning naturally.

The world is life functioning artificially.

The moral makes life.

The world destroys life.

The moral makes PEACE and "LEAVES" it.

The world negotiates PEACE and GUARDS it.

He who discovered the secret of genuine PEACE submitted the formula:

"PEACE I leave with you, my PEACE I give unto you: not as the world giveth, give I unto you. Let not your heart be troubled neither let it be afraid."

"I will____give you another comforter, that he may abide with you forever; even the SPIRIT of TRUTH; whom the world can not receive." (John 14:16-17, 27)

"It is the spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you. THEY ARE SPIRIT, AND THEY ARE LIFE." (John 6:63.)

Peacemakers are pure in heart. The individual who has made peace within, notwithstanding the imperfections and evil influences that prey upon the creative powers of man through the learning processes of life, sees God winning out even in international chaos.

He who has PEACE within knows that through the constant failures in the experimentation of wars and negotiated PEACE that man will discover, to have peace, he must develop within himself the ABILITY TO LIVE PEACEABLY.

WAR THRIVES IN EXCITED STUPIDITY.

No one plans to take the life of another nor his possessions unless he sees nothing else to do for his own security or the security of his major interests. It does not mean that something else could not be done for security; but, his ability fetches it not.

WAR IS VICE. It makes no appeal to, nor use of Moral virtues; love, truth, justice, mercy. WAR is enraged greed, revenge, hate, and pride.

WAR IS VICIOUS. It teaches men to hate, plunder, destroy property, and glory in murder.

WAR IS STUPID. It sells bonds to buy bombs to destroy property, food, and clothes and then begs those who bought the bombs to give clothes to those whose clothes and homes their bombs destroyed.

WAR IS DEATH AND DESTRUCTION. The life and property destroyed in World Wars I and II exceed human imagination's ability to estimate.

"WAR IS HELL." The homes, churches, Schools, hospitals, and many of the great cities of the world have been literally burned or bombed beyond recognition. Art galleries with the world's greatest paintings and sculpturing; museums; invaluable historial records; inventions; scientific discoveries; and many other records that might have led to discoveries that would have blessed mankind, have fallen heir to the flames of hell—

"RACE SUPERIORITY."

The heathens in the jungles of AFRICA poke fun at the stupidity of what men with white skins call RACE SUPERIORITY and Christion civilization. No jungle dweller in Africa has ever suffered the mass slaughter and disasters that Western Europe has suffered in the past five years; nor has any heathen ever committed such crimes against humanity as is credited to tthe SUPERIOR RACE.

Anyone who thinks that Jesus' concept of the power of "MORAL RESISTANCE" to be greater than the power of the sword was stupid; or anyone who thinks that Jesus did not know what he was talking about when He issued the orders to the leaders of His movement; "Put up thy sword for he that fighteth with the sword shall die by the sword," let them ask Italy—Mussolini; Germany—Hitler; Japan—Tojo.

In the Negro's universal indifference to material power and the susceptibility of his soul to spiritual values, beneath the surface, there is a ray of hope for man's escape from self-extermination.

The spiritual leaders of the Negro race have a church and a following. The Negro's spiritual leader has not fleeced his flock not feathered his own nest. A rich Negro preacher is unheard of.

The successful Negro business man has invested his ability and character in the cooperation he has built. Maggie L. Walker, the banker; B. L. Jordan and W. L. Taylor, in insurance; and R. H. Boyd, the publisher, all died poor. W. A. Jordan, of the Southern Aid; Hattie F. N. Walker, of the St. Luke; Bernard Gilpin, of the Richmond Beneficial; and C. C. Spaulding. of the North Carolina Mutual. head Negro insurance corporations that handle approximately $20,000,000 annually. And, as angels of mercy, they have turned over to the families of distressed policy holders in the five years more than $40,000,000, and then saved Virginia Seminary, a school of religion, that represents the hope of millions of Negroes, from the auction block; while they themselves have chosen to suffer the afflictions of their people's poverty.

George Carver, the scientist, re-

Flying Down to Haiti

(Continued from Page 1)

for the most part. Like most of the West Indian countries, the main subsistence of Haiti depends upon agriculture. But unlike most of the other Latin American countries, the Haitian farmer most usually owns the little farm that he operates. There are very few large plantations in Haiti such as exist in Cuba, Puerto Rico and our American South. Such plantations as do exist (and these cover a very small part of the farming area) are owned by a quasi-governmental corporation and a few by the United Fruit Company on which bananas are produced.

But because of the extremely large population on the small amount of land, the farms must be very, very small and the people very, very poor. Nevertheless the total product of Haitian agriculture (its coffee, bananas, sisal, cacao, rice and recently rubber) is of significant amount and importance in Inter-American trade and commerce.

Haiti shouts to the world for help in developing its economy and relieving the poverty of its people. Haiti wishes to take a firm place in the Family of Nations. Haiti led the movement for freedom from the yoke of colonial oppression which finally freed Latin America from the control of Europe. She supplied troops to help the American colonies in the war of revolution. Her great President Petian provided a haven and support for Simon Bolivar, the Latin American "George Washington." The story of how Toussaint L'Ouverture fought for the liberation of Haiti from French slavery was an inspiration to all the rest of the American Nations.

Haiti has a rich heritage of leadership in freedom, in independence and in international cooperation with freedom loving nations. Her voice should be heard in the Council of Nations. **Her ability to speak for the black peoples of the Americas is patent. Will she be able to do so? Will she be willing to do so?** Upon these questions rests the test of international democracy and the outlook for the black peoples of this hemisphere.

Stomach Trouble

Every now and then some so-called "Negro Leader" does something that just turns your insides right on out. Last month we received a copy of a pamphlet entitled **Negro Migration from the Shreveport Area** with "Causes and Suggested Remedies," the author of which was the Colored Probation Officer of a Louisiana parish.

A few excerpts from this notable document will suggest the general character of this supposed study:

"A Summary and Condensation of the opinions secured . . . . come to this: There is a deep, dreaded underlying feeling of fear . . . a deep, dark picture of impending doom of one kind of other.

" . . . Not once was voting made a point; not once was poll tax and the sing-song "segregation and discrimination" of Northerners who wish to make political capital of such matters ever mentioned, not even as an outlying contributing factor.

"This one fact was clear throughout. The Negro here . . . . is supremely satisfied with what he does and can do as things stand, and he indeed loves the South as a man only can love his home. But he is just scared."

The pamphlet goes on to say that Negroes are told about great opportunities and better living conditions elsewhere, but they are never told about Northern Slum Areas, high rents or that Negroes are segregated just about as much North and West as in the South. Misinformed local readers and outsiders are responsible for the Negro's fear complex.

Yet in face of this, the "study" does note that **"it has been the responsible, steady, reliable, intelligent Negro who has been migrating."** How the author puts this observed fact together with the idea that fear based on misinformation and no appreciation of the great advantages offered in the South is a little difficult of understanding.

Careful studies by exceedingly competent persons almost unanimously show that there is a great surplus of underpaid, ill-housed, impoverished and sickly people backed up on Southern farms and in Southern towns. Thousands upon thousands are being "tractored" off their sharecropper units and more threatened to be in the next few years.

The South and the nation should be glad that some of these people are now getting the opportunity to get established with jobs in new areas. The nation and the South should be interested in helping these people become adjusted to their new environment and in assuring them continued employment.

Adequate reorganization of Southern economy means that at least one-third of the people must secure new means of livelihood. The development of Southern industry should and must employ many of these people. But a large proportion will necessarily find jobs elsewhere.

On the other hand, anybody who maintains that present day Negroes don't want to vote or don't want to be treated as human beings and given equal opportunity to achieve status according to their ability, is either crazy or decidedly dishonest. **You can't educate people and expect them to maintain the point of view of the slave.** At least this is true of most people; unfortunately there are exceptions.

General Education Board Gives $30,000 To Aid Boy Scouts

New York:—The General Education Board has appropriated $30,000 to the Boy Scouts of America for a three-year project to carry the programs of Scouting to more Negro boys it was announced last night (WED.) by Elbert K. Fretwell, Chief Scout Executive.

This was in addition to $17,000 granted by the Board in 1941, which made possible the employment of Negro Field Executives by 36 Local Scout Councils in the South.

Any Local Scout Council in the South wishing to employ a Negro Field Executive or add an additional one to its staff may receive a grant from the General Education Board Fund. One-third of the Field Executive's salary and traveling Expense will come from the fund if one-third is provided by Negroes and one-third by white persons in the community, or if the last two-thrids is provided by the Community Chest or War Chest.

This program makes possible the employment of thiry to forty additional Negro Field Executives who will devote their full time to the organization and supervision of Cub Scout Packs, Boy Scout Troops and Senior Scout Units, the recruiting and training of suitable volunteer leaders and the supervitivities.

sion of camps and other Scout ac-

Since the 1941 grant Negro participation in Scouting has increased to a membership of over 100,000 boys and adult leaders.

"Experience shows," says Dr. Stanley A. Harris, National Director of the Interracial Service of the Boy Scouts, "that Negroes are very much interested in their boys, willing to sacrifice so that their boys may have Scouting, and that the white men on Boy Scout Executive Boards in the South are tremendously interested in seeing this character education program of Scouting extended to more Negro boys."

An army mule named Maggie was buried and the following inscription appeared on the tomb: "In memory of Maggie, who in her lifetime kicked 1 general, 4 colonels, 2 majors, 10 captains, 24 lieutenants, 42 sergeants, 545 privates, and 1 bomb."

It Can Be Done

San Francisco—the World's Biggest Selling Job

At the San Francisco Conference, delegates from 49 nations in Asia, Africa, Europe and America, are seeking a way to keep peace in the world long enough for one generation to grow up without a last war's taxes around its neck, or a next war's uniform on its back.

Forty-nine countries, many of them populated by darker races, are trying their mightiest to sell their belief, their needs and their good intentions to each other. It is the biggest and toughest selling job the world has ever known—and the going is hard.

The chief salesmen are Stettinius of the United States, Eden of Great Britain, Molotov of Russia and Soong of China. The countries they and others in their delegations represent are known as the "Big Four," because at this time they are the four most powerful countries in the world, having the most weapons to use in war, the most goods and raw products to sell in peace, and the most people to whom the goods of others can be sold.

So large and so powerful are these countries that the 45 smaller nations look to them both in hope and in fear, and there is every good reason for both feelings. For with power goes influence that multiplies many times each country's actual ability to make war, keep peace or sell goods.

The 45 smaller nations sitting in the World Conference are measuring their chance of living among their powerful neighbors in freedom from want and fear by watching the ideas voiced by Big Four delegates at the Conference with patterns of life inside the Big Four countries.

What some of these patterns show is disturbing, the farming patterns most disturbing of all. For instance, a recent issue of **The Farmer's Weekly,** South African "farmer's" paper, spelled out at length arguments for and against the better wages, better food, better housing and a little education, which could be counted on, some planters thought, to hold workers on South African farms for the next 20 years, at least, since, "in all parts of the world, low wages have been the chief factor in the draft to town."

But, while admitting that "no matter how one looks at it, the average Native farm worker is grossly underpaid, ill-housed and clothed, incorrectly if not actually underfed, and generally a harassed and miserable individual," arguments for better treatment were presented almost wholly as a means of taking the bull by the horns in advance of possible government action, others frankly offering better treatment as a means of keeping workers under a hoped-forextended wage-freeze.

The demand of still another planter correspondent for "a constructive (government) policy to keep workers on the land," was an uncomfortable reminder that the Pace "Slave Labor" Bill is still with us in the United States, promoted by "farmers" of the same kind of those who now seek to ham-string farm labor in South Africa.

Shortly after the farm labor talk came out in **The Farmer's Weekly,** an article on rural housing was published in the North Ireland **Farmers' Journal,** organ of the Ulster Farmers' Union and the Young Farmers' Clubs of Ulster. The author, commenting on a newly published report of "the firs tcomprehensive housing survey ever made in North Ireland," pointed out this Home Office survey was made only after publication of a protest article in the **Journal.** As a North Ireland farmer, he charges officials of the ministry of Agriculture with giving all their attention to the condition of cow-sheds, "while we our wives and our families have to eat, sleep and spend our days and nights in homes unfit for human habitation." The survey—20 years delayed—shows that one farmer out of every five in Ulster lives under such conditions.

So? Back to the selling job. If people with money power can still force such conditions on people without money power, in lands, including our own, under Great Power control, how can these powerful nations sell confidence to little nations, to little farmers, to laborers, to racial groups, at San Francisco?

They cannot. Our own United States has steadily stripped from its shelves the goods which it was stocking for its own people, and that it might have sold to others—goods such as better living standards for tenant and sharecroppers, including sanitary housing, the right to space for a family garden, the right to keep a family cow and raise a few pigs for meat, the right to a "decent floor" for their wages, and for social security to remove the fear of want.

Great Britain has little but "futures" to sell to minorities—"pigs in pokes" at a going price far too high, like Churchill's recent words of approval for "fair wages and a standard of living" for agriculture, spoken **after** a resolution supporting these advances had been passed by his Conservative Party Conference the day before. Whole-hearted sympathy goes to China in her heart-breaking task of making progress with worn-out abused little people on worn-out abused land—but China has only her courage to sell.

Alone of the Big Four, Russia—red, green, purple, or just plain practical—has put a bill of goods for the little man into action without apology.

We American farm people do not like "collectivism." We do not wish to "farm for the State," collectively, and we wish still less to farm collectively for the Gold Brick Insurance Company, or the Land Grabbers Protective Association which is the rankest kind of collectivism. And we are too smart, now, to starve ourselves to death on a diet of "rugged individualism, making a living with our bare hands even as our fathers did." But we know, now, how to gain strength and keep independence through cooperation.

So we do not have to live in Russia and "farm collectively" to admire the single-mindedness with which Russia has worked at building her soil, her industries and her opportunities for all her people.

What, if anything, then, has the Big Four sold to the Little Forty-Five and a great many minority group consultants at San Francisco? Just this—their own power; their own ability to state their own cases, apply their own pressures and produce enough discomfort to force some expression of consideration for the basic right of all people to freedom of action and decent living.

If, by offering to us a bare cupboard, the Big Four have sold us self-reliance—the realization that we are now, as never before, "on our own," then the Big Four, without in the least meaning to do so, sold to all "little people" at San Francisco, A FIRST CLASS BILL OF GOODS. Let us use it first, in our own country.

ONE WAY TO DO THIS IS TO PAY THAT POLL TAX

Police in Portland not long ago received the following note: "The guy who lives next to the police station is a crook and ought to be prosecuted to the fullest extent of the law. I cracked his safe last night and found it full of black-market gas coupons. Signed, A Friend."

Medical men are astonished by a rare case just called to their attention: a man suffering from a cigarette cough.—Pittsburgh Press.

The Tenant And Soil Conservation

By D. W. Wiley, Jr.

(Written in the Wichita Falls (Texas) Record News and reprinted in Acca Press, monthly cotton farmer's magazine published, by Anderson, Clayton Co., at Houston, Texas)

It is long past moving time on the farm and yet the tail-ends of many a crop are still in the field. With land to be broke and oats to be drilled, this smattering of cotton and corn is enough to give some the fidgets while others just get plain draft board conscious.

As landlords and tenants we should take stock of that obvious something that is responsible for the nomad existence of the countless number of our tenant farmers.

If you, as a landowner, were asked this question, "Why is your tenant leaving?" what would be the answer? Did he have the ability to cope with your expectations and was he equipped to farm your land in a profitable manner? If the answer is yes, then maybe it has dawned on you or the tenant that the land is no longer fit for cultivation. That the many years of robbing the soil has left its mark in eroded poverty stricken splashes of brown scars across its borders. Or maybe he left because the roof leaked or the windows, unscreened, looked out on the spot where the barn had fallen down. When you rented him the farm "as is," you might have kept a good renter if you had indeed rented to him "as was." But no, you were pennywise and by neglecting to keep up your improvements you have seen desirable tenants pass you by. As a result your farm house may now resemble a pigsty more than a place of human abode.

And the tenant, what has he to say? Did he ever know from one year to the next whether he could keep the place for the following year? Was he kept excited by prospective buyers or selling agents?

He probably had first knowledge when the east field needed terracing or the three borers first deposited their eggs. He knew that the leak in the overhead tank would soon rot out the heavy supports, but what was it you told him when you rented him the place? Take it "as is." You were just catching, not pitching.

It is true that the breaking up of many of our farm families is due to the furnishing of manpower for our fighting units both at home and abroad, but subsistence on the farm is dependent on more things than just the uncertain aspects of the weather. The tenure system as it exists in the South today can likely sour the best laid plans if continued into the postwar world. To secure a good tenant you must first have something to offer that is tenantable and to assure a prosperous partnership between the landlord and the tenant will call for mutual consideration and understanding over a term of years. How easy it would be to spread the barn manure where it will enrich the soil if you plan to share the fruits of future plantings. How quick a gate or fence can be repaired if the hinges and staples are made available. Who knows, maybe the lock on the henhouse door can be fitted with a new key.

The old house could stand a coat of paint and as one partner is making it his home he will be interested in doing it right, while the other partner will want to furnish good paint to stave off depreciation and protect his capital investment.

Where the length of tenure is based on something more than just a yearly arrangement, the incentive to buy new machinery and improve the physical farm plant will reflect itself in the health and wealth of both tenant and landowner. But where the tenure is no longer than the present season you will find erosion, rust and decay.

Lester Brooks said it, "The time when we could go west and squat on the public domains has past. We must now build back a part of the soil that we have allowed to waste away."

EDITORS. NOTE: When the Acco Press comes forth with an article like this it IS time for some rejoicing. Good going for somebody.

"You know, it's up to guys like you to take care of that."

"You're damn tootin'," said Green. "I got it all figured out."

Justice Black Calls for World Resurgence of Democratic Faith

(Acceptance of Thomas Jefferson Award

Mr. Toastmaster, Mrs. Roosevelt, and, may I say, friends, who have gathered here this evening:

It would be impossible for one not to be deeply moved by the kind expressions and the warm manifestations of friendship which have come to me this evening. I cannot, however, accept the award as a mere personal offering to me. It implies to me rather a recognition that we, all of us, share common hopes and ideals, all of which rest on a belief in the essential dignity of men. It was that belief, I think, which led Jefferson to strive unceasingly that our nation might establish, in his words, "equal and exact justice to all men of whatever state or persuasion, religious or political." A government with this faith is democracy at its best; a government without this faith leads straight to fascism.

This democratic ideal has sustained our nation for more than a century and a half. Unfortunately, our daily practices sometimes have fallen short of the dream, but viewed in the broad perspective of history, there is little reason for us to doubt that our long-run movement has been in the direction of our goal.

The democratic faith is now being tested in the crucible of war. It has not been and it will not be found wanting. Intelligence, energy, unity and faith will bring victory to our cause. But when victory comes on the battlefield, there will yet remain very much to do. The laying down of arms could be but an armistice between this and a bloodier, more destructive war to snuff out the lives of the next generation. Should this occur, democracy will have achieved a hollow victory, for peace, not war, is the ultimate goal toward which democracy must move.

Idealism, a hope that the future may be better than the past, is part and parcel of the democratic faith. In that hope this nation was founded. While it abides in the human heart, men of good will must strive to outlaw the scourge of war. **The peace to which we now look will further test that democratic faith. It will not be enough to stamp out anti-democratic practices in the land of our enemies. The conditions which created fascism there must not pass unnoticed here. Their first and most dangerous symptom is always the same everywhere: an abandonment of equal justice to all, the placing of some groups in a preferred class of citizenship at the expense of other groups. True democracy must continue to war on all such beliefs.**

Like most of the great values of life, the ideals of democracy, and peace can be won or maintained only by constant struggle, for democracy is a fighting thing. No man with a conscience can be so far removed from that struggle as not to feel the compulsion of joining in it. Each of us in our own way has a job to do in that fight.

The principles of fascism and all that fascism stands for, with its barbaric denial of human values, must be obliterated and destroyed. To accomplish this, there must be an emphatic reassertion of democratic values and a resurgence of democratic faith at home and throughout the world. There WILL be, and all of you will join in bringing that to pass.

NAACP Begins All-Out Attack On "White" Primary Law Of Georgia

Atlanta, Ga.—Suit filed June 13th in the Federal District Court here against T. E. Suttles, local tax collector and registrar for his refusal to forward the list of Negro electors eligible to vote in the 1944 democratic primaries, marks the beginning of the NAACP's all-out attack on these states defying the U. S. Supreme Court decision granting full enfranchisement to Negroes by maintaining the "White Primary." The plaintiff, Wallace Van Jackson, Negro registered voter of Georgia, is being represented by NAACP Special Counsel, Thurgood Marshall and A. T. Walden of the NAACP National Legal Committee. The aetion in behalf of the plaintiff and other Negro registered voters in Georgia is a class suit which seeks a declaratory judgment and injunction.

The complaint sets out that Suttles in violation of sections 2 and 4 of Article I and Amendment 14, 15 and 17 of the United States Constitution, kept separate lists for Negro and White registered voters; that last year in accordance with the state law of Georgia and at the request of the executive committee of the Georgia democratic party, he sent only the white list of voters to the polls on primary day and refused to send the names of the registered Negro voters.

Commenting on the suit when the case was filed, Marshall and Walden stated that the state of Georgia had refused to abide by the deciison of the U. S. Supreme Court in the Texas primary case, and this action was for the purpose of destroying the white primary in Georgia as was done in Texas. It is expected other cases involving "primary" violations as well as those to break discriminatory practices in Alabama and Louisiana, will follow.

World Peace Can not . .

(Continued from page 3 Col. 5)

fused fortunes to remain at Tuskegee to serve Negro students and save the South from bankruptcy. And Dr. Charles R. Drew, of Howard University who discovered how to preserve blood and set up blood banks all over the country, has no interest in money. The superior race, that now MAKES PEACE, took his discovery and declared the blood of the inventor to be inferior and segregated it.

"I AIN'T GOIN' TO STUDY WAR NO MORE.

The way to make wars cease is to refrain from studying it. The secret of the power of war is in the study of it. Cease to study war and its strength becomes its weakness.

War cannot thrive in the heart where the spirit of genuine peace is left.

PEACE left is PEACE without trouble.

PEACE left is PEACE without fear.

"They cry PEACE, PEACE, PEACE." There is no PEACE where the study of WAR resides.

ARE YOU INTERESTED!

—The Expected."

Awarded Good Conduct Medal

VII FIGHTER COMMAND HEADQUARTERS, IWO JIMA—Private First Class Archie McGowan, son of Joe McGowan, of Bolivia, Tennessee, has been awarded the Army's Good Conduct Medal for exemplary behavior, efficiency and fidelity.

Private McGowan is a member of an aviation squadron stationed at an air base on a Western Pacific island, and has been serving overseas for 28 months.

Prior to entering military service in August, 1942, he was engaged in farming.

The L. & N. Railroad's revenue per passenger per mile in 1944 averaged 1.84 cents.

Impact of the War On Southern Labor

A. F. Hinrichs
Acting Commissioner, Bureau of Labor Statistics

For many years industrialization has been proceeding more rapidly in the South than in the country as a whole. From 1910 to 1920 the number of non-agricultural workers increased 25 per cent, and from 1920 to 1930 by 34 per cent. . . .

The preliminary figures that are available show that in the 13-state Southern region non-agricultural employment increased at least as rapidly as in the country as a whole: 32 per cent as compared with 31; and more rapidly than in the industrialized Northeast where the number of non-agricultural employees increased only 23 per cent. Indeed, the only section that certainly expanded much more rapidly than the 13-state region was the Pacific Coast where the number of non-agricultural employees increased about 65 per cent.

Cutbacks After the War

Activities which are very directly connected with the war and which will be cut back most sharply after the war account for nearly 1,100,000 of the total increase of about 1,900,000 in the number of non-agricultural employees. . . .

This war-time employment gain can obviously not be held in these same lines of employment. More than half of this gain will disappear quickly after the end of the war with Japan. . . .

Cutbacks in the South after the war is over will be slightly more serious than in the country as a whole. The employment figures themselves show this. Four lines—ships, aircraft, ordnance, and Government employment—account for 53 per cent of the increase in the number of non-agricultural employees in the country as a whole, but for 58 per cent of the increase in the 13 Southern states. . . .

There is a wealth of new plants, new equipment, and newly trained labor now present in the South. These are available for immediate use in expanding the postwar production and markets in your states and in the nation. . .

It is true that the particular industrial operations developed during the war are likely to be ephemeral, but they should leave a permanent residue of skill and equipment that can be turned to the service of this area. It should never again be said that the South lacks skilled labor.

Southern Labor Efficient

In passing let me stop to blast one false idea that I often hear expressed—that labor in the South is less efficient than labor in the North. Before the days of minimum wages—and even today in some low-wage areas—we have found that labor is less efficiently employed in some southern plants than in any Northern plants in our sample. Thus a hosiery mill could use obsolete equipment if it could hire labor for 15 or 20 cents an hour when other mills were paying 30 and 40 cents. . . . . But I have yet to encounter an industry with clear regional differentiation of efficiency, given equally good materials, equipment and management. And the wartime record of ship production bears out my assertion that the South has a proven supply of skilled workers.

The Outlook for Wages

The wartime demand for labor has resulted in pulling up the lowest wage scales so that today there are comparatively few workers in either manufacturing or non-manufacturing industries getting less than 40 cents an hour, and there has been widespread application through the War Labor Board for minimum rates of 50 cents or more.

The elimination of very low wages has been an advantage to this region. In many instances we know that efficiency has been increased enough to offset fully the increase of wages. Certainly the markets afforded by people fully employed at fair wages will do much to offset one of the disadvantages under which the South has labored—the thinness of the local market. . . .

The income of workers laid off in the South will not be as well maintained while they are looking for other employment as it will be in the North. This is partly because the standards of unemployment compensation are generally somewhat lower. But incomes will also be lower because the South has relatively a larger number of workers who cannot draw unemployment compensation. . . .

Full Employment, Key to Confidence

The maintenance of full employment at fair wages would itself partly solve the problem of getting full employment—solve it in part by bringing about a voluntary decrease in the size of the labor force. On the other hand, depression itself breeds further unemployment by forcing additional members of the family to hunt for jobs.

This may sound to you like an elaborate kind of double talk—the existence of full employment makes it easier to maintain full employment! But it is by no means the only or the most important example of a situation in which the assurance of full employment would help to bring about full employment. The significance in this regard of the Murray-Wagner-Thomas-O'Mahoney Full Employment Bill now pending before the Senate Banking and Currency Committee can be illustrated from what I have been saying about the South.

No one questions the fact that a tremendous increase of non-agricultural employment is needed in this area in order to raise its level of living to levels already attained in many other parts of the country. No one doubts that businessmen could quickly discover what kinds of goods were needed in the vastly expanded markets that full employment under peace-time conditions would bring in its wake. But how many business men can you find who are prepared to build factories as soon as materials are available on the assumption that the million shipyard and other war workers who will be laid off will be quickly reemployed in these 13 states? Or are they rather inclined to wait and see before they make a long-run investment that will be warranted only if these people were re-employed?

If the businessman does wait—and under present conditions I do not blame him for being cautious—by that very act of postponement he lessens the immediate demand for products and hence the amount of employment private industry can create. On the other hand, if he were sure of the size of the total market, I suspect there would be a rush to invest in new plants and equipment such as this country has never seen. It is our job to find ways and means of giving him the assurance that he needs. With that assurance given—and I mean assurance—we can count on him to find the particular types of production that call for expansion and to choose appropriate locations.

In that kind of a national setting the South stands to gain almost more than any other section of the country. So far, the Murray Bill is the only measure that has been proposed to give businessmen and farmers and workers the assurance that full employment will exist after the war.

Address before Conference on "The South's Postwar Economy" held by the Southern Regional Council, Atlanta, Georgia, April 11-12.

YOU CAN'T EAT SUBSIDIES

The farmers of the nation have had more uncertainties to contend with, over which they had little or no control, than almost any other industry. Many a farm is now so regulated as to price and output that its entire profit must come from a subsidy check.

This does not mean that subsidies are a sound national policy, or that opposition to them as a national policy should cease. They are the inevitable result of war and debt. They aim to temporarily ease the shock during the transition period when the purchasing power of money falls as cost of production and government climbs. But it is folly to believe that planning which refuses to recognize that political hand-outs in the form of subsidies which seek to side the true cost of either production, or debt, from the consuming public, will secure a balanced output or a sound economy.

If there is no incentive other than subsidies to encourage a farmer to produce, the American bread basket will suffer accordingly.

On the Agricultural Front

NEGRO 4-H'ERS SELL PIGS AND BUY WAR BONDS

When 52 colored South Carolina 4-H club boys and girls sold 78 pigs the other day, 13 of the youngsters put $243.75 in War Bonds, according to Wayman Johnson, Colored State 4-H leader.

The 4-H'ers, all of Marion County, grossed $2,218.57 from their hogs which weighed 15,465 pounds. The youngsters work under the supervision of George Dean, Colored Extension Agent of Marion County.

* * *

EXPERIMENT STATION AIDS COLORED AGRICULTURE WORKERS

Ninety-eight colored county agents of Extension Service and a group of Colored Alabama farm leaders attended a series of meetings at Alabama's Agricultural Experiment Station and substations recently to study recent experimental results and observe work in progress at the stations.

Visiting the stations in groups of 20 or more, the agents and farm leaders observed methods found best for establishing and maintaining permanent pasture and perennial legume hay crops, studied management of milk processing units, and discussed better food, better health, fruit and vegetable production and the management of poultry flocks.

The meetings were held at the main Experiment Station at Auburn, Ala., and at the Tennessee Valley, Black Belt, and Wiregrass substations.

* * *

COLORED FARMERS RAISE CHICKENS TO UP INCOME

Producing chickens and eggs for market is providing Colored farmers one of their best sources of extra farm income, according to reports received by the U. S. Department of Agriculture from State Extension Service directors.

North Carolina reports that G. G. Crudup of Louisburg purchased 1,750 baby chicks last December and sold 1,665 of them 12 weeks later and made a labor return of $561.52.

In Maryland, J. C. Barnes is collecting eight cases of eggs a day from his 6,000 layers and is selling them in Washington and Baltimore.

In Texas, David Rivers, a Farm Security Administration borrower, is collecting over a case of eggs a day from his 700 layers.

Department officials point out that the production of poultry and eggs by colored farmers is playing a big part in preventing further reduction in the egg supply. The total March output by all farmers was four per cent below the figure for March, 1944. However, it was 38 per cent above 1934-43 March average.

* * *

AGRICULTURAL INFORMATION FOR SERVICEMEN

In order to provide agricultural information to servicemen and veterans who are interested in farming, the U. S. Department of Agriculture has arranged to place kits containing samples of available information in separation centers, hospitals, libraries, and in vocational guidance and retraining centers of the Army, Navy, Air Forces, and the Veterans Administration.

Among the materials being offered are several general publications designed to help servicemen or veterans, who are thinking of farming, decide whether or not they really want to become farmers.

* * *

SURPLUS PROPERTY FOR FARMERS

The Surplus Property Board has announced that farmers and rural areas generally are assured equal opportunity to supply their needs out of surplus property as it becomes available. The Board has set up procedures for channeling critically needed trucks, machinery, and equipment in agricultural uses.

The Board, in cooperation with the War Food Administration, will arrange for the sale of surplus property in rural localities in such manner as to assure farmers and farmers' cooperatives equal opportunity to buy.

PRODUCING MORE MEAT

USDA photo by Cooper.

Responding to War Food Administrator Marvin Jones' appeal for a larger pig crop this year to help meet the increased wartime demand for meat, white and colored farmers have kept additional sows for farrowing this spring and next fall. This year's goal calls for 57,500,000 spring pigs. Mr. and Mrs. Samuel Crawford, Maryland farm family, are shown with one of their sows and her new pigs. Mrs. Crawford is wearing a Women's Land Army uniform.

PREPARE NOW TO FIGHT BOLL WEEVIL INVASION

Cotton growers in areas where the boll weevil has caused serious losses in past years should prepare now to fight the pest this season, say entomologists of the U. S. Department of Agriculture.

The scientists advise that growers get their dusting machines in shape for use, and have available at lease 10 to 15 pounds of calcium arsenate for each acre planted to cotton.

* * *

MOTOR FUELS FROM FARM WASTES

A process for the chemical conversion of such agricultural residues as corncobs, sugarcane bagasse, peanut shells, flax shives, oat hulls and cottonseed hulls and burs into liquid motor fuel and other commercially valuable products is moving into the semi-works stage of experimentation at the Department of Agriculture's Northern Regional Research Laboratory at Peoria, Ill.

Results of experimental laboratory investigations by Department chemists indicate that from 90 to 95 gallons of liquid motor fuel can be obtained from a ton of corncobs or cottonseed hulls and that about half of this is in the form of ethyl alcohol.

* * *

SUGAR-SAVING REMINDERS

Home economists of the U. S. Department of Agriculture offer the following sugar-saving reminders:

1. In summer especially serve fresh fruits liberally in place of heavy desserts that call for sugar. A fruit salad topped by a dressing mixed with fruit juice does double duty as a refreshing salad and dessert.

2. Save sirup from canned fruit to sweeten other fruits, sauces, or beverages.

3. Be sure all sugar is completely dissolved to get its full sweetness. A sugar sirup goes farther than plain sugar in sweetening iced tea or fruit punch. To prepare sugar sirup, heat equal parts sugar and water until sugar is completely dissolved. Keep left-over sirup tightly covered in the refrigerator. Corn sirup may also be used to sweeten summer drinks. Try some iced beverages without sugar.

4. Cook cereals with prunes, raisins, or oats, and serve without sugar.

5. Use fewer or no frostings on cakes. Don't frost the sides.

6. Serve sweet yeast breads, such as cinnamon rolls, and sweet quick breads occasionally, instead of more sugar-consuming cakes and pies.

7. Make desserts that use honey, molasses, sorghum, corn, or other sirups when these are available.

8. Stretch sugar in baked goods with honey, molasses, corn or other sirups. Honey may replace sugar cup for cup, but use half the quantity of other liquids called for in original recipe—and keep baking temperature moderate. Corn, cane or maple sirups can replace sugar measure for measure. Reduce liquid by one-third.

REA Is Ten Years Old

May 11 was the tenth anniversary of REA. Subject to challenge, the alleged first lines energized in 1935 as an REA project were at **Piqua, Miami county, Ohio.** State progress material on REA is being sent to cooperative managers out of St. Louis headquarters direct. Get on their list for monthly statistical bulletins a s things will move fast from now on.

That Washington REA offices have employees who are working farm users of electricity is proved by the fact that Mrs. Dora Haines, a staff member here, owns a poultry-sheep-fruit farm in Fairfax county, Virginia, for which the January electric consumption was 1,434 KWH, bigger than some average farms for a whole year out where I traveled.

She points out that REA is making rural schools more pleasant and serviceable—**18,000 rural schools now served by REA lines.** Rural health welfare will advance as fast as country hospitals can be built and equipped with electric clinical and diagnostic apparatus, she also suggests.

New REA law effective last September makes the interest rate on present and future loans 2 per cent to the cooperative and REA pays 1¾ cents to RFC. Loans can now be made for not to exceed **35 years duration,** and the REA administrator has authority to change existing loans to that basis whenever in his judgment it will extend service more quickly to thinly settled, poorer agricultural areas.

Loans have been made to 833 cooperatives, 54 public bodies and 19 private utilities. Borrowers have paid 90 million dollars in principal and interest on their loans, some of it well in advance of repayment dates. Delinquent accounts more than 30 days overdue amount to only about one-half of 1 per cent of the principal and interest paid.

Without doubt, REA and other extensions of electricity to farms afford the nucleus of the greatest labor-saving and life-prolonging era ever known to U. S. agriculture. No need to remind you, is there?

Staley Appointed Farm Labor Assistant

F. Marcellus Staley, former director, School of Agriculture, Georgia State College, effective May 16, was appointed to serve as assistant in farm labor extension service. Mr. Staley will supervise the recruitment and placement of Negro farm workers in the states of Alabama, Georgia, Florida, South Carolina, North Carolina and Virginia.

June 1 to 2, the newly appointee was called to Little Rock and June 4 to 9 to Prairie View, Texas, to confer with Federal Officials. June 23 to 30, he will attend the conference of Extension Leaders, Washington, D. C.

Mr. Staley comes to this appointment with a wealth of experience and training. He received the bachelor of Arts from Morehouse College, bachelor of Science of Agriculture and Master of Science from Cornell university. Further graduate work at Cornell and one full year's graduate work at Ohio State university.

He has served as Director of Agriculture, A. and T. College, Greensboro, N. C.; Dean of Instruction, Bennett College, Greensboro, N. C.; Dean of Instruction, Georgia Normal, Albany, Ga.; Director of Agriculture, Georgia State College, Savannah, Ga.; itinerant teacher trainer, State Department of Education of Georgia, Special County Agent, Sumter County, Georgia.

Every Person Needs A

SAFE DEPOSIT BOX

Citizens Savings Bank has placed an Order for a large number of these so that you may have one

PLAY SAFE! No one knows when fire will destroy his home or a burglar might break in and take your valuables. Our bank wants you to protect these valuable papers, insurance policies, wills, your diamonds and other jewelry. We can rent to you a safe deposit box, which is in our fire and burglar proof vault. The prices are within reach. You have your own individual key. Not even the bank officials can get in this box without you being present with your key.

Enriched Flour, An American Patriot

Long before mankind knew about dehydrating foods to make them keep well and in the smallest possible storage space, nature had perfected an efficient food-dehydrating system in the ripening of wheat and other cereal grains.

When wheat plants have done their job of growing and of depositing in the little wheat kernels a variety of food substances, nature partially dehydrates them. During ripening, wheat gives up some of its water content. Thus the proteins, starches, sugars and other substances in the kernels become firm and compact, and nearly impervious to spoilage, so long as they are kept dry. Nature's system for dehydrating wheat and other grains was designed so that the wheat grains might be safe until a new growing season, for wrapped in its multiple brown coat of bran each kernel contains just the proper food materials for a new wheat plant. When laid in the ground, warmed by spring sun and wet by melting snows and spring rains, the food materials absorb again the moisture they gave up as they ripened, and a new wheat life cycle starts all over.

Not only does the wheat kernel have the ability to re-absorb water, but every tiny particle of wheat flour can do likewise. This ability to absord water easily, together with the particular combination of substances in wheat, make wheat flour unique in the food world. Only flour made from wheat will make the kind of dough that can be leavened to make bread, the food that is the symbol of life itself.

Each particle of flour is, in a sense, comparable to those lovely "magic" flowers that look like tiny bits of dry paper until they are dropped into water. As they absorb moisture they blossom forth into beautiful shapes.

When flour particles are moistened, they swell and cling together. stirring or kneading transforms the mixture into smooth batter or dough. When this happens, the baker knows that the protein substances in the flour have absorbed enough water to make the fine meshwork inside the dough needed to hold the leavening gas that the yeast or baking powder manufactures. This meshwork can actually be seen in a slice of bread. The thin translucent walls of the "holes" in bread are the final sisible result. Baking makes the protein meshwork firm enough so it will not only hold its shape, but will actually hold up all the other ingredients in a baked product,—even such heavy, luscious ingredients as raisins and dates and nuts.

From the cook's and baker's point of view, the protein in flour is important because its presence enables them to make a great variety of good things.

From the nutritionist's point of view, the protein in flour is important because it supplies in most economical form some of this essential food substance. This fact may well be kept in mind these days when the meat supplies for civilians is limited. Bread and wheat flour products of all kinds can help to carry the nutritional load of keeping civilian America strong and well.

Protein foods are the builders of the body. They are needed by adults to replace the daily wear and tear of boby tissue, growing youngsters need them to make new muscle and new body tissue as they increase in size.

All proteins, say cnemists, are made up of many invisible individual "building blocks" called amino acids. What kind of these breads containing milk taste good and keep well, most white breads are made with milk.

In these days of meat shortages and red point problems, it is well to remember that six slices of enriched white bread supply about the same amount of excellent protein as a moderate-size serving of meat. Nutritionally, therefore, no one needs to suffer because of meat shortages.

Flavor is, of course, another matter. Folks like the taste of meat, and miss it in meals. Here is another place where the versatile protein of flour does a patriotic as well as a gastronomic service.

The protein in wheat flour and in bread is bland in flavor. That is one of the fine things about it, for the blandness of bread is one of the reasons folks eat breads and biscuits day after day without tiring of them. But this blandness has another advantage. It permits the protein of flour and bread to absorb, or seem to absorb, other delicious flavors and thus "extend" them. That is why a sandwich is so good, —two or three slices of bread make the flavor of a small amount of meat or cheese or other filling taste like more. This is why flaky hot biscuits on top of chicken pie, or delicate dumplings on meat stew help make the goodness of these popular dishes. Dr. C. O. Swanson, of Kansas State College, has said that one of the many reasons for the popularity of bread is that it provides such a delicious way for many other good foods to "ride" from plate to mouth.

Aside from its all-around usefulness and economy, today's flour has special virtue. On the advice of some of this country's most eminent scientists in nutrition, flour and bread have been enriched. That means that three of the B-vitimins —thiamine, niacin, and riboflavin— and the food mineral iron have been added. These valuable food substances are not visible in flour, any more than the rich vitamin C content of an orange is visible in that fruit. Nor do they change the baking qualities of flour in any way.

HELPING TO CURB EGG SHORTAGE

USDA photo by Pace.

Colored farmers are pitching in to help relieve the wartime egg shortage this year by increasing their laying flocks so that they will have extra eggs to market. J. C. Barnes, of Forestville, Md., is one such farmer. He is collecting an average of 200 dozen eggs a day from his 6,000 carefully culled high producing layers. Washington and Baltimore provide a ready market for his eggs. Mr. Barnes is shown at right conferring with District Extension Agent Martin G. Bailey about culling his flock and about the most suitable feed for maintaining high production. At left, Mrs. Laura V. Hammond, one of Mr. Barnes' assistants, is shown filling crates for shipment after carefully candling and grading the eggs.

Oklahoma Pasture Contest

Purpose: To encourage establishment of new pastures and better management of pasture lands, through Oklahoma A. and M. College.

Prizes: $100 per county, in cooperation with a Tulsa radio station. Contest to cover the period September 1, 1944, to September 1, 1945—with May 1, 1945, as deadline for film entries.

"Feed A Fighter In '45" 4-H Slogan

Upon tabulating reports from State 4-H club offices, it is clear that the club members easily produced food equivalents to feed **more than one million members** of the armed forces in 1944, which means that they **more** than supplied the food equivalents of the nearly **800,000 present or former 4-H members** enrolled in active service units. The slogan "Feed a Fighter in '45" will again be used to dramatize the junior food army's current campaign afield.

Last year projects in the form of production lists to show such food equivalents were sent to the 4-H membership by the Cooperative Agricultural Extension Service. For instance, the size of the project needed by each person to equal the annual needs of a soldier were given as **one cow producing 5,600 lbs. of milk, or a sow and 7 pigs** raised to 200 lbs., and so on through the main items. This project had the endorsement of the Army, who furnished ration estimates to the 4-H club department. The year 1944 with 1,700,000 active members between 10 and 21 years marked the high water level of 4-H history.

4-H Data for N. E. States—An average State gain of 30.8 per cent over prewar enrollment of 4-H clubs in 12 Northeastern States is reported by E. W. Aiton, field agent for that area in the Cooperative Extension Service, USDA. Maine registered 110.8 per cent and Rhode Island **over 190** per cent gain, but New York State led in total enrollment, with 56,941 4-H members wartime average. For 1942-44 these 12 states combined had 187,063 enrollments, against a prewar average of 142,996.

Completions of projects averaged 80.4 per cent of enrollment in the immediate prewar years and 77.8 per cent during wartime, a surprisingly low decline of about 2.6 per cent. To show heavier adult leader responsibility lately, the figures in the report give 151 members per adult leader prewar, and 178 members per leader in wartime years.

Love stoops for it has no ambition but the good of others.

A Dangerous Detour

The United States has been helping fight a world war to crush a form of state socialism labeled nazism which destroys the freedom and dignity of the individual. While fighting this war to crush a vicious political philosophy abroad. we have been actually laying the foundation for its counterpart at home. Edwin Vennard of the Middle West Service Company, turns the spotlight of fact on this contradictory situation and says:

"There is a bill in Congress to create the Missouri Valley Authority (MVA). MVA is modeled after TVA, only it is ten times as large. TVA is the type of planned economy referred to in the "Road to Serfdom' " (by Frederick A. Hayek, the most important book of a generation to re-state for our time the issue between liberty and authority).

"In Germany this sort of planned economy is called national socialism or nazism.

"If the MVA bill passes, it is almost certain that a pending bill to create nine TVAs covering the whole country will also pass. They will establish the planned economy of national socialism in the electric light and power business. and incidentally, TVA is in 29 other businesses. Local and states' rights are largely discarded with the establishment of these Federal authorities. To stop the spread of the TVA Road to Serfdom. we must correct an erroneous public impression:

"1. TVA is supposed to control floods, and yet TVA, with its high combination dams, has permanently flooded with reservoirs more acres than were ever temporarily flooded by the biggest flood in history.

"2. TVA is publicized as a financial success, and yet TVA pays practically no interest (less than one-tenth of one per cent) on the $800,000,000 of the people's money Congress has given it. Let TVA pay the market price on the money it is using and let it pay the taxes equivalent to those paid by electric companies, and TVA would have to double its electric rates to break even.

Rural Bathtub and Toilet Administration

A bill was recently introduced in Congress to establish a Rural Telephone Administration, on the theory that not a sufficient number of farmers have telephones. There was the minor item of $100,000,000 for annual expenditures by the new RTA which would be set up with highly-paid appointed officials permanently on the taxpayers' necks.

While no "survey" has been made, it is likely that there are more farmers without modern bathtubs and patent toilets than there are without telephones. Therefore, it would seem reasonable to suggest that a Rural Bathtub and Toilet Administration be established, with inspectors to check all the farm houses. A project of this kind could spend hundreds of millions of dollars a year of the taxpayers' money instead of a mere hundred million. Of course, the United States has more telephones, bathtubs and toilets than all the rest of the world, which indicates that none of the industries involved have been sleeping at the switch, and they probably will move faster after the war to see that their services and products reach the maximum number of people, than would any government bureau.

Just why the government should use a back entry, disguised as a Rural Telephone Administration, to get its foot into the door of the telephone business, is hard to understand, except it is a part of the general program of those who would socialize American industry. And a telephone in every farm house, whether it is needed or not, is good bait to win public approval of Federal spending which slowly but surely curbs individual incentive, opportunity, and ultimately, liberty itself.

"The fact is, TVA uses flood control and navigation as a pretext to put the government into the power business. Broadly speaking, there are two general methods for developing America's rivers:

"1. The TVA method which involves the planned economy.

"2. The Army Engineers-Bureau of Reclamation method.

"One principal difference between them relates to the manner in which the electric power is used. To preserve the integrity of the primary purpose for which a dam is built by government, Congress should stipulate that:

"1. Electric power should be secondary and incidental.

"2. In all cases where flood control and power are combined in the same dam, there should be uncontrolled sluices (holes with no gates) at a predetermined level.

"3. The power should be sold at wholesale rates without discrimination, near the damsite, with all savings passed on, under government regulation, to the public.

"Under this plan the people derive all the benefits of sound river development and avoid taking a big step along the Road to Serfdom."

Mr. Vennard has stated the dangers of the "authority" bills being pressed in Congress, and he offers practical methods for securing the benefits that may be derived from flood control without involving our nation in the web of state socialism.

Paper Mill Waste Water For Soils

Annually 27 million tons of waste liquor from the paper mill sulfite process is dumped into the streams of the nation with no improvement in the atmosphere and, as just discovered by Pennsylvania Station, at a distinct loss to the soil.

This wasted product may be turned into a useful soil amendment if the trials by Penn Station materialize into action. This liquor contains lignin, a major constituent of the wood used. When added to soils this humus-forming material is precipitated by chemical and biological action. If certain harmful ingredients in lignin are previously removed, it may be added to newly plowed land and results in the formation of granules or clods which render the soil more permeable to air and water.

WOMAN'S PAGE

SHREDDED CABBAGE AND CARROTS

2 cups shredded cabbage
2 cups shredded carrots
2 tbsp. butter or margarine
2 tbsp. water
1 tsp. salt
1-8 tsp. pepper

Melt the butter or margarine in the saucepan. And carrots, cabbage. Cover. Bring to steaming well. Cover. When steam appears turn heat to simmer. Cook 12 minutes longer. Makes 5 servings.

QUICK-COOKED CABBAGE

4 cups finely shredded cabbage
2 tbsp. butter or margarine
2 tbsp. water
Salt and pepper

Place water and butter or margarine in a saucepan or skillet that has a lid. Add shredded raw cabbage. Cover, Bring to steaming point quickly, then reduce heat Turn to high, then turn to simmer. Do not boil violently. Total cooking time 15 to 18 minutes. Serves 5.

BUFFET STYLE

Scoop out insides of small heads of cabbage, leaving shell intact. Shred and mix with green pepper, carrots, celery salt, pickels, chopped apples, peanuts and french dressing. Put back into cabbage shell, serve on large platter.

CREAM OF CARROT SOUP

1 medium onion, chopped
2 tablespoons butter or other fat.
1-2 cup fine dry bread crumbs
1 quart chicken or meat broth or water
1 teaspoon salt
Dash of pepper
1 tablespoon sugar
2 cups grated raw carrots
1 cup rich milk

Cook onion slowly in butter 5 minutes, without browning. Add crumbs, broth, salt, pepper, suger and carrots. Simmer 20 minutes. Add milk and reheat before serving. Serves 6.

More cabbage and then more is headed our way from hard working farmers in our Southern states who have answered their country's call for an abundance of food.

Let's use as much of this healthful food as possible and in this way help our own budget and health and also prevent waste. From the War Food Administration comes a request that we use cabbage in as many ways as possible. Our request section is devoted to this subject today.

There are many interesting ways of serving cabbage.

KEDJEREE

1-3 cup rice
3 cups water
1-2 teaspoons salt
4 tablespoons butter or margarine
1 tablespoon onion, finely chopped
1 can shrimp, drained
2 tablespoons parsley, chopped
4 hard-cooked eggs
1-8 teaspoon pepper
1-4 teaspoon curry powder
1 teaspoon salt
1 tablespoon or more cream

Cook rice in boiling water, to which 1 1-2 teaspoons salt has been added, until tender. Drain. Remove one or two center slices from each egg and set aside for garnish. Cut remaining eggs into large pieces. Cook onion in butter until soft but not browned. Add cooked rice, shrimp, parsley, eggs and seasonings. Add cream or milk to moisten slightly. Heat thoroughly stirring cautiously with 2 forks. Taste and add more seasoning if desired. Serve very hot, garnished with egg slices. Serves 4.

COFFEE SAUCE

For a sundae sauce that requires no sugar, try marshmallow coffee sauce, made by combining eight marshmallows, 1-2 cup hot coffee, and 1-4 teaspoon salt and stir over a low heat until marshmallows are melted. Cool and fold in 1-2 cup chilled evaporated milk. Chill before serving over ice cream.

BAKED COFFEE CUSTARDD

2 eggs
1-3 cup sugar
Few grains salt
1 cup milk
1 cup cold strong coffee

Beat egg slightly. Add sugar and salt. Add milk and coffee. Pour into greased custard cups. Place in pan with hot water about one inch deep. Bake in moderate oven (350 degrees) about one hour, or until firm. Serves 3.

COCOA SYRUP

You will save work by keeping the makings for quick cocoa in a covered jar in the icebox . Just combine 1 cup of water, 1-2 cup light corn syrup and 3 tablespoons of cocoa, cook for 5 minutes or untli slightly thickened. Add as needed to hot or cold milk.

EGGPLANT SUPREME

1 cggplant
1 cup cracker crumbs or dried bread
1-2 teaspoon salt
1-4 teaspoon paprika
1 egg or 2 yolks beaten
1-4 cup milk
4 tablespoons fat
1 cup cream of mushroom soup

Cut eggplant in inch crossway slices, discard pecl. Wash slices and then dip in crumbs mixed with seasonings and dip in the egg with milk added. Dip again in crumbs and brown quickly on both sides in fat, heated in frying pan. Transfer to shallow, buttered baking dish. Add soup and a lid. Bake 20 minutes in moderate oven.

Cream of asparagus or pea soup can be used.

RHUBARB TURNOVERS

Make pastry, using 2 1-2 cups flour. Roll dough 1-2 inch thick; cut into 4-inch squares. Then mix 1 1-2 cups thinly sliced rhubard with 1-2 cup sugar and 1-4 teaspoon mixed cinnamon and nutmeg. Place 2 tablespoons rhubard mixture on each square; dot with butter or margarine. Fold each into a triangle, sealing edges. Bake in a hot oven, 400 degrees F., 30 minutes. Makes 12 turnovers.

STRAWBERRY, ICE CREAM FILLED CAKE

1 sponge cake
1 quart vanilla ice cream
3 cups sweetened strawberries

On a serving plate place the hollowed out sponge cake. Fill with the ice cream. Cover and surround with the berries and serve immediately.

NOVEL TEA SANDWICHES

Gingerbread has really come up in the culinary world—from a one-track, whipped cream dessert to one of the most versatile hot breads you can bake. For example: ribbon sandwiches. Makes gingerbread easily with prepared mix. When cool, cut in 1-2 inch slices. Spread with softened cream cheese mixed with grated orange rind. Stack slices. Cut down through in 1-2 inch widths.

BORTSCH

(Russian Beet-Cabbage Soup)
1 cup cooked chopped beets
1 cup chopped carrots
1-2 cup chopped onions
1 cup shredded cabbage (raw)
3 cups soup stock
Salt and pepper, cinnamon
1 Tsp. lemon juice
Sour cream

Place vegetables in soup kettle, cover with meat stock. If soup stock is not available use three bouillon cubes dissolved in three cups of boiling water. Add salt mer, cover, for thirty minutes. Just before serving add lemon juice. Ladle into scoup plates and garnish with a heaping tablespoon of sour cream. If sour cream is not available, use thick buttermilk or beat an egg, put in each plate, and pour the soup over the beaten egg.

CABBAGE FILLED WITH CORNED BEEF HASH

Trim outer leaves, stem, from cabbage. Do not overcook, drain, soup inside leaving 1 1-2 shell, keep hot in greased ovenproof dish. Chop removal part, adding to contents of 16 oz. can minced corn beef hash. Add 1-4 sauteed onion, or onion salt, milk. Heat ingredients, fill shell, covering top with buttered cornflakes. Serve.

In line with spring toning up food and also with appetite appeal is this menu. First, fruit nectar cocktail. With rosy beet salad serve ala king of meat, fish or chicken, hot biscuits. For dessert, treat the sweet tooth to chocolate fluff cake with your favorite beverage.

ROSY BEET SALAD

2 tablespoons plain gelatin
1-2 cup cold water
3 cups boiling water
2 tablespoons vinegar
2 teaspoons chopped onion
2 teaspoons sugar
1-2 teaspoons salt
1-4 teaspoon pepper
1-4 teaspoon paprika
2-3 cup thinly sliced celery
2-3 cup grated raw beet
2-3 cup chopped cabbage
Lettuce
Mayonnaise

Soak gelatin in cold water, dissolve in boiling water. Add vinegar, onion, sugar and seasonings. Chill until slightly thickened. Fold in vegetables. Line a salad bowl with lettuce leaves, saving heart for center of salad. Pour gelatin mixture into salad bowl. Press lettuce heart into center of mixture. Chill until firm. Open lettuce heart gently and fill with mayonnaise. Serves 6.

RHUBARB RAISIN PIE

The first hint of spring in the air announces the arrival of rosy rhubarb. This juicy fruit has that colorful goodness and refreshing flavor to tempt the most lagging of appetites.

Rhubarb Raisin Pie combines the elegant flavor of rhubarb with that of raisins. The sugary goodness of the raisins compliments the tartness of the rhubarb to give an unusually delicious dessert.

For extra-special dinner parties glamourize Rhubarb Raisin Pie with a cream cheese topping. To make this delicate topping, whip cream cheese and place a scoop of cheese on top of each serving of pie. Another tempting way to serve this favorite is with a thin lemon sauce drizzled sparingly over each serving.

Served plain or dressed up with extra frills. Rhubarb Raisin Pie is an A-1 de luxe dessert.

Pastry

1 cup sifted enriched flour
1-2 teaspoon salt
1-3 cup shortening
1 to 2 tablespoon cold water

Sift together flour and salt. Cut or rub in shortening. Add water gradually. Mix into a dry, crumbly dough. Toss on lightly floured pastry cloth, Roll and fold until smooth. Roll about 1-8 inch thick. Line 9-inch pie pan. Prick with fork. Fill with Rhubarb Raisin Filling. Dot with margarine or butter, if desired. Bake in hot oven (450 degrees F.) 15 minutes. Reduce heat to moderate (350 degrees F.) and continue baking for about 45 minutes.

Rhubarb Raisin Filling

3 cups rhubarb
1-2 cup raisins
1 teaspoon grated lemon rind
1 1-4 cup sugar
6 tablespoons enriched flour
1-4 teaspoon salt
Margarine or butter, if desired.

Wash rhubarb and cut into 1-inch pieces. Cover raisins with hot water. Let stand about 10 minutes. Drain raisins. Combine raisins, rhubarb, and rind. Sift together sugar, flour, and salt. Mix flour mixture and fruit mixture. Fill pastry shell with Rhubarb Raisin Filling. (If rhubarb is very dry, a small amount of water may be added).

Yield. One Rhubarb Raisin Pie, nine inches in diameter.

PEPPER RICE CASSEROLE WITH FRANKFURTERS

2 cups rice
6 tablespoons butter or margarine
2 onions, minced
4 cups hot water
2 boullion cubes
2 cups tomatoes, canned or fresh
1-2 green pepper, minced
1-2 teaspoon celery salt
Cayenne pepper
1-2 teaspon chili powder.
1-4 teaspoon powdered cloves
1 dozen frankfurters

Wash rice thoroughly in several waters, picking it over carefully. Melt two tablespoons of butter or margarine in a large, heavy frying pan. Add thc rice, half of the minced onion and the minced garlic (if desired). Stir over low heat until lightly toastcd. Melt bouillion cubes in hot water. Pour over rice. Add grcen pepper. Cover tightly, turn fire low and cook 30 to 40 minutes until rice is dry and fluffy, the liquid absorbed. Turn into a large, shallow baking dish and shape into a ring, leaving a hollowed-out center. Into this pour a tomato chili sauce made by simmering together for 10 minutes the tomatoes, remaining half of minced onions, 2 tablespoons butter or margarine, celery salt, chili powder and cloves. Add cayenne to taste after simmering. Saute the frankfurters slowly in heavy frying pan with remaining two tablespoons butter or margarine and arrange in decorative patterns on top of rice and sauce. Reheat in moderate oven 15 minutes. Serve piping hot.

STUFFED CUCUMBERS

4 firm cucumbers
1 cup cottage cheese
1-8 teaspoon each of rosemary, basil, oregano
1 teaspoon minced onions
1-2 teaspoon salt
Few grains cayenne pepper
Stuffed olives, sliced

Wash cucumbers. With cooking fork, score the green rind deeply, the length of the cucumber. Cut cucumbers in half lengthwise; hollow out the center and cut center into small cubes. Add cottage cheese, mixed herbs, onions, salt and pepper. Mix lightly. Fill the hollow in the cucumbers and arrange on serving platter with garnish of watercress or parsley. To serve, cut each cucumber half in thirds and garnish servings with watercress or parsley. French dressing or mayonnaise may be served with these.

The Secret of Retail Success

(Continued from Page 1)

ness. The chains actually have been beneficial to independent merchants, as well as to the consumers, because they have tended to reduce production costs, the benefits from which have been enjoyed by retailers and consumers alike.

The chain stores will play an important part in the ultimate return of our nation to orderly peacetime production. They will be a stabilizing influence for the simple reason that they have to buy in quantity at reasonable prices. Thus, they will act as a constant brake on price raising trends which would be detrimental not only to consumers, but to competitors. Whether they wish to or not, chain stores must fight the anti-inflation battle, because their life depends on low-cost sales and distribution.

* * *

Famous last words: "He and I were buddies and then he ran out of cigarettes."

Household Hints

Your chenille bedspread will dry fluffy if you hang it inside out on the line so the chenille rubs against itself.

To take the discoloration off an aluminium pot or pan cook rhubarb or applesauce in it.

Be sure the holes in your baby's rubber nipples are open before sterilizing. It's surprising, but some mothers forget this:

Celery leaves as well as stalks given fine flavor when chopped and heated in fat. Use only about a fourth as much chopped onion as celery. Celery salt is a good seasoning, too.

Onion, celery and parsley will carry their flavors more evently through stuffing if they are chopped and cooked in fat a few minutes before being mixed with the bread crumbs.

Roll several spears of cooked asparagus in slices of enriched bread. Broil until golden brown. Serve with frizzled ham as delightful luncheon treat.

Fragrant Butterhorn Rolls do for a toosed vegetable salad what a crisp organdy dickie does for last year's suit. They both give a note of spring crispness. Serve Butterhorn Rolls, made from a favorite refrigerator dough, frequently throughout the spring. Their interesting shape, velvety texture, and fragrant flavor make them delightful salad escorts.

Make a smooth white sauce and add cut cooked asparagus and slices of hard cooked eggs. Split piping hot baking powder biscuits and in "sandwich" fashion, spoon the cream sauce between and over the biscuits. Serve as luncheon or dinner entree.

A favorite baking powder biscuit makes excellent shortcake and is sparing on the family sugar bowl. Enriched flour in the biscuit dough gives better nutrition insurance. Dress the shortcake with sweetened frozen fruit or victory canned fruits.

To glamourize baking powder biscuits, roll out biscuit dough 1-4 inch thick and spread with orange marmalade. Roll jelly-roll fashion and cut in 1-inch sizes. Place cut side down in greased muffin pans and bake in moderately hot oven (450 degrees F.) 12 minutes. These sweet fruity biscuits require no sugar and make excellent tea rolls or accompaniments for tossed vegetable salads.

A teaspoon of salad herbs added to the flour-shortening mixture of a standard baking powder biscuit recipe gives the biscuit special fragrance. These tasty treats go well with meat dress at dinner or tossed luncheon salads.

PRESERVING TIPS

Fruit butters are the most sugar economical of the sweet spreads, requiring only half as much sugar as fruit pulp used. A pound of sugar will make about three pints of a butter.

In jam and preserve recipes that ordinarily call for equal parts by weight of sugar and fruit, the proportion can satisfactorily be cut to three-fourths as much sugar. With this proportion, 1 pound of sugar will make around 1½ to 2 pints, or 4 to 6 jelly glasses of jam.

A cracked egg can be boiled if it is rubbed with salt before putting it in the water as this will seal the crack.

If the windows work stiffly and it is difficult to run them up and down, rub paraffin on the window cords.

Love has no ambition but the good of others.

THE MODERN FARMER

VOL. XVIII. NASHVILLE, TENN., JULY 16, 1945 No. 6.

The Road Up

Something New In Georgia

By GILES A. HUBERT

The State of Georgia is where I was born. My folks came from Hancock County. This county is just south of Greene County which has been so accurately studied and described by Arthur Roper in his two books: PREFACE TO PLEASANTRY and TENANTS OF THE ALMIGHTY. The northern part of Hancock County is just like most of Greene County. There is not much difference.

It is one of the counties where the slave plantation first took hold in upland Georgia. It was also one of the first to become worn out by the cotton system. It is in the country of "growing rocks"— rocks which were once covered with fertile soil, now appear to "grow" up out of the earth as the dirt is constantly washed away from over them— the result of clean cropping and heavy rainfall.

That section of Georgia (and many other sections) has been just about at rock bottom as far as profitable farming is concerned. Share cropping followed slavery. Then came share tenancy. Many old plantations were broken up— went into absolute ownership.

This is one of the areas where Negroes have been able to buy land. Several land owning Negro communities were established in the early 1900's only to find that their poor worn out land failed them in the postwar years of falling cotton prices and depression. As the land has wasted away so have the children—into the stream of rural-urban migration.

Much of the land has completed the cycle of from trees to new land, corn to cotton to sage grass and back to trees. Farm abandonment has become general.

Georgia is taking a prominent leadership in the efforts of the Southwest to change over from a plantation cotton economy to one based on a balanced agriculture and developing industry and commerce. She has had to do this because she WAS at rock bottom. There had to be a change.

And Georgia is having its plans of rebirth. Witness the last ditch fight for the status quo as led by the Talmadge clan. The great burst of enthusiasm over the freight rate differential scrap is another more positive indication. The explosion over the educational system, the fight led by Governor Arnall over the abandonment of the poll tax, all these are symptoms of the pangs of being reborn.

Then comes a new outburst. Cason Calloway, a multi-millionaire cotton milling tycoon, tried to go into seclusion at a country place— went into farming as a hobby. Poured hundreds of thousands into

Address Of Hon. Hugo L. Black, Justice of The Supreme Court

Graham Points The Way To A New, Happier South

A clarion call to the people of the South was sounded last week by Dr. Frank P. Graham, the region's leading educator and progressive spokesman, who urged "the Southern peple, regardless of party, race, creed or economic position, to unite in support" of the following postwar program for the development of the South:

1. Reduction of uneconomic tariffs.

2. Elimination of discriminatory freight rates signally recognized in the preliminary and far-reaching decision of the Interstate Commerce Commission.

3. Federal aid to the states for the public schools without federal control; increased pay and equal pay for teachers of equal competence; as steps toward providing equal educational opportunity for all youth.

4. Elimination of the poll tax as a prerequisite to voting and provision for the equal suffrage rights of all citizens in primaries and general elections.

5. More and diversified industries in the South and responsible collective bargaining between organized business and organized labor.

6. State minimum wage laws in line with the federal minimum, fair employment practices and equal pay for equal work.

7. More diversification of agriculture; conservation development of soils, forests, minerals and water-power, prmotion of agricultural cooperative societies, farm and home ownership, and the establishment of a clear and equitable status for tenants.

8. Adequate state and federal support not only of applied agricultural and industrial research but also of fundamental scientific, economic, historical, social and humanistic research.

9. The development of great university centers in the South.

10. State aid for rural health centers and a state-wide medical care and hospital program for all the people.

11. State aid for county-wide libraries; for adult education; workers' education; institutes of government; state symphonies and folk drama.

12. Most important of all, vigorous support now for the winning of the war in Asia; for Dumbarton Oaks, Bretton Woods and the international organization of justice and peace in the world.

Dr. Graham is President of the University of North Carolina, Member of the National War Labor Board and Honorary Chairman of the Southern Conference for Human Welfare.—(Reprint from the SOUTHERN PATRIOT, June, 1945.)

"A Word To Percy Greene" Editorial From the Jackson, Mississippi Daily

THE JACKSON ADVOCATE, a Negro newspaper published on Parish Street with Percy Greene as editor, is quite indignant over President Truman's appointment of Tom Clark, a Southerner, to the Attorney-Generalship and accuses him of "insulting colloquilism in the use of the word Negro when efforts were being made to obtain action from the Department of Justice in connection with Mississippi lynchings."

The incident never happened. It was vigorously denied by Mr. Clark, but nevertheless Percy Greene is uneasy over Mr. Clark's appointment, and his editorial on the subject has this paragraph:

The outspoken refusal of the states of the South to abide by the decision of the highest court of the land, the United States Supreme Court, outlawing the White Primary and giving to the qualified Negro citizen the rights to vote; the failure of the states of the South to provide equal educational opportunities for Negro citizens in accordance with provisions of their own state constitutions reaffirmed by the decision in the Gaines case rendered by the highest court of the land; the impossibility to obtain appropriate action in certain areas of crime and human relations in state and Federal courts in the South; the ineffectiveness of certain Federal directives and laws in their operating in the South, are only a few instances and conditions retarding the general outlook and progress, as well as Negro progress in the South, as a result of its tradition of illegality.

That's the sort of stuff that is being spewed out to the Negroes of Jackson by Percy Greene.

If we ever have a racial trouble in Jackson—and here's hoping we never will—Percy Greene is going to be in the middle of it, and what happens to Percy won't contribute much to his health or well-being.

Workable Farm Factory Idea Advanced by Rex Thomas

By REX THOMAS

Autaugaville, Ala., May 12—(AP)—A South Alabama merchant who likes to "work with the other fellow" has found what may help solve one of the South's greatest postwar problems—a simple, workable formula for mixing agriculture with industry.

He is middle-aged, energetic Edward Pearson. His ingenuity enables a Negro tenant farmer to envision a $2,000-a-year income, and factory owner Pearson makes money out of it too.

Here's the way it works:

Pearson needs a worker for his broom or mop factories or his grist or handle mills. He offers the job to a nearby farmer and agrees to hire the machinery to do the man's farm work.

The soil-tiller-turned-millhand has cash in his pockets every week, gets his crop laid in by modern mechanical methods.

The man who owns the machinery—in this case another landowner—picks up extra change.

And Pearson gets a loyal employe.

"He has a personal interest in the factory," explains Pearson. "And besides, he knows the day he stops working for me he goes back to plowing with a mule."

Pearson once a farmer himself, finances the planting operations, takes the money out of the worker's pay. Like this:

The farmer-factory hand earns $20 a week. Half goes to him, the other $10 into a credit fund until it equals the amount spent on the crop. Usually it takes about six months. After that the worker draws his full pay until next planting season.

Pearson is optimistic about the future of his farm-factory idea, says it's virtually unlimited in its possible scope.

"Why, a small town grocer or department store owner could put it to work the same as I did," he predicted. "Any place in the South, or the whole country for that matter, where there's tractor land this plan will work."

"Look at Thomas, here," he continued. "He's got money in his pocket and that's something he never had before. Why, man, a

Speaker At Inter-Racial Dinner In Chicago, Illinois

Chicago, Ill., June 19, 1945—Mr. Chairman, Mayor Kelly, Ladies and Gentlemen: I am very happy that my wife and I can be here with you this evening. The life of a Supreme Court Justice gives little chance for speech making, and it has been a long time—nine years, I believe—since I last spoke in Illinois. This visit, brief as it is, gives me an opportunity to renew old acquaintances and to refresh pleasant memories.

I realize that there is something special about this meeting tonight, something which this meeting symbolizes so valuable that I am particularly pleased to have the opportunity to meet here with you. This meeting centering as it does on the Seventh War Loan, an important enough objective in itself, symbolizes something even more important than the Bond Drive. Your meeting and the activities of your association are a reminder of the most important element in the civilian portion of America's all-out-effort to win the war. A gathering of this kind is a meeting of the common man whose sincerest aspiration is victory. This is not primarily a meeting of the highest financial or political leaders of Chicago or Illinois. It is a meeting of the people themselves.

Perhaps I can make my meaning more clear by pointing to the list of officers and directors of your association. I find on that list a president of a realty company, a vice-president of a coal company, a vice-president of a shoe store, a retail druggist, a head of a laundry, two grocers, and so on. These men are the community businessmen, with whom the people eonduct their affairs.

At the same time, your association, as I understand it, is dedicated to the high service of promoting improved relations between the white and the Negro eitizens of Chicago. Your group thus rep-

Wake Farmers Purchase Co-Operative Farm Machinery

Negro farmers of the Friendship and Holly Springs sections of Wake County pooled their resources to purchase farm machinery cooperatively for better farming practices. The equipment includes a farmall tractor and other attachments necessary to carry on better farming in Wake County. C. N. McCullers and Earnest Booker of the Friendship and Holly Springs communities respeetively, are co-sponsors of the farm machinery co-op.

The coop is in agreement with nineteen eommunity farmers and aggregating more than 381 acres of farm land to be serviced by the way of tilling, discing and etc. Other attachments as a mowing machine, wood-saw and combine are to become a part of the outfit. Aside from members of the co-op, community and non-community farmers will be serviced by the sponsoring group.

According to W. C. Davenport, Agricultural Agent of the State College Extension Service, these farmers are experiencing their first co-op venture and at a time when there is a great need because of the farm labor shortage. The machinery is busy at work and serving the farmers' needs of the respective communities. With the gradual release and location of major farm equipment, other farm groups will benefit from such community services through co-op channels.

Chopped wheat straw has been found a satisfactory substitute for sawdust in packing ice, according to the experience of Matt Crowley, a North Dakota farmer-rancher near Hebron.

Address of Honorable Hugo L. Black

(Continued from page 1)

resents the aspiration of the great mass of the common men and women of all walks of life in America toward tolerance and understanding.

It is not idle flattery or idle romanticism for me to say that it is the effort and contribution of the common man in civil life which marks the greatest civilian asset of the United States in the battle against those enemies whom we have conquered and the enemy which we still fight. For the common man, war is a series of sacrifices. Like all others he is left lonely with his sons gone to battle. He bears the brunt of the disruption of civil life. He pays his taxes; he makes no spectacular profit. He buys his Bonds. He gives his blood. He feels the full burden of all the necessary but annoying regulations which so encroach upon the customary freedoms of all of us. He works long hours and sacrifices vacations. And because his freedom was at stake he has borne these burdens cheerfully, cooperatively, and willingly. Without that cooperation our victory could not have been achieved.

A War Bond Drive typifies the spirit of the common man in war time. These drives are our opportunity to do something extra to help our armies in the field. A voluntary Bond Drive is one of the most significant activities of Democracy war. It presents an opportunity for each one of us to say to ourselves: "I understand what this war is about. Of my own free will I want to help the country of which I am a part. I will assess myself as heavily as I can, as my contribution to the common cause."

America's men and women have voluntarily responded magnificently. They have already loaned to their government in the form of small War Bond purchase over 34 billion dollars. Eighty-five million individual Americans have bought bonds. In other words two-thirds of our people have bought Bonds in an amount far, far greater than the total cost of our government during the first 100 years of its existence. Twenty-seven million Americans have bond payroll deductions made at every pay period.

A bare recital of statistics can only suggest the meaning of this accomplishment. This is more than a triumph in contribution—it is a triumph in Democracy itself. We have proved, by our Bond buying as in many other ways that Hitler was wrong in believing that it was impossible for a Democracy to defeat a tyranny by willing instead of coerced cooperation. The Bond program itself is the product of volunteer activity. Our people have not bought Bonds because they were coerced by paid propagandists. On the contrary, Secretary Morgenthau and our late President Roosevelt decided that this program, to be a real meaning, must depend not only on the contributions of the people but on the salesmanship of the people themselves. The result has been that major credit for the success of the Bond sales goes to more than 4 million voluntary workers who receive no personal return except the gratification which comes from serving one's country in its time of need.

I am particularly glad of the opportunity afforded by this inter-racial Bond gathering to assure every person who is listening to this speech that in every Bond Drive, as in all the rest of the war effort, the American Negro is doing his job. Thinking only of the common cause he has said to himself: "This is my war for my country and I will do my part." I do not know how many Negroes have bought Bonds nor do I know the dollar value of those Bonds. It is very wisely, not the practice in this country to keep books by racial groups. I do know that one Negro organization reports that its members alone have bought 12 Million Dollars in Bonds and that 11 Million Dollars were sold through one series of inter-racial meetings. You have all heard the tale of Joe Louis who early in the war risked his title without compensation at a Bond Benefit Fight. Before the fight one person said to him: "You are fighting for nothing tonight Joe." "No," replied Louis, "I am fighting for my country." Thus spoke a loyal American.

It is a tragic fact that a great number of Negroes have all too little with which to buy Bonds so that each contribution is proportionately more of a sacrifice than it is for many of the rest of us. But I hope that our country will always remember the spirit of the Negro woman in Los Angeles who sold her home so that she might buy Bonds, of the 11-year-old Negro boy who saved 1,875 pennies with which to buy a Bond, of the Negro farmer in Georgia who brought $7550.00 in a flour sack to a Bond station so that he might purchase a $1,000 Bond.

To me, this meeting tonight, and the Bond Drive of which it is a part, symbolize what America is fighting for. Let me be more specific. As I understand your organization, its object is to promote group understanding so that all Americans of whatever race or creed may more happily live and work together. The Bond Drive is one example of the way Americans can work together. As I understand it, we have been fighting this war because certain powerful enemies have sought to enslave the world under an opposite philosophy. That philosophy is that Germans and Japanese are born to rule, while others are born to serve the master race or the master class. We in America have challenged that philosophy with a philosophy of our own. We have not said and I do not now suggest that the customary groups of the world population may not have their own custom, their own traditions, and habits as exclusively as they desire; but we have dedicated our nation to equality of opportunity and equality of justice for all behind that standard Americans have fought and won.

Another way of stating our philosophy is to use the phrase familiar to every one of us: "Live and let live." That principle guides us in countless ways in our aspirations for a better world order and for a better domestic order. For example, if I understand the meaning of what the representatives of the countries of the world, large and small, are trying to do at San Francisco, it is to create the formula by which the Nations of the world will be allowed to live freely and without domination by anyone. If I understand the movement in America toward tolerance among our racial and religious groups, that movement is based on a spirit of freedom for all.

Like a successful Bond Drive, the drive toward realization of human ideals cannot be forced upon the people from above. It must grow out of the people themselves. For example, neither courts nor legislatures could require tolerance if there were in the hearts of the people themselves no desire for fairness and justice, any more than the Treasury could carry on the Bond Drive if the people did not want to buy Bonds. We are, perhaps, as a people, a little too prone to put all of our faith in laws rather than in human convictions.

Let me make myself very clear. Of course, laws and courts do have a most important place in the affairs of men. But in a Democracy at least laws arise because of public demand. We will have black markets as long as the people endure black markets. We will have monopolies if the people want monopolies. We will have war while people endure war. We will have intolerance as long as men are intolerant. Therein lies the function and value of organizations such as yours. I think most Americans are tolerant, or at least are not aggressively intolerant. You, by example and education, can spread the message of tolerance so that the balance of human thought will swing more heavily to the side of humanity.

We would be indeed unsophisticated if we did not realize that it is a long step from our aspirations to their realization. The San Francisco conference will not achieve perfection. Intolerance will still linger with us. But we keep trying. Against the long backdrop of history we make progress. If the common men and women of the world, white and Negro, Catholic, Protestant and Jew, farmer, laborer, little businessmen, and working people everywhere, can keep their shoulders to the wheel of progress with the same determination with which they have kept their shoulders to the wheel of victory, equality of opportunity will become a lasting reality.

Workable Farm Factory

(Continued from Page 1)

small farmer under this setup can whip the pants off any big power operator in the country.

"Even if he has a complete crop failure he still earns a living."

The merchant-farmer lays no claim to being an economist, just a business man with a penchant for cooperating with his fellow citizens.

"If I work by myself," he philosophizes, " I am just one person. If I work with others I can be as many people as I want to be."

ICC Finally Gives West a Break on Freight Rates

Under prodding, the Interstate Commerce Commission last week took a short but significant first step toward better business for all Americans, and equalizing economic conditions so industry can spread.

This was the commission's order to cut class freight rates east of the Rockies by 10 per cent except in the so-called Official Territory, which is North of Ohio River and East of the Mississippi. There they are to be raised 10 per cent. Later, the ICC said, class freight rates will be put on a uniform basis.

When the change is accomplished (railroads haven't said they would accept it without a fight) industries can be established more easily in the vast Southern and Western territories.

Gov. Arnall's Fight

Despite the big headlines which greeted the order, however, its actual effect will be gradual and slight. The molasses-slow Interstate Commerce Commission, which has looked on complacently for 60 years while the Northeast was built up as a giant industrial region at the expense of the rest of the country, was prodded into action only by an aggressive fight led by Governor Ellis Arnall of Georgia, the TVA, and other persons and agencies interested in a better break for the South.

Governor Arnall had already succeeded in getting the U. S. Supreme Court to agree to hear the Southern plea to outlaw old-style rate making, and he says he'll go ahead with the case, as "double insurance."

In the past two generations, many a promising business, in cities and towns all the way from Memphis to Denver, has been laid in ruins because Eastern competitors, favored by freight rates could simply pour in their goods at low prices until the local manufacturer was put out of business.

The actual effect on the whole freight rate bill will be small because only 4.1 per cent of all freight moves under class rates. the vast majority moving under so-called comodity rates set up for individual commodities.

In the latter class are most raw materials shipped by farmers. That the farmer pays the freight rate and has it deducted from what he gets for his produce, is axiomatic.

However, the 4.1 per cent includes most of the highly-manufactured goods, such as suits, shoes, farm machinery, etc.

BUSINESS WEEK gave an example of what the cut will mean:

Example

Now work clothing shipped from Macon, Ga., to Chicago costs $1.56 freight for 100 pounds, a distance of 817 miles.

Shipped from Philadelphia to Chicago, a distance of 814 miles (Philadelphia being inside the golden circle of "official" territory) it costs $1.12.

Guess who gets the business?

When the change is made, the freight from Macon will be $1.41 while that from Philadelphia will be $1.23, a handicap of only 18 Cents instead of 44 Cents.—National Union Farmer.

Extension Spends Millions on Pamphlets for Farmers

The Alfred P. Sloan Foundation, financed by the former head of General Motors, is spending thousands of dollars to do work the U. S. Extension Service heads, the county agents and home extension agents draw public salaries to do.

While the U. S. Extension Service waits on Farm Bureau members hat in hand—and Congress prepares to give it more millions—it has totally failed to do the job it was created to do, according to the Sloan experimenters.

The Sloan Foundation has financed three experiments— one at the University of Florida, one at the University of Kentucky, and one at the University of Vermont, to actually reach the people and show them in simple language how to improve farming, gardening, housing, and other essentials of living.

No Usable Material

Assuming that they would find, in Extension Service and other government bulletins, plenty of material for teaching such subjects, the planners of the project at first did not intend to prepare their own books and pamphlets.

But they got a rude shock. They found that the millions of dollars spent by the government for Extension Service pamphlets and other bulletins is largely money thrown away.

These bulletins are written by college graduates for college graduates, wrap the subject up in such wooly and technical language, that people wit hless education find it impossible to understand them, and lose all the value of the excellent advice in the bulletins. These are the people that really need it.

With money supplied by the Sloan Foundation, the three universities have slowly worked out their own bulletins that really do catch and hold the attention of laymen and do some good.

Extension's Failure

They have found that even for college graduates, bulletins should be written in language adapted for non-technical people who have not had the advantage of a college education.

As to the failure of the Extension Service, let Prof. Harold F. Clark of Columbia university, the head of the project, tell the story:

After saying he searched unavailingly for material to teach the children, with the idea they would carry home better ideas about diet, housing, etc., Dr. Clark says:

"We had assumed that the Department of Agriculture bulletins, the experiment stations, and the state departments of education could be used, but we found out they could not, in our communities.

"Why? Because the people could not read them. How did we know? We tried them. The officials of such organizations had evidently never put the matter to a test, or they would have found out the same thing.

"In the poorer communities, there is no material that is usable. That is a damning indictment of the whole educational system from one end to the other. There is almost no material . . . that the ordinary adult in the poor communities of the U. S. can comprehend and use.

"We happened to have one community where conditions were good for poultry raising.

"The community did not raise enough for its own use.

"We got the poultry bulletin, written by the U. S. Department of Agriculture, and tried it out. It was too difficult for the people to read.

"We finally gave it to the teacher and after struggling with it she finally gave it up in despair. She hadn't the least idea what it was all about. She simply couldn't read the thing. And I think you'll find out why if you get the sample of these bulletins."

(These bulletins and others like them have cost millions of dollars of public money.)

Dr. Clark said that when the Sloan experimenters wanted to rewrite the poultry bulletin into language the people could understand, they had to do it "over the violent protest of the technicians. They said you cannot rewrite that poultry bulletin and keep it accurate. Impossible! Well, we did rewrite it; we changed it from college level to third-grade-level."

In Florida, driving with a dean of the School of Engineering, they asked a farmer if there was anything he needed to know about his house.

The farmer thought a minute and said there wasn't, but added: "Oh, I guess there is. My house has burned down four times in the last seven years. I'd like to know how to stop that."

Farmer Not Contacted

The Dean asked him if he didn't know the School of Engineering had had for 50 years a screen designed to stop the roof catching fire from fireplace sparks, and the farmer said: "No, I've never been to the School of Engineering."

--"Of course he hadn't, but you see the School of Engineering had never been to him either. That was the tragedy," added Dr. Clark.

Striking improvements in health and housing have begun, as the people really learned how. The Sloan Foundation is expanding the project because it realizes the need— though this private-enterprise foundation is exactly duplicating the job that the Extension Service, the county agents, the home extension agents, and other services of the Department of Agriculture and of other government bureaus, are paid by the taxpayers to do.—National Union Farmer.

800,000 GI's Want to Farm

More than 800,000 men in the Army alone want to become farmers after the war—and less than 10 per cent plan to be wage workers.

This is revealed in a survey conducted by the Information and Education Division of the Army. it showed less than 5 per cent of white and less than 10 per cent of Negro service men expect to work for wages, and that a high proportion of all will require the major portion of their financing.

Inasmuch as the nation has failed to hold surplus lands, or prepare to locate farms for veterans, there is foreseen a great danger that thousands will go on sub-marginal farms doomed to failure from the outset.

Price Control

"I was active in drafting and securing the passage of the Emergency Price Control Act of 1942. I believe that price control is necessary during the war to prevent run-away inflation. I believe we will have to extend it for perhaps a year after the end of the war. Price and wage control, however, is the most extreme form of regimentation in which a government can indulge. The government's hand enters into millions of transactions every day, and a wide field of individual freedom is destroyed. We don't want it any longer than it is absolutely necessary."—Senator Robert A. Taft of Ohio.

Bloc Rushes Farm Credit Ripper Bill

Hope to Move FCA and FSA Out of Dept. of Agriculture in Quick, Quiet Action

Washington.— Supporters of a measure to remove the Farm Credit Administration from the Department of Agriculture— and send the Farm Security Administration out with it—are attempting to push the measure (the Flannagan Farm Credit Bill) through Congress quickly and quietly.

The measure, directly counter to most of the principles of Farm Credit for which NFU has stood, and destructive of the type of Farm Security Administration program for which NFU has battled for years, must be opposed with every resource at Farmers Union's command if it is to be defeated.

It is particularly important to insist upon a delay until adequate consideration can be given to such an important measure.

The bill, introduced by Chairman Flannagan of the House Committee on Agriculture, differs widely from any of the consolidation measures previously proposed.

Separate Agency

Section 2 of the bill sets up an independent agency, the Agriculture Credit Administration, and transfers to the new agency all of the functions and powers of the present FCA and FSA.

Section 3 of the bill establishes a 7-man, $12,500-a-year Agricultural Credit Board, at least 3 of whom shall come from each of the two principal political parties, with appointments to expire at 2-year intervals beginning in 1947. and to serve after that for 14 years each.

Section 4 provides for appointment of a $12,000-a-year administrator, under the board, and five $10,000-a-year deputy administrators, each of whom will head one of the following divisions:

"1. A division for supervising loans to farmers co-operative organizations.

"2. A division to supervise short-term loans made by co-operative lending institutions and long-term farm mortgage loans.

3. A division for supervising and administering direct lending to farmers.

"4. A division to supervise financing and discounting activities.

"A division to carry out the functions of appraisal and examination and other service functions."

Policies

Section 5 spells out the policies of the 7-man board as follows: "(7) To promote a system of agricultural co-operative credit banks and associations and cause them as soon as practicable to become producer-owned and producer-controlled; (2) to assist qualified veterans, and farm tenants, farm laborers, sharecroppers and other individuals who obtain, or who until recently obtained. the major portion of their incomes from farming operations, to become farm owners; and (3) to assist farmers to whom direct government loans are extended . . . to qualify as soon as practicable for membership in the co-operative agricultural credit system or for other private credit."

Section 6 sets up a Public Appraisal System "available to the public for use in determining the value of farm real property."

What It Does

These are the essential provisions of the bill.

It would thus take Farm Credit out of the Department of Agriculture, in contrast to the integration of related agencies desired by President Truman.

It would lump the special rehabilitation-loan type of credit with the routine commercial-type credit offered by FCA.

It would adopt the board system of administration advocated by the Farm Bureau. Moreover, it would confront the new Secretary of Agriculture, Clinton Anderson, with a drastic reorganization situation just as he takes office. Finally, it leaves in serious question the status of the whole rehabilitation program, since it merely gives the new agency the authority contained in the Bankhead-Jones Act without specific reference to such loans. While the bill is an excellent example of draftsmanship, in simplicity and theoretical integration, and also contains an excellent provision in the section setting up a Public Appraisal System, it is directly counter to most of the principles for which NFU has been fighting.—National Union Farmer.

Property Right Inherent in Human Rights

In its "Fortnightly Letter," the Connecticut Economic Council of Hartford says:

"Frequently the pious sentiment has been uttered that 'property rights' must never be placed above 'human rights.' But if we stop and think, we know our 'humanity is at the base of our property.

"Freedom in the right to work; in the enjoyment of our existence in decent homes: in the opportunities opened by good education; in good health as improved for us by modern science—all of these freedoms are supported by our property in the fruits of our labor.

" No man who is not assured of the products of his labor can be sure of his liberty. If we have no property rights in what we produce, we are under a political control which soon turns into an economic enslavement. We are not free if we have no say about what we shall expend our forces upon, what sacrifices our ambitions shall inspire us to make, and what rewards we shall aim to attain."

Pull Together Now

The housewife has problems of marketing; the farmer has his difficulties; the manufacturer wonders how he is going to meet consumer demands; the retailer who seeks to get goods in the face of shortages, wonders how he is going to carry on; and the headaches of transportation, on which we all depend, are particularly acute.

Take the express industry—in addition to facing all the common problems of shortages, it must meet abnormal demands for service. Like the railroads, when other means of transportation fail, it must take up the slack.

When the housewife ships her birthday gift, when the farmer moves his perishable crops, when the factory rushes a piece of equipment to a war job, or when the retailer needs goods in a hurry, they all seek transportation.

The Railway Express Agency illustrates how American business carries on under drastic gas rationing, great curtailment of highway transportation due to rubber and truck shortages and mileage reduction called for by the ODT and other wartime government bureaus, inability to buy new equipment, and lack of parts to maintain old equipment.

One might ask, How is it done? The answer is. By cooperation—cooperation within its own ranks and cooperation and a spirit of toleration and understanding on the part of customers who realize the difficulty of maintaining peacetime efficiency under wartime handicaps. Toleration and cooperation are the American way. By their use, we are winning the war, and by their use we can all lick our domestic problems of production and distribution, and maintain dependable service which the American customer and consumer has always expected and received from American enterprise.

Coal and Farming in Same Boat

An encouraging indication that industry as a whole is taking a broader outlook on the problems affecting any one industry, is shown by an article in the April issue of the National Grange Monthly, by Fred Brenchman, national legislative representative of that organization, entitled, "To Regulate Coal Industry." Mr. Brenchman said:

"Farmers, together with other consumers of coal, both domestic and industrial, have a vital interest in several bills pending before the Ways and Means Committee of the House of Representatives to re-enact legislation for the regulation of prices in the bituminous coal industry. As many disinterested people view it, these proposals are part and parcel of the movement for government control of industry, as opposed to our traditional system of free enterprise. . . . If this legislation should be enacted, the precedent thus established for the coal industry would likely be extended to other industries allegedly charged with a public interest."

Members of Congress who believe in our American system of free enterprise will find little difficulty in justifying themselves for voting against such proposed legislation, because, as the Honorable Frank Carlson of Kansas, says: "The coal industry is not a national monopoly any more than farms or timber, and if Congress is to set minimum prices based on cost of production for this natural resource, would it not be logical to do the same for petroleum, farm products, and factory products? This, of course, would lead to regimentation and a bureaucratic controlled domestic economy. We have just defeated German national socialism at an unparalleled sacrifice of blood and treasure. Why support a measure here that leads down the road to serfdom?"

Is Your Self-Respect Worth Anything

Are you willing to help win the war against Japan? Naturally you will say, yes. There are two outstanding things those of us who are privileged to remain at home can do to aid our fighting forces. First, we can work to the limit of our strength and ability, without interruption; second, we can deny ourselves luxuries in order to buy War Bonds necessary to give our fighting men every ounce of equipment and food they need.

While millions of men are facing death and foregoing the pleasures of home and family life, every mother's son of us should put every dollar we can into financing this war, so that by the sheer weight of the equipment we throw into it we will bring it to a conclusion at the earliest possible moment, thereby saving the lives of countless loved ones.

After all. this is our war; our boys are the ones on the firing line; our homes are the ones being saved. How much would your life or property be worth if the Japanese army and navy had not been held at bay, and were not eventually demolished? Don't think that in buying War Bonds you are in some manner doing someone else a favor; you are the one who is really favored by having an opportunity to buy them. Think what it means to the boys at the front to know that the necessary money is given willingly to back them up.

All war loans necessary to knock out the Japs must go over the top with a bang. American bullets and American money are the most discouraging things they can face today. Why should we hesitate about buying that extra Bond when the boy with a rifle hits the beachheads without question, not knowing at what moment he may be blown to bits or blinded or crippled for life—and then we quibble about loaning $25 or $100 to buy more supplies for him.

There is only one answer if you wish to keep your self-respect.

More Surplus Machines for Farmers in Sight

Washington — Farmers' prospects for getting more surplus machinery this year are looking up, Chairman Flanagan, Va., of the House Rules Committee. said this week, giving Henry A. Wallace credit for the brighter outlook.

"I am happy to report that we are making real progress in working out a program that can be used on the farm back to farmers," Flanagan said.

"I want to congratulate Secretary Wallace on the way he has co-operated since entering the picture. It knows the interests of the farmers are now in safe hands."

Flanagan's statement followed issuance of the Surplus Property Board's Regulation 3, first action it has taken toward implementing the provisions of the Act, written at the suggestion of NFU, giving preference to farmers in the disposal of surplus property.

The regulation directs disposal agencies "to cause appropriate quantities of surplus property to be sold or channeled into rural areas so that farmers and farmers' co-operative associations will be accorded opportunity to purchase which is equal to that accorded buyers having no priority."

The regulation then spells out at length the procedure to be used in making surplus property available in farming sections.

Flanagan also made public a letter from N. E. Dodd, AAA Administrator, in which Dodd said that efforts are being made to get fixed prices established on trucks offered for sale and to get ceiling prices established that "will reflect actual services rendered by the dealer, plus a reasonable margin of profit." Dodd said that both the Commerce Department and the Surplus Property Board have promised to cooperate toward getting both these points established.

Stubborn as a Mule

By Jasper B. Sinclair

THE old phrase "stubborn as a mule," not always intended in a complimentary vein, might well be modified to "determined as a mule." It would be more fitting to this sturdy four-legged friend.

Actually, the mule has been much maligned in its time. So much so, in fact, that its virtues have often been overlooked.

It is freqently stubborn, of course but it more often filled with a determination to do the job at hand. In this respect, it is more determined than most animals when put to similar tasks.

The hardihood of the mule has never been better illustrated than in wartime, where it has generally displayed itself as much better fitted to withstand cold, rain, snow, hunger, and privation than the horse.

Reports by American artillery batteries to this effect were frequent in the last war. Where horses and mules had been exposed to the same conditions the horses were generally sent to the rear as unfit for further front line service. The mules, on the other hand, were again ready for combat duty after a few days' rest.

For some years, the Georgia and Missouri mule were facetiously credited by the people of the "Cracker" and "Show Mee" states with having won the first World War The debate continued til second war made them forget past rivalries.

It may be a surprise to Georgians and Missourians, alike, that they can no longer contend for leadership in this regard. Texas now leads all the states in the number of mules on Lone Star grazing lands.

It is not surprising, though, in a country that now travels on wheels and farms with tractors that the number of United States mules is decreasing. Last year there were only 3,500,000 left to carry on their tradition.

Practical Unemployment Relief

Anyone who has driven on the highways of the country is aware of the fact that they have taken a beating during the last several years and have been denied necessary upkeep.

In view of the fact that returning soldiers and cutbacks in manufacturing have created unemployment in certain local areas, Charles M. Upham, Director-Engineer of the American Road Bulders' Assocation. appeals for action to release government funds for road projects now that the war emergency has been relieved. He says: "We do not claim that highway construction without limitation should start now, but we find an unemployment problem in the number of returning service men and the cancelling of war contracts."

Highway construction can be extremely flexible, as new roads are required everywhere. It can be gauged to fit those areas where demobilization and cancellation of government contracts develop a local unemployment situation. With few exceptions, materials for highway construction are no longer critical, according to Mr. Upham. He finds no shortage exists for such basic materials as cement, asphalt, tar, crushed stone, sand and gravel. The WPB has modified its controls over constructon machinery and such equipment will soon cease to be a problem.

For Hillside Acre

Here lie the joyous hearts; let no sad song
Rise from this sweet green acre where they sleep,
Even though waiting time seems overlong,
And the sad heart would claim its right to weep.
These were the love and loving, these, the true,
The eager and the innocent and gray;
These were the faithful to the best they knew,
And sure of Heaven as dawn is sure of day.

Then let the snows of winter cover lightly
These little mounds, and the returning sun
Gladden the ground, and the moonlight follow whitely,
And peace brood gently while the seasons run.
Weep for all earthly sufferers, as you must;
But let no mourning vex this happy dust.

—Silence Buck Bellows

Only the Free Eat Well

"Some of our more advanced thinkers," says the Wall Street Journal, "have had the effrontery to put into so many words a statement to the effect that 'freedom is all right but you can't eat it.'

"Well, perhaps you can't eat freedom. But note one thing. People who do not have freedom are likely not to eat."

Proof of the latter statement becomes more evident in the United States each day. Due to wartme restrictions, the people of our country have given up many of their freedoms, a principal one being the right to produce and sell,

We have accepted wartime rationing and price control as essential to the distribution of existing supplies. But as we have given up our freedom to produce supplies have dwindled until the United States today faces shortages of the essentials of life. All the alibis that are offered in the name of "anti-inflation," will not supply the nation's needs when freedom to produce and sell is gone.

Something New in Georgia

(Continued from Page 1.)

his dream farm and developed the peer of all of Georgia's millionaire show places.

What had once been poor land blossomed forth with renewed fertility under the prodding of Mr. Calloway's paid experts and their bountiful and money absorbing soil building practices. Paradise took the place of desolation.

So, it strikes Mr. Calloway that if he can do this, so can all of Georgia. Agriculture should and can be completely revolutionized. What it takes is organizational genius and plenty of capital. SMALL FARMING MUST GO, it has been pitting around with the land too long and not making any progress. How can it? It has not the necessary capital resources for the direction of guiding genius.

So, Mr. Calloway sets about campaigning among the business men and capitalists of Georgia. He is organizing corporations in each county made up of business men who purchase the shares. These corporations are beginning by setting up demonstration farms in the counties where they are organized. All these are to be operated under the guidance of Mr. Calloway and his experts. They are to show everybody how it can be done.

Then, presumably, the corporation, as interested investors increase, will buy up additional farms until finally all of Georgia's agriculture will be controlled by county corporations organized into and directed by a central federation af some sort over which presides the guiding genius of a business man or a council of them.

What will become of the small farmers? Will they become tenants? Day laborers? Or are they to become joint owners in the enterprise? If so will their vote count democratically (on a one-man-one-vote principle or will the business men have sole control?)

Is it significant that the demonstration farm units are of 100 acres (or family size) and not of 1000 acres? If the farms are to be 100 acres, as the pattern, where is the absolution of the family farm? What kind of socialism is this to be anyhow?

Is it to be common community ownership and contrl of land resources for the benefit of the farm families concerned, with the business men taking an altruistic leadership? Or is this to be a sort of national or state socialism with a business man's oligarchy regaining control of all the state capital resources (and through these, the government) and thus reducing the masses to a completely controlled and rejuvenated group of farm and factory workers? Are these the seeds of fascism in Georgia?

There appear to be some good points in Mr. Calloway's plan. Georgia business men surely need to become vitally concerned with the future of the State's Agriculture. But what direction will their interest take? Toward helping to build a thriving democracy in agriculture, or toward the fascism of dominance of the majority by the financially powerful minority?

What is it Georgia? Or, is this simply a passing acute symptom of the State's "growing pains?"

NFU Backs Trade Pacts and Bretton Woods as Aid to Prosperity on Farms

In a statement to Chairman Doughton of the House Committee considering extension of the Trade Agreements Act, under which tariff barriers can be reduced, President James G. Patton explained farmer support as follows:

"The National Farmers Union strongly endorses the extension and strengthening of the Trade Agreements Act and urges its approval by the Ways and Means Committee.

"The members of the Farmers Union are interested in foreign trade in these principal ways:

"First: Many of us produce products which have traditionally entered into export trade, like cotton, wheat, tobacco, hogs and certain fruits. We know that the export market for these crops is important to us and that it depends on low trade barriers abroad on prosperity and buying power in foreign countries, and especially on foreigners' supplies of dollars. We know that foreigners can obtain dollars chiefly by selling goods and services to citizens of the United States, and that the amount they can sell depends in part on the level of our tariff rates against the goods they have for sale. We, therefore, support this bill because it tends to reduce both American tariff rates on foreign goods, and foreign barriers against the goods we have for sale. _____ ___ ___ __

"Second: On the other hand, many of us produce products which are not ordinarily exported from this country, such as beef and dairy products. The market for these products depends on prosperity at home, and especially on the level of industrial employment and wages. We know that many American industries depend on foreign trade for important parts of their market, and that these industries cannot operate at full employment unless their foreign sales are large. We know that these same industries pay among the highest wages in the country, and that the people who work for them, when they have jobs and wages, are among the best customers for the meat and diary products which our members have for sale. We, therefore, support this bill because it promotes the prosperity of these industries, and thereby our own prosperity.

"Third: All of us are consumers, not only of supplies for the operation of our farms, but of all kinds of consumers' goods. We know that the prices of some things we have to buy are still too high, that some of these high prices are held up by high tariffs, and that high tariffs are one of the main bulwarks of monopoly. We are in favor of reduction of excessive tariffs, and are, therefore, in favor of this bill.

"Fourth: All of us believe in full employment in an expanding free economy and we do not believe that either is promoted by governmental barriers which prevent trade from moving. This bill proposes to reduce such barriers, both in this country and abroad. For that reason we support it.

"Fifth: All of us desire peace, security and liberty for the United States and all its citizens. We are convinced that peace depends on co-operation among nations, not only in political matters, but in the practical affairs on which the material welfare of people everywhere depends. This bill proposes to carry on and strengthen a tested and sensible program of practical co-operation among nations. For that reason we are for it."

Oysters provide work for approximately 65,000 persons in the United States in normal times.

A Christmas pudding presented to William Archer of Evesham by Queen Victoria during the Boer War has figured on the family dinner table at Christmas for the 44th time.

F. E. P. C. Is Gone

The Fair Employment Practices Committee has been crucified on the SOUTHERN CROSS. Under pressure of southern congressmen the House of Representatives has refused to appropriate funds with which to maintain this agency created by the late President Roosevelt to "assure" the right to work of all citizens REGARDLESS OF RACE OR CREED. Many people have regarded the F. E. P. C. as a national "CHARTER OF FREEDOM" for minority groups here at home in the U. S. A.

By doing so, Congress has served notice on the minorities that they cannot expect its support in their effort to assure fair and equitable employment for all citizens in the nation. This decision is extremely important to the millions of Negroes now backed up on worn out and eroded forms of the South which have been ruined by single-crop plantation type cultivation:—millions who will be surplus to the needs of a reorganized and mechanized Southern Agriculture.

It has been estimated that there are at least 1,600,000 able bodied Negro workers that must find jobs outside of agriculture in Southern States. There is an even greater number of white farm workers that must leave agriculture for other occupations. What is the likelihood of Negroes being employed on equitable terms with other people in any development of southern industry?

The greatest industrial development thus far in the South has been the textile industry. In the textile factories, Negroes have been systematically and thoroughly excluded from all jobs that white people want. This has also been true of the tobacco industry where Negroes have seldom been able to secure jobs above the most menial tasks.

This principle of racial differentual in employment has been and still is a major characteristic of southern industry. It has only been during the war-time period of intense labor demand that Negroes have had a shot at any of the better paying industrial jobs and this has been due largely to leadership of Federally supported war industries and under pressure of the F. E. P. C.

In the interest of economic stability and progress, of providing a market in the South for southern industry, ways and means must be divised for the full employment of the South's large Negro population. Reorganized agriculture will not need many of them, industry and commerce must employ them.

F. E. P. C. has been virtually abolished. Does the South come forth with a better answer to the problem? What Southern agency is going to protect the interests of its disadvantaged minorities?

An Old Racket

The farmer has always been picked as the down-trodden individual by politicians when they wish to bring tears to the eyes of the public, and put through appropriation bills calling for the expenditure of countless millions of dollars of tax funds to finance excursions by government into socialistic experiments in rural areas,

We have watched this racket carried on successfully in the Federal program to socialize the power industry. Now we see the same political forces at work to get a hundred-million-dollar initial appropriation for rural telephone expansion. As usual the poor old farmer is dragged in. It seems there isn't a telephone on every farm. Therefore, there must be a Federal Rural Telephone Administration to see that every farmer has one.

War restrictions have prevented telephone installation for years, Telephone companies, like, electric companies, kept far ahead of demand in normal times and gave this nation the greatest telephone service in the world without governmental tax expenditures.

Some 12,000 cities and towns in the United States receive telephone service from more than 6,000 separate, privately-owned independent telephone companies. It is good business for the promoters of industrial socialization to weep for the poor farmer when they ask one-hundred-million dollars in Federal taxes that could be used to change such a network of private business into a political patronage machine.

Davis And Barnett Address Extension Dinner Meeting

Washington, D. C., July 16, 1945 —Dr. Jackson Davis of the General Education Board, and Claude A. Barnett of the Associated Negro Press were the principal speakers at a dinner given Monday evening at Slowe Hall in honor of the colored State Extension Service supervisors here in attendance at a six-day conference at U. S. Department of Agriculture.

Dr. Davis, who has just returned from a six-month tour of West Africa, spoke of the immense resources of that region and pointed out how America can further contribute to the development of Africa.

Mr. Barnett sounded a warning of what may be in the offing in the way of unemployment both in rural and urban areas after the war. He quoted figures to show the large number of colored workers who already are being laid off war jobs. Also he pointed out that mechanized cotton production may mean the beginning of a new exodus from southern farming areas.

Said he, "These facts post new problems and a new challenge for Extension workers in helping displaced workers adjust themselves to a changing agriculture economy in the South. Unfortunately, there are all too few farm and home agents to most effectively discharge this responsibility."

Prior to the addresses by Dr. Davis and Mr. Barnett, Mrs. Mary McLeod Bethune, as honorary chairman of the entertainment committee, made a brief welcome statement.

Special guests at the dinner aside from the supervisors included Judge William H. Hastie, Dr. and Mrs. Arthur Raper, Dr. and Mrs. Charles H. Thompson, Dr. and Mrs. R. O'-Hara Lanier, Mrs. Thomasine Johnson, Dr. Madeleine Kirkland, Dr. Flemmie Kittrell, and Mr. and Mrs. Russell Smith. T. M. Campbell, Extension Service field agent, was toastmaster.

—Nashville Globe

United They Stand!

Never in the history of American agriculture did the farm owner and operator have to be so well qualified as a business man to make a success of farming. Like all other activity, farming today is conducted under pressure. It is not the easy, peaceful existence many persons like to picture it. It is largely mechanized. In addition to countless regulations and restrictions which complicate its operations, it is subject to political controversy, labor problems, and the weather, which no one can control.

Farming is literally being forced into cooperative action in the marketing and production of crops, as a means of self-preservation, for the farmer alone is almost helpless to cope with the forces that are continually working against him.

If you've been annoyed with salt shaker top corrosion, try this. Remove tops from the salt shakers and invert them. Pour melted paraffin through them. Enough paraffin will adhere to coat the surface and holes may be opened with a tooth pick or needle. This will last for a long time..

Spaulding Urges Business Methods For Negro Farmers

"Teach the farmers to use business methods, and to keep books," was the advice offered by C. C. Spaulding, president of the North Carolina Mutual Life Insurance company, and the Durham, N. C, Mechanics and Farmers Bank, in an address before the South-Wide conference of colored State and District Extension Service supervisors, meeting here last week at the U. S. Department of Agriculture.

"You need to keep books," Spaulding said, if for no other reason than to know when to go out of business." The banker and insurance head cited examples of successful colored farmers who were grossing from $10,000 to $100,000 annually through careful, business management of their farms.

Showing how tenants and sharecroppers may climb into ownership through good business management, Spaulding pointed out how his bank had loaned an indebted tenant farmer money one year to make a crop. The man made enough to pay off his debt, and make a down payment on a farm of his own. Spaulding said that for nearly 10 years prior the man had been coming out in debt to his landlord every year.

The address by Spaulding was made during the opening session of the six-day conference. There were 39 regional, State and District supervisors in attendance, representing 14 Southern States. Major problems considered by the conferences were methods of assisting farm-minded veterans and displaced workers in getting established on the land, helping colored farmers in adjusting to mechanized cotton production, and finding ways toward improving rural health facilities.

Spaulding not only pointed out how business methods could be applied in the operation of a farm, but he also told the supervisors how he was encouraging 4-H boys and girls to raise more livestock for market and keep records of production costs. His bank is offering $700 in prizes to North Carolina 4-H's to encourage better breeding of livestock.

Public HandOuts Road to Poverty

The question of tax reduction rest entirely in the hands of the people. The National City Bank of New York sums the situation up accurately when it says that the extent of the reduction in the tax rates will depend on how far the people are willing to go in reducing government spending after the war. The Bank says: "The American people need to get out of the habit of trying to solve every economic problem by running to government for some kind of subsidy or financial guarantee, the sum totals of which easily run up to staggering amounts."

Taxes will go higher if individuals and communites persist in asking public hand-outs from government, instead of being self supporting.

Learning the Hard Way

Fred H. Sexauer, long a leader in the dairy industry, in a recent statement, said that the Dairyman's League more than three years ago warned that unless agriculture was treated as an essential war industry, the nation would have serious food shortages.

The present food shortage and the frantic government efforts to correct conditions are evidence of the correctness of the farm organization's stand.

An acre was first defined as the amount of land a yoke of oxen could plough in a day.

Casualty List: Farm Accidents and Fires

(Average Annually)

Killed, 16,000 injured, 1,500,000.

Deaths from farm work accidents totaled 25 percent of all occupational deaths in 1943.

More farm people were killed by accidents in America during the first two years after Pearl Harbor than there were U. S. fighting men killed in the war itself.

The farm accident death toll averages from 40 to 50 every day.

Monetary loss from farm accidents averages a billion dollars annually.

Fire casualties in 1943: 3,500 lives; monetary loss, $90,000,000.

July 22-28 is to be observed as National Farm Safety Week. Let's make it the beginning of an intensive campaign to reduce farm accidents and fires, because America needs every farmer strong to meet our wartime food requirements.

97

April 6, 1945

Subject: NATIONAL FARM SAFETY WEEK. JULY 22 THROUGH JULY 28, 1945.

Time: JULY 22 THROUGH JULY 28, 1945 WASHINGTON, D. C.

Purpose: To focus national attention on the farm and home accident and fire problem and promote the active interest of farm families in correcting hazardous conditions that might cause the occurrence of accidents and fires.

National Farm Safety Week which was so successfully observed last year is again endorsed by the Secretary of Agriculture and the War Food Administrator.

EXTENT OF U. S. FARM ACCIDENT LOSSES

Accidents killed 17,200 farm people and injured 1,500,000 during 1943.

Of the injured, approximately 15,000 were crippled for life.

The monetary loss from accidents during 1943 totaled approximately $1,000,000,000.

EXTENT OF U. S. FARM FIRELOSSES

3500 farm people lost their lives and more than $90,000,000 in property was destroyed last year by farm fires.

HIGHLIGHTS-FARM ACCIDENT FACTS

Deaths from farm work accidents in 1943 totaled more than in any of the other five major industries, amounting to 25 per cent of all occupational deaths.

Non-fatal farm work injuries totaled approximately 225,000 in 1943.

More farm people were killed by accidents in America's first two years participation in the war than the number of fighting men killed in the war itself.

Careless use of farm machinery is the chief cause of farm work accidents with livestock close behind.

Two fifths of the total accidents to farm residents in 1943 occurred in the home.

Deaths due to farm home accidents numbered approximately 7500 and injuries about 1,000,000.

For each $10.00 of gross income the farmer as a class pays out about $1.00 as the result of accidents and fires.

HIGHLIGHTS-FARM FIRE FACTS

A farm home or farm building catches fire every fifteen minutes during the day in the U. S.

The cost of farm fires totals $273,972 each day.

An average of ten lives are lost in farm fires each day.

It is estimated that out of the more than 6½ million farms in the country, one in thirty-seven had a disastrous experience with fire in the five-year period 1936-1940.

Latest reports indicate that fire losses in the United States last year were the highest in this country since 1932.

WHAT CAN BE DONE

The majority of farm accidents and fires can be prevented if every farm family will put into effect this simple three-point safety program.

1—Learn to recognize and hunt out the accident and fire hazards on the farm and in the farm home.

2—Correct or remove those hazards that you can.

3—Learn to live and work safely with those hazards that cannot be immediately corrected or removed.

The following check list provides farm families with a simple but effective means of discovering for themselves whatever common hazards exist on their farms. Undoubtedly every farmer will have additional ideas to augment this list.

FARM HAZARDS CHCEK LIST

ARE YOU PROTECTING YOUR FAMILY AND PROPERTY AGAINST FIRES? DO YOU—

Regularly inspect and clean chimneys and stovepipes?
Avoid using kerosene and gasoline in starting fires?
Insulate wood and other inflammable materials from the heat of stovc and stovepipes?
Store gasoline and other inflammable or explosive materials at safe distances from major farm buildings?
Properly clean and adjust kerosene and other burners?
Do you keep electrical extension cords and appliances in good repair?
Have handy means available for putting out fires?

ARE YOU PROTECTING YOURFAMILY AGAINST PREVENTABLE FALLS? DO YOU—

Use only safe ladders, securely fastened?
Provide adequate handrails for steps, porches, stairways?
Keep steps, porches, and stairways in good repair and clear of rubbish and all tripping hazards?
Keep wells, cisterns, pits, etc., securely covered?

ARE YOU PROTECTING YOUR FAMILY AGAINST PREVENTABLE INJURIES FROM ANIMALS? DO YOU—

Keep bulls, boars, and rams securely penned?
Use care in handling animals with newborn young?
Keep vicious dogs tied up and away from children?
Speak to animals before entering stalls?

ARE YOU PROTECTING YOUR FAMILY AGAINST PREVENTABLE INJURIES BY MACHINERY, TOOLS, EQUIPMENT OF ALL KINDS? DO YOU—

Keep all hazardous belts, gears, etc., well guarded?
Permit only experienced operators on machinery?
Stop equipment before adjusting, refueling, etc?
Keep children away from dangerous equipment?
Safely use and store sharp-edged tools?
Keep yard clear of broken tools, machinery, etc.?

ARE YOU ENCOURAGING ACCIDENT PREVENTION IN YOUR HOME? DO YOU—

Urge members of your family to work safely, play safely, drive safely, and otherwise prevent accident by correcting conditions that might cause accidents?

DO YOU—

Have first-aid materials on hand for treatment of minor injuries?
Are members of the family familiar with the proper use of first-aid materials?

Inspection points the way to protection. Locate the danger spots on the farm and in the farm home and get rid of them.

Group Gets Charter For Baking Co. And Training School

The state has granted a charter to the Southern Baking Company, whose incorporators state will have its headquarters in Nashville, its business office being located at 419 Fourth avenue, north.

Two of the leaders in the new business venture made statements outlining the plans of the concern this week. They are Leo Lillard, president and manager of the Modernistic Cabinet Company, 1002 Jefferson street and Walter S. Walker, dean of colored lawyers at the Nashville bar.

Said President Lillard:

"The Southern Baking Company's program calls for a baking school and bakery in Nashville and a warehouse and bakery in Memphis. From our Memphis project we plan to spread out fanwise to other Southern cities. Our baking school will be designed to keep a steady flow of skilled bakers available for each new venture. Free courses will also be offered both male and female household cooks who wish to learn pastry cooking. We expect to employ over two hundred persons."

Said Attorney Walker:

"I was immensely gratified to learn that a group of my people had discovered in what rests much of the future plight of the Negro, namely, corporate undertaking. I immediately joined with them to make this undertaking not a Negro corporation, but a corporation of Negroes; not a local corporation, but a universal one; not a corporation to enable a few to become rich, but a corporation of many, for service."

—Nashville Globe.

FEPC Forces Intend To Bring Measure Before Congress

By Anna Arnold Hedgeman

Washington, D. C.—By putting its stamp of approval on continuation of the FEPC, Congress has demonstrated that it is in tune with the times. Finally given an opportunity to vote on FEPC, Congress clearly indicated its support of the principle of equality in employment opportunity. It is regrettable, however, that the FEPC appropriation did not reach the floor of Congress in the form and amount originally approved by the Bureau of the Budget, for we believe the majority of members would have preferred an opportunity to vote for the full $599,000 required, and without the termination clause.

The people know that the compromise was forced upon the Congress by a minority which jeopardized the entire war program by its obstructionist tactics. The termination clause, especially, is a challenge we believe the people of this country are prepared to meet.

We are beginning today to redouble our efforts toward enactment of the permanent legislation in the fall. Only about 70 signatures are required to complete the petition for bringing it to the floor at the House of Representatives. All over the country the people are determined to continue the process of making democracy work, and during the Congressional recess, while the members are in direct contact with their constituents, those who have not yet signed the petition will come to realize that their place is with those who are with the tide of history.

We cannot believe that the Congress or the people want a reconversion to job discrimination as the war draws to a close. What is unfair in war time, is also unfair in peace time. Our efforts to build world-wide peace and security through implementation of the San Francisco Charter are inextricably intertwined with our treatment of minorities within our own border. Our national and international efforts toward peace and security are but both sides of the same coin.

—Nashville Globe

An Enviable Record

American electric power production successfully met the peak demand resulting from America's war effort, and in the year 1944 it once more set an all-time record. As in previous years, full service was maintained to all customers, military and civilian.

Eighty per cent of this huge power output was produced by investor-owned private electric companies, serving the great mining and manufacturing centers of America.

Household use of electricity made the usual gain, in spite of the almost complete stoppage of the manufacture of appliance and of restrictions on connecting new customers.

This is striking proof of the increasing appreciation of the value of electric appliances in a period of vanishing servants and other services.

Because of restrictions in the use of materials, construction expenditures were the lowest in ten years, and due largely to increased costs of operation, the net income available for stockholders was seven and one-half per cent below the pre-war year of 1939.

Unequal tax treatment by the Federal government of private power companies, as compared with government-owned power plants, is the most serious problem confronting the private electric industry. Twenty per cent of the nation's total power production, which the government owns, rides free of the Federal tax burden, while the other 80 per cent which is privately owned and serves the bulk of the nation's power requirements, pays government 16 cents out of every dollar of gross revenue.

In the face of this tax loss to government, Congress is being urged by proponents of government ownership of industry to extend its program of Federal ownership of power in many parts of the country. Instead of sanctioning new ways to spend billions of dollars of the taxpayers' money, Congress should exert itself to encourage the expansion of taxpaying private enterprise and eliminate every Federal appropriation not absolutely essential to the basic requirements of government and the conduct of the war.

OVERWORKED

"We shall be glad," wrote the firm to the War Manpower Board, "if you can assist us in retaining this man a little longer. He is the only man left in the firm, and he is carrying on with 15 girls."

In normal times, the United States averaged 11 pounds of coffee per person annually; in England, it was less than one pound.

Handy Household Hints

An unexpected and arresting new suggestion for button placement is to take a cue from toreador fashions and let buttons take the place of braid decoration in a yoke effect across the shoulders and continue down to outline the armholes.

Ground raw meat spoils more quickly than meat in large piece and should be stored in the coldest part of the refrigerator.

Stirring air into foods while they are cooking causes Vitamin destruction.

Sugar syrup goes much farther than plain sugar in sweetening cold drinks. To prepare sugar syrup, heat equal parts of sugar and water until the sugar is dissolved.

When beating whites, make a little more by adding 1-4 teaspoon of cold water and a pinch of salt for each egg white before beating.

Cotton clothing repaired monthly under the quartermaster reclamation program in the United States furnishes 409,174 pairs of khaki trousers, 382,831 khaki shirts, 271,683 green twill work jackets, 309,027 pairs of green twill plants.

To Pique Summer Appetites try varieties of tossed salad. Combine diced tomatoes, cooked kidney beans, chopped celery, chopped pickle or pickle relish, season with minced onion, salt, and pepper, and moisten with salad dressing: or mix diced tomato, celery, radishes, cucumber, scallions or green onions and lettuce.

When storing things in the cellar be sure they are not near a hot spot such as the furnace, or walls concealing hot pipes.

BEDROOM COLORS SHOULD BE CAREFULLY CHOSEN

Your bedroom should be the most restful room in your house, because, after all, its chief function is to provide rest and relaxation. Your first thought should be for the comfort of your bed. A quality mattress and bedspring in good condition are essential to ironing out fatigue posture and renewing energy.

Of second importance is atmosphere in which color plays an influential part. Color experts claim that the effects of color can be observed upon the blood pressure and upon the muscular, mental and nervous activity. They suggest that you use warm colors such as yellow, peach, rose, tan, biege, or brown in rooms receiving cool light from the north and east. Cool colors such as white, off-white, light ivory, gray, blue, blue-green, or green are best in rooms receiving warm light from the south and west.

If your bedroom is square and uninteresting, use different color on the bed wall. If the room is long and narrow, use a darker color in the end walls, with the ceiling the lightest of the three colors. This will equalize the proportion of the room as dark colors tend to advance and light colors to recede.

If your room is too high, use a darker color on the ceiling than on the walls.

Walls and woodwork done in the same color will make the room appear more spacious.

Remember that your walls and woodwork should provide a harmonious background for your furnishings. If you are unable to do both decorating and furnishing at the same time, plan carefully for the ultimate results.

Production of tractors (agricultural, industrial and military) in 1944 had a value of $657,000,000, compared with $357,000,000 in 1943, and $342,000,000 in 1941.

Ocie Lee Smith Addresses Co-op Association

Professor Ocie Lee Smith, co-operative specialist with headquarters in the Donaghey Building, Little Rock, spoke to the Eastern, Arkansas, Purchasing and Market Association, Sunday, June 3rd at 4:00 p. m.

Using as his subject, "It is better to light one candle, than to curse the darkness." The speaker admonished these people to continue to improve and increase activities of their association, which is becoming state wide. In substance he said: If some one will light a candle in Dark Corner, some one light one in Brinkley, West Memphis, Pine Bluff, Little Rock, etc., soon all these lesser lights will merge into a huge big light illuminating the agricutural horizon, and it will be a new day for the farmers in the state of Arkansas.

Since the incipiency of this co-operative Association, February 13, 1945, it has purchased and distributed at a saving of $4.000.00 to the membership up to 3 weeks ago it had marketed $365.00 worth of eggs. The members own three combines.

This is a cooperative for service but one can easily see that in less than 5 months benefits, that eventually will go back to the members, have accumulated. The organization consists of 200 members, and has a charter from the State, Rev. J. I. Bell, Postelo, Arkansas is president, Mr. John Culp, Holly Grove, Arkansas is treasury, and Prof. John M. Harris Holly Grove, sect. mgr. Prof Harris is dynamic in his attempts to make the Association go, and throughout the state, he is getting favorable response and participation. The Board of Drectors is composed of 24 members.

The affair at Dark Corner, Sunday evening was a momentous one, such instruction as was given by Mr. Smith will serve to educate the members and public in co-operatives. The Association has a capital stock of $20,000 with a paid in stock of $5,000.

This is a Garden Purchasing and Market Association instead of Production Credit.

SAVE YOUR OWN BACON

Knowledge of fire causes and of conditions which permit a small fire to become serious, is very essential to fire prevention. Without such knowledge, inspections are valueless. A simple report that a cellar contained rubbish, or a store was selling cotton batting in the basement area, means little. But if this rubbish is beneath the stairs or the cotton is open on a table at the foot of the main stairway, any experienced fireman can visualize the inferno he would have to go through to reach a fire in the basement.

Study shows that a large percentage of fires endangering life and property originate in basements and cellars. Such fires may result from an accumulation of paper and boxes or the improper use of spigots instead of pumps for the discharge of oil from drums, or the continued use of defective stovepipes, or any one of several causes which, even though corrected, could develop between inspections.

Repeated fires of this character emphasize the inaccessibility of fires in cellars and basements. As a result, the important facts to be considered in controlling such fires, are the location of stairways and other entrances, and providing means of fighting fires in basements from other than an interior stairway.

Many basements are bound to remain a serious fire menace unless they are provided with a sprinkler system which, if not supplied by a connection to a street main, could be fed by hose lines from a fire engine.

The foregoing simple suggestions will enable any person having the well-being of his property and community at heart, to safeguard his own premises at little or no cost, with possibility of great saving to himself.

Liar's Club

Submitted by Phm 2-c Vonn Reed. (Asst. Sup. Mc.Gehee, Ark.)

During the dry fall of 1933 when we were compelled to save all the food possible, I was hauling rich pine out of the woods to the sorghum mill to use as fuel to cook our molasses It was next to my last load of pine that I uprooted an old rotten stump in which there were two large red centipedes presumably making that their hibernating place for the winter months ahead; they ran out and stung the right front wheel on the wagon before I had time to get out to the wagon and kill them. I thought it funny that they stung the wheel several times. Before I had reached the main road on my way out of the woods, I noticed that the team was having to pull harder and soon saw that the wagon seemed to lean to the right.

Now this is the truth. Do you know that in a few minutes' time that wheel began to squeak and slide to the extent it was impossible to go on with my load. It dawned on me that the hub had swollen to where the wheel would not turn and it was the next day before the swelling went down to where I could move my load on to the mill.

YOU WIN

Submitted by M. W. Stewart (sup., Amite, La.),

On a recent visit to an FSA borrower we were in this garden discussing the planting of vegetables and the wife stated that she had planted a row of English peas on a dark night of the moon and the rabbits ate them, but the other row was planted on the full moon these the rabbits would not touch.

Submitted by Frank Horsefall (sup., Little Rock, Ark.,)

A man named Rube always won the fat hog contest at the county fair and his neighbor wanted to know how he diid it.

"Well," says Rube, "you see, I feed the hogs all they will eat until about two weeks before the fair. Then I put two half-starved shoats in the pen with the fattening hogs, and they can't stand to see these poor shoats eating their food so they eat some more and get fatter."

NEGRO WINNERS in Farm Family of the Year content in Arkansas and Mississippi are getting well-deserved recognition due to the thoughtfulness of Ocie Lee Smith Negro FSA worker at the regional office. With the cooperation of FSA personnel, and others, Ocie Lee arranged for appropriate ceremonies at Forrest City, Arkansas (April 6,) and Boonevillle, Mississippi (April 16.) The event at Forrest City was a great success, consisting of a tour of the Paul Euwing farm and home, and a public meeting at the local Negro high school. The program at Booneville will include a variety of activities in honor of Walter Sorrell and family. Both families have paid off their FO loans and now own their farms (their first) free of debt.

Pfc. DELORS E. MAGEE (Asst. sup., Brandon) Fort McPherson, Ga., March 10 "I was at home a few days ago and found a recent copy of the Region Six-Shooter which I enjoyed reading very much. I am writing you to let you know my present address and my present assignment. I am now here at Fort McPherson, Ga., Separation Center. My present assignment is Occupational Counseler for veterans being discharged from the armed forces. I attended Separation School at Fort Dix New Jersey, for this assignment. My major job is to counsel those veterans who came from farms and those who are returning to the farm. At the present I am making a study of the federal agencies who will assist these returned veterans in becoming reestablished on the farms of the South. I find this work very interesting and when I discuss FSA with a veteran., it makes me feel very much at home. Again I will say I enjoyed reading the Region Six-Shooter and will be looking forward to receiving it again. I would be interested in receiving anything else new that you may have that applies to returning veterans who are interested in farming as it relates to the G. I. Bill of Rights. (Ed. note: Available material has been forwarded.) I am hoping this war will soon be over so that I can return to the rural among farming people wth the FSA."

CLOSE TO OUR HEARTS

The subject of postwar jobs is one in which the petroleum industry must not, and will not, be found wanting. Many a weary warrior in the foxholes of France, the ruined villages of Italy, and the eternal mud of New Guinea has thought confidently of the oil job he is coming back to tend, the service station he is going to operate, the truck he will be pushing around again, the joys and sorrows of being a roughneck in the limbo of pipes and towers and tanks that make the modern refinery.

Just as we have implicit faith that our boys now overseas will protect this fair land of ours, and maintain by their powerful war effort what we call the American way of life, so do they have a simple faith that oil-industry management will provide for them a place in all the things they have won and kept for us. It is not a question of capital and labor, or employment vs. unemployment. It is simply a case of opening to them again the places we have been saving for them in our hearts and our homes and our daily lives. In this reunion with our own, let the petroleum industry yield first place to none! And in all the postwar planning for us to do there is no other so important.—Address by William R. Boyd, Jr., Chairman, Petroleum Industry War Council.

Race Fan—What is meant by horse sense?

Jockey—It's what keeps a horse from betting on people!—Pomeroy (Wash.) East Washingtonian.

"Oh, dear," she said, 'I've missed you so much."

Then she raised the revolver and fired again.—Camp Bowie (Tex,) Blade.

190 Girl Scouts in Camp on Campus of State College

More than 190 Girl Scouts attended the Girl Scout Day Camp which has been in session on Tenness State College campus for the past three weeks. The first two weeks intermediate and senior scouts camped and the third week was given to Brownies.

Each camp day opened at 9:00 a. m., with the flag ceremony which was directed mostly by senior scouts. This activity was followed by physical education activities. Swimming, which was a highlight of each camp day was offered twice daily, this was usually followed by hiking, traveling or cookouts. The middle of the day was given to campcraft lunch, folkdancing, handicraft and singing. At the close of each day, taps was solemnly sung.

Mrs. J. G. Holloway, director of the camp, was pleased to report that the aim of the Day Camp was accomplished and that there were campers from all of the twenty-six troops that are registered in this district. During the Day Camp period thirty-two Red Cross Beginners swimming certificates were awarded; ten the first week, fourteen the second and eight the third. Mr. T. Hughes of Tenn. State College served as swimming instructor. Other persons responsible for the success of the camp and its program were, Miss Jessie E. Abbot, Folk dancing; Dr. W. A. Beck, physician; Miss Norvelle Dismukes, Music; Mrs. V. H. Dixon, nurse; Mr. J. W. Holt, life guard; Mrs. J. W. Maxwell, business manager and dietician; Mr. V. E. McCain, Physical Education and Mrs. Phynetta B. Nellis, handicraft.

Program aides included Misses C. V. Fludd, Dorothy Harris, N. W. Holloway and Marion Upshaw.
Unit leaders and assistants were Mesdames Judy Hamilton, Mattie Hamilton, James Jordan, M. C. Thompson, Aline Taylor, C. P. Wims, E. D. Williams, Louise Barnes, M. J. Bent, M. T. Crain, Ushley Hayes, Marinday Lindsley, Annie Roland, Lola Wilks, Misses S. M. Jumper, S. M. Marlin, Sara McClure, Ethel Pullen and Minnie Stewart.

Draw this pattern on stiff paper or light weight cardboard. Color it with your best crayons. Cut double and paste together at the top. When dry, pull the wheels apart so they will spread open and stand up.

MAKE OUT YOUR WILL

Place it along with your insurance policy, your deeds, your abstracts and other valuables that you want to protect against theft, fire and tornado in a

SAFE DEPOSIT BOX, FIRE AND BURGLAR PROOF

We have just installed 189 of these new boxes. You may rent one which makes it private and only you can get into it. Not even the Bank can open the box without your key and you cannot get in it without the Bank inserting its pass key.

Do not make the mistake of keeping your Will around the house and your valuable papers in your trunk nor your deed and abstract in some drawer in your home.

Come down and see these boxes at the

Negro Extension Workers Make Plans To Help Farmers Produce More F

Washington, D. C. July 16, 1945 —Meeting in a six-day conference here at the U. S. Department of Agriculture, 39 Negro State and District Extension Service supervisors made plans last week for more effectively helping colored farmers to further increase their production of food crops. Plans also were made for helping returning veterans, and displaced war workers, who wish to farm, get established on the land.

The conference program centered on six major problems: postwar cotton production, a program for farm youth, problems of returning veterans and displaced war workers, rural health, improving extension methods, and a conversion program for the cotton South.

After a series of talks and discussions on these subjects, the supervisors were divided into committee workshops where they carefully evaluated all of the material that had been presented on a given subject, and then made recommendations for putting into practice in their various States some of the things which had been suggested.

Among other things, the supervisors made definite plans for helping colored farmers grow and conserve more food for home use. A program also was developed for helping farm-minded veterans and displaced war workers get located on farms. And recommendations were made for improving rural health, and for making rural life more attractive to farm youths.

The whole conference was conducted against a backdrop of the changing agricultural economy of the South: mechanization of cotton production, cotton prices in the world market, shifting of farmers from cotton production to the types of farming, and the trend toward larger farms with fewer farm operators. It is believed that this latter factor may seriously affect tenants and sharecroppers.

The conference was highlighted by addresses by C. C. Spaulding of the North Carolina Mutual Life Insurance company, Claude A. Barnett of the Associated Negro Press, Dr. Jackson Davis of the General Education Board, T. M. Campbell and John W. Mitchell, Extension field agents, F. F. Elliott, Mordecai Ezekiel, and Sherman Johnson of the Bureau of Agricultural Economics, M. L. Wilson, director of Extension, and by Reuben Brigham and H. H. Williamson, assistant directors of Extension Service. H. W. Hochbaum of Extension Service presided over the conference.

Colored Extension supervisors in attendance at the conference represented Alabama, Arkansas, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.

Supreme Liberty Life Agents Set Collection Record

In an intensive collection campaign honoring Mr. J. G. Ish, Agency Officer and Vice President of the Company, the Nashville District under the leadership of Mr. L. B. Hurt, manager, set a new high for Tennessee Districts of the Supreme Liberty Life Insurance Company when they reported a collection of $2,242.18 during Ish Week, July 13-20. The District Managers of this Company compete with each other every year in honoring Mr. Ish under whose direction the Agency Forces have written enough business to bring this Company into the Million-dollar class of Race business enterprises and every agent on the company pay roll strives to do his best job of collecting during this campaign.

Last year the Nashville District topped all previous records with a collection in excess of one thousand dollars but this year, in setting a new record, they more than doubled their last year's figures.

The highest percentage of collection was made by Mrs. Nell Joyner, agent on the Murfreesboro debit, who reported a 700 per cent collection. Other agents who exceeded their assigned quotas included Messrs. Thompson, McCoy, Wilson and Miss Jessie Perkins, all of Nashville. Mesdames Harwell, of Pulaski and McDonald of Fayetteville also turned in collections on their respective debits in excess of 100 per cent.

The Clarksville and Springfield debits, collected by Mrs. Ethel Northington and supervised by H. L. Allison, Regional Agency Director of the Company, led the larger out-of-town debits by reporting more than 200 per cent.

Messrs Sledge and Corporal, and Mesdames Gooden and Rhodes, together with Miss Dismukes, all of the building units, also made a very creditable showing.

The local district has been an intensive drive for new business and improved collections and since the coming of Mr. Hunt to Nashville as manager this district is certain to make its place to the top as one of the best in the organization.

According to Mr. Hurt, this phenomenal record was made without any outside help other than that rendered by Mr. Allison who was the only representative from the Home Office working on the district.

H. L. Allison.

PAC All Dressed Up, But Has No Place To Go With Democrats

NEW YORK—The Citizens Political Action Committee, appears unchastened over the way the leaders of the organization have been booted out of the Democratic Party by Robert E. Hannegan and Company and this week were trying to "save face" by pretending that they have gotten just as raw a deal from the Republicans as from the Democrats, to whom the organization sold its soul in the 1944 Presidential campaign.

Lacking the courage to be forthright and apparently still hoping to hang on to the tail-gate of the Democratic bandwagon, Lew Frank, Jr., publicity man of the PAC has issued an amusing appeal to Robert Hannegan and Herbert Brownell, chairmen respectively of the Democratic and Republican national committees, demanding that the chairmen issue calls for special meetings of their committees, and have the committees reaffirm support of a permanent FEPC. Frank may or may not know that nothing like this has ever happened in this country and will not happen as a result of his "demand."

It happens that Republicans in National Convention assembled last year DID endorse enactment of a Fair Employment Practices law, but the Democrats refused to do so However, President Roosevelt, when the going with Dewey got hot, did personally endorse a permanent FEPC. On the strength of what Mr. Roosevelt did, the Political Action Committee went all out for the election of the Roosevelt-Truman ticket. PAC tried to defeat EVERY Republican who ran for the house and senate in 1944, and therefore has no claim upon Republicans for support of any measure it espouses. It does have full authority, however, to demand that the Democrats make good the promise of President Roosevelt. If Democrats, as a unit, supported FEPC or if President Truman made a sincere effort to get FEPC enacted, the bill could be passed even if all Republicans in Congress opposed it. As it is, a Democratic-controlled committee in the house is keeping FEPC from coming up for consideration, and apparently with the knowledge and consent of Hannegan and Company, who have just about liquidated the New Deal and are now hitting it off with Wall Street and all of the reactionary elements which hated Roosevelt.

PAC has only one chance to gain respectability now and that is to withdraw its support from the Democrats and either support the Republicans all down the line or become wholly independent of both parties. Of course PAC could become allied with the revived Communist Party, with which ever so many of its members all along have been affiliated, but thereby they would lose just about all of the colored brethren and sisters in PAC, since most of them are duespaying members of Baptist and Methodist churches.

PAC made its colored followers believe that they would walk the streets of a "new Jerusalem" in the Fourth Term, New Deal administration. It was thought that Sidney Hillman would be next to President Roosevelt, himself, in power to put over things in the Fourth Term. But even before the tragic death of the President, it was plain that Sidney Hillman had lost his stinger. He couldn't get for Secretary Wallace authority to dispense the RFC billions and couldn't get Aubrey Williams appointed to a high government office after Mr. Roosevelt nominated him. Old Guard Democrats marched into power at the beginning of the Fourth Term. When President Roosevelt died and Mr. Truman came to power his first move was to name Robert Hannegan, monarch of all things in the shape of political patronage in the Democratic Party.

And so, PAC is now all dressed up but with no place to go in Democratic society. Democrats consider Hillman and Company a liability, while the Republicans are willing to accept support from PAC and pay the same for services rendered that PAC got in the Fourth Term.

How Young Are You

Youth is not a time of life—it is a state of mind. It is not a matter of ripe cheeks, red lips, and supple knees; it is a temper of the will, a quality of the imagination, a vigor of the emotions; it is a freshness of the deep springs of life.

Youth means a tempermental predominance of courage over timidity, of the appetite for adventure over love of ease. This often exists in a man of fifty more than in a boy of twenty.

Nobody grows old by merely living a number of years: people grow old by deserting their ideals. Years wrinkle the skin, but to give up enthusiasm wrinkles the soul. Worry, doubt, self-distrust, fear, and despair—these are the long, long years that bow the head.

Whether seventy or sixteen, there may be in every man's heart the love of wonder, the sweet amazement at the stars and the starlike things and thoughts, the undaunted challenge of events, the unfailing childlike appetite for what next, and the joy and game of life.

You are as young as your faith, as old as your doubt; as young as your confidence, as old as your fear; as young as your hope, as old as your despair.

It is just there that Christ helps so much. So long as your heart is in tune with him so that messages of hope and courage and forfiveness can come through, so long you are yung.

Without him the grasshopper may be a burden. With him thy youth is renewed like the eagle's.

—Aurora College Bulletin.

FDR Was Staunch FSA Friend

The passing of President Franklin Delano Roosevelt on April 12 has saddened the hearts of FSA employees and borrowers alike. Needless to say, his death came as a shock to everyone, leaving employees dazed and almost speechless.

Here are a few comments heard from RO employees:

"FSA borrowers, past and present, have suffered a distinct loss. Under his administration, the FSA program has passed through the experimental stages and its future is assured. The bright spot of the future is the fact that the new president, Mr. Truman, has a sympathetic understanding of the common man's problems, and a firsthand knowledge of conditions in rural America"—E. B. Whitaker (RD).

"He had the greatest understanding of human problems of anyone"—J. V. Highfill (asst. RD-RR).

"His leadership and farsighted programs have given opportunity, encouragement and hope to millions of small farmers, as well as others"—T. B. Fatherree (asst. RD-FO).

"Very unfortunate that his death came before the victory, which he worked so hard for"—Charlotte Roberts (PG).

"His death was a great calamity, not only for the United States, but for the whole world"—W. O. Wilson (RR).

"He was the friend of all working people"—LaNelle Sims (PE).

"His life was symbolic of love for all people, charity and understanding, and imbued with a Christian philosophy"—Ocie Lee Smith (RD staff).

"His death has caused a temporary eclipse of a people's hope for a permanent peace, but we will not fail since his philosophies, ideals, and objectives have taken root in the world"—H. H. Hankins (RD staff).

"I think everyone feels a personal loss in the president's death"—Margaret Clark (FO).

"I think the world has lost the greatest statesman of this generation"—Lester Hatch (BM).

"I was shocked, of course"—Lucille Hull (PE).

"The common man has lost a great friend"—Claude Woolsey (Co-op).

"The principles he stood for will continue to live"—Ralph Whitmore (PG).

"A great humanitarian. He always championed the cause of the under-privileged"—Tom Oliphant (BM).

"I couldn't believe it was true at first"—Marie Snider (RD staff).

"He was a great exponent of the desires of people who love freedom"—Guy A. Watkins (Eng.).

"He was the one man in whom rested the hope and the faith of a yearning people everywhere"—C. Q. Kelley (RD staff).

Issue Call To Observe National Negro Sports Week, Aug. 5 to 11

WASHINGTON, D. C.—Seeking to raise the moral level among teenage Negro boys and girls, and to make certain there will be no letdown in the Negroes' interest in sports activity during the post-war period, National Sports Foundation, Inc., Washington, D. C., is sponsoring National Sports Week, August 5-11.

According to Foundation president, Dr. W. Henry Greene, former Howard university football star and prominent Washington physician, the chief purpose of such an annual celebration is to "perpetuate the memory of Negro athletes and to lend substantial aid to those local organizations who are combatting juvenile delinquency through the use of sports."

The Negro has brought considerable prestige to his race and country by his athletic skill, and the Foundation is utilizing this brilliant record to lure youngsters into the sports field. A series of drawings by prominent Negro artists depicting the careers of famous Negro athletes, and a brochure emphasizing the need for a more active sports program, are being distributed to Junior Police Corps. Settlement Houses, Canteen Centers, YM and YWCA's in sixty-two (62) thickly populated Negro communities.

No tie-ups with national advertisers is contemplated for this year. A commemorative stamp is being widely distributed, and meetings with prominent athletes as guest speakers at Boys' Clubs are being arranged in lieu of a scheduled Sports Jamboree, which has been tabooed by ODT order.

Other activities of National Sports Foundation include: (1) the establishment of a research bureau on Negro sports; (2) creating a greater interest in a greater variety of sports; (3) encouraging the formation of more professional and semi-professional teams; (4) aiding college athletic programs.

WOMAN'S PAGE

Stay-at-Homes Can Have Picnics, Too

Just because you have patriotically given up all thought of driving miles from home to stage a picnic doesn't make picnics taboo. There's always your own backyard or a cool shady porch or terrace—and when it comes to the "eats" you can let your imagination go.

You can have breakfast, and lunch outdoors. as well as dinner, for a few or a whole crowd. You can include a hot dish to make the menfolks happy. Yes, and as Mrs. Julia Kiene, home economist, comments in suggesting some of her favorite stay-at-home picnic recipes, eating outdoors can be fun for everybody including the "cook".

For those who have an outdoor fireplace, of course all this is a "natural," but don't let the lack of one stop you. After all, it's only a short trip from the kitchen to the porch or garden. Bring out a steaming pot of spaghetti, baked beans, chopsuey or chili con carne. for example. Serve it with a salad or cole slaw and a relish plate. Keep the dessert simple, such as plenty of cookies plus fresh fruit.

If it's impractical to bring food to the picnic table in the utensil in which it is cooked, then "plate" the meal in the kitchen. Go in for paper plates and place mats and your sturdiest glass. Use a salad bowl instead of individual dishes and use serving trays to save steps back and forth.

If you have an electric roaster-oven, put it to work. Prepare in advance if you like. Food will keep hot for six hours if roaster is wrapped in a blanket.

Following are a few of the recipes which Mrs. Kiene has found simple to prepare and serve outdoors.

Marzetti

8-ounce package noodles
1½ pound pork and veal cut fine
1 quart strained tomato juice
8-ounce can mushrooms
1 cup grated cheese
1 small onion, chopped

Brown meat, add chopped onion, tomato juice and mushrooms. Cook slowly until some of the liquid is absorbed. Place cooked noodles in baking or serving dish, pour sauce over noodles, sprinkle cheese over top and serve.

Jellied Salad Loaf

1 package lemon or lime gelatin
1 3-4 cups hot water
1-4 cup vinegar
½ teaspoon salt
1 cup tuna or cooked diced chicken or veal
1½ cups chopped celery
1 tablespoon minced onion
2 sweet pickles, chopped

Dissolve gelatin in warm water. Add vinegar and salt. Chill. When slightly thickened fold in tuna, chicken or veal, celery, onion, and pickles. Turn into loaf pan. Chill until firm. Serve in slices garnished with crisp lettuce. Serves 6.

Sandwich Fillings

For a tasty bolonga or wiener filling grind one pound bolonga or wiener and mix well with ½ cup chopped pickles or relish, 1 cup mayonnaise, 1 tablespoon minced onion, dash of hot sauce (optional) and 1-4 cup pickle juice. Divide in half and to one part add 3 chopped hard-cooked eggs and ½ teaspoon salt. To the other half add 1 cup ground raw carrots and ½ cup chopped celery. 15 to 20 sandwiches.

A point-saving filling can be easily prepared by mixing 1 cup each of coarsely ground carrots, salted peanuts, and seedless raisins with ½ teaspoon salt, 2 teaspoons lemon juice, and 2 tablespoons mayonnaise.

Peach Sauce

Cream 4 tablespoons butter or margarine and 4 tablespoons brown sugar in top of double boiler. Add 1 egg; beat well. Cook over boiling water and add 1 cup peach juice gradually while stirring constantly. When slightly thickened add 3-4 teaspoon almond extract; remove from heat and beat. Makes about 1 cup of sauce.

Tomatoes with Herbs

Peel 6 large tomatoes and cut in fairly thick slices. Mix 1-4 teaspoon basil herb, 1-4 teaspoon celery salt, 1-4 teaspoon thyme, 1-4 teaspoon sugar, salt and pepper to taste and sprinkle over each slice. Place in deep plate and let stand in the refrigerator for 2 hours. Serve very cold with a sprinkle of tarragon vinegar.

HOME FOLKS' DISH

Star Beef Pot Roast

4½ pounds Armour's Star Beef Round Bone Pot Roast
2 tbsps. fat or drippings
1 tbsp. salt
⅛ tsp. pepper
1 cup sliced onion
Potatoes
Carrots

Brown meat very slowly in the fat. (Takes about 30 minutes to brown.)

When well browned, add salt, pepper and 1-4 cup water. Cover tightly and cook over lowest heat for 3 to 3½ hours. One hour before the meat is tender, add vegetables to the roast. Cover and cook until tender. Serves 3 to the pound of meat.

COMPANY DISH

Crab Meat or Fish Au Gratin

Your turn to have the girls? Best food forward, please, and no coupon give-up either! Crab meat au Gratin is Ladies' Choice. But don't fret if you can't get crab, any white-meated fish will be a succulent success.

Feather-light whipped potatoes, golden as sunshine (that's the beaten egg yolk mixed in) form the border. Roll a stout sheet of paper into a cone to make a pastry bag. Fill with mashed potatoes. Clip off the tip and gently force the potatoes fluff thru. An entrancing ruffle, lovely to look at delightful to taste.

The cabbage salad chaperoning the fish is tossed with the Stork's Special Dressing: mayonnaise, chopped pimiento, and minced parsley, plus a dash of lemon juice or vinegar.

3 tablespoons butter
2 tablespoons enriched flour
3-4 teaspoon salt
1-4 teaspoon paprika
1-4 teaspoon nutmeg
1 cup hot, top milk
2 cups flaked crab meat or poached fish fillets
2 beaten egg yolks
1 teaspoon Worchestorshire sause
1 tablespoon cooking sherry

Melt butter; add flour and blend. Stir in seasonings and hot milk. Cook over low heat until smooth and thick, stirring lightly. Add crab meat. Add small amount of hot mixture to 2 egg yolks. Add to remaining hot mixture. Cook 2 minutes over very low heat. **Do not boil.** Add Worchestershire sauce. Add sherry. Pour crabmeat mixture into sea shells or individual casseroles; top with bread crumbs and sprinkle with grated sharp cheese. For border combine 1 egg yolk and 2 cups well-seasoned potatoes; press thru pastry tube. Broil until potatoes are golden-brown and cheese is melted, about 3 minutes. Serves 4.

PICKLING TIME IS HERE

Says Susan Adams

CORN RELISH

6 ears corn
½ lb. cucumbers
½ lb. white onions
1½ lb. tomatoes
2 green peppers
2 sweet peppers
3 small hot red peppers
1 small bunch celery
1 teaspoon turmeric
1 qt. vinegar
2½ tablespoons salt
2 cups sugar
5 tablespoons whole light mustard seed

Use a knife, not a food chopper, to cut all vegetables. Cut corn from cob, without scraping. Peel cucumbers, onions and tomatoes; dice coarsely. Remove seeds and fiber from green and red pepper; cut fine. Use inside stalks of celery; cut in small pieces. Blend turmeric with small amount vinegar; add to remaining vinegar with salt and sugar; stir until dissolved. In large kettle, combine corn, cucumbers, onions, tomatoes, peppers, celery, mustard seed; add vinegar mixture. Boil 1 hr., stirring frequently. Pack into 3 hot sterilized pint jars, filling to top; fasten closures at once.

Watermelon Rind Pickles

2 lb watermelon rind
1 tablespoon lime in 4 cups water
4 cups vinegar
5 cups sugar
1 tablespoon each whole allspice and cloves
Stick cinnamon

Pare rind: remove all red portion. Cut in round chunks. Soak rind in limewater 3 hrs. Drain. Cook 1½ hrs. or until tender. Let stand in this water overnight. Drain; drop pieces into sirup made from vinegar, 1 cup water, sugar and spices. Cook gently 2 hr. Pack into sterilized jars; seal.

Spiced Cantaloupe

The cantaloupe MUST be underripe.

1 underripe cantaloupe
4 cups sugar
1 cup cider vinegar
1 teaspoon whole cloves
3 sticks cinnamon bark
1 tablespoon each cinnamon, allspice and cloves
1 lemon

Cut cantaloupe in sections; remove rind. Soak 3 hrs. in salt water, using 4 tablespoons salt to 4 cups water. Drain; rinse quickly in cold water. Combine 2 cups water, sugar, vinegar, cloves and cinnamon, allspice and cloves in cheesecloth bag; add. Boil 10 min.; add well drained rind; boil 10 min. Let rind stand in sirup overnight. Drain sirup from cantaloupe; boil 10 min. Add cantaloupe; thinly slice lemon; add. Cook slowly 1 hour, or until clear. Pour into sterilized pint jars; seal immediately.

BREAD AND BUTTER PICKLES

My grandmother used to pile these paper thin slices on homemade bread spread with sweet clover butter. Now I eat them just with bread.

12 cucumbers
4 onions
1-4 cup salt
2 cups vinegar
1 cup sugar
1 tablespoon each mustard seed and celery seed
1 tablespoon ginger
1 teaspoon turmeric

Soak cucumbers in cold water overnight. Cut unpeeled cucumbers into very thin slices. Sliver onions. lengthwise. Cover cucumbers and onions with salt. Let stand 1 hr. Rinse quickly with cold water. Drain, in large kettle, heat vinegar with sugar, mustard seed, celery seed, ginger and turmeric to boiling. Add cucumbers and onions. Quickly return to boiling point; boil exactly 3 min. Immediately pack into 6 sterilized pint jars; fasten closures at once.

STUFFED CUCUMBERS

These are special. A little trouble, but they don't ake ooo much time each day, and well worth it, I say.

6 large long cucumbers
1 cup salt
16 cups water
½ tablespoon alum
1 lemon
½ lb. seedless raisins
4 cups sugar
2 cups vinegar
½ tablespoon whole cloves
1 stick cinnamon

Cut 2'' from ends of cucumbers. Scrap out seed portion, leaving cavity full length of cucumbers. Replace the ends; fasten with picks. Lay cucumbers flat in stone crock. Add salt to 8 cups water; bring to boiling point. Pour over cucumbers. Cover; let stand in cool place 12 days. Drain, Rinse cucumbers in cold water, return to crock. Add alum to remaining water; pour over cucumbers. Let stand 24 hrs. Drain; cover with cold water, let stand 24 hrs. Finely chop lemon; mix with raisins. Fill cucumbers; fasten ends with picks. Combine sugar, vinegar, cloves and cinnamon; bring to boiling point. Pour over cucumbers. Place weight on cucumbers to hold them under vinegar mixture. Let stand overnight. For the next 9 mornings, pour sirup off; reheat to boiling point and pour back over pickles. Cover crock. Will keep indefinitely in their syrup.

PEACH CREAM PIE

Line a medium-sized pie plate with pastry, fluting the rim, and bake at 500 degrees for 12 minutes. Cover this with sliced peaches and pour over them a cream filling made as follows: Beat 2 eggs and add ½ cup sugar, 1-3 cup flour and 1-4 teaspoon salt mixed together. Add 2 cups scalded milk and cook for fifteen minutes in the top of double boiler, stirring constantly. Let cool add 1-2 teaspoon lemon extract. Top the pie with whipped cream if desired.

FUDGIES

1-4 cup shortening
½ cup sugar
½ cup corn syrup
1 teaspoon vanilla extract
1 egg
2 squares of chocolate melted
2 cups sifted flour
½ teaspoon soda
½ teaspoon salt
½ cup buttermilk or sour milk
¾ cup chopped nuts

Cream together shortening and sugar. Add corn syrup gradually, beating well after each addition. Blend in vanilla extract. Add egg beat well. Add melted chocolate. Sift together flour, soda, and salt. Add to creamed mixture alternately with buttermilk or sour milk. Add nuts. Drop by teaspoonsful on greased cookie sheets. Bake in moderate oven (350 degrees F.) 10 to 15 minutes. Yield: 4 dozen 2 inch cookies

CELESTIAL IN A CULINARY WAY IS SIMPLE DESSERT

Banana slices—cut them on the bias if you want long, tapering slices—lend their special goodness to favorite partners in goodness; coconut and oranges, in one of the prettiest, toothsomest desserts ever to come out of a proud cook's kitchen. Light enough to climax a filling dinner, pretty enough to satisfy the party hostess, and luscious enough to tempt a dyspeptic, a tropical trio gets together for real success in banana coconut orange cream pie! Make it for dinner tonight and call it:

Banana Ambrosia

2 oranges
3 ripe bananas
1-4 cup powered sugar
1½ cups shredded coconut

Use ripe bananas. (yellow peel flecked with brown)

Peel oranges and cut crosswise into thin slices. Peel and slice bananas. Arrange alternate layers of oranges and bananas in a large serving dish, sprinkling each layer with sugar and coconut. Re-heat until all ingredients are used, topping with coconut. Chill. Six to eight servings.

Garnish with additional sections of oranges and slices of ripe bananas, if desired.

HONEY RAISIN MUFFINS

2 cups sifted enriched flour
2 teaspoons baking powder
1 teaspoon salt
1 tablespoon sugar
½ cup raisins
1 egg
1 cup milk
1-4 cup honey
3 tablespoons melted shortening

Sift together flour, baking powder, salt, and sugar. Add raisins. Beat egg, add milk, honey, and shortening. Blend thoroughly. Add to flour mixture, stirring only until flour is moistened. Fill greased muffin pans 2-3 full. Bake in moderately hot oven (425 degrees F.) for 20 minutes.

Yield: About 1½ dozen 2-inch muffins.

Household Hints

REGISTER FOR MACHINE

If you're one of the recent recruits to the sewing ranks and have been renting or borrowing a sewing machine for your thrifty stitching projects, you'll be glad to know that you can sign up now at your local sewing center to get priority on new consumer machines as soon as they are manufactured.

NEW FINISH REDUCES LAUNDERING

Dressing little girls in playclothes that need a minimum of care is one of the pleasures in prospect for mothers this summer. Shortalls for tots, beach pajamas, bras, shorts and playsuits for older youngsters come in cute styles that are treated with a water repellant. Because of the finish, splashes from ocean spray, or garden hose roll right off the fabric. Mud spots and other non-oily stains can be sponged from the treated clothes, saving the trouble of washing the whole garment. The finish is renewable at commercial laundries and dry cleaners. This entails little extra cost and, if done regularly will reduce laundry labors.

LAUNDRY TIPS

Don't sort clothes on a dirty floor; it makes them harder to launder.

To remove rouge and lipstick from washable fabrics, treat them with glycerine and then launder with soap and water.

When pressing on the wrong side of a rayon garment, use a very light touch, over buttons to prevent damage to the fabric.

Let your electric iron cool after
6—FARM JEF July 21, 18945
use and remove any starch with soap and a damp cloth.

Never try to clean a washing machine before disconnecting the plug from the outlet.

RICHER IN VITAMIN

Gardeners who want to get the most in vitamin value from their sweet peppers will pick them red instead of green. This suggestion comes from scientists who recently tested different varities of peppers at different stages of growth and found that all of them increased in carotene and absorbic acid as they turned red.

TIME SAVERS

To save time in extracting juice from small sized oranges, do not cut in halves but simply cut off stem end and ream out juice from the whole orange in one operation.

To save time keep needles threaded in several different colors wherevver they may be needed for quick repairs.

THE MODERN FARMER

VOL. XVIII. NASHVILLE, TENN., AUGUST 15, 1945 No. 7.

The Road Up

National Erosion

By GILES A. HUBERT

If farmers in the United States want a compelling object lesson on what erosion can do to a country they should take a look at Haiti. Coming in by plane, the first view of Haiti is one of breath-taking beauty. The great bay of Ganave is incased in a "theatre" of mountains which reflected a myriad of blending colors under the rays of the sun.

The city of Port au Prince (the capital city) gleams like a large white jewel nestled at the apex of this setting of blue sea with high mountain ranges on both sides, right and left. Beyond the city lies the Cul De Sac plain with its broad green fields of sugar cane and plantations.

But, when your airship comes in close to the mountains, your first exclamation is "My Lord, what has happened to the trees?" You understand then why the mountains are not green, but pink, coral and purple. You are looking at bare earth and rock with a sparse scattering of brush and a tree here and there.

A closer look shows great gullies that follow a pattern like many Japanese fans tied together in a system like the profile of a tree in winter without its leaves. These mountains and high rolling hills must once have been covered with deep and rich tropical growth of trees and a fertile soil. Now there remains mostly rocks and gullies.

Man started this debauchery of nature's wealth by cutting the trees and digging up the land. Nature has finished it with the hard blowing tropical rain storms which carry the rich earth off down the hillsides into the water courses and on off to the sea.

The name Haiti means "land of Mountains" and this is no mistake Beside three fairly good sized plains and several smaller valleys, Haiti is a land of mountains. Fortunately, these mountains were covered with a wealth of forests and good soil. The forests have provided fine mahogany and other woods which have been exported to build furniture, houses and ships for other lands. The highlands for many years have produced some of the best and mildest coffee drinks in the cafe's and the coffee shops of

Instructions For Raising Turkeys By R. A. Munday

How Southern Farm Land Is To Be Owned Fully Explained By George S. Mitchell

Atlanta Ga.—It looks as though for some years to come we are in a good deal of public controversy about how southern farm land is to be owned.

Perhaps as many as half a million farmers, including tenants and croppers, left southern farms in the last four or five years. Nobody supposes that anything like all of them are going to go back to the land. That will lessen the pressure on the land a good deal.

On the other hand, it looks as though a very large proportion of the land now in cotton will in a few years be growing other crops, better for the land. Cotton has always used a lot of labor, and it is the mainstay of a great many small farms. And on the land that will stay in cotton new machinery will come in.

Many of the farmers displaced by a new cropping system and new machinery can find a living in the South if industry expands. In particular, we are getting more and more small processing plants that will use labor at good wages. Hundreds of southern communities are pulling for canneries and pulp mills and packinghouses and creameries. Each of these enterprises will offer town or city work for people now on farms.

All the agricultural planning you read about talks in terms of much bigger farms than we are used to having in the South. It is soon going to be harder than ever for the small man to get a farm big enough to compete with the farmers around him, and he will have to have a lot more capital to get machinery and higher labor and pay for services. People are not going to keep on living in the kind of tenant shacks that are still usual.

What I am afraid of is that in a few years those who are now good-sized owners will still be owners and many, perhaps most who are now tenants or croppers will be off the land or working as day hands for big farmers.

If small, struggling farmers now on the land want to leave and take better paying city jobs, that's all right if the jobs are here. But the

C. C. Spaulding Urges Business Methods For Negro Farmers

Washington, D. C., July 16 1945 —"Teach the farmers to use business methods, and to keep books," was the advice offered by C. C. Spaulding, president of the North Carolina Mutual Life Insurance company, and the Durham, N. C., Mechanics and Farmers Bank in an address before the South-Wide conference of colored State and District Extension Service supervisors, meeting here last week at the U. S. Department of Agriculture.

"You need to keep books," Spaulding said, "if for no other reason than to know when to go out of business." The banker and insurance head cited examples of successful colored farmers who were grossing from $10,000 to $100,000 annually through careful, business management of their farms.

Showing how tenants and sharecroppers may climb into ownership through good business management, Spaulding pointed out how his bank had loaned an indebted tenant farmer money one year to make a crop. The man made enough to pay off his debt, and make the down payment on a farm of his own. Spaulding said that for nearly 10 years prior the man had been coming out in debt to his landlord every year.

The address by Spaulding was made during the opening session of the six-day conference. There were 39 regional, State and District supervisors in attendance, representing 14 Southern States. Major problems considered by the conference were methods of assisting farm-minded veterans and displaced workers in getting established on the land, helping colored farmers in adjusting to mechanized cotton production, and finding ways toward improving rural health facilities.

Spaulding not only pointed out how business methods could be applied in the operation of a farm but also told the supervisors how he was encouraging 4-H boys and girls to raise more livestock for market and keep records of production costs. His bank is offering $700 in prizes to North Carolina 4-H'ers to encourage better breeding of livestock.

Negro Extension Workers Make Plans To Help Farmers Produce More Food In War Effort

Washington, D. C. July 16, 1945 —Meeting in a six-day conference here at the U. S. Department of Agriculture, 39 Negro State and District Extension Service supervisors made plans last week for more effectively helping colored farmers to further increase their production of food crops. Plans also were made for helping returning veterans, and displaced war workers, who wish to farm, get established on the land.

The conference program centered on six major problems, post-war cotton production, a program for farm youth, problems or returning veterans and displaced war workers rural health, improving extension methods, and a conversion program for the cotton South.

After a series of talks and discussions on these subjects, the supervisors were divided into committee workshops where they carefully evaluated all of the material that had been presented on a given subject and then made recommendations for putting into practice in their various States some of the things which had been suggested.

Among other things, the supervisors made definite plans for helping colored farmers grow and conserve more food for home use. A program also was developed for helping farm-minded veterans and displaced war workers get located on farms. And recommendations were made for improving rural health, and for making rural life more attractive to farm youths.

The whole conference was conducted against a backdrop of the changing agricultural economy of the South; mechanization of cotton production, cotton prices in the world market, shifting of farmers from cotton production to other types of farming, and the trend toward larger farms with fewer farm operators. It is believed that this latter factor may seriously affect tenants and sharecroppers.

The conference was highlighted by addresses by C. C. Spaulding of the North Carolina Mutual Life

Head of Poultry Division Tells How To Handle Fowls

Tuskegee, Institute, Ala. —Turkey poults (baby turkeys) should be fed as soon as they are hatched, dried and able to walk. The feed should consist of turkey or chick starter. Starter should be fed dry in baby chick feeders of the open type. Water must be kept before poults at all times, beginning with the first feeding. Poults do not learn to eat and drink as readily as chicks, therefore, the feed and water must be presented in open type fountains and feeders. When poults have learned to eat to the extent that they rush and push for feed, they should be given wet mash once a day, along with their dry feed which is kept before them at all times.

To make wet mash: Add just enough water to dry mash to make it crummy. Mix just enough of this so that they will clean it all up in about ten minutes.

When the poults have learned to like wet mash to the extent that they push and fight for it, then they may be fed wet mash twice and later—three times a day. With three feedings of wet mash a day the dry mash can be discontinued, if the poults are on free range.

From the first feeding, poults should have green feed at least once a day. The first green feed must be cut very fine. A good way to start green feed is to put it in the drinking water in very small amounts until the poults learn to pick it out. When they have learned to like green feed, it may be mixed in the wet mash. The amount of green feed is increased with each feeding until at least half the ration, by volume, is green feed.

Turkey poults are being well fed when they are growing rapidly, yet always ready to eat. Normally, they rush in and push for their feed and never be allowed to allowed to eat all they will take. After about ten to fifteen minutes, the wet feed should be taken away. A fine flock of turkey poults can be ruined by **over-feeding.** They differ from chickens in this respect.

Any high grade chick starter or turkey starter will serve the feed purpose. The green feed should consist of carrot tops, young oats green tender rye grass, lettuce, rape, burr clover leaves, alfalfa,

Lowden Plantation Now Offers Site to Study South's Problems

By Laurence N. Eldred

Chicago (AP)—Managing a 21,000-acre Arkansas plantation as a vast laboratory has put the Farm Foundation "up to our ears" in agricultural problems of the Southern States. Frank O. Lowden, former Governor of Illinois, died two years ago and bequested the plantation, near Gould, Ark., to the foundation for studies in Southern farm tenancy and ownership.

Dr. Joseph Ackerman, associate managing director of the foundation, says there are scores of problems to be solved but it will take as much as 20 years.

The plantation is infested with Johnson grass, suffers from water seeping under levees of the nearby Arkansas River and from summer parching.

Tenants labor with walking plows drawn by mules and are strangled in a one-crop cotton economy. Most of the tenants, have slipped far down the economic ladder.

ROAD HELP NEEDED

There is no all-weather road to the property, no electricity and no telephone service but plans have been arranged to provide electrification. There is but one small school.

Because of the run-down condition of the farm, a stable supply of labor has been lacking. Local people are looking to the foundation to raise the standard of living and prove that farming is more desirable than it now appears.

GIFTS INCREASE FUND

To solve these and similar agricultural and sociological problems the Farm Foundation was created in 1933 by a request of $500,000 in the will of Alexander Legge, former president of the International Harvester Co.

The fund was increased to more

National Erosion

(Continued from Page 1)

Paris. Brussels, London, and Berlin.

Without any of the basic mineral resources, such as the metals and oil, the land and forests of Haiti have been her greatest resources. Most of this was in mountains and highlands. And, now it is nearly all gone—shipped abroad and washed out to sea.

With the soil and forests of the hills going rapidly. Haiti must turn more and more to its plains and valleys for sustenance and products for export. Now Haiti, like most tropical countries, has a rainy season and a dry season. When the rains come things grow and when they stop things dry up. They dry up unless here is a reservoir of water which can be held back and made available to water the lands during the dry lesson.

Everywhere his is a natural function of forests. Trees drink in and store water and turn it loose gradually into streams. Without them water runs off rapidly and the land dries up. There is no water for the valleys and plains when the dry season comes.

Driving through the mountains of Haiti, one sees many deep ravines which must once have carried rivers. Crossing the parched up plains you can see many river and creek beds completely dry. Haiti has now only one large river which carries a significant amount of water the year around, the Artibonite river, and this river gets very low in the dry period.

Haiti's crying need is water for irrigation of its plains, yet its best reservoir, the forests, have been denuded. It will take many years millions of dollars, and much hard labor to rebuild the water resources and to harness the seasonable rains of this country so as to be useful again for its agriculture. The old French colonial planters utilized natural water resources then available and built many effective irrigation systems. The ruins of many of these still remain.

Add to this the fact that Haiti's population has been constantly and rapidly increasing until it is now one of the most heavily populated countries in the world 266 people per square mile.) Farms are pitiably small (1 to 5 acres as a rule) and the people desperately poor. Every available productive space of land is needed to sustain this population which is still growing.

Without coal and with most of the larger trees gone, even the brush, small trees and undergrowth have been cut to make charcoal, the universal fuel for cooking for Haiti's millions. What soil remains on the mountains in still being cultivated in tiny little farms in and between the rocks; rocks which become larger and more numerous as the years go by.

This is the bed-rock problem of this country: a growing population on wasted and disappearing resources. This is the root of its poverty and its desperation. We have the same problem in our Southeastern states. We have cut off much of our forests without regard to reforestation. We have dug up our land and let it wash away.

We do have a few resources that Haiti is without and our population has had some outlet to the large and growing urban centers of our country. Haiti's insular positian and its racial complexion forces its population to be damned up with nowhere to go. This makes our comparative situation a little less desperate and a little more hopeful.

But we may well heed the lesson of Haiti. Should we continue to waste our land and forest resources and do so little to preserve and rebuild them, the pressure of our increasing population will reduce our farm people to an even lower level of poverty than they now have.

Haiti surely needs our help in her efforts to stop the drain on her resources and to rebuild and develop them as the foundation for this future economic stability and prosperity. But, in some places, we are setting for Haiti a very very bad example.

Methodist Women of South Lash Bilbo And Eastland For Bigotry

Lake Junalaska, N. C.— Methodist women leaders from nine southern states, meeting here last week, joined in a forceful statement of condemnation of Senators Theodore G. Bilbo and James O. Eastland for their recent "un-American and un-Christian" attacks on minority groups. The full text of the resolution, presented by Mrs. M. E. Tilly, of Atlanta, follows:

"Realizing the great necessity for the promotion of plans that will bind our nation together into one united whole, and realizing that when one group of citizens is singled out for discrimination and attack, the whole peace and unity of the nation is threatened, and that when it comes from Congress halls it has both a direct and indirect bearing upon the peace of the world;

"We, Methodist women from the nine Southern States, in the seminar on Christian Social Relations, in session this day deplore and condemn the filibuster of Senator Theodore G. Bilbo against the Fair Employment Practice Committee, made as an attempt to thwart the onward march of democracy; and we further condemn such use of Senate time as a tragic waste of tax-payers' money.

"We are bowed in contrition that a senator of our South could so forget himself as to be so un-Christian and ungentlemanly as to address anyone with the title of an offensive epithet. We deplore and condemn the violent and abusive attack made by Senator James O. Eastland upon our American Negroes in our armed forces, who, with the other youth of our land, are giving their lives for the sake of all of us. We particularly deplore that such a speech was made by a senator of our South.

"We want the outside world to know that such practices and tactics do not have the sanction of the Christian South. We make these pronouncements in the Name of Him Who came that we might be one, and that life— more abundant life—might be for all."

H. J. Heinz Company Hiring Women For Jobs In Salem, N. J.

Representatives of the famed H. J. Heinz Company, "makers of 57 varieties" of canned goods, were in the city this week recruiting young colored women for work as processors of foods in Salem, New Jersey. Free transportation is promised the workers to Salem.

It is stated that the company will pay the workers at the rate of 50 Cents an hour and the work-week will be from 40 to 70 hours. Workers, it is announced, eat at a non-profit cafeteria where meals will average 35 C ents each, and lodging will be 20 Cents per night, in quarters with bath and other facilities.

Further information about the company and its proposition may be obtained from the United States Employment Service, 7th Avenue, North and Union Street. The company is seeking to recruit one hundred young women and will be ready to take a group to Salem on Saturday of this week, it is stated.

Says Minorities Want FEPC To Show War Has been Won

Washington, D. C.—The minorities of this country will not feel the war has really been won unless FEPC is made permanent, declared Mrs. Hedgeman, Executive Secretary of the National Council for a Permanent FEPC, in a statement released to the press today.

"The world rejoiced when the news came from Potsdam that Truman, Stalin and Attlee had issued a decree abolishing all discriminatory Nazi laws," she said. "Yet here in the United States, unless Congress acts quickly, FEPC is automatically abolished by the winning of the same war that made the Potsdam declaration possible."

The text of the statement follows:

"The minorities of this country will not feel the war has really been won unless V-J Day is soon followed by FEPC Day—the day the Permanent FEPC Bill is enacted.

"To them their participation in this war had special significance because it was nourished and spread on the exploitation of race prejudice. If anything is to be learned from the rise and fall of Nazism it is that racial discrimination is self-destructive. The depths of degradation to which the Nazi racial precepts led the German people should be a warning to the world. The ruthless extermination of millions of Jews was only a beginning; by the time the atrocities were extended to prisoners of all races, as at Buchenwald, most of the German people were either callous enough or intimidated enough to close their eyes and ears.

"The world rejoiced when the news came from Potsdam that Truman, Stalin and Attlee had issued a decree abolishing all discriminatory Nazi laws in Germany. Yet here in the United States, unless Congress acts quickly, FEPC is automatically abolished by the winning of the same war that made the Potsdam decree possible.

"Once having given minorities protection against discrimination, our government cannot afford to step backward and withdraw it. We dare not risk the race riots that followed the last war. At least we can attempt to alleviate the tensions by assuring that, no matter how many or how few the jobs, they are distributed fairly.

"Congress must not sit by and let FEPC die the natural death of other war agencies. The war against economic discrimination must continue. The Permanent FEPC Bill belongs high on the list of the reconversion program for which Congress is cutting short its recess on September 5th."

Roberts Brothers Ranking High In Army, Visit City

Sarasota, Fla.—The commanding officer, Sarasota Army Air Field has announced that First Sergeant Carl G. Roberts has reported to the field and is in charge of enlisted personnel of reclamation. Sgt. Roberts served overseas hauling ammunition, Air Corps supplies and personnel to air strips. Sgt. Roberts, a graduate of Pearl High school, Nashville, Tenn., also attended A. and I. State College. He entered the service March 14, 1940 at Fort Benning, Ga.

He is the son of Mr. and Mrs. Albert Roberts of 1402 Hawkins St., Nashville and a brother of Capt. George Albert Roberts and Pvt. William Roberts who are with the Ground Forces. Both he and Capt. Roberts recently visited their parents in Nashville.

WARTIME DEVELOPMENTS IN COTTON TO FIND PEACETIME APPLICATIONS

Wartime research projects on cotton at the Southern Regional search Laboratory have resulted in development that will find important peacetime applications, according to officials of the U. S. Department of Agriculture's research administration.

Among the results of research to develop an improved cotton tire cord are a cord with improved heat resistance, and another with greater tensile strength than is obtained with present commercial cotton tire cords processes. The investigators declare without qualification that cotton cords can be manufactured which are definitely superior to the type of commerical cotton cords now being produced, and further improvements can be expected as more information is obtained and applied.

Another wartime development at the laboratory that will find important peacetime uses is a process for rotproofing cotton goods that is more effective than any other known treatment. Cloth samples treated by the new process have retained more than 80 percent of their strength after burial for an entire year in a damp, warm soil known to be rich in organisms that cause rotting. In contrast, untreated goods placed in the same soil rotted to pieces in about a week.

The investigators at the southern laboratory have also developed a flameproofing treatment for cotton fabrics that has definite advantages. Although effective treatments have been available for a number of years, usually they have made the fabric too stiff and heavy or they wash out too readily. Fabric treated by the new process retains its flame resistance after many launderings, yet its physical characteristic are changed but little. The process makes flamproofing of outer garments more practicable.

Still other recent discoveries of the New Orleans laboratory are a resinous treatment that increases by many times the life of cotton fishnets, a specially treated cotton thread that will resist deterioration resulting from presence of acid in fertilizer bags, and a new type of semielastic all-cotton bandage. The latter, announced earlier in the war, had undergone extensive hospital trials and has been declared by medical men to be superior to ordinary gauze, particularly for elbow, knee, and head dressings.

Under War Food Order 29 WFA is continuing through next September 30 the suspension of restrictions on delivery of crude cottonseed, peanut, soybean, and corn oils to refiners for refining purposes. Authorizations for delivery of the four crude oils to all other users, however, will continue to be obtained from WFA.

Dr. L. D. Reddick Asks What Was Gained By War

New York—The following statement for V-J Day was issued by Dr. L. D. Reddick, Curator of the Schomburg Collection of the New York Public Library, 104 W. 136th St., New York City:

VICTORY FOR WHAT?

The end of the war means that the United Nations have crushed the greatest political and military threat, based upon racist philosophy that the world has faced. Race propaganda was a feature of both German and Japanese warfare.

Now that we have this great victory within our grasp, what are we going to do with it?

Our announced plans call for the re-education of the German and Japanese peoples toward the end of cleansing their minds of militarism and race hatred. But is it possible for a nation to teach democracy and equality to others when the teacher-nation does not really know or practice democracy itself?

The task of democratizing the world is a great responsibility. However, this effect cannot be expected to go very far unless we embark, simultaneously, upon a drive for full democracy at home. Otherwise, we will not know how to teach these lessons abroad, or, if we did, nobody would believe us when our noble words would be contradicted by our ignoble deeds.

Stated bluntly, America must make a clear decision for total democracy and world leadership or that leadership must be resigned to others.

The release of atomic energies with all of their wonderful and frightful possibilities only makes the responsibility a fateful imperative.

If we decide to go forward, then, the war just ended, despite all its horrible crimes and brutality, may be considered as an advancement of mankind; otherwise, World War II will be recorded as one more futile gesture which brought the human race one step nearer the chasm of self destruction.

Fraternal Council Promotes National Farm Safety Week

Cooperating with the U. S. Department of Agriculture in promoting National Farm Safety Week which will be observed July 22-28, the Fraternal Council of Negro Churches in America called on rural and urban ministers this week to emphasize farm and home safety in their sermons on Sunday, July 22.

Dr. W. H. Jernagin, director of the Washington bureau of the Council, says that letters under the signatures of Bishop A. P. Horace, chairman of the executive board, have been sent to colored church leaders throughout the country.

The Council's letter points out that President Truman has issued a National Farm Safety Week proclamation in which he requested all persons and organizations concerned with agriculture and farm life to do everything in their power to educate farm people in the proper precautions by which they may eliminate farm hazards.

The Council also called the attention of the ministers to the fact that from 40 to 50 farm people are killed by accidents every day, making an average annual farm accident death toll of more than 15,000. In addition to these fatalities, the Council pointed out that 1,500,000 farm people suffer injuries every year. The monetary loss totaled over a billion dollars in 1943; fire losses alone amounted to $90,000,000.

In suggesting methods by which farm accidents and fires may be prevented, the Council urged that steps be taken by the churches to instruct farm families in learning to recognize and hunt out the accident and fire hazards on the farm and in the farm home; correct or remove the hazards that can be removed, and learn to live and work safely with those hazards that cannot immediately be corrected or removed.

Among other things, the Council sent the ministers a set of simple safety rules developed by the Department of Agriculture for farm people. These included such suggestions as: never grease, oil, unclog, or adjust a machine that is in motion or in gear; don't wear loose, torn clothing around machinery, check the brakes on all vehicles, be careful with livestock; keep bulls, boars, and rams securely penned, keep vicious dogs tied up away from children, check and clean chimneys and stovepipes regularly, keep guns safely put away, and keep first aid material on hand for treatment of minor injuries.

The Council represents over 20,000 ministers, nearly 40,000 churches and more than 6,000,000 communicants. Nearly half of the membership is to be found in rural areas.

On The Agricultural Front

MORE BEEF IN SIGHT

Slightly more beef will be available for civilian distribution as a result of a reduction in set-aside for government purchase of Army-style and Kosher beef, Secretary of Agriculture Clinton P. Anderson announced last week.

The over-all set-aside of Army style beef has been reduced from 30 percent to 25 percent of the total quantity produced by federally inspected slaughterers; and the beef set-aside in Kosher plants has been reduced from 25 percent to 20 percent. Set-aside of utility grand and canner and cutter beef remains unchanged at 65 percent.

GEORGIA 4-H'ers SELL 30,000 POUNDS OF BEEF

Trying to do their part to help assure more food, 38 colored Georgia 4-H Club boys raised 47 calves and sold them recently for $5,898, according to reports received by the U. S. Department of Agriculture from the Georgia State Extension Service.

Alexander Hurse, colored agent for 4-H Clubs in Georgia, states that the calves weighed 30,313 pounds at the time they were sold. He also points out that there are 486 colored 4-H'ers in Georgia who are raising beef calves.

MARYLAND SEEKS METHODS OF FURTHER AIDING NEGRO FARMERS

Extension Service and the Agricultural Experiment station of the University of Maryland have begun a survey of the economic and social status of the rural colored families of Maryland as a basis for building an adequate Extension program for colored farm people, according to a report received by the U. S. Department of Agriculture this week.

Dr. T. B. Symons, Maryland Extension Director, says that the study will be state-wide with special emphasis on the southern part of the State and the lower Eastern Shore where the colored rural population is more concentrated. According to the 1940 census, Negro Americans account for 17 percent of the total population of the State, but in southern Maryland they make up 25 percent, and on the lower Eastern Shore they make up 28 percent of the population. Most of these were classified as rural.

Within the past few years the Maryland Extension Service has employed several agricultural and home demonstration agents to work with colored rural families. Dr. Symons states that these agents are in need of basic factural information on which to build a satisfactory Extension program. It is expected that the survey will supply this information.

Information will be solicited from both rural farm and rural non-farm Negro families regarding tenure; size and value of holdings; productive enterprises; products grown and used at home; products marketed; income; type and availability of market outlets; condition, value, and adequacy of farm buildings and dwellings; home facilities and living conditions; size and composition of family; formal education of parents and out-of-school children; health status; presence and participation in community organizations; and rural-urban migration.

The survey workers will have access to records and publications of the U. S. Bureau of the Census, State Department of Health, State Department of Education, State Office of the Agricultural Adjustment Agency, Office of Farm Security Administration of Maryland, and offices of local county assessors.

The survey, which is being financed by the General Education Board, and the University of Maryland, will be conducted by the Department of Agricultural Economics, headed by Dr. S. H. DeVault. Arthur B. Hamilton, associate professor of agricultural economics at the university, will direct the survey. Assistant directors will be L. B. Bohanan, assistant agricultural economist, and Martin G. Bailey, colored district agent.

Four colored community leaders, W. E. Henry, Jr., president of Bowie Colored State Teachers college; Miss Ethel Bianchi,county home demonstration agent; the Rev. Richard Johnson, and J. A. Oliver, will serve as consultants.

2,500 VETS GET FARM LOANS

The 2,534 white and colored veterans of World War II who have received loans through the Farm Security Administration to operate or buy farms of their own are doing a good job, the U. S. Department of Agriculture reports.

These veterans are following approved farming methods, adjusting themselves to the life of the community, and are repaying their loans. The Department follows the anti-inflation policy of making loans for farm purchases only where a local committee of farmers certifies that the farm could be purchased at its long-range earning capacity value.

IMAGINE, NO MOSQUITOES

It's entirely possible that you may have to take a great deal of time trying to explain to your grand-children what a mosquito looked like, and how its piercing proboscis felt as it sought to feed on your arm or leg, because DDT, a new insecticide developed by the U. S. Department of Agriculture, may now be used to wipe out mosquitoes and other insects by the acre.

Primarily as a result of wartime research in Bureau of Entomology and Plant Quarantine laboratories in Orlando, Florida, DDT was developed for use in the armed forces against malaria and other mosquito-borne diseases.

Now, with an airplane and new devices for distribution, 500 acres may be treated with 800 gallons of DDT spray in 30 minutes, killing both larvae and adults of the malaria mosquito. However, it may prove harmful to use DDT for broadcast spraying over large areas in non-combat localities, because the deadly insecticide may upset nature's balance by killing beneficial insects and by killing fish, birds, or other wildlife either directly or by their feeding on insects killed by DDT. Research to determine the facts as to this danger and to devise procedures for safe use of DDT is now underway.

COTTON DOWN TO 1885 LEVEL

According to estimates of the Crop Reporting Board, there were only 18,355,000 acres of cotton in cultivation in the United States on July 1. This is 2,000,000 acres or 9.8 percent less than last year, and 30 percent less than the 10-year (1934-43) average.

The acreage planted in cotton this year is only 40 percent of the record 1925 crop of 45,968,000 acres, and may be the smallest acreage harvested since 1895.

More Than Jobs Needed

From Idaho comes one of the best plans yet for creating jobs. Gordon Squires, publisher of the Cascade News, says: "It is easy to make 60 million jobs, or 70 or 80 or 100 million. Simply forbid the use of iron, then everyone would have to grub from dawn to dark just to keep alive. Or forbid the use of the wheel—even wooden wheels. Then we would drag everything along over the surface of the earth. . . .

"There would be plenty of jobs from the womb to the tomb if we forbid the use of sewing or washing machines; or moving machines, going back to the scythe; or locomotive, going back to the ox cart; or light bulbs, going back to the tallow dip; or power looms, going back to the spinning wheel."

Editor Squires points out that the present plans to create jobs contemplates more debt, more taxes, more printed money, and a super-duper WPA.

He recommends that the way to reach the desired goal is by "increasing the output per hour and hence the earnings of everyone who wants to work in a free country where he can choose his job—which he can't do in Russia, and soon will not be able to do in America," if the spend-yourself-into-prosperity philosophy is continued. He asks: "Is it jobs we really want? . . . All this talk about 60,000,000 jobs completely distorts the picture. Who wants full employment for every man and woman anyway? There are 35,000,000 families in America. Wouldn't we feel that our system had done a grand job if 35,000,000 heads of families—with only 35,000,000 jobs—could provide a happy living for all these families?

"The way forward is the same way we have come. Its general direction was right. It is not to make a giant taskmaster of the state, it is to increase the earnings of the worker with better tools, new inventions, encouragement to savings and investment, lower costs, lower prices, lower taxes, freedom from monopoly and privilege and drudgery—freedom itself. More freedom, not less."

Don't Fence It In

According to Reese H. Taylor, president of the Union Oil Company, our future oil supply is not limited by our ability to find or produce it, but is handicapped by a regimented economy supervised by many who do not know the oil business.

If it had not been for the fact that American industry was on its toes and ready to go when our government called on it in a war emergency, the history of the outcome of this global war would have been a different story.

The longer a war lasts, the greater the danger that a country and its industries cannot break the shackles fastened on them by political bosses given temporary power.

Oil is one of the natural resource industries that every country espousing the cause of state socialism seeks to control. But no country following that system has been able to show the oil development or production of the United States, which depends on free enterprise for its source of supply.

The Pattern Is Plain

Proposals now before Congress to establish a Missouri Valley Authority patterned after the TVA, contradict any talk that emanates from Washington about decentralization of government. The program to include power development, flood control, irrigation, navigation, and soil conservation under Federal agencies such as TVA, is the ultimate in the creation of highly centralized government, to the exclusion of countless local subdivisions of government, from states down to cities. Even the legal systems for water control in the various states which the Missouri Valley Authority would take over, differ.

A Federal agency thus created, at an "estimated" cost of over $1,250,000,000, would sit in the driver's seat in all matters pertaining to water power developments, and many industrial developments, in the territory covered.

All agencies of government seek to increase their power, none ever willingly give it up. States involved in such a gigantic Federal scheme to dominate local natural resources, would become mere lackeys of a political overlord.

Farmer Organization Essential

It was never the original purpose of a true cooperation in this country to operate business and escape taxation. There is a marked difference between non-profit marketing cooperatives which seek to give farmers service through an organization to handle their many problems, and a purely commercial selling cooperative which seeks to cut prices for the benefit of a special group of customers. Farmers are faced with as many problems of buying and processing and selling as the big corporations. Only by joining together in marketing cooperatives can they provide themselves with facilities needed for efficient operation. Only through organization can they meet other organized groups on an equal basis. Only by working together can farmers carry on research and develop new ideas that will benefit all the people—the consumers of food as well as producers. It does not require special tax subsidies or tax exemptions for farmers to cooperate in this manner to stabilize their position and secure fair prices.

Equality Of Opportunity All They Ask

Railroads after the war "will succeed in holding the major place in the transportation of the country's goods and will operate at a profit on sound investment," and their "only major worry is to have sound governmental policies giving them somewhere near equality of opportunity," said Edward S. French, president of the Boston and Maine Railroad. "I am not going to weep about free or nearly free rights of way for trucks and buses; free or nearly free facilities for air and water transport, nor am I going to wail that railroads are restricted in participating in that type of competition." Those things are beyond the ability of the railroads to solve, but "enlightened public opinion can find the proper solution."

For example, public understanding of the demoralization that would follow the winning of the anti-trust suit now being brought by the Department of Justice against the railroads, would result in an immediate demand on Congress for the passage of the Bullwinkle bill which would end confusion and uncertainty caused by the suit, and place regulation of the railroads squarely under the Interstate Commerce Commission.

Mr. French does not believe the answer to a possible postwar decline in railroad revenue is an appeal to the ICC for higher rates, as rate increases tend to lower volume, and volume is what the railroads need.

As for the future of the railroads, he said: "By far the most interesting and important favorable factor is what I would call . . . . improvement in the art of railroading. The parade of improved practices suggested and adopted is a constant source of astonishment to me."

Government Medicine No Answer

The United States had the largest group of thoroughly trained medical specialists in its entire history at the beginning of World War II. In war service their professional competence, plus the aid of new drugs and modern methods, were largely responsible for the fact that 96.1 per cent of the 1,375,000 wounded in the European theatre were saved.

The nation wishes its citizens and soldiers to have the best possible medical service. In connection with doing this, there are powerful advocates of a compulsory national medical program which would tax wage earners and employers at high rates for funds to support it, regardless of whether or not they desired state medical service.

Those who regard freedom of opportunity as one of the precious assets of America today, deny that government control of medicine is the conclusive answer. Voluntary health insurance plans to provide prepayment for medical service, are already underway and are not a drag on the country's medical proficiency or brilliant progress and research.

"By expanding and improving our public health service, by supporting various group and community systems, and by encouraging private insurance companies to add to the usefulness of their services, the country should find that Federal control of medicine is not necessary to insure a healthy nation," says the Index, quarterly publication of the New York Trust Company. "Historically the experience of foreign countries provides no evidence to the contrary."

Davis and Barnett Address Extension Dinner Meeting

Dr. Jackson Davis of the General Education Board, and Claude A. Barnett of the Associated Negro Press were the principal speakers at a dinner given Monday evening at Slowe Hall in honor of the Colored State Extension Service supervisors here in attendance at a six-day conference at the U. S. Department of Agriculture.

Dr. Davis, who has just returned from a six-month tour of West Africa, spoke of the immense resources of that region and pointed out how America can further contribute to the development of Africa.

Mr. Barnett sounded a warning of what may be in the offing in the way of unemployment both in rural and urban areas after the war. He quoted figures to show the large number of colored workers who already are being laid off war jobs. Also he pointed out that mechanized cotton production may mean the beginning of a new exodus from southern farming areas.

Said he, "These facts pose new problems and a new challenge for Extension workers in helping displaced workers adjust themselves to a changing agriculture economy in the South. Unfortunately, there are all too few farm and home agents to most effectively discharge this responsibility."

Prior to the addresses by Dr. Davis and Mr. Barnett, Mrs. Mary MeLeod Bethune, as honorary chairman of the entertainment committee, made a brief welcome statement.

Special guests at the dinner aside from the supervisors, included Judge William H. Hastie, Dr. and Mrs. Arthur Raper, Dr. and Mrs. Chas. H. Thompson, Dr. and Mrs. R. O'Hara Lanier, Mrs. Thomasine Johnson, Dr. Madeleine Kirkland, Dr. Flemmie Kittrell, and Mr. and Mrs. Russell Smith. T. M. Campbell, Extension Service field agent, was toastmaster.

Distributing the Pork

At this time, when a number of states and cities are trying to get their noses in the Federal pork barrel via a tax-financed electric line to one of the tax-exempt Federal power plants, an editorial in the New Albany, Indiana, Tribune of June 4, is worth reading. It pulls some of the tinsel off the TVA experiment in the socialization of electric power which is costing the general taxpayer so much money, and says:

"True, the nation made the valley a Christmas present of $750,000,000 . . . . But the country is pretty sure to weary of subsidizing that vicinity one of these days—especially when it presses harder to remove industry from other regions to enjoy the 'blessings' Federal generosity has created. . .

"The United States News revealed that as of April 1 1945, Tennessee had $400,000,000 of war contracts in process; Alabama had also $400,000,000, and Mississippi, $100,000,000, a total of $900,000,000. As of the same date, Indiana had $3,200,000,000 of war contracts in process! More than three times as much as the three southern states combined.

"We have nothing against Tennessee, and hope it does well (on its own, if it can ever get back there) but we see no reason for the Middle West to be envious. Indiana and the rich industrial Ohio valley are doing all right, and without any fabulous Federal gifts."

The Tribune should have added that political plans in the making would blanket the nation with TVA's, thus spreading "pork" as widely as possible. It remains to be seen whether the people can be bought into national socialism by this tax-squandering process.

THE FORUM

The Modern Farmer

Published monthly by the Modern Farmer at Nashville 3, Tennessee.

Giles A. Hubert _____Editor
Sadie Wilson _____ Secretary
Henry Allen Boyd_____ Publisher
Office, 403 Charlotte Avenue.

Devoted to the interests of the Farmer, Truck Gardner, Livestock and Poultry, Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929. at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer, should be addressed to The Modern Farmer, 403 Charlotte Avenue, Nashville 3, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Advertising rates and sworn circulation figures presented upon application.

How Southern Farm

(Continued from Page 1)

South would do well to make opportunities for those who love the land and want to stay on it do so, whether they are rich or poor Our democracy will have deeper roots—and it needs them today—if we get the land owned by medium-sized family-type farms.

If the little fellows do not get together to look after their own interests, a great many of them who don't want to lose out are going to lose out.

George S. Mitchell.

Hitler Also Promised Much

There should be a new definition for so-called "liberal" parties. They always seek public support under the guise of giving the "common man," whoever he may be, greater liberty, opportunity and ease of living. But, contrary to their preachings, they invariably seek to bind him with the shackles of state control.

The destruction of personal liberty and private property rights would be no sweeter under the term, "liberalism," than under the term "Hitlerism."

Lowden Plantation

(Coninued from Page 1)

than a million dollars by gifts from Harold McCormick and others.

DOWN UNDER TENANTS

Lowden was head of the foundation's board of trustees at his death. His plantation has an estimated value, when brought to full production of about $1,500,000

Much of the area is chopped up with ox-bow lakes and swamp lands. Eight thousand of the 21,000 acres are in cottonwood forest a source of continuing cash income if properly lumbered. About 4500 acres are under cultivation. At one time most of it was in cotton.

"As the market for cotton failed," Dr. Ackermon said, "so did the Lowden acreage until now only about 800 are in the crop. After the flood of 1927 the plantation was leased to tenants instead of direct operation under a manager. Buildings and yields declined. The land, much of it left idle, became badly infested with weeds. Cotton production fell from a high of 295 pounds an acre to 66.

At one time the plantation was one of the 10 best in the South. Now, he says, it is one of the 10 poorest.

"Oh, dear," she said, 'I've missed Then she raised the revolver and fired again.—Camp Bowie (Tex,) Blade.

It Can Be Done

WHAT ABOUT SECRETARY ANDERSON

By CONSTANCE DANIEL

Subsidies are what we had planned to talk about, this time, but that was before the new Secretary of Agriculture, Clinton P. Anderson, took office on July first. Since then we have been pretty busy "spelling him out."

All that this column had to go by was Mr. Anderson's voting record in Congress and a couple of Congressional investigations which he conducted— one of the CIO-Political Action Committee and the other on the War Food Administration. Judged as a liberal record, Mr. Anderson's voting was nothing to brag about, but his conduct of Congressional investigations spelled out a kind of decency and independence of action which was very refreshing. In both instances he did a highly creditable fact-finding job, at a time when a "smear" job would have been easier—and more popular.

If there is anything which the United States Department of Agriculture needs, right now, it is forthright action based on fact-finding. For a long time, now, the Department has been bogged down with some pretty low-class nudging and leg-pulling, interbureau and interoffice feuding that have done neither the Nation nor its farming any good. Mr. Wickard, the outgoing Secretary, never had a Chinaman's chance to get a good job done, handicapped as he was with about every variety of organizational defect that could be thrown at him. In spite of that, he leaves to his credit sound and far-sighted recommendations to the Congress. Mr. Anderson, if he is as straightforward and courageous as his investigations indicate, will very likely follow through on these, and will throw his weight in favor of social security for farmers and farm workers, school lunches and a revival of the food stamp plan, to build a strong America by better distribution of farm products, supervised loans for small farm operation as well as loans for farm ownership, and other real farm measures INCLUDING THE UNCORKING OF THE FARM LABOR POOL.

On Mr. Anderson's doorstep, right now, is the wreckage of the Farm Security Administration, left there by the Cooley Committee which did for Farm Security as viciously dishonest a piece of "investigating" as any Capitol Hill committee has turned out in recent years.

The "findings" of this committee resulted, directly, in shut-down orders for Farm Security community-type projects— only a drop in the FSA bucket, but **indirectly in shut-down orders for the FSA rehabilitation program which amounted to ninety percent of FSA's aids to small farmers.**

The farm-ownership program was left, it is true, but it was left as a blind, for the "F-O" program, hobbled with its no-more-than-average-cost clause, is so limited as to be "no trouble," as all big landlords know. In a nation where two and a half million farmers are marginal, which bad wolf is afraid of ownership loans at the rate of two thousand a year—38,000 for the entire eight-year life of Farm Security? No, it was the rehabilitation aid that the big fellows were afraid of. That was the aid that reached **a million** sharecroppers and other tenants and some bad-off little owners, in that same eight-year period—pulling them out of the mire of hopeless dependency by spreading a little money a long way with a quick turnover. And now comes the old divided-you-fall racket, with its bid to the GI farm boys—"We don't mean you veterans can't buy a farm over average in cost for the county, **we just mean those civilians!"**

In the middle of the fight between reaction and progress is the new Secretary. We sympathize with him. If he continues to operate honestly he is in for a fight with the big farm interests. Perhaps by way of a compromise that will save the big fellows' boutonnieres and the little fellows' stake in the soil, a new Farm Security program will have to arise under a new name from the ashes of the old—and the same may hold good for other progressive measures.

At any rate, both the new Secretary of Agriculture and his new boss, the new President of the United States, are on record as clean investigators with minds of their own. This column casts its lot with the liberal organizations who believe that both of these new public servants will continue to hew to the straight, tough line they have already drawn.

NOW, WILL YOU KINDLY PAY THAT POLL TAX?

Being Merged Out

Chairman Flannagan of the House Agricultural Committee is sponsoring a bill which provides for the consolidation of all Farm Credit Agencies of the Government under one administration. The idea is to create a seven man board on which the members would sit for 14 year terms. This permanent board would administer all of the farm loan activities of the Federal Government.

The Farm Credit Administration, with all of its branches, the Farm Security Administration and all other credit agencies would be merged under one command. In theory this organization would become owned and controlled more and more by the farmers of the Nation themselves somewhat similar to the way the Federal Land Banks are supposed to be owned and controlled.

By the time this editorial reaches the press this bill may have been passed or it may still be under debate. But, the move is so vital to the interest of small farmers that an opinion should be expressed.

The merger of the Farm Security Administration with the Farm Credit Administration would throw the federal credit facilities especially designed for the service of small farmers under the control of the big farmers and their organizations: The American Farm Bureau Federation and the National Grange. The bill is being sponsored and pushed by these organizations for this very purpose.

This so-called "Farm Bloc" which represents the big fellows in Congress does not believe that the small farmer has any place in American Society. Family farming to them is an absolute hangover from a passed era. They would promote the development of a National Agriculture based on big commercial highly mechanized farms. These big farms would be controlled by a relatively few land barons and worked by a wage earning agricultural proletoriate.

The Farm Security Administration, on the other hand has followed the philosophy that a secure class of economically organized family-type farms owned by the people who till their soil is the soundest basis for agricultural development here or anywhere and a surest guarantee of bed rock democracy in this country. Properly organized, as in Denmark and Finland, this type of agricultural society can be as efficient and as scientifically progressive as any type of rural organization. FSA has set about to promote this type of agriculture by combining financial assistance with a down to earth, direct and effective adult education program which is rapidly placing thousands of farm families on a sure footing.

The clash of policies is clear. The Farm Credit Administration is primarily a financial institution controlled by and operated in the interests of the larger, purely commercial farmer interests. Other phases of its activities are simply incidental.

The Farm Security Administration, on the contrary, is primarily an educational, rehabilitational and developmental agency, with financial assistance simply one important means toward its goal. It has been sponsored and backed by the National Farmers' Union and those people interested in the welfare and progress of the little farmers and the agricultural workers of this country.

Any such merger of farm credit agencies which does not clear include the carrying out of this latter policy is clearly against the small farmer. This class includes nearly all of our Negro farmers. Their outlook in the future of American Agriculture would be sadly blackened. They need most of all just what FSA has to offer. Without this there is not much hope.

Negro Extension

(Continued from page 1)

Insurance company, Claude A. Bennett of the Associated Negro Press, Dr. Jackson Davis of the General Education Board T. M. Campbell and John W. Mitchell, Extension field agents, F. F. Elliott, Mordecai Ezekiel and Sherman Johnson of the Bureau of Agricultural Economics, M. L. Wilson, director of Extensions, and by Reuben Brigham and H. H. Williamson, assistant directors of Extension Service. H. W. Hochbaum of Extension Service presided over the conference.

Colored Extension supervisors in attendance at the conference represented Alabama, Arkansas, Georgia, Kentucky, Louisiana, Maryland Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.

Instructions For Raising

(Continued from Page 1.)

cow peas and soy bean leaves. The green must be cut very fine in the beginning and larger as the turkeys grow.

Turkey poults must be kept warm. They like a little more heat than chickens and do not adjust to changes in temperature as well as chicks. Farmers do better with May and June turkeys because of this fact.

At least three times as much space should be allowed for turkeys as foot of floor space per turkey poult for chicks. At least one square and eighteen square feet per twenty turkey poults on wire should be provided. The one hundred chick size Louisiana lamp-brooder will carry at most twenty poults. Never more than one hundred poults should be put in one brooder regardless of size of brooder.

A dry place is essential to success with turkeys. Their water fountains must be so arranged that they cannot wet the floor of their brooder house. The brooder house must be well ventilated but free from drafts. It must be kept **clean** and free from smells. Turkeys require more care in this respect than chickens.

When poults are started there must be no change in the care given them until they are eight weeks old. At that time, they may be changed from starter to growing feed. All changes must be made gradually by mixing some new feed with the old—with ever increasing amounts of the new until the changes are completed. After poults are eight weeks old, they may be encouraged to roost out-of-doors in trees or roosts constructed for them.

The health of turkeys is usually good and mortality low, if these instructions are followed. A turkey hen is the only natural mother for poults. The use of a chicken hen will too often result in failure. Turkeys cannot successfully be kept in a box in the house like chickens. A good brooder is necessary. It is also necessary to keep turkeys and chickens separated at least during the brooding period.

Whenever turkeys appear droopy—that is with heads tucked or wings hanging or go off feed or don't appear to be thriving, **give cod liver oil.** Mix three tablespoons of cod liver oil with a double handful of feed—Let them eat this up—Then give regular feed as usual. Use only the **best** cod liver oil.

Keep turkeys warm dry, clean and hungry. Do not keep them with the chickens. Do not feed them too much. Do not let them get chilled, and do not try to raise turkeys without a good brooder.

Fruit trees mean food on the shelf and money in your pocket. Dr. W. W. Aldrich, Department of Agriculture Specialist compares two peaches, one from a tree that was thinned at blossom time, and a smaller peach from a tree that was not.

About Those Peaches

There are still plenty of peaches on the trees in many parts of the South, and plenty at the market. If you don't have them your neighbor or your merchant probably does.

Can them, dry them, serve them in your favorite salad or dessert, or for breakfast, for they are not poison. although a rumor has leaked out, probably through some gossipy encyclopedia, that when the King of Persia was at war with the Egyptian, some two thousand years ago, he sent a few chariot loads into Egypt to poison his enemies.

If they died, it was probably from eating the peaches green, because the Chinese had been eating them still another two thousand years before the Persians got them.

Up and down the United States we have been growing peaches for a long time—from Connecticut to California and down to Texas and Florida. All in all we've grown some 2,181 varieties, but we're limited, now, to about 500. This food shortage is getting awful!

So as to make the most of the few hundred varieties still left to us, here are some what-to-dos if peaches are where you can find them. Use the ideas yourself and pass them on to your city cousins or the school or hospital in your neighborhood.

First, here is a sugar-saver timetable for canning, and if you are buying, for your home or for institutional use, **do remember that one bushel of peaches canned at home will produce 2,000 blue points worth, bought at the store!** Peaches, point-free in the basket are 80 blue points a quart at the store.

Why not reach up, instead of down, for at least part of your cash crop? Conversion from cotton is on the way.

PEACHES: No points a bushel in the basket; 80 points a quart can or 2,000 points a bushel at the store!

TIMETABLE FOR SUGAR-SAVING CANNING

The following table shows the best proportions for using corn sirup

FRUIT	PRECOOK	THIN SIRUP heated to boiling	MEDIUM SIRUP heated to boiling	PROCESSING (actually boiling)
PEACHES peeled and halved or cut up.	3 min. in boiling sirup.	6 1-3 C. water 2-3 C white corn sirup 2 C. sugar	5 3-4 C. water 1 C. white corn sirup 3 1-3 C. sugar	20 min.
PEARS peeled and halved.	3 to 5 min. in boiling sirup.	7 1-4 C water 1 C. white corn sirup 2 C. sugar	5 2-3 C. water 1 1-3 C. white corn sirup 3 1-4 C. sugar	20 min.
PLUMS skins on but pricked here and there with darning needle.	No pre-cooking of fruit.	6 1-3 C. water 2-3 C. dark corn sirup 2 C. sugar	5 2-3 C. water 1 1-3 C. white corn sirup 3 1-4 C. sugar	20 min.
BERRIES well washed and stemmed.	No pre-cooking of fruit.	No water 1 C. white corn sirup 3 C. sugar	No water 2 C. white corn sirup 4 C. sugar	15-20 min.

Louisiana Extension Service says follow these suggestions when canning peaches:

1. Choose ripe, fresh, firm fruit Look beyond any pretty pink blush for the yellow or whitish yellow background color indicating ripeness. Peaches picked green have poor flavor even when ripened. Don't use any fruit with decayed spots.

2. Wash and peel peaches, handling gently—a canner load at a time. For easy peeling place a few at a time in a wire basket or cheesecloth, dip in boiling water a minute or so, then quickly into cold. Skin, pit, and halve or slice. To prevent darkening after peeling, drop into a solution of 1 gallon of water with 2 tablespoons salt and 2 vinegar, then rinse and drain.

Precook peaches: If they are juicy, add sugar—½ cup to each quart of uncooked peaches. Then heat peaches to boiling and pack in their own juice.

For less juicy fruit, drop into thin to medium syrup boiling hot, and just heat through. For moderately thin syrup use 1 cup sugar, 2 cups of either water or peach juice—made by crushing, heating and straining sound peaches too soft for canning.

To stretch canning sugar, corn syrup may replace up to 1-3 the sugar; mild-flavored honey up to 1-2. If it is necessary to can without sugar, cook the fruit in its own juice, or add just enough water to keep it from sticking to the pan.

4. Pack hot peaches evenly into hot clean jars. Place halves in overlapping layers, pitted sides downward. Fill in with 3-4 to a cup of boiling liquid, taking care to cover solid food well and leave 1-2-inch head space. Peaches not covered by liquid may turn dark. Air bubbles also cause the fruit to darken. So work out bubbles by running a knife blade down jar side. Add more liquid if necessary.

5. Adjust lids. Process 20 minutes in a boiling-water bath. Finish sealing if type of jar requires. Cool jars overnight, right side up and away from drafts.

Arkansas had a peach preservation week from the 17th to he 24th of July. If you **grow** peaches every week they ripen is peach preservation week. Texas observed peach week from the 16th to the 21st of July. Institutions in all states should take advantage of tree-ripened crops from the areas nearest to them in preparing for winter menus—and canned goods short! Remember, they have a nine percent sugar content when fully ripe.

Temperance Leader Asks Closing Of All "Thirst Parlors" On Trains

Chicago—Converting tap cars into passenger coaches will help relieve the problem of transportation of service men and women during the war emergency was suggested to ten leading railroad lines of America in a letter from the Rev. Herbert H. Parish, administrative director of the National Temperance Movement.

Writing in the interest of "character, efficiency and comfort," the Rev. Mr. Parish made the following suggestions:

1 Convert all tap cars to the exclusive use of seating passengers. If this is done by all railroads, a large number of additional cars would be available for passenger use The people who occupy space in the tap car are usually holding seats elsewhere on the train.

2. Eliminating the tap car would release porters and waiters for service on sleeping and dining cars.

3. Much roaming back and forth on trains, adding to the confusion and making the trainman's work more difficult, would be eliminated.

4. This would give trainmen more time to spend caring for their necessary duties instead of being constantly compelled to give extensive attention to the intoxicated, or exhilarated people, who, if no drinks were available would remain quiet and orderly.

5. This would add to the comfort of the passenger who desires to proceed without the indignities often forced upon him in a crowded train by those who have had too much to drink, to say nothing of the very nauseating effect often produced by these people in the dining car and in other parts of the train.

The National Temperance Movement, with headquarters at 1321 Chicago Temple Building, Chicago, Ill., was organized in November 1944 to assist existing national and state temperance organizations in their work, as well as temperance-minded persons not connected with a temperance agency, and to discover areas of cooperation in a nation-wide crusade for the elemination of the beverage use of alcohol

New Director of Youth Activities Announces Plans

Colored Youth Organizations engaged in sports throughout the city of Nashville, Tenn., and its environs have been entered into National competition through the "Committee of Youth Work Among Negroes" affiliated with the National Sports Foundation, Inc., Washington, D. C.

Director R. D. Tynes, Negro Youth Work, states that the Foundation has launched a compaign to "Stop Juvenile Delinquency Thru Sports." The program is designed to:

1. Coordinate the sports activities of existing organizations engaged in combating Juvenile Delinquency.

2. To offer incentives to both organizations and youth by making funds available to them for carrying out their activities.

3. To commemorate and publicize the achievements of Negro athletes past and present.

4. To celebrate and set aside a special week each year in the month of August to demonstrate through national competition the athletic accomplishments of cooperating organizations and individuals.

5. To establish and maintain suitable facilities for compiling athletic records.

National Sports Foundation Inc., and its affiliated organizations believe that a program including sports as the dominant medium, will accomplish the purpose of keeping youngsters busy. Keeping little hands busy catching a baseball or gripping a soft ball bat is far more conducive to his moral and physical well-being than a handful of rocks.

All organizations, groups, clubs and individuals who wish to be entered in any sport seasonal event other than weights may communicate with Directors R. D. Tynes, Negro Youth Work, 1621 18th Ave., North, Nashville, Tenn., or Mr. Andrew Jackson, Executive Secretary, 1934 11th St., N. W., Washington, D. C.

Donaldson Jamison And Frances Silvers Visit City

Pvt. Donald Jamison, who is now serving in the United States Army stationed at Westover Field Mass., (Air-Base) was recently home on a furlough. He is the handsome son of Mr. and Mrs. Ernest Jamison. He is a graduate of Pearl Senior High School and studied at Fisk University.

Miss Frances Silvers the charming daughter of Lt. and Mrs. L. A. Silvers was also in the city visiting, and was highly entertained along with Pvt. Jamison. She too is a graduate of Pearl Senior High School and took special courses at Tennessee State. At present she is private secretary of The Mardis Realty Company, Chicago, Ill.

Many gala affairs were extended to these two Nashvillians. On leaving both were loud in their praises to all who made their stay enjoyable.

Rights Imply Responsibilities

By RUTH TAYLOR

The Bill of Rights is a favorite topic with all American speakers —no matter what their viewpoint or their politics. It is the one surefire hit.

We all **believe** in the principles embodied in the Bill of Rights. We all proclaim it as the foundation stone of our democracy. We brag of its insurance of our liberties as we wave the flag. We flaunt its great phrases in the faces of our enemies.

But do we **live up** to the ideal it embodies? Do we carry out in our nation, in our community, in our personal life, its great teachings?

We emphasize equality before the law, for which the Bill of Rights stands. We say we oppose discrimination—that this is the abhorrent idea of the so-called "master race." But—are we free from the taint of discrimination? How do we judge our neighbors? Bigotry and intolerance can be allowed no place in our own lives, if we would be true to our own faith.

The people have, through the Bill of Rights, the inalienable right to the furthering of the State of equality of opportunity. But they have it not merely as a State-given right, but as a God-given one. Freedom from discrimination is a spiritual as well as a material condition for human development.

This does not mean that all people must have equal amounts of everything—but it does mean that they must have an equal opportunity to develop their talents, to do profitable and worthwhile work—without being hampered by discriminations based upon anything other than their ability and their willingness to work with their fellow-men.

The only way we can defend our liberties is to see to it that the law is administered impartially and equally to all the people of the country. The pledge to our flag makes this clear.

"I pledge allegiance to the flag of the United States of America and to the Republic for which it stands, one nation indivisible, with liberty and justice for all."

The last two words—"for all"—are the essence of the Bill of Rights—but before we brag too much about them, let us do a little soul-searching and see if we live up to them in our own lives. Rights imply responsibilities.

Good Advice To Retailers

There is probably no better posted man in the United States on the part of retailing, than Dr. Paul Nystrom, president of Limited Variety Stores Association, and professor of marketing at Columbia, University. He says that the small store owner's role in post-war distribution is "doing a better job of storekeeping than he ever did before."

From this standpoint, the small store is in exactly the same position as the largest chain store, and both will succeed or fail by the same techniques. And both must win public patronage by the service they render in their respective localities.

Specifically, Dr. Nystrom points out that the little retailer can improve his display, improve his selling technique, and improve his choice of merchandise to meet the requirements of his particular customers. The largest chain can do no more than this. The field is open to the smallest store, for there is no monopoly on intelligence.

Small retailers who heed such advice need have few worries about competitors.

Corporal: "That new recruit used to be a clerk."

Sergeant: "How do you know?"

Corporal: "Every time he stands at ease, he tries to put his rifle behind his ear."

"Machiavellianism" Is Tag Put On Attacks Made On Railway Service

There is a more than faint odor of Machiavellianism in the recent extensive press-agenting of hardships alleged to have been inflicted by the railroads on returning troops. The railroads, the Pullman Company, the Office of Defense Transportation, and the officers of the Army's transportation corps have exerted themselves to the utmost since the early days of the war to provide the maximum of efficiency and comfort for troop movements, and there is no evidence that they have suddenly lost their interest and skill in this work. Meantime, others more influential in the government have done their planning with no regard to the necessities or even convenience of domestic transportation.

Undersecretary of War Patterson said in a statement quoted in **Railroad Age** of July 14 that the War Department on June 26 had foreseen and expressed itself critically about the "possibility" of some congestion. Others, including **Railway Age**, had foreseen and forecasted for years before that, not the possibility, but the **certainty** of serious congestion. It was certain because, first, a large decline of passenger equipment occurred during the depression; second, the government during the war has been refusing to let the railroads acquire additional passenger equipment third, an enormous increase in travel by rail was occurring, and fourth, a huge transfer of troops from Europe to the Pacific area was sure to be made following termination of the war in Europe.

Let us look at the record of previous performance. During World War I the railroads and Pullman Company owned passenger-carrying cars as follows: Coaches and combination cars, 33,241; sleeping cars, 8,681; total, 41,922. In 1918, with this amount of equipment, the railroads rendered 43 billion passenger-miles of service, or about 1,000,000 passenger-miles per car. In 1941 the railroads and Pullman Company owned only 20,329 coaches and combination cars and 7,378 parlor and sleeping cars, a total of 27,707 and rendered over 29 billion passenger-miles of service, or about 1,060,000 per car.

When this country entered the war there were on order 389 passenger-carrying cars, and the carriers desired to acquire many more, but the government prevented it. In consequence, in 1944 there were only 20,524 coaches and combination cars and 8,136 parlor and sleeping cars, a total of 28,660. With this amount of equipment the railways in 1944 rendered a service of almost 96 billion passenger-miles,—3,335,00 per car, and about 235 per cent more per car than in 1918 or 1941. The 1945 passenger load is expected to be more than 100 billion passenger-miles—two and a half times the load carried in 1918, and four times the load in 1941; and yet the railroads are expected to carry it with 30 per cent less cars than in 1918 and about the same number as in 1941.

"We have been promised relief," Mr. Patterson said, "but relief has not been forthcoming—You may be sure and certain that the War Department will press for decent and comfortable accommodations for troops . . ." The War Department has known all along just how many sleeping and other passenger cars are available on American railroads, and just how many arriving troops could be accommodated by this number of cars without disrupting regular travel. The return of troops from Europe is an event that the Army has had over three years to prepare for, and the government has had control of the man-power and the materials necessary for such preparation. If the means are not now at hand to provide the kind of accommodations for returning troop movements that Mr. Patterson "insists upon" then the responsibility rests squarely upon top management in government and not upon the railroads, the Office of Defense Transportation or the Army's transportation officers. Because of the way ships are arriving, tens of thousands of troops are disembarking on one day and then none at all for several days. Surely anybody should know that the railways cannot deliver their full capacity of service with a load permitted to fluctuate so widely.

There is no reason for troops to have to ride in crowded and uncomfortable cars except that government "planned it that way." And it is that kind of disregard for transportation needs and human comfort which explains the increasing shortage of freight cars and why business men in New York with a day's work to do in Pittsburgh or business men in Chicago with a day's work to do in Cincinnati have to go to their nationally-important duties after sitting up all night in day coaches. Many returning troops report that they came down to the Atlantic ports of Europe in journeys of four or five nights' duration in "40 and 8" box cars, beside which any accommodations yet provided them in America are luxurious in the extreme—and probably few of them would be inclined to criticize the travel facilities so far offered them here, if a calculated effort were not being exerted to make them believe that they are being deliberately mistreated.

We see no reason why the railroads should quietly submit to being blackguarded for a failure which is not theirs, by officials of a government that is primarily responsible for the conditions which are criticized. Nor do we see any reason why a business man forced to ride all night in a day coach on a necessary trip should refrain from criticism of an officialdom which has unnecessarily inflicted this discomfort upon him.

It is significant that the bureaucracy is forcing the railroads to withdraw Pullman services at the very time when the airlines are being awarded additional planes, enabling them to expand their commercial traffic. The government, that is to say, is driving the railroads' steady customers to the airlines. And just what part of this emergency movement of troops are the railroads' competitors—the long-haul buses and the airlines—being called upon to handle? How many overnight planes have been pulled off their regular runs to serve the "redeployment" program and how many overnight buses have been diverted from their regular runs for this purpose? The answer is that only the railroads among all the agencies of transportation are expected to have the "stand-by" facilities to deal with such emergencies as this, and are criticized for not having them.

The railroads have made too good a record and won a too favorable public opiion during the war to suit the planners of national socialism. Some opportunity to smear them had to be found; and the passenger service situation created by the return of the troops from Europe has been seized upon as the long awaited opportunity.

. . Taken from **Railway Age** July 21, 1945 Issue.

The Seven Fold "You Can"

Perhaps we know it by heart already— and may indeed have been practicing it for years—but the repetition of an old rule ought to do good to us and to others. It is this: "Do all the good you can, By all means you can, In all the ways you can, In all the places you can, At all the times you can, To all the people you can, As long as ever you can."—Selected.

All things are possible to us with the help of God.

Clothes Magic

HOW TO BE A MAGICIAN IN ONE EASY LESSON, TURN YOUR SAD RAGS INTO GLAD RAGS, SAVE MATERIAL AND MONEY, HELP PREVENT INFLATION

MAGIC is what we need in these textile-short, clothing-scarce times. And that is what the girls in the Office of Price Administration decided to invoke. Magic of a practical kind to be sure—completed with sewing machine, scissors, pins and advice from New York stylists. A drastic step you say. But when many kinds of yards goods have disappeared entirely from the shelves of department stores, and weeks of search for readymade clothes end in the discovery of some item so high in price as to be unattainable, drastic steps are in order, even to the point of calling in the nearest handy magician.

So OPA employees decided to have a show and call it Clothes Magic. How they did it, and how others can do likewise, we shall see.

Brain child of the Employees' Recreation Association, the show was introduced to OPA workers by a series of displays on every floor of the building announcing a "sad rags into glad rags" contest. Old-fashioned garments which could be styled to 1945 lines were displayed with appropriate comments.

Girls were invited to enter their oldest dresses in the contest. The prize, a War Bond, would go to the costume which to paraphrase a famous saying, made the most from the leastest.

On the night of the show, the winners in the try-outs modeled their sad rags on the stage of a Government department's auditorium. One by one they walked out in limp, peculiar-looking outfits. Necklines wrong, sleeves were definitely yester-year. Too-full skirts hung badly. In short, every one of the dresses was indeed a sad rag. Why they had been given closet space at all we spectators couldn't imagine. An agile-fingered, imaginative stylist soon showed us how lucky the owners were. With vestees, collars, berthas, and bright scarfs the necklines were concealed or transformed. While the stylist moved briskly around the model explaining what else should be done to the dress and how to do it, a nearly life-sized sketch was being made in the background, illustrating her suggestions In a few moments the abashed-looking model in the sad rag, was transformed into a radiantly proud owner of a glad rag.

Another part of the Clothes Magic show illustrated what had been done in a "make over and make do" program. A green summer print with old-fashioned very full skirt and sleeves was transformed into a pencil-slim V-neck dress with the new cap sleeves. A trim button-up-the-front dress from a discarded redingote, pedalers (bicycle shorts from G. I. pants and a stunning beach ensemble—complete with matching beachbag—from a discarded cotton evening dress were a few of the other things shown.

What came of all this magic? Some of the magician's equipment a— sewing machine—is in the OPA recreation room. There, in an informal clothes clinic of their own, girls can practice magic on their sad rags; try some of the tricks they saw demonstrated at the show. Out of the backs of closets and from the depths of packed away suit boxes will come old dresses that were "too good to throw away,' and which their owners planned to do something with but forgot all about. Magic will be worked on them with the aid of such unmagical implements as scissors and sewing machines.

This will be a two-way saving, for besides he money saved, unused material will be put into service again, and the scarce supply of yard goods and new clothing will be left for those not fortunate enough to have "sad rags" to work on. Another shot in the battle against inflation will be fired!

This Clothes Magic show is by no means the first attempt to save textiles and money by "making over and making do." More than 2 years ago there was a Victory Dress Review of remodeled clothing in the patio of the United States Department of Agriculture. Sponsored by wives of Department of Agriculture officials, it had the great advantage of scientific advice and help from the specialists in the Clothing Research Laboratory.

Personal

Dr. and Mrs. R. C. Cheek are spending their vacation in Philadelphia, New York, Buffalo, and Niagara Falls and other points while in the east. They attended the Elks Convention that was held in Philadelphia. They plan to return to their home on or about September 1st.

MAKE OUT YOUR WILL

Place it along with your insurance policy, your deeds, your abstracts and other valuables that you want to protect against theft, fire and tornado in a

SAFE DEPOSIT BOX, FIRE AND BURGLAR PROOF

We have just installed 189 of these new boxes. You may rent one which makes it private and only you can get into it. Not even the Bank can open the box without your key and you cannot get in it without the Bank inserting its pass key.

Do not make the mistake of keeping your Will around the house and your valuable papers in your trunk nor your deed and abstract in some drawer in your home.

To Market To Market

GO CONSUMER REPRESENTATIVES TO HELP THE PEOPLE OF THE NATION'S LARGEST CITY BUY QUALITY FRUITS AND VEGETABLES AT FAIR PRICES

W ashington Market—just a narrow cobbled street on the lower west side of Manhattan Island. But within the 100-year-old buildings and warehouses lining Washington Street move practically all the fruits and vegetables consumed by the 10 million residents of Greater New York. Not only do consumers in New York City rely on this market for their daily supply of fresh foods, but consumers in big and little cities from Pennsylvania to Vermont also buy large quanitities of fruits and vegetables that first were delivered from the important shipping areas to Washington Market.

Into this congested area, one-half mile long and two blocks wide, jammed with trucks, carts, and great piles of crated fresh foods, have come consumer representatives. Because, it is here that the quality, quantity, and price of a great bulk of the food eaten by New Yorkers are determined, the consumers of New York, as well as of many other cities, are taking keen interest in market activities. They want to take equal responsibility with public agencies and the food trade in making the food distribution process more efficient, less costly. and more equitable.

During the working hours carloads of oranges, strawberries, lettuce, onions, and a hundred other fresh foods demanded by the varied tastes of New Yorkers arrive at the rate of one carload a minute. Bunched beets from Texas and South Carolina, California cauliflower. Florida celery, snap beans from Louisiana, rhubarb from Pennsylvania and New Jersey, turnips from Canada, and pineapples from Cuba include some of the foods and some of the States and foreign countries represented. Wholesalers, agents for large growers' associations, buyers for chain stores and hotels, surveyors for restaurants, commission merchants, truckers, and jobbers work the length and breadth of the market from midnight to midmorning inspecting, evaluating, bargaining, buying.

While a city sleeps, a small group of merchants and workers act as middlemen between the producers of America and the consumers of America. Here carloads of food are divided and sold by the crate, here prices are arrived at for the fresh fruit and vegetable crops of the entire country, and to this market growers in almost every State in the Union look for indications of the strength or weakness of demand for their products.

During the hundred years that the Washington Market has been in existence, many groups, public and private, have tried to improve the buying and selling methods used there. They have tried to find ways of reducing the number of times a commodity is handled, of increasing the transportation and storage facilities, and most important, of increasing the return to the grower while decreasing the cost to the consumer.

Only recently, however, have consumers participated in this joint effort to speed up the distribution business and to remove wasteful operations. Much of this new consumer activity has come because of rationing and price control. These conditions have helped to focus public attention on the distribution phases of food production and consumption. Black markets in ration points, overceiling prices, scarcities in one commodity and abundances in another have all pointed to the need for consumer representation at the market place.

Today, shoppers of low-income families and of high-income groups, of immigrant families, and of old American stock are joining volunteer groups throughout New York in order to cooperate with public and trade organizations in the gradual improvement of fresh food marketing. Aided by Government agencies, they are educating themselves.

In the intricacies of the food industry, they are learning each day of the supply and price situation for that day, they are learning for themselves and then teaching others the wartime regulations and restrictions pertaining to food sales.

One of the most concrete demonstrations of consumer education begins at 1:30 a. m., every day of the work week in the Washington Market. That's the time when two inspectors of the Consumer Services Division of the New York City Department of Markets, take up their posts at the commission houses to gather the day's market news. They keep track of the number of carloads of fruits and vegetables moving from the piers on the Hudson River through the crowded streets to the dealers' stands. They watch the sales, calculate the tempo of buying and selling, judge the quality of the foods coming to town that day, the quantity. and the variety.

They knows every wholesale dealer, every purveyor, every jobber, every trucker by name and shout to them over the rumble of trucks and carts: "Hi Bill! What's Hot Today?" And sometimes the answer comes: "Strawberries are hot, tell 'em oranges are *very* hot." As they gather the news and watch the fluctuations of supply and demand, their thoughts are for the consumer: "What should the economical, thoughtful, wise, family shopper buy today in her local store and how much should she pay for it?"

By 6:30 a. m., they have the answer and are ready to release for press and radio coverage what has become recognized as one of the clearest and most accurate of the market news reports for consumers

The "hot" and "very hot" comments from the dealers get translated: "Strawberries: Demand very active; they sell at the ceiling but many payments of a few dollars on the side, over the ceiling, take place—one of the most sought after articles in the market. Florida oranges, together with those coming from California. Continue in light supply and sell at ceiling, with tie-ins prevalent. California lemons bring the ceiling price; the supply is adequate. Florida grapefruit sells at the ceiling price mostly. All citrus fruits are in the reasonable column at their ceiling prices."

The three-to-four-page report which covers the supply, price, and quality of every commodity from avocados to escarole is then passed on for release to the city newspapers and for use by Mrs. Frances. F Gannon, well-known Director of the Consumer Services Division, in her daily morning broadcasts to the housewives of New York. Mrs. Gannon wants to make certain that shoppers understand the markets for that day, know the good "buys" and the ceiling prices, compare quality, go easy on purchases of those commodities in short supply, concentrate on those in abundance. She realizes that the first job of any intelligent buyer is to be informed on supply and price trends. Visits to the local store won't indicate total supply, nor will price alone tell the whole story. Consumers need and want the kind of information Mrs. Gannon gives them.

"Good morning, Housewives," she says cheerfully, as she begins her 8:25 a. m., broadcast, "the approach of summer is certainly indicated by the farmers' supplies that are coming into the wholesale market, and which you should see on your retailer's stand at low prices. Fine young, tender beet tops, Swiss chard, collard greens, kale, turnips tops, and kohlrabi will give a wide choice in nearby vegetable servings----------

Most of the fruits are still within the right column. Light supplies of oranges and grapefruit make them harder to obtain. So, keep in mind that there is a retail ceiling price on these items." And so her report to consumers continues, high lighting the good buys, warning against breaks in the ceiling price, suggesting menus that use the abundant foods, and explaining, from time to time, the conditions back of the big food story in the morning's newspaper headlines.

From the radio station and the pressroom the report goes to the several cooking schools conducted by nutritionists of Mrs. Gannon's Division at the city retail markets in the Lower East Side, Harlem, and the Bronx.

All who care to learn and show how to prepare and serve the abundant and cheap foods present in the markets that day. So during a time when cabbage, radishes, lettuce, carrots, turnips and sweetpotatoes are abundant and meat is scarce, the consumer learns how to make cabbage rolls, grated raw vegetable salad, and sweetpotato fritters. This is a service that consumers have asked for and that they use. It is a concrete way of narrowing the gap between producer and consumer and of making the fullest and best use of the available supply. The cooking schools also serve as common meeting places for neighbors to swap experiences and ideas, and to work together to combat the black market.

In addition to the assistance given through the up-to-the-minute consumer-market news and the cooking schools, the city's Division of Consumers' Services gives housewives daily help with rationing problems and also cooperates in the work of the New York City Food and Nutrition Committee.

Equipped with the knowledge of what to buy and how to use it, groups of New Yorkers have joined in a common effort to inform other shoppers. Within the large frame-work of the Greater New York Civilian Defense Volunteer Office, originally organized as a wartime expedient but definitely headed for a post-war future, is another consumer organization. It draws its volunteer membership from people of all income levels and nationality groups. The Civilian Defense Volunteer Office cooperates with some 35 public and private agencies, including he WFA, the OPA, and the WPB, is getting across the importance of consumer knowledge and consumer action in the market place.

Meetings, distribution of pamphlets and leaflets, lectures and demonstrations at the public schools, city-wide exhibitions on health, nutrition, food conservation and preservation, and investigations of black markets and price violations are included in the work of the 135 cosumer centers. Almost a million members have volunteered their time to the serious business of educating themselves and others to the conditions prevailing in the civilian markets and to the definite actions they can take in strengthening the home front program.

Another volunteer group working to articulate the needs of shoppers and housewives is the New York City Consumer Council, which functions, throughout the Metropolitan Area, tackling food shortages, black markets, poor quality misbranding, high prices, and inefficient, costly distribution. The most recent group of consumers to be incorporated into the Council are the women of the Lower East Side. Starting at the Henry Street Settlement, the Lower East Side Consumer Council now represents some dozen social agencies—the Parent-Teacher Association, the tenants' league, the 13 Lower East Side settlements, the credit unions, and the cooperatives, the credit and the cooperatives. After only 3 months of existence, it has had considerable effect on the equitable and lawful distribution of food on the Lower East Side.

Women whose food budget must feed many mouths, have come together and are beginning to loosen the hold of food black marketeers. Before the organization of the Council, the black market in poultry in this section was the worst in the whole city. With the invaluable weapon of information, the women are beginning to lick it. They hold open meetings where speakers from the various city, State, and Federal agencies tell the women the facts; they set up stalls at the important shopping centers where volunteers distribute leaflets on price and rationing regulations; they handle the complaints of shoppers against retailers suspected of violations and present them to the local OPA board for investigation; they cooperate with the War Food Administration in its food distribution activities. Some of the women have even appeared as volunteer witnesses before the hearing of the Congressional Committee investigating food shortages held recently in New York. And their latest project is the organization of a consumers' cooperative so that the neighborhood can own and operate its own store.

When the war is over and the abnormal conditions creating food shortage, maldistribution, and black markets are over, these organized consumers do not think their work will be over. They believe that there are still hundreds of problems in the production and distribution of consumer goods to which they can bring new light and new effort. They belive, too, that every shopper organized in wartime, from the one who confines her activities to listening every morning to Mrs. Gannon's news of the market to the one who heads up a neighborhood group, will be a better shopper in peacetime.

—Consumers' Guide

Book Editor

Photo by Maynard Studio. GWENDOLYN BROOKS, whose book of ballads, blues and portraits-in-verse reflecting Negro life in a great American city, A STREET IN BRONZEVILLE, will be published by Harper and Brothers on August 15.

Gwendolyn Brooks was born in June, 1917, in Topeka, Kansas and lives in Chicago. She graduated from Englewood High School in 1934, and from Wilson Junior College in June, 1936. In September, 1939, she married Henry L. Blakely. She has had poetry published in numerous magazines and is at work on a novel.

William Rose Benet writes: "A STREET IN BRONZEVILLE' by Gwendolyn Brooks is the work of a remarkable young poet. Her BALLAD OF PEARL MAE LEE is indelibly tragic. Her book, throughout, has dramatic vigor and unusually expressive phrases. Miss Brooks is as original, as dynamic as Langston Hughes. She is salientlly individual.

Richard Wright has written of Miss Brooks' work: "She is a real poet. There is no self-pity here, nor a striving for effects. She takes hold of reality as it is and renders it faithfully . . . She easily catches the pathos of pretty destinies; the whimper of the wounded; the tiny accidents that plague the lives of desperately poor, and the problem of color prejudice.

A Poor Solution

In Paris the lights may soon be dimmed. In the huge textile mills of Lyons, the spindles are idle. In Belgium the great steel mills in Liege, Charleroi and La Louviere are shut, and in many a European village there is ample food, but no way to get it to the hungry cities, says TIME magazine.

Why is the economy of Western Europe still paralyzed? It has a coal famine. Like a wagon without a horse, it lacks the power to start. Until the coal shortage is solved, there is little chance that Europe's shattered economy can be rebuilt or that any sizable trade with the United States can be revived, says TIME.

The only remedy that France suggests is to nationalize its coal mines. It seems to have the idea that state socialism of industry, such as the Hitler government established, will in some miraculous manner encourage increased production, even though it destroys the incentive that flows from individual opportunity.

According to the latest figures, this fuel year will see the United States 37 million tons short of its coal needs. We tried temporary socialization of the coal mines as a remedy for coal strikes. The result was not surplus coal but continued shortages.

One gloomy official in the European area, says: "If the people don't get coal, you can count on chaos and revolution." That would mean less coal and more freezing. We had the modern revolution— strikes— in the United States mines when our country faced its greatest war danger. And the result was less coal. It takes more than revolution and government seizure of property to get production. Until the people learn this, they must expect suffering.

Strange Pigs And Their Cousins

By WILBERT N. SAVAGE

When pigs were first domesticated by man, no one can say, but we do know that common American types had their origin in the Old World. Indeed, our finest varieties of today are cousins of wild hogs of other lands, from which they descended. We know that pigs were common two thousand or more years ago, for they are mentioned frequently in the Bible.

Throughout the world there are many strange and remarkable kinds of hogs. The pygmy pig, no larger than a hare when full-grown, is native to certain parts of India. A further unusual example of pig life may be found in Africa, south of the Sahara, where the bush pigs dwell. These wild creatures are distinguished by the presence of large permanent swellings on each side of the face.

The African forest hog is the largest member of the swine family Their tusks are of great size, and as weapons of defense they are so formidable that the giant animal can meet the tiger on terms of equality. Large and fierce as he is, the forest hog is little known. Livingstone and Stanley both heard rumors of him, but dared not believe native reports. It is known, however, that they reach a weight far exceeding that of any other wild hog and, size for size, their great strength. which is said to be displayed only when the creature is aroused to extreme rage, is perhaps equalled by no other animal in the world.

If a medal should be awarded the ugliest hog, the warthog of Ethiopia would surely capture the prize, for he is so hideous in appearance that not even the hyena —the social outcast of the animal world—will associate with him.

The parent stock of most pigs found in Canada and the United States was brought from Europe, and chiefly from England. The English Yorkshire attains the greatest size of any domestic variety, but some of the best and most popular breeds—the Chester Whites, Duroc-Jerseys, and Poland-Chinas—were developed here in the United States.

Everyone feels that it is easy to love his best friend, God is really our best friend.

Even we who hate know that love is a necessary part in our lives.

Let us not dwell upon our faults, but upon what will cure them.

WOMAN'S PAGE

HELPFUL HINTS FOR HOUSEHOLD

SCALLOPED BRAINS WITH MACARONI

1 pound brains
Water to cover
1 teaspoon salt
1 small onion
¼ teaspoon powdered sage
2½ cups medium cream sauce
⅛ teaspoon cayenne pepper, or more
1½ to 3 tablespoons lemon juice
2 cups cooked macaroni
¼ cup grated cheese
3 tablespoons bread crumbs
2 tablespoons butter or margarine

Wash brains, cover with water. Add salt, onion and sage. Cook slowly about 20 minutes, and drain. Remove membrane from brains; slice in one-inch pieces. Add to cream sauce; season with cayenne pepper and lemon juice. Mix cooked macaroni with grated cheese. Place some of the macaroni on bottom and along sides of oiled baking dish. Fill center with brain mixture, and put remaining macaroni around edge of dish.

Mix bread crumbs with melted butter or margarine and sprinkle over top. Bake in moderate oven (375 degrees F.) until set and golden brown. Serve very hot with green or mixed salad. Serves 4.

PEACH SHORTCAKE

2 cups flour
3 tablespoons sugar
3 teaspoons baking powder
½ teaspoon salt
1-3 cup milk
Dash of nutmeg
1 egg
6 tablespoons butter or margarine
Sliced peaches
Chilled cream

Mix and sift dry ingredients. Cut or rub in butter or margarine. Add well-beaten egg, and enough milk to make ingredients hold together in a stiff dough. Roll one-half inch thick on a floured board, in rectangle shape. Brush half the dough with melted butter or margarine. Fold over and brush top with milk. Bake at 450 degrees 12-15 minutes. Split shortcake while still warm, spread sliced, sweetened peaches over the bottom layer. Place top layer on cake and top with more peaches. Cut in squares and serve with chilled cream.

ESCALLOPED POTATOES AND ONIONS

2 tablespoons butter or meat drippings
2 tablespoons flour
1½ cups milk
¾ teaspoon salt
4 to 5 medium-sized potatoes
1 onion

Melt butter, blend in flour; add milk and stir over moderate heat until sauce boils and thickens. Add salt. Put a layer of peeled, sliced potatoes in bottom of a buttered 2-quart casserole, lay a few onion rings over them and add one-third of the sauce. Repeat until all are used, topping with sauce. Cover with buttered crumbs. Bake in a moderate oven, 350 degrees F., for 45 minutes, or until potatoes are tender. Serves 6.

MOLASSES NUT BREAD

1 cup sifted all-purpose flour
1 teaspoon baking soda
2 teaspoons baking powder
1 teaspoon salt
2 cups bran
1 cup whole wheat flour
¼ cup shortening
1 cup nuts, coarsely chopped
½ cup raisins
2 eggs
1¾ cups sour milk
½ cup molasses.

Mix and sift flour, baking soda, baking powder, and salt together. Mix with bran and whole wheat flour. Cut in shortening. Add nuts and raisins. Beat eggs and combine with milk and molasses. Add to dry ingredients. Fill one very large greased loaf pan or two medium-sized ones about half full. Bake in moderate oven (350 degrees Fahrenheit) for about one hour. Cool and store one day before slicing for easier cutting.

FISH TIMBALES

2 cups cooked fish flakes
2 tablespoons fat
2 tablespoons flour
1 cup milk
2 eggs
1 tablespoon lemon juice
1 tablespoon chopped parsley
1 teaspoon minced onion
Salt to taste

Add lemon juice to the fish. Prepare a sauce of the fat, flour, and milk. Stir in beaten eggs, fish, onion, parsley, and salt. Pour the mixture into greased custard cups and bake in a pan of hot water in a moderate oven (350 degrees) for about 30 minutes. Turn the timbales onto a hot platter. Garnish with slices of lemon and serve immediately. If preferred timbales may be served with hot tomato sauce or Spanish sauce.

Household Hints

CANNING HINTS

Heavy work gloves, the kind from the dime stores, says Mary Mabon, home economist, protect hands in the grandest way when they're lifting jars from the boiling water bath canner.

Use the deep well cooker and its French fry basket to make preliminary scalding of tomatoes and peaches easy. As soon as the water boils in the cooker, switch to low heat, fill the basket with the vegetables or fruit; scald, lift out and peel.

A pastry blender saves time and effort in making biscuits and pie crust.

Use warm water to sprinkle clothes for ironing as it will spread through fabrics faster.

Fats will kill Japs.

SAVES BUTTER

If butter is short, use well seasoned heated French dressing with your vegetables. Particularly with green beans, broccoli or artichokes. You can be happy about adding 3 or 4 chopped, stuffed olives when it's a case of the sauce for the latter vegetable.

Keep cellar stairs in good repair to prevent accidents.

MEDIUM CREAM SAUCE AND VARIATIONS

2 cups milk
4 tablespoons fat
4 tablespoons flour
½ teaspoon salt

Melt fat, blend in flour. Stir until smooth, then add milk. Heat in top part of double boiler until thickened, stirring occasionally. Add salt and pepper just before serving. Makes 2 cups.

Variations

Olive Sauce: Add ½ cup sliced, stuffed or ripe olives to above recipe.

Mushroom Sauce: Add ½ to 1 cup sauted mushrooms to white sauce.

Pimiento Sauce: Saute 4 tablespoons onion in fat when making white sauce. Fold in four tablespoons chopped pimiento just before serving sauce.

Soubise Sauce: Rub four boiled onions and two sprigs parsley through a coarse sieve and fold into prepared white sauce.

RED PEPPERS PREFERRED

Even the small amounts of sweet peppers ordinarily used stuffed or in salad, or to add color and flavor to main dishes, may do a considerable bit toward the vitamin value of family meals, especially if they are allowed to become red-ripe. Stuffed red peppers are attractive, and delicious, and sliced red peppers add appetizing color and flavor to salads, as do green.

QUICK-FROZEN SPINACH MAKES A FLAVORSOME ADDITION TO MEAL

Salads Plates and Teams Well in Egg and Cheese Alliances

Gay, piquantly flavored salads are good menu strategy for any day when the butcher's counter is barren. Hard-cooked eggs, as well as cheese dressing, cubed American cheese or mounds of cottage cheese provide easy, flavorsome ways to add protein value that will qualify your salads as main course dishes.

The current abundance of point-free quick-frozen spinach offers another easy way to achieve zestful variety in tossed salad combinations. Just thaw the quick-frozen spinach as it comes out of the carton and chop; all the chores of sorting and eliminating grit and sand were disposed of before quick-freezing sealed in a full quota of vitamins and flavor. You'll find the tender green leaves are a particularly luscious addition to any assemblage of salad greens. They have a special flavor affinity for cheese and hard-cooked eggs, as well as onions, pickles and radishes. So resolve the current meat shortage by your inspirations and experiment with novel salad ingredients that will add up to appetizing main course dishes.

GREEN SPINACH SALAD

1 box (14 oz.) quick-frozen spinach, thawed
½ teaspoon salt
½ cup sour cream
4 tablespoons mayonnaise
Dash of pepper
1 teaspoon scraped onion
1½ teaspoon horseradish
2 hard-cooked eggs, chopped

Chop spinach. Drain if necessary. Sprinkle with ½ teaspoon salt. Combine remaining ingredients. Add half of sour cream mixture to spinach and mix well. Arrange on crisp lettuce and top with remaining sour cream mixture. Serves 4.

SCALLOPED SPINACH AND EGGS

1 (14 oz.) package quick-frozen spinach, or other quick-frozen vegetable
4 hard-cooked eggs

White Sauce

3 tablespoons butter or margarine
2 teaspoons minced onion
2½ tablespoons flour
1¼ cups milk
6 tablespoons vegetable liquor or vegetable liquor and milk.
Salt and pepper to taste

"FIX YOUR OWN" SUPPER IS SUMMER SUGGESTION

Long glasses of cooling iced coffee and the makings of fruit salad you make yourself is a sensible suggestion for sultry summer days. Outdoors or on the porch, you needn't go far to "eat out," so make way for a buffet supper, with strawberries, sliced bananas, fresh pineapple, melon balls and apple slices with the skin left on, ready to be combined with French dressing, whipped cream mayonnaise or plain cream, as your guests prefer. The salad is simple, there's nothing to it and there's nothing to making good iced coffee.

TRY THIS WHEN COMPANY COMES

To make a dessert glamourous on a busy day, when company comes unexpectedly. Stir up a favorite one egg cake recipe and bake in greased muffin pans. Top these golden cup cakes with a fluffy 7 minute icing or whipped evaporated milk and garnish with a plump red strawberry. These elegant cup cakes are an excellent dessert to serve when strawberries are few and the occasion calls for a festive dessert.

DRESS UP YOUR CUP CAKES

Color half of a one-egg cake batter pale pink and drop the pink and white batters alternately into greased muffin pans. Bake as for cup cakes. Let cool thoroughly. With sharp knife, cut cone-shaped top from top of each cup cake. Fill hollow with honey sweetened berries and place cake cone, cut side up on berries. Serve these saucy little cakes for dinner dessert.

PASTRY SHORT CAKE

Roll out plain pastry ¼ inch thick. Cut with 3 inch biscuit cutter or fancy cookie cutter. Bake on ungreased baking sheets in hot oven 8 to 10 minutes. Serve pastries and strawberries, sweetened with syrup or honey, making layers of pastry and fruit. This rich pastry shortcake is a solution for those no-sugar days when the family sugar bin is low.

CHERRY FILLED COFFEE CAKE

Cherry Filled Coffee Cake, made from a luscious coffee cake recipe, is a real flavor winner with those who dote on fruity rich coffee cakes. Inside this elegant coffee cake is hidden the sweet goodness of cherries sprinkled with the melting cinnamon sugar crumble. With sweet orange slices and a cup of piping hot coffee, Cherry Filled Coffee Cake is the main part of a deliciously satisfying breakfast. It is elegant as a luncheon or dinner dessert, for its crunchy sugar topping and filling gives inviting sweetness.

Sugar Crumble Mixture

¼ cup sugar
¼ cup enriched flour
1 teaspoon cinnamon
¼ cup margarine or butter
1¼ cups cooked drained cherries

Mix sugar, flour and cinnamon. Cut or rub in margarine until mixture is crumbly.

Batter

1¼ cups sifted enriched flour
¾ teaspoon salt
2 teaspoons baking powder
4 cups sugar
1 egg
¾ cup milk
3 tablespoons melted shortening

Sift together flour, sugar, baking powder and salt. Beat egg. Add milk and melted shortening. Add to flour mixture, stirring only until flour is moistened. Spread half the batter into greased pan. Cover with cherries. Sprinkle half the sugar crumble mixture over the cherries. Cover with remaining batter. Sprinkle with remaining crumble. Bake in moderately hot oven 25 minutes. Use pan about 8x8 inches in size.

Labor At the Helm

The election of Joseph Benedict Chifley, a former locomotive engineer and son of a blacksmith, to the high position of prime minister of Australia, is hailed as a great victory for the labor party and the "little man."

When labor is responsible for employment, it will find its interests are identical with those of capital. Responsibility has a sobering effect on all of us.

Prime Minister Chifley has the opportunity to show the same ability in handling his new job that many another man who started from the ranks has shown in industry and political leadership.

Dictatorship Dies Hard

The president of the French Confederation of Labor, Leon Jouhaux, while in Washington, D. C., recently, discussed French plans for the nationalization of industries. Fresh from several years in a German concentration camp, he still seeks socialization of such French industries as mines, transportation, gas, electricity and credit. He naively says however, that all plans for nationalization of those industries provide for indemnification of shareholders. In other words, the properties will not be confiscated, but the owners will be forced to sell them to the state.

Apparently France didn't get enough of political dictatorship under German occupation — it wants more under its own management.

Like the Mouse And the Lion

We have heard so much about rationing, price control, ceilings, reconversion and postwar planning, that we are all pretty much confused. But one fact is standing out more clearly every day: The retailer, who from the beginning of the war has been treated largely as non-essential, is now recognized as the connecting link between the buyer and the producer, upon which the success of any reconversion plan rests. Stripped of manpower, stripped of many essential commodities and food products, the retailer has in some way managed to keep articles on his shelves that enabled consumers to supply their needs.

The keen competition between chain stores and independents, and between chain stores themselves, is a governor that controls attempts by price gougers to cash in on scarcities. The independent and the chain store have a common interest in seeing that goods flow to the consumer in the greatest quantity, at the lowest cost, because they both depend on volume for their existence. It is therefore highly essential that in postwar planning which involves employment and production, the retailer's position be given greater consideration than ever before. Any artificial hampering of his operations retards the flow of manufactured goods, agricultural products and employment. It is time that both national and state legislative bodies recognized the fact that production and retailing are like the fable of the mouse and the lion.

Abreast of the Times

Just about the time the general public comes to the conclusion that the good old days are gone forever, that high costs will prevent expansion, and that it will be necessary for a benevolent government to look after all its unemployed citizens, industry comes along with some new and helpful plans which upset the pessimist's applecart. As evidence of this, the possibility of a postwar building boom has stimulated interest in improved building codes throughout the country, according to a report just issued by the National Board of Fire Underwriters.

While the public has feared the cost of building will be so high after the war that the average man cannot hope to own a home, the National Board cites that "predictions are widely made that postwar houses embodying materials now generally unknown, will be fabricated in greater quantities in factories so that they can be quickly assembled on the building site. Unbelievably low costs to purchasers are talked about.

"The Chamber of Commerce of the United States is on record advising cities to restudy their building codes. It is hoped that provision may be made to take advantage of technological advances resulting from the war effort and the availability of new building materials which are in the process of development. Lower building costs with the same promise of safety are in prospect."

The insurance industry is seeking to keep abreast of the times by having building codes in various cities perfected so as to facilitate construction along safe lines which will assure the lowest possible insurance cost.

THE MODERN FARMER

VOL. XVIII. NASHVILLE, TENN., SEPTEMBER 15, 1945 No. 8.

The Road Up

God Save the Virgins

By GILES A. HUBERT

Three little islands with about 22,000 people. They don't sound like much to us who have been in the habit of thinking in terms of states as large as Tennessee, Texas, Ohio and New York and in terms of population which runs into millions. But, to me now, after spending two of the most interesting and enjoyable weeks of my life there, they loom—pretty important.

First, these three little islands are undoubtedly one of the most beautiful, healthful and pleasant places on the face of the earth. Green clad hills, which rise to two thousand feet in places, roll down to bays and inlets and to the open sea. White coral-sand beaches form the borders to little bodies of water which reflect all the colors of blue, green and purple imaginable. The water is so clean and pure that a person can see clearly objects on the bottom of the sea at fifteen feet.

The climate is almost perfect the year around— warm at mid-day and cool at night. Few are the moments when the cool breezes from the sea are not blowing to comfort any one who steps into the shade. Calm bays and sheltered channels between "many green islands" make an ideal situation for basting and bathing. The waters turn with game fish such as is the dream of every angler.

On St. Croix, the largest of the Virgins, there is plenty of activity for the huntsman. There are quail, pigeons and ducks in abundance and large thickets inhabited by deer. These islands are truly a garden spot of nature and a heaven to the sportsman.

Secondly, the Virgin Islands are inhabited largely by colored people who enjoy an extent of democracy which is difficult to find in any other area under the American flag. In political, economic and social life, colored people are represented at the top as well as the bottom and all the way through. By law and by custom discrimination on account of color is outlawed.

The judiciary is headed by a Negro, the proprietor of the best hotel is a Negro, the newspapers are all owned and edited by Negroes, the U. S. District Attorney is Negro. It is true that much of the land is owned by the descendents of the old Danish settlers, but many of these are intermarried with Virgin Islanders and there is very little differentiation based purely on race.

It is only among the continental elements stationed in the islands in connection with the U. S. Army and Naval installations that there is any overt feeling of racial superiority or inferiority or tend-

THE TODD WESTERN FAMILY THRIVES ON FARM LIFE

Todd Western, Negro farmer in Mahaska county, pauses to see how his oldest daughter, Betty Lou, 8, is coming with the milking.—Staff photos by James Sherman.

Modern Equipment And Planned Crops Have Paid Well

By GLENN CUNNINGHAM
(Register Staff Writer)

New SHARON, IA.—The Todd Western family farming 160 acres eight miles southeast of here is one of the few Negro farm families in Iowa.

Western, 41, was born on the farm. His grandfather purchased the land in 1864 when he moved from just south of New Sharon to be closer to timberland.

The family is well respected in the community, Western having worked with the neighbors all of his life. The farm is equipped with modern equipment.

Western has two sisters who are farming near Ewart in Poweshiek county. They married brothers, Russell Kiner on 440 acres and Booker Kiner on 160 acres.

Livestock

Western generally feeds 40 to 50 head of beef cattle a year, last year raised 80 head of hogs. He milks eight cows, usually has around 20 to 25 head of sheep and 150 laying hens.

The crop plan on the farm this year is 53 acres of corn, 25 acres of oats, 10 acres of soybeans, 30 acres of hay, 22 of clover and eight of alfalfa. The first hay crops yielded 28 tons.

Western has been a co-operator with the agricultural adjustment agency (AAA) since it was organized. He has about half of the farm limed and plans on spreading lime on 225 acres this fall.

He used commercial fertilizer for the first time this year on oats ground, putting it out just ahead of the big rains early in the spring.

20 Bushels of Oats

Because of cold, wet weather the Boone oats produced only an average yield of 20 bushels to the acre where in a normal year the yield would be 40 bushels.

He hasn't tried planting on the contour, but is interested in this way of farming rolling land and has been talking recently with the soil conservation people.

The farm is rolling to gently

F. Marcellus Staley Appointed To Important Post In Farm Labor Program

F. Marcellus Staley, former director of the school of agriculture at Georgia State college, who helped to mobilize sufficient workers last year to save a 55,000 acre peanut crop, has been appointed as an assistant in the Farm Labor Program of Extension Service, Director M. L. Wilson has announced.

In his new position, Mr. Staley will assist with the recruitment and placement of colored farm workers in Alabama, Florida, Georgia, North and South Carolina, and Virginia. He will have his headquarters at Americus, Ga.

Educated at Morehouse, Ohio

(Continued on Page 2, Col. 1)

Farmer Veterans Who Will Return Soon Can Obtain Help

Atlanta, Ga.— The next few months should see the release of millions of veterans who were reared on farms. In some southern states half or more of the men and women who went to the armed forces came from farms.

Will they go back?

The war has taught nearly all of them new skills. Boys who plowed with mules now know how to fix airplane engines. The Army and Navy needed clerks and assembly-line workers and warehousemen and laundry operators and bakers and builders, as well as riflemen and parachutists.

A great many of these young people, when they come home to Southern farm communities, will

Arkansas Families Get pure Bred Milch Cows For Their Farms

Memphis, Tenn.—Eighteen families, all members of the Southern Tenant Farmers Union, living on plantations near Cotton Plant, Arkansas, received a pure bred Guernsey milch cow on Thursday, August 2, 1945. The cows are heavy milkers, giving from 5 to 6 gallons a day.

The cows were contributed by the Heifers For Relief Committee of the Church of the Brethrens' Service Committee whose headquarters are in Nappanee, Indiana. The transaction is being handled through the Arkansas Farm Tenants Cooperative Association which was set up in 1942 by members of the Southern Tenant Farmers

Many Southern Families are Troubled By Problems of Farming

Jones G. Maddox and Henry Jarrett Discuss These Postwar Problems

Most Southern farm families are troubled as they look ahead to the years after the war, and are keenly interested in having the kind of farm of farm program that can best help them cope with their coming difficulties.

One thing many farmers are worried about is the increasing number of machines that are going into the cotton fields. Already the mechanical stripper is coming into use on the High Plains of Texas. It seems to be only a question of time — probably a very short time—until the mechanical picker and flame cultivator will be seen in many fields in the Delta and elsewhere throughout the Cotton Belt. And even now, from one end of the Cotton Belt to the other, tractors and cultivators are steadily replacing mules and plows.

More machines mean fewer workers in agriculture. During the past 10 years or so, many thousands of farm families have been "tractored off." Many more thousands of families almost certainly will be displaced by machines within the next few years.

Many other small farmers who can't afford machinery, or whose land is not well suited for the use of machinery, will feel the pressure, too; for they will be forced to compete against the cheaper production methods that machines make possible.

Another great problem is growing uncertainty as to future markets for American cotton. Already

READ: READ: Twenty-eight Dollars To Ownership—P. 5

Arkansas Families

(Coninued from Page 1)

Union F. R. Bottom of Cotton Plant in manager of the cooperative.

Each family receiving a cow is obligated to return the first heifer calf to the Association which will in turn make the increase available to another needy family at a nominal cost. A pure bred Guernsey sire is being purchased by the Association.

Mr. George Craig of Indiana and two assistants transported the cows by truck to Cotton Plant. At the home of N. Darby, near the Mt. Pleasant School, 50 families were gathered to witness the drawing by lot. Each head of a family drew a number from a hat held by little Johnnie Childress. The number drawn was the same as the number of the cow the family was to own. The family was required to pay the cost of transportation from Indiana to Arkansas. The cost was about $30 each. The milch cows are valued at $150 to $200 each.

The Mt. Pleasant School turned out and 125 rural children saw the fine cows and heard the instructions for the care of the cattle which were given by Mr. Craig who is an experienced dairy farmer in his native state. Assistant County Agent, Electra Tiller, of Clarendon was present. The vocational teacher from the Fargo Agricultural School also attended. Dr. H. V. Watson of Brinkley a licensed veternarian, has been engaged by the Cooperative Association to make regular inspections of the cows. The County Agent of Monroe County will assist in supervising the project.

The following families drew their cows by lot and paid the transportation costs:

F. R. Betton, Hardy Hoskins, S. W. James, Dorsey Simon, Ernest Jones, James, Bunch, Hilton Chandler, Ophelia Smith, John L. Jones, J. E. Fleming, J. W. Stewart, L. H. Betton, Mrs. Johnnie Reed, L. W. Davis, Anderson Johnson, King Floyd, Abb Locke, Lemuel White.

NOTE TO EDITORS—

Publication of an article based on the above is requested of journals having a circulation among southern farm people. The best of our knowledge, these 18 families living on the cotton plantation of East Arkansas, are the first of their class to own a pure bred milch cow.

The Church of the Brethren set up a Heifers for Relief Project about two years ago to replenish the dairy herds destroyed by war in Europe. Until recently, the Brethren were unable to secure transportation of the cattle to Europe. Some of the cows were shipped to Puerto Rico for distribution by the Farm Security Administration and a few were also sent to FSA clients in Arkansas, near Pine Bluff, about two months ago.

F. Marcellus Staley

(Coninued from Page 1)

State, and Cornell, holding a Master of Science degree in agriculture from the latter, Mr. Staley has held important positions at Tuskegee, A. and T. college, Bennett College where he was dean of instruction, South Carolina State, and Georgia State college.

While serving as county agent in Sumter County, Georgia last year, Mr. Staley assisted in recruiting enough workers to harvest a 55,000 acre peanut crop and an equal acreage of cotton. This year, with his work extending over six states, Mr. Staley will aid in the recruitment and placement of more than 50,000 colored farm workers.

Farmer Veterans Who

(Continued from page 1)

not want to line up their lives as an imitation of their father's lives. Many will go to town to industry and business. Many will go to town to industry and business. Many will go North.

For those who want to farm, GI rights are mighty important. A determined young fellow can borrow enough on reasonable terms to set himself up as a land-

The other children watch Mrs. Todd Western of New Sharon, Ia., tighten the lids on some fruit she has just canned. Left to right, children are Todd, Jr., one year old, held by Charlene, 5; and Joyce, 3. The family usually cans around 500 quarts from the garden each year.

owning farmer with a good house and good machinery and tools. A young man who does this has every chance to stay in the running.

It looks as though the line will be drawn even more deeply in the future between those who have good places and knowledge of modern farming and those who work for somebody else and lag behind.

The country is rightly grateful to the veterans. The law entitles the veterans to borrow to get farms if they can be found at a workable price. It is up to the boys themselves and their parents in Southern counties to make the law work and to get good farms for those who can swing them.

Modern Equipment

(Continued From Page 1)

rolling, but he says there is not much washing or less of topsoil except during an infrequent flood. He believes in planting on the contour as it has increased corn and soybean yields for neighbors.

Bad Luck With Pigs

This year Western had bad luck with pigs. He had 15 sows to farrow in February and March, but they saved only 38 pigs. Western was sick, the weather was cold and wet and a man hired to do the work was kept busy feeding and caring for other livestock.

Western's wife is 38. They have three daughters, Betty Lou, 8, Charlene, 5, and Joyce 3; and one son Todd, Jr., one year old. The 8-year-old girl helps with the chores during summer and after school, and is a good milker.

The Westerns have a telephone and electricity furnished by a generating plant. Equipment includes tractor, binder, corn picker, manure spreader and a hammer mill for grinding feed. There are six horses but they are used in the field only at planting time.

Western does a lot of custom work with his binder and corn picker and always has shared work with neighbors during haying and harvest. He has used a tractor 15 years, now owns the third one and wants to get a new corn picker as soon as he can get his application approved.

Western says the price of feeder cattle is too close to the price on finished beef to allow the farmer sufficient margin. Corn costs him $1.02¾ with a hauling charge of 5 Cents or more a bushel on top of that, he said.

"You read about best cattle bringing a top of $18 or better a hundredweight," says Western, "but that doesn't mean a thing to the average feeder. Most cattle sell for around $16 or less or from two to two and a half cents under the top." He pays 12 and 12½ cents for feeders aid his last cattle shipped to Chicago, Ill., two weeks ago sold for $14.50.

"More Negroes should be on the farm," he says, "as someone is not handing you a check on Saturday and telling you to look for another job as is the case many times in town.

"There is a lot of hard work on the farm but if you don't feel like working you can take it a little easy. The farm is a wonderful place to live and raise a family."
—THE IOWA FARM REGISTER.

Jones G. Maddox and

(Continued from Page 1.)

rayon and other synthetic fibers have chipped away a good bit of the home market that used to belong to cotton. And in world markets where American cotton used to have undisputed leadership, the cotton grown by farmers in other countries steadily has been crowding out American cotton. As long as the price of our cotton is kept comparatively high, it is likely that competing products will continue to take away more of its markets.

What is the wisest thing to do in this dilemma? Even when America cotton sells at fairly high prices, many cotton farmers, especially the smaller operators, aren't able to make adequate livings. If prices are kept up by selling even less cotton, incomes from cotton will become smaller and samaller. Yet if we let the price drop and sell more, farmers still will be in trouble unless they can get their production costs down.

It may be the machine, after all that will solve part of the problem. The farmers who are able to use machinery efficiently will be able to sell their cotton at a competitive price and still make a good profit. But what about the farm family who can't make good use of machinery?

None of the farm programs we have had in the past looks as if it could completely fill the bill. Several of these programs have done a lot of good and can continue to do good, but none of them seems to provide the whole answer. Farm Security Administration, for example, can do much useful work in helping hard-pressed families get back on their feet again and in helping tenants become owners, but it can do very little about the basic difficulties faced by all cotton farmers. Likewise, the work done by the Agricultural Adjustment Agency and the Soil Conservation Service toward helping farmers conserve soil—essential as it is—does not get to the root of some of the chief difficulties.

A much broader approach is needed—an approach that will enable all of the existing useful programs, and maybe a new one or so, to team up together in making Southern agriculture a better way of life than it has been, and in keeping it that way.

The suggested conversion program for Southern agriculture which has been discussed in recent months points one way toward such a coordinated program that will be concerned not just with cotton, nor just with agriculture, but with the whole economy of the South. Cotton's difficulties are only part of the trouble. Even displacement of farm workers by machines is more a symptom than the disease itself. The root of the problem is and has been underemployment on Southern farms. More than one-half of the Nation's farm families live in the South; yet they have only a third of the country's cropland. They receive only about one-fourth of the Nation's total farm income. Too many people are trying to make a living off too slender a farming base.

Clearly the thing to do is to establish adequate farming bases for the families who remain in agriculture, and to help the other farm families get into kinds of work where their efforts will be more productive and bring them better incomes.

The proposed conversion program suggests reaching this goal by means of four major steps:

1. The price of American cotton would be established at a level that would enable cotton to compete freely in the home market and world market. In this way the South could continue to grow the crop for which so much of its land and so many of its people are so well suited.

2. Price adjustment payments would be made to cotton farmers to cushion the effects of the change from a protected price to a competitive price, for otherwise the change would cause a tremendous shock. The idea would be to make payments for a limited period only—probably 5 years—and to make the payments smaller each year until they stopped entirely.

3. There would be a broad program for helping farmers keep their operations on a basis that would be profitable for the long pull after the price adjustment payments had stopped. Most farmers who could use machinery and take other steps to lower production costs would want to grow as much or more cotton than they had been growing. Other farmers would want to reduce their cotton acreage or perhaps go out of cotton entirely. Many of them in switching to a more stable kind of farming would need to make changes that they could not afford. To enable them to do this the program would provide for conversion payments to help them pay for the needed changes, and for credit facilities to finance some of the large operations. This assistance would be given to farmers who worked out and agreed to follow long-time individual plans for their farms.

4. There would be a program for stimulating business and industry in the South, so as to create more jobs for training farm people who wanted to leave agriculture for nonfarm employment, and for helping them actually locate jobs and establish themselves.

How would a program of this kind actually work? First of all, it would be purely voluntary. If a farmer felt that he could get along all right with cotton at the competitive price and without making any large changes in his methods of farming, he would receive the temporary cotton price adjustment payments, without getting into the program at all.

But take the case of a small farmer who owned his land and felt he needed to make changes—cut down his cotton acreage, for instance, and branch out into poultry or vegetables. By working out a 5-year farm plan he could qualify for payments to help pay for some of his improvements, and to keep his family going until they become firmly established on their new basis. There would be credit arrangements, too, if he needed to make some very large improvements like buying more land or building a new barn. It might be, of course, that such a small farmer and his family might feel they would have better opportunities by changing to other kinds of work. With a conversion program, he would have help in fitting himself for the kind of job he wanted, and in establishing his family in a new place in case he needed to move.

Suppose a sharecropper and his family were displaced by machinery. He would have the same kind of opportunity to learn new work. Or if nearby land were available, the conversion program could offer him help in buying or renting an adequate farm and in getting started.

If such a conversion program were put into full-scale operation, 10 years might be enough to bring about a great and lasting change in the South. There would be fewer farm families, but they would be making better incomes on more adequate farms. The other families would have been established in useful jobs in factories, offices, stores, filling stations, etc.

Such a program, of course would for a few years cost the Government considerable sums of money, although the expenses probably would not be so very much greater than those under the old programs before the war began—programs that have not yet succeeded in bringing about any permanent large-scale improvement. At the end of the conversion period, the cost to the Government would drop off sharply. The conservation payments would be the one large continuing item.

Probably the main difficulty the conversion program would face is the extent of the change so many families would have to make in their way of doing things. Perhaps some of the older farmers would feel it just wasn't worth the trouble. On the other hand, the way machines already are displacing people and the way that cotton is threatened by competitors makes it plain that a great many Southern families will have to change their ways even without a conversion program. A conversion program would give them definite help in changing their ways for the better.

This conversion program that has been outlined is, of course, just in the discussion stage. It isn't even a formal Government proposal, but it does offer one possible way out of a serious dilemma. It should be thought about and discussed carefully along with the other possible alternatives that farmers need to consider as the postwar period comes closer.

Welcome To Dr. Norris

This welcomes Dr. Ernest Norris of Texas into the job of assistant to the Director of Personnel at the United States Department of Agriculture at Washington.

Getting Negroes integrated into the Department wherever their training and competency indicates is a man's-size job.

But Dr. Norris will have behind him in his efforts the cooperation of all truly liberal organizations.

The National Farmers' Union wishes him well.

Signatures: Russell Smith, Legislative Secretary, National Farmers' Union.

PLANNED INFLATION

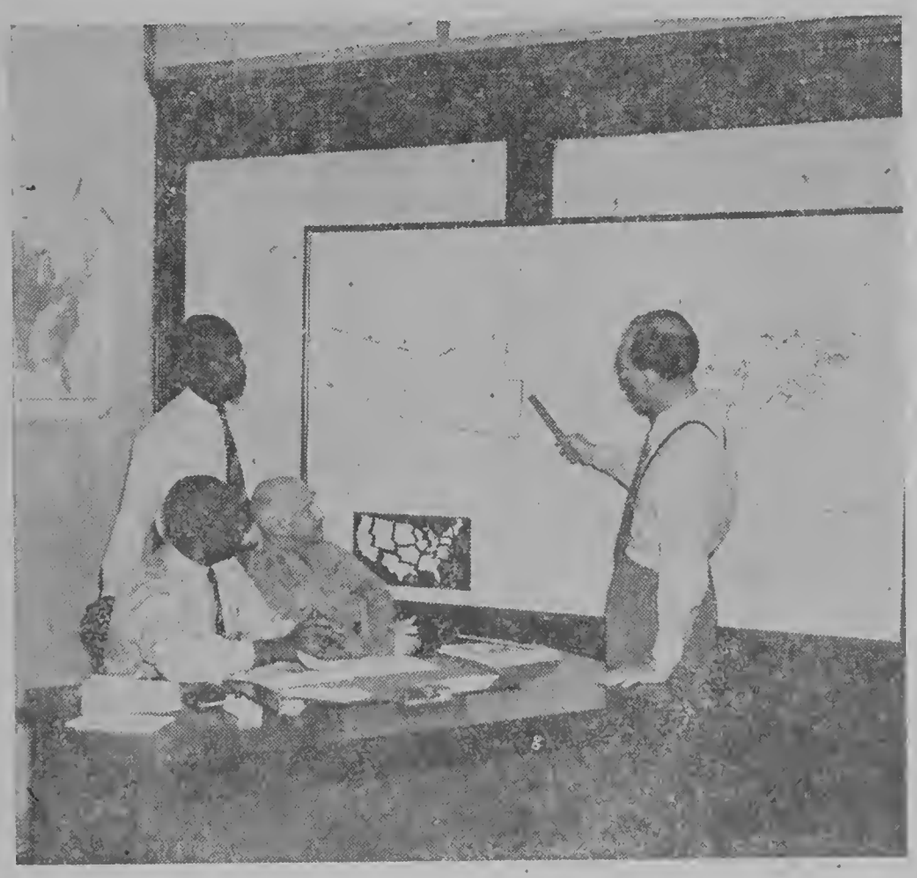
No one wants to argue against labor getting a fair wage or a wage that will enable it to meet increases in the cost of living. But labor is the biggest factor in the cost of living. Labor, and that means 99 per cent of the people, will pay either directly or indirectly, all wages received by labor.

Therefore, such demands as those of the railway brotherhoods for a 25 per cent increase in existing wartime wage rates, is a definite threat to the possibility of government, industry and labor working out any successful reconversion or anti-inflation program.

A child can see the implications in the demands of railway labor leaders.

"They that wait upon the Lord shall renew their strength, they shall mount up with wings as eagles; they shall run and not be weary; they shall walk and not faint"

Jamaican Delegation On Inspection Tour



The three delegates, who were sent here by the Jamaican Government to inspect working conditions and housing quarters for Jamaican agricultural and industrial workers, look on as Herbert G. Macdonals, chief liaison officer of the British West Indies Central Labour Organization, points out on a U. S. map some of the locations where Jamaicans are working.

Left to right are: Rep. C. C. Campbell, Rep. J. Z Malcolm, Major Ald. Curphy of the Upper House, and Mr. MacDonald. They completed their tour of eight States, including New York, Illinois, and Florida by September 4. Accompanying them on the tour were Burley B. Mitchell of the U. S. Department of Agriculture's Office of Labor, and Mr. Macdonald. There are nearly 40,000 Jamaicans here doing emergency work on farms and in factories.—USDA Photo by Foldenauer.

Farm Oil Needs Great

The Chairman of the Petroleum Industry War Council, William R. Boyd, Jr., recently told a War Bond Rally in New York how the petroleum industry had met all military demands for all fighting zones and gave assurance that as soon as military takings of oil products were reduced, more gasoline and oil products would be available for civilian uses. But, he pointed out, even after the collapse of Germany, the current worldwide requirements of the United Nations exceed seven million barrels of crude oil a day, and of this the United States is called upon to supply 69 percent. Military demand for all types of gasoline has increased 433 percent since 1941 and forecasts are that military requirements will continue at present rates until V-J Day.

Farmers use 34 percent of all motor trucks and hold 47 per cent of all truck certificates of war necessity issued by O. D. T. These vehicles transport 98 percent of farm products leaving farms. On June 30, 1944, there were 4,133,365 privately operated trucks and 630,017 for-hire trucks. There were 166,072 passenger carrier buses, 78,642 taxicabs, 24,961 rental cars and 49,211 ambulances and buses. These are all essential transportation needs.

After deducting military requirements of gasoline the first alotment of the remaining supply must be given to these essential forms of transportation. Thus it is easy to understand why holders of A and B cards have been rationed so drastically.

THERE'LL BE MORE SOAP

While there will be less sugar with which to cook and can, there will be more soap with which to wash the dishes and the laundry.

Secretary of Agriculture Clinton P. Andersonn has announced an order which will increase U. S. production of heavy duty soaps by 10 percent. The order requires manufacturers to use additional quantities of water-softening "builder" materials in their products. This will enable the soap makers to increase the total quantity of laundry-type soaps for civilian use by 100,000 pounds during the next 12 months.

Also in favor of homemakers is the fact that Army requirements for soap will be lower during the next six months, thereby making it unnecessary to reduce further the quotas of fat available for the manufacture of civilian soaps.

Secretary Anderson says that all of this should result in a substantial increase in the amount of soap available for civilians and should persuade housewives of this country to discontinue the practice of raiding the shelves of stores as soon as a new soap shipment arrives.

CARE OF FLOORS

A solution of lukwarm water and powdered borax soap proves best for removing marks made by wartime black composition soles and heels, the U. S. Department of Agriculture reports.

The Rhode Island Experiment station recently made a study of effective ways to prevent and remove marks caused by wartime soles and heels without injury to the floor and without fire or health hazards. This station found out that wax treatment helps prevent floors from being marked, that some dry cleaning fluids may be used for removing occasional marks, but that the washing method with powdered borax soap and lukewarm water gives the most satisfactory results.

FOREST FIRES REDUCED

Only a little more than half as many acres were burned over by forest fires last year as were burned the year before, says the U. S. Department of Agriculture. The figures were 16.549,312 acres of U. S. woodland burned over in 1944 as compared with 32,333,398 during 1943.

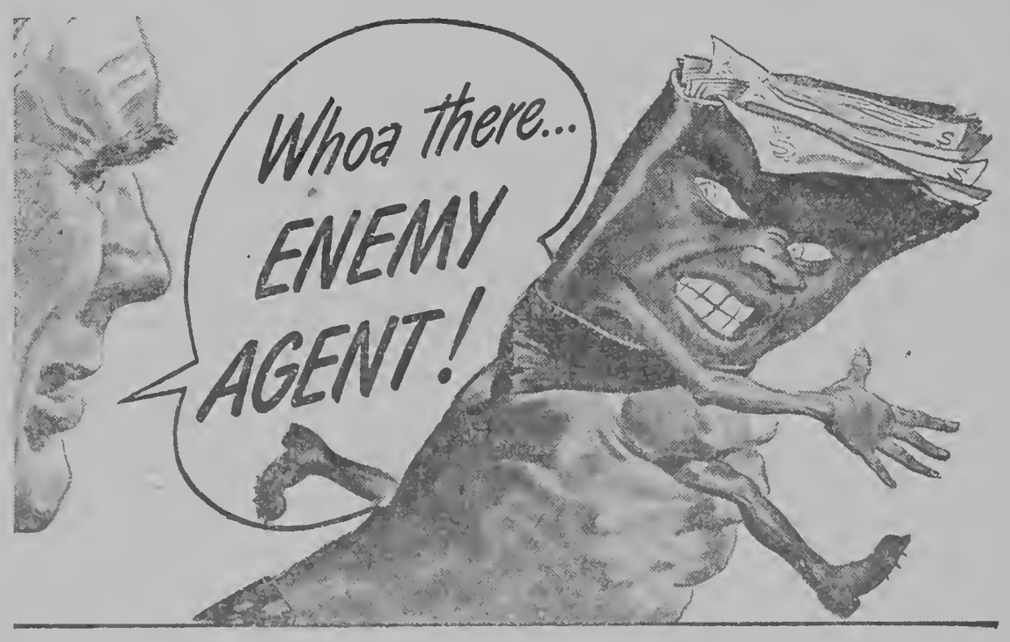
Housewives Urged To Save More Fat

The fat salvage can on the back of the family stove has been doing a fine job this year, taking care of every drop of scarce grease scraped into it by thrifty housewives, say U. S. Department of Agriculture officials in charge of the Fat Salvage Program.

Even in these days of little meat and high red point values, those drops of fat add up in a big way to a big job, for there are 34 million families in America—about 4 million readers of Negro newspapers.

Officials said it will take the best efforts of all 34 million families to reach this year's quota of 250,000,000 pounds of used household fats—that's a quarter of a billion pounds out of the almost 4 billion that America must have in 1945 for munitions, medicines, military soaps, enough soap for civilians at home, protective coatings and hundreds of other industrial uses.

That quarter of a billion pounds amounts to about 7 and a third pounds for each family for the year or only **2 and a third ounces each** week. As little fat as that, patiently saved from pan drippings and not skimmings, will provide the material to speed the victorious end of the War in the Pacific.



WALLET: What do you mean, Enemy Agent? . . . I'm your wallet . . . on *your* side!

YOU: Yes, sir . . . and I'm seeing you stay on our side. While this war is on, you're not getting loose . . . and running wild with your concealed weapons!

WALLET: Concealed weapons? All *I'm* concealing is some of your cash.

YOU: Uh-huh . . . But that cash is dangerous. If I let it loose now to buy any old thing at fancy prices . . . well, that would be just like stabbing myself in the back. No, sir—none of that high-priced wartime shoddy stuff for me!

WALLET: So you're going to . . . ?

YOU: Put this cash into War Bonds! That'll help put a crimp in inflation . . . as well as give the boys at the front the weapons they need to win the war in a hurry! And it will give me a backlog . . . for a new barn roof later . . . and to put the youngsters through college!

WALLET: Here—put every dollar you can spare into War Bonds.

YOU: That's the spirit! We'll *help* win the war . . . and have more money later. We get $100 at maturity for every $75 we put in bonds. Think of that . . . Mr. Wallet, you'll be a lot healthier after the war than you ever were before!

Never give a dollar a day off... BUY WAR BONDS!

THE FORUM

The Modern Farmer

Published monthly by the Modern Farmer at Nashville 3, Tennessee.

Giles A. Hubert _____Editor
Sadie Wilson _____ Secretary
Henry Allen Boyd_____ Publisher
Office, 403 Charlotte Avenue.

Devoted to the interests of the Farmer, Truck Gardner, Livestock and Poultry, Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer, should be addressed to The Modern Farmer, 403 Charlotte Avenue, Nashville 3, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

God Save the Virgins

(Continued from Page 1)

ency toward separation.

Economically however, the Islands are poor. Sugar cane, the agricultural mainstay, suffers severely in competition with Cuban and Puerto Rican production. On St. Croix, there is considerable production of beef cattle. But this is done on large estates owned and operated by a handful of people.

Overgrazing of pastures and clean cultivation of cane, has caused considerable erosion and run-off of water. The result is that even with an animal rainfall of 40 inches, the island is subject to serve draughts and the water table has been receding for years.

Water is difficult to find and wells are few and far between. This makes the problem of crop cultivation and of water for livestock extremely difficult.

Through WPA, work provided by military projects, expenditures by the military and deficit appropriations to the municipal governments, the United States has been subsidizing the economy and living standards of the Virgins since it was purchased from Denmark.

In all this, however, there appears to exist no coordinated long time plan for setting the islands on their feet economically. Fortunately there has been a continual out-migration of people from the Islands to the United States. The result is that although the great bulk of the population is poor, there is no such depth of popular poverty and dire privation as found in Haiti and even in Puerto Rico.

Careful planning and development over a considerable period could make St. Croix, the only agricultural island, self supporting and provide exceptable living standards for a limited population.

St. Thomas, on the other hand, will depend on the military base, its harbor and probable increase in its tourist trade for its future development and prosperity.

In spite of their problems, the Virgin Islands are truly pleasant places to live and to visit. The people are hospitable, the climate is comfortable and the mountains and sea are beautiful. Those who can should plan to go there sometime.

After One Year

One year ago, THE MODERN FARMER reorganized its editorial policy, revised its format and set out to achieve an ambitious goal. This goal was to become a vital news organ and FORUM for the small farmers of the South in general and Negro small farmers in particular. It was desired to build a newspaper through which small farmers and their educational and supervisory leadership could speak to each other, to their government and to the world.

Toward this end we have made some progress. A few people have become vitally interested in the project and have given their time and effort helping with the editing, contributing articles helping to win friends and subscribers for the paper. This service has been rendered entirely without financial compensation.

Our circulation has increased gradually but constantly. Many have written in expressing how much the paper has been useful and appreciated. The year's operations have shown us that THE MODERN FARMER can play a very important role in the encouragement and development of Southern agriculture and the family farm.

But, it takes a lot of work to develop an effective farmer's newspaper—A LOT OF WORK BY A LOT OF PEOPLE. In a cooperative venture such as this, all interested persons must pitch in to help all they can to get new readers and subscribers. Articles of news and opinion must be contributed by many people from all ranks and from all sections. Just a few persons cannot be depended upon to fill the paper with news and opinion which will be of interest to all concerned, especially if these few must take time from their regular occupations.

In the last few months articles have appeared in THE MODERN FARMER which have demonstrated how active the agencies are which work against the interests of the little man both in agriculture and in industry. To combat this influence, the paper must receive the facts and opinions of you who are interested in the welfare of small farmers in the South, black and white. It must have these regularly not just once in a while.

We must decide now whether we want an effective, liberal and forceful organ for our own service. Once decided, we must all of us pitch in and help. Only in this manner can THE MODERN FARMER survive and maintain its present liberal policy.

THE NOVEMBER NUMBER OF THE MODERN FARMER IS BEING DESIGNATED AS OUR ANNIVERSARY ISSUE. The editorial policy of the paper during the last year will be reviewed. Interesting articles which have appeared during the last year will be briefed and reprinted.

For the ANNIVERSARY ISSUE, the paper would like to have A LETTER FROM YOU offering constructive criticism of our efforts to date and making suggestions as to future policy and how we can best develop our paper and increase its circulation.

DROP US A LINE. EVERY LETTER HELPS.

Industry Should Solve Own Problems

Farm and Ranch, in a recent issue, presented to its readers this powerful editorial which government policyholder might thoughtfully observe.

"Industry, under war conditions has found it necessary to go to Washington with its troubles and problems. In the good old days industry solved its own problems —not always with the best results, but in the end, in a fairly satisfactory manner.

"Because men presume to make regulations and solve problems concerning business in which they have had no experience, much confusion has resulted and many losses sustained. How much better it would have been to have turned many of these problems over to men who could give practical answers instead of referring them to young men just out of school who grasped the opportunity to try out some of their theories at no cost to themselves.

"Industry has made but little complaint. It has gone on producing to its capacity and has almost performed miracles. It has accepted regulations, directives and orders, both verbal and written because it is wartime and mistakes were expected to be made. What Industry is thinking of at this time is whether or not Washington will make an effort to continue its hold on industrial management and production long years after the world is at peace. Under fair regulations, Industry will be able to solve its own problems. If management is interfered with to the same extent it is during the war, we may expect confusion, failures and much unemployment. Initiative must be encouraged, not stymied by inexperienced theorists."

LEARNING BY EXPERIENCE

"The year ahead," says the Farm Journal and Farmer's Wife, "will afford striking material for thoughtful farmers to consider. Wartime restrictions have reached into every day of every one's life. Farmers have taken rationing, price ceilings and floors, and all else in their stride. Agreeing that some controls are to be expected in wartime, farmers have seen that none has worked too well.

" . . . . Agricultural price policies, for instance, have been affected by the political demands that cost of living be held down. Farmers have seen such policies defeat their own ends by creating scarcities where plenty was possible, and by setting up black market prices instead of fair prices. Watching the ponderous efforts of government to meet the rapidly changing situations of these months ahead, farmers will have a chance to estimate how much government they want in their affairs when the war has passed.

It Can Be Done

ATTLEE AND AGRICULTURE

By " A FRIEND OF FARMERS"

Take it easy, friends. Yes, Labor's in the "front office" over in Merrye Englande. So we can hope for the best and work like nobody's business to make it come true, but all is NOT over but the shouting. We'll open this service with prayer—and roll up our sleeves.

Clement Attlee, head of Britain's Labor Party, became Prime Minister of Great Britain on July 26, taking over from Winston Churchill, Britain's great war leader and Mainstay through six years of conflict and threatened invasion. Churchill's Conservative Party was voted out of office in July's general elections, **but Churchill, by his personal victory in his House of Commons district remains in Parliament as leader of the opposition.**

Harold Laski, chairman of the British Labor Party says that Churchill "underestimated the political maturity and intelligence of the British people." It now remains to be seen whether "the British people" as represented by the Attlee Government are smart enough to correctly estimate "the political maturity and intelligence" of the man on the soil—and we do not mean gentlemen farmers, absentee landlords and the rest of agriculture's vested interests.

There is no doubt that the new government means well. In his first formal statement as Prime Minister, Attlee has good words for agriculture, and nationalization of land is a plank in the platform of the British Labor Party. But Great Britain has a tradition of "land for the landlords" to overcome— a tradition paid for with poverty, misery and bloody resistance. British land barons, home front or colonial, will yield up their lands no quicker than Arkansas or Mississippi land barons—and the British Labor Party is no CIO.

Prime Minister Attlee said on taking office: **"British agriculture has made a wonderful contribution to winning the war, and in so doing has rehabilitated itself. We cannot afford to have it sink back again."** That is, British agriculture set a new production record for itself and this stepped up production should be continued.

Attlee further said that some war regulations, such as county agricultural committees, should be kept. He summed up the agricultural policy of his Labor Government as: " . . . a fair return to the producer; an ample supply of good and wholesome food at reasonable prices to the consumer; well-planned distribution, transportation and marketing, and a bountiful and prosperous countryside."

The new Prime Minister did not mention the nationalization of land —whether or not this is desirable; he did not mention **a better status** for the man-on-the-land in terms of housing, fair rents and fair farm wages. He promised nothing.

In an earlier column, soon after the San Francisco Conference, we pointed out that British influence as spelled out in South Africa and Ulster had contributed nothing but half-hearted appeasement and belated promises to the progress of the man-on-the-land and this has all been in the direction of "improved conditions" under the same old repressive, paternalistic patterns rather than toward real development through democratic patterns.

That is what makes us sick to our stomachs when Negroes from the islands come over and thump their chests with this "I am a Brr-r-r-itish citizen" stuff, instead of just holding out their hands and saying "thank God for some more poor folks—any color—let's get together!" (No harm, friends, but that wash has stayed in the hamper too long.)

What we are getting at is that this IS "one world" in which either we work along with other freedom loving people— CIO, British Labor, Nigerians, or the farmer next door—in the direction of full democracy, or we **are worked** in the opposite direction by American die-hards teaming up with the Churchill opposition and Alexander Hamilton save-us-Lords, wherever they may be—and Alexander, by Mississippi standards, was black. Yes, indeed! He is definitely one skeleton in the closet of black liberals.

To return to 1945, the British Labor Party is in. This means that at least world patterns will be no worse than before, and IF WE WORK AT DEMOCRACY HARDER THAN EVER, the new Attlee Government **may** take courage and help liberals, like ourselves, in other lands, to make conditions better.

KEEP WORKING AND PAY THAT POLL TAX.

We can't buy friendship of the worthwhile sort with money, but it is worth more than millions in cash when it is real.

Didn't It Rain, Noah —Didn't It Rain!

NASHVILLE—Noah had his troubles with "moisture conditions" and so have Eastern Seaboard farmers— and the end is not yet. As "THE FARMER" goes to press there have been over three week of almost daily rains from as far east as Washington, D. C., North Carolina to New England, and Pittsburgh.

Too much rain in eastern Virginia, North Carolina and Georgia, may cause some damage to late crops such as peppers, cantaloups, watermelons and tomatoes. In North Carolina, corn that looked up under the first two weeks of rain is now in danger of drowning in many places, and delayed barning has overrun curing barns and caused heavy losses on some tobacco farms. Cotton made rapid growth but was becoming "weedy", with increasing threat from boll weevils which are rapidly multiplying. Soils were too wet for peanuts; but dry pastures lapped up the excess rain, and milk production is "up."

Texas got just enough rain to suit, and moisture conditions were satisfactory over most of the state. Cotton conditions were good and picking active as far noth as Corpus Christi, but boll weevils are on the increase and more rain is making too many leaves.

Watermelons are active and Pecos cantaloupe crops are good. Pan handle potatoes and onions are moving out, and preparations are in progress for fall crops in irrigated areas. Tomato transplanting is underway in the Winter Garden and onion plant beds have been seeded and land prepared for early winter garden vegetables.

Livestock is holding up well, with some shrinkage in dry areas, but screwworms are becoming bothersome in wet areas.

Twenty-Eight Dollars To Ownership

Bootheel Farm Project Goes to Tenants

SIKESTON, MISSOURI— Eight years back, the Farm Security Administration reached down into the Missouri Bootheel and started a hundred down-and-out sharecroppers on the road to ownership.

Practically all were suffering from malnutrition. Housing was a shambles. The average net value of each family's possessions was Twenty-eight Dollars! Only a government practical enough to invest in human values would have taken them on as a financial risk.

Neither paternalism nor pity, but belief in the high value of normally-functioning folk in the national economy dictated the establishment of the La Forge project at Sikeston, Missouri. It and its fellow community projects were experiments in rebuilding human beings as soil conservation rebuilds land.

Three years after its establishment, a "CRISIS" article stated: "Of most significance to these hundred former croppers, black and white, has been the chance to direct their own affairs—to make their own decisions and to plan together toward the day when all assistance from the Government, technical or financial, will have ceased, and the La Forge community will be entirely "on its own." Today, La Forge is "on its own"—a community of independent owners, and out of ninety-nine units (two of the hundred were combined) eighty-five belong to former tenants. The experiment has worked.

Typical Southeast Missouri farming land—6,700 acres of it—were purchased by FSA in New Madrid County, near La Forge. At the time of purchase, 100 families lived on this land, 60 whites and 40 Negroes. The proportion of ownership is approximately the same.

The handling of the liquidation of this Farm Security project sets a pattern for similar operations, which is as sound as that of the original venture. La Forge, no longer an experiment, continues as a practical venture in the humanities, paying cash returns.

How has La Frrge operated? The land was divided into units large enough for each family to have a farm which would provide for their needs and leave a surplus which would enable them to pay debts, buy basic household goods and livestock, and live a more satisfactory life with their fellows.

The government assisted in the establishment of schools for both whites and Negroes, helped farmers establish their own community store and community cotton gin, loaned them funds with which to buy seed, feed, livestock and machinery, helped them form cooprative groups which could share breeding stock and farm equipment, and provide expert advice in farm and home planning and operation. For this service the tenants paid a cash rent for their land, in addition to the regularly scheduled payments on their operating or cooperative loans.

Financially the government has spent a total of $786,443 on La Forge, besides the assistance given in developing schools available to the entire area. Approximately $132,000 of this was in loans to families on these tracts, and this has been or is being repaid at 5 percent interest. About $20,000 was in loans to the cooperative association, and most of this, too, has been repaid with interest.

The government invested a little under $600,000 for the land now owned by these families, and in erecting new buildings upon the land. During the period in which it was being rented to the families—and average of six years per tract, the government collected almost $30,000 per year in rentals. Now that the sale of land and buildings to the present owners is about to be completed, sales totals have reached $535,000.

While the government is almost "out of the red" as far as La Forge Farms is concerned, the families' progress has been even more phenomenal. Of the 96 families who became owners before the first of this year, only one is in arrears on his farm-ownership loan repayment. **The government loaned these families the money to purchase their farms, allowing them forty years to repay, with 3 percent interest on the unpaid principal. The 95 who have paid even ahead of this schedule now average two years' payments made for each year due.** Approximately 90 of these families had operating loans with FSA in addition to their farm-ownership loans; and as of May 1, 1945, all but 35 of these operating loans had already been repaid in full.

Typical farm dwelling at La Forge. This one is occupied by Argus L. Odom family.

A study of the farm records kept by these families reveals that they had an average farm income of $2,141 during 1944. Sixty-seven percent of this was derived from cotton; but these families had already learned to diversify their farming operations so that they were raising soybeans, corn, wheat, legume crops, hogs, dairy animals and poultry.

To operate their farms the average La Forge family spent $927, while they spent another $630 for family living expenses. They purchased $172 worth of capital goods during the year, and averaged $171 worth of farm-produced food and fuel used in their homes. They paid an average of $230 on their farm-ownership loans and reduced their other indebtedness by $50.

It is difficult to single out any individual families who are doing a more outstanding job than the others in the community; but perhaps a review of the accomplishments of a few families can be used to represent the activities of the entire group.

Typical of progress at La Forge is Harrison Minnaweather. Minnaweather, a Negro farmer, is considered an outstanding example of what one man can do to improve soil fertility on his farm. Minnaweather, operating a 65-acre farm, had 20 acres in cotton last year and made 12,000 pounds. One reason that he has been able to make this production on land which once made half that yield is because he has used vetch as a green manure. Minnaweather plants vetch between his cotton, uses it for pasture the following year, combines part of it for future seed, and plows the rest under as fertilizer the next time his rotation brings that land into production.

Because he is raising vetch and other legumes, Minnaweather is able to operate a good livestock program. Right now he is milking three cows, keeps three sows and three mules. In addition to his cotton crop he raised, in 1944, 13 acres of corn, 6 and a half acres of soybeans for oil, and 6 for hay; he had 8 and a half acres of barley and 10 acres of vetch. He still has in storage a cellar full of fruits, vegetables, and meats canned by his wife before her death, last winter.

Chester O. Smith has a registered Duroc gilt which is the pride of his farm, and has made a start in registered Jerseys. He raises less cotton than other La Forge farmers. Last year he had 83 acres in soybeans and plans to do better this year. From his bean sales he was able to pay almost 25 percent of his total farm purchase price, last year. In the shift away from cotton, Smith is way up front.

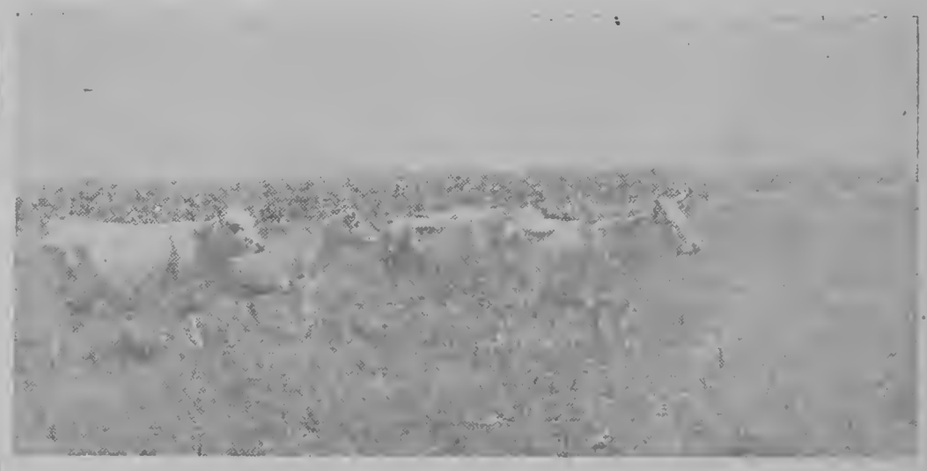
All Smith's production, last year, did not come from the farm which he purchased from FSA. A near neighbor, Mrs. Pearl McRoy, is attempting to hold on to her present farm until her son returns from military service; so Smith is helping out by farming the widow's land on shares. Mrs. McRoy's share, incidentally, was more than enough to supply her family needs in 1944 and make scheduled payment on the land.

Down the road from Smith is the 50-acre farm of Argus Odom. In the window of the neat white-frame house is a service star, placed there in honor of their 18-year-old son who is in the Navy. But Odom has not let the loss of his son's labor cut down his farming operations. In fact he decided that America needed a lot more food than he could raise on his 50-acre tract. So he has already purchased an adjoining fifty which he is now operating. In the two years in which Odom has been a farm owner he has been able to make almost ten years' payments on his first farm, make a large cash payment on the second, buy a car, and buy a small house and two acres of land as a home for his in-laws.

One of the features on the Odom farm is the young orchard which is bearing its first fruit this year. Odom comes from orchard country and is looking ahead to the day when he can get out of the cotton business and specialize in fruit. He believes there is a good market for fruit in Southeast Missouri, and he knows enough about horticulture to make good as a fruit grower.

C. H. Lancaster, another La Forge farmer, has one of the best teams in Southeast Missouri—a matched pair of mares, one with foal. Lancaster thinks that he may use this team as breeding stock, as well as for work animals.

One of the newest farm owners in this group—Thurman Turnage—is a veteran of World War II. When he learned that all of the original 100 families did not plan to buy the farms which they had been operating as tenants, he applied for an unclaimed unit.



La Forge Farmers go in for good livestock. Chester Smith has made a start in registered Jerseys. He doesn't raise much cotton.

Turnage has not been on the land very long, so his record as a farmer is still ahead of him, but if the start he has already made this year is any indication, Turnage will make good.

The Carl Taylor farm is one of the outstanding examples of La Forge's benefits to the 100 families settled there. Before La Forge was established, few if any of the children in these families had the educational and social opportunities which they deserved as American citizens. Today, Taylor's son is attending the local school built at La Forge, and is actively engaged in 4-H work. The boy has a registered Poland gilt and a splendid litter of pigs. The elder Taylor is also going in for registered livestock, a chance he never had until he became a farm owner.

While the schools at La Forge, such as that attended by young Taylor, were government subsidized at the time of their original construction, they serve the entire community. About 25 percent of the students are from former project families. The rest are non-FSA families living in the same neighborhood. The schools, while built by the government, are operated by the county. At these schools the children have the opportunity to engage not only in 4-H work, but also to belong to Scout troops and engage in other wholesome community activities.

Among the successful community enterprises at La Forge are a cooperatively operated store which supplies most of the merchandise needed by the families, a cotton gin which enables the families to gin their own cotton, and a sire service which supplies registered bulls and boars for the use of borrowers families.

At a minimum expense to their government, La Forge has "rebuilt" 100 hopeless sharecroppers and stranded day laborers into 100 upstanding American small farmers.

Something fine and enduring has again been produced in democracy's old proving ground.

(See next page for other pictures)

Each farm dwelling has an outdoor storage cellar for use of family in storing canned or basketed fruits and vegetables and root crops—La Forge Farm, Mo.

FIRE PREVENTION MEANS FIRE POWER

Just as officers and privates in the Army have been awarded recognition for outstanding acts of service and bravery, so has private industry been given citations by the government for outstanding work in behalf of the nation's welfare.

One of the least publicized and least spectacular of such activities which has been of inestimable value in saving property during the war emergency, has just been granted recognition. The National Board of Fire Underwriters has received from the War Department in Washington an engrossed citation in appreciation for fire prevention services rendered to the Army by the Board in the past five years. In presenting the citation, Lieutenant General Eugene Reybold, Chief of Engineers, said:

"The particular job of fire prevention and fire protection was tremendous. Fire protection and fire prevention are prime factors of military operations—almost as vital as fire power itself. Promotion of maximum prevention practices and maintenance of minimum requirements—are a part of military strategy. Failure to supply adequate and immediate means of such protection may determine the success or failure of any campaign.

"Back in the early days of the war—when we were assembling and training our army and building our military establishments—every minute, every man, every piece of lumber, every gun and bullet, every plane and bomb, every drop of gas, and every stick of high explosives were worth their weight in gold. To have suffered a severe fire loss in any particular, would have been a disaster of the first magnitude.

"I wish to single out those men who made the thousands of surveys and inspections— and were on the job developing new and better equipment. Their cooperation contributed much to a record that will stand up in the pages of fire prevention history."

The Wartime Dairy Program

By Tom C. Stitts,
Chief, Dairy and Poultry Branch

First consideration in planning the wartime dairy program has been given to increasing the supply of dairy products available for human consumption, without too much disruption of the dairy industry and without creating too many postwar problems.

The total supply of dairy products available for human consumption has been increased in three ways during the war years:

1. By increasing the production of milk on farms from 109 1-2 billion pounds in 1940 to a level that is expected to exceed 120 billion in 1945.

2. By farmers selling a larger proportion of their total production as whole milk rather than as farm-separated cream—thus increasing our commercial whole-milk supply from 47 billion pounds in 1940 to 64 1-2 billion in 1944.

3. By producing non-fat dry milk solids for human consumption from skim milk that was formerly used for animal feed dry skim milk and for casein—close to 3 billion pounds of skim milk being diverted in this way from non-food to food use between 1940 and 1944.

Rapid increase in milk production, such as can be made with hogs and poultry, are impossible. There always has been, however, a large potential supply of human food on farms in the skim milk fed to hogs and poultry. This was rapidly made available for human consumption.

Harrison Minnaweather, FSA Supervisor Lee Ellis, and Robert Blackman examining the vetch which Minnaweather has planted in last year's cotton field. Approximately 10 acres of vetch was plowed under as green fertilizer for this year's cotton.

This shift was extremely significant because the nonfat, milk solids in milk (about 8. 7 pounds per hundredweight of milk) contain the milk proteins, the milk sugar, and certain minerals and water—soluble vitamins. The nonfat milk solids are an important source of the calcium needed for sound bones and teeth. The nonfat milk solids, also, contain a supply of phosphorus and water-soluble vitamins such as riboflavin, thiamine, and niacin. Prior to this shift, while most of the nutritionally valuable fats and fat-soluble vitamins in milk were being used for human consumption, much of the the nutrients of the nonfat milk solids were not being used.

These nonfat milk solids could be made available in a number of ways of which the following are important and result in products that are needed for military and lend-lease purposes. These ways also utilize the butterfat and fat-soluble vitamins in milk.

1. Nonfat dry milk solids (with the fat used for butter or cream)
2. Evaporated milk
3. Cheddar cheese
4. Fluid milk

Historically the butter industry of this country has been based on farm-separated cream than on whole milk. In order to utilize the skim milk available from butter making, a facilities program was initiated and over 200 plants were built. Practically all of the plants were for the production of nonfat dry milk solids and this made possible a greater utilization of the nonfat milk solids in connection with butter making.

Fortunately for the wartime dairy program there was a great deal of unused processing and distributing capacity for evaporated milk, Cheddar cheese, and fluid milk. Had it not been for this capacity it would have been impossible to handle the additional 17 billion pounds of whole milk delivered to plants and dealers in 1944 as compared with 1940. The 17 billion pounds was an increase of 37 percent over 1940 whole milk deliveries and resulted from the larger 1944 milk production and the greater proportion of that production sold as whole milk rather than as farm-separated cream.

This very substantial increase in whole milk deliveries by farmers, combined with the processing capacity that was fortunately available, the ingenuity and the long hours of work by plant labor, has made possible extraordinary increases in the production of Cheddar cheese and evaporated milk. Estimated production of Cheddar cheese in 1945 will be 850 to 900 million pounds as compared with 600 million pounds in 1940. Production of evaporated milk in 1945 will be close to 90 million cases, whereas it was only 56 1-2 million cases in 1940.

Demand

Even with these extraordinary increases in production, military and lend-lease requirements for these products have been so great that substantial decreases below prewar levels in civilian supplies have been unavoidable. Military demands to meet the extreme conditions of the Pacific area have called for even more extraordinary increases in the production of certain whole milk products. Dry whole milk powder production which never reached 30 million pounds before 1941 will approximate 225 million pounds during 1945, a sevenfold increase. It is anticipated that more than three-fourths of 1945 production will go to the war services.

The armed forces are requesting a production of 150 million pounds of dry ice cream mix during 1945 as compared with a negligible prewar production. The increase production of 195 million pounds of dry whole milk and 150 million pounds of dry ice cream mix will require an amount of butterfat sufficient to make 110 million pounds of butter.

These changes in the utilization of manufacturing milk were necessary to meet war service needs and maintain a minimum civilian supply____especially of evaporated milk.

In addition to these changes, per capita consumption of fluid milk has increased 20 to 25 percent during the last 5 years in this country. The greatest utilization of milk in fluid form by civilians has been an important factor in the civilian diet during the war years. Principally as a result of the heavy fluid milk consumption, supplies of protein are 10 percent above prewar, and of calcium 20 percent. About half of the calcium of the average civilian diet in 1945, 15 percent of the protein, and 30 percent of the riboflavin, will come from fluid milk and cream.

While these extraordinary changes in milk utilization will create some postwar problems they were necessary in order to increase the supply of dairy products available for human consumption, to meet war needs, and to utilize existing processing capacity. An effort has been made to keep changes in the dairy industry to a minimum consistent with the objective of maximum food production.

The principal device used has been limitation orders restricting the production of dairy products not wanted by the military services, not widely consumed by the civilian population, or the consumption of which fluctuates widely with depression and prosperity. War Food Orders 92 and 93 are examples of the first category. These orders are designed to prevent shifts away from types of cheese and dried milk required by the war services to other types. WFO 13 prohibits the sale of heavy cream to help maintain butter production which is more widely consumed. WFO's 8 and 79 limit the sales of ice cream and fluid milk and cream, the consumpton of which tends to increase in periods of prosperity. These orders were designed to maintain as nearly a normal utilization of milk as was consistent with obtaining maximum food production and utilization.

Many of the changes in milk utilization that have been required by war needs will not be permitted. Careful consideration should be given to reconversion to peace conditions as soon as the requirements of war permit.

On the Agricultural Front

1,200 VETERANS GET FARM LOANS

Washington, D. C. August 27, 1945

Over 1,200 veterans have received loans through the Farm Credit Administration since last October, the U. S. Department of Agriculture reported last week.

Of these loans, the 12 Federal land banks made 299 totaling $1,292-,300 to veterans, their wives, or husbands. Most of these loans were made for the purchase of farms, or for refinancing debts incurred in the purchase of farms.

A total of 923 farm production loans, amounting to $2,037,000 were made to veterans during the first six months of 1945 by production credit associations. The larger number of production credit loans may indicate to some extent that many farm-minded veterans find their best opportunities currently in renting rather than buying.

However, recent amendments to Farm Credit legislation make it easier for land banks to meet the requirements of veterans and other borrowers. Federal land banks can now lend up to 65 percent of the appraised normal agricultural value of the farm. Formerly they were limited to 50 percent, plus 20 percent of the appraised value of the permanent, insured improvements. land bank loan, if the security is adequate and the applicant otherwise meets the requirements.

A Commissioner loan, together with the land bank or any other prior mortgage, may not exceed 75 percent of the appraised normal value of the farm. When the veteran uses the guaranty provisions of the G. I. Bill of Rights, the interests rate on Commissioner loans will be 4 percent whereas the regular contract rate is 5 percent.

Veterans interested in applying for FCA loans are advised by the Department of Agriculture to consult their county agents.

JAMAICANS SEND HOME $400,000 IN SIX MONTHS

Between January and June of this year the Jamaican agricultural and industrial workers, who are in this country helping to relieve the wartime labor shortage, sent

The La Forge Cotton Gin—La Forge, Mo.

Where the veteran needs a larger loan than the land bank can make a land Bank Commissioner loan over $400,000, according to Herbert may be made supplemental to the home in compulsory savings alone G. Macdonald, chief liason officer of the British West Indies Central Labour Organization. He said that the exact amount was 98,838 pounds.

MORE PORK PRODUCTS FOR CIVILIANS

Through further reductions in set aside percentages of four major pork cuts for Government purchase, announced last week by Secretary of Agriculture Clinton P. Anderson, it is estimated that civilians will receive about 10 million pounds more pork per week.

Under this action taken by Secretary Anderson; 29 percent less pork will be set aside from production of Federally inspected slaughterers than is currently provided. The specific reduction in set-aside are: Ham, from 5.5 percent to 5 percent; bellies, from 3.5 percent to zero percent; loin from 5 percent to 4.5 percent; shoulders, from 7 percent to 5.5. The amendment reduces the total set-aside from 21 percent to 15 percent.

HEMISPHERE GROUP SEEKS TO UP CONSUMPTION OF FARM OUTPUT

Further progress toward solution of the agricultural problems of the American republics and improvement of the living standards of the people of the Western Hemisphere was achieved at the recent Third Inter-American Conferenc of Agriculture in Caracas, Venezuela, additions, principles to be followed in the development of international commodity agreements, and an effective liason between the Inter-American Conferences of Agriculture and Food and Agriculture Organization of the United Nations.

The delegates agreed that lowering trade barriers would facilitate international trade expansion, and that it was important to increase industrial production as a means of promoting increased consumption of agriculture commodities.

In adopting the resolution pointing to necessity for post-war agricultural reconversion, they stressed the need of directing the production of agricultural commoditis toward the areas capable of producting them most efficiently.

Other resolutions adopted dealt with important technical questions, including means of developing better farming practices and of increasing production of complementary farm and forest products of which the Western Hemisphere is a deficient producer.

COTTON PRODUCTION DOWN

It is estimated that American farmers, white and colored will produce only 10,134,00 bales of cotton this year. This amount would be 17 percent less than the 1944 production. The iindicated lint yield per acre this year is placed at 269.7 pounds, or 39 pounds above the average per acre yield. However, this yield is not as high as it was in 1937, '42 or '44.

STRETCH CANNING SUGAR

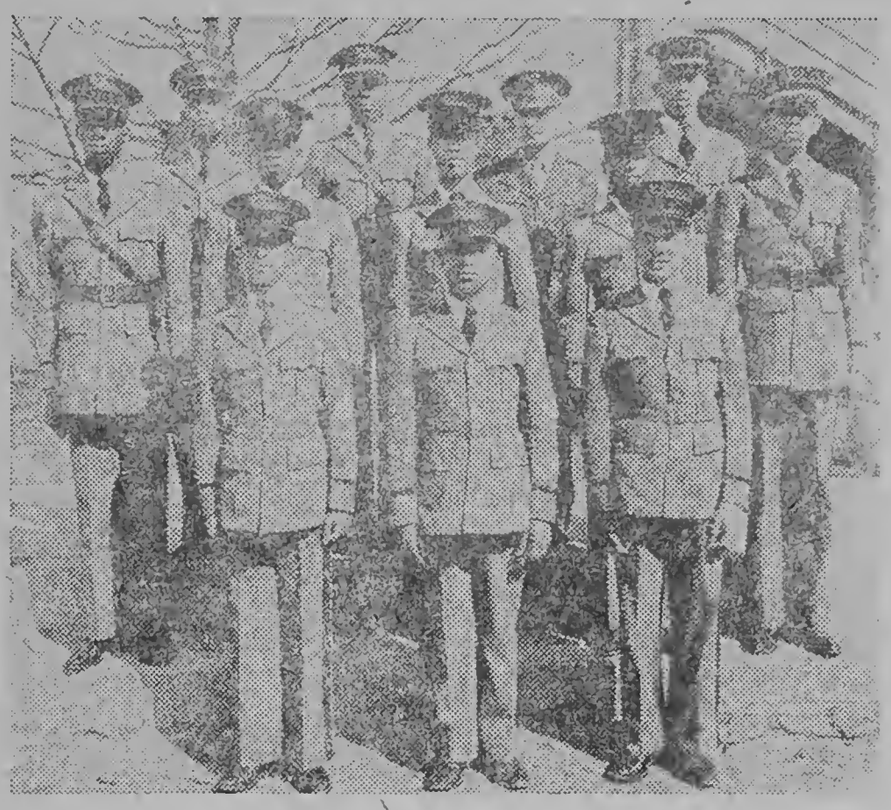
Because of summer canning, the need for sugar is greater now than at any time during this year, and yet the supply is the smallest of any time on record, the U. S. Department of Agriculture reports.

Here are some of the reasons why sugar is scarce: (1) the Cuban crop is 1,700,000 tons less than last year. (Last year more than half of our sugar came from Cuba. (2) There is a reduction in the domestic sugar beet crop from a prewar level of 1,500,000 tons to 1,000,000 tons, and (3) due in part to liberal canning allowances last year, we over used our allotment by 800,000 tons.

Homemaker can help relieve the situation by spreading l supplies thinner, by avoiding the black market, by using less sugar for canning and by using substitutes when possible.

Registered boar owned by La Forge farmers and part of their breeding service for farm families.

Staff of St. Emma 'Belmeadian'



ROCK CASTLE, VIRGINIA. The "Belmeadian" is the monthly publication of student activities at the St. Emma Military Academy. It is produced by the cadets themselves, under the supervision of a faculty member, and goes not only to the homes of the parents but also to Alumni members in all parts of the country. Many former students of St. Emma are now in the service, and the "Belmeadian" follows them to every corner of the world. The staff members enthusiastically devote their spare time to the paper, outside their regular high school studies, trade or agricultural courses and military activities. Shown in the Photograph, front row, left to right, are Cpl. Theodore Adams, age 16 (New Jersey); Pvt. Wesley Cook, age 15 (Pennsylvania); and Cpl. Thomas Octove Goudeau, age 16 (Mississippi); all Associate Editors. Second row, 2d Lt. Walter Ross, age 17 (South Carolina), Corresponding Secretary; Pvt. Donald Collins, age 15 (Illinois), Sports Editor; Cpl. Edgar Redmond, age 17 (Dist. of Columbia), Alumni Editor; S/Sgt. Walter Lacey, age 16 (Virginia), Inquiring Reporter; 2d Lt. Ferdinand Wilson, age 17, (Maryland), Cadetchings. Back row, Cpl. George F. Jones, age 15 (Virginia) Associate Editor; Capt. Wilbur B. Clarke, age 17 (New York), Editor-in-Chief; Fr. Casimir, O. S. B., Faculty Adviser; Capt. Leroy Davis, age 17 (Dist. of Columbia), Humor Editor.

Dr. Norris Assumes Duties In High Agricultural Post

Dr. Ernest M. Norris, newly appointed assistant to the personnel director of the U. S. Department of Agriculture, assumed his duties here in the Washington office on August 1, Secretary of Agriculture Clinton P. Anderson announced this week.

Dr. Norris, who is succeeding the late Thomas N. Roberts, was director of graduate studies in agriculture at Prairie View State College, Prairie View, Texas, at the time of his appointment to the position in the Department of Agriculture.

In his new post, Dr. Norris will represent Personnel Director T. Roy Reid in specific problems concerned with racial factors and in formulating and putting into effect plans and programs for extending and increasing knowledge and understanding of racial groups to personnel policies and department objectives and to work closely with colored agricultural colleges in helping them develop plans for preparing students to take advantage of employment opportunities in agriculture.

Dr. Norris, who was born in Normangee, Texas, September 3, 1903, received his training at Tuskegee, Prairie View, and Cornell University, receiving his doctorate in agricultural economics and rural education from the latter in 1934. He is thoroughly acquainted with rural problems, having been vocational agriculture teacher at a rural school in Alabama, and principal of a rural school in Texas.

From 1927-29 Dr. Norris was instructor of horticulture at Prairie View; from 1929-37 he was vocational agriculture teacher-trainer 1937 he has been director of graduate studies in agriculture, and for the State of Kentucky; and since teacher in the resident teacher-trainer program of vocational agriculture at Prairie View State College.

Dr. Norris is married and has two children, a boy 11 and a girl 13.

School Lunches Back For '45-46

Under the Agricultural Appropriation Act for 1945-46, Congress authorized the use of 50 million dollars by the Department of help pay for food used in school lunch programs.

Federal assistance will follow last year's pattern, and schools which shared in the program during the 1944-45 school year are being reinstated upon request under a simplified agreement. Schools applying for school lunch aid for the first time should write to the Department of Agriculture, Washington 25, D. C.

The school lunch program is set up to operate under local sponsors —school boards, parent-teacher associations, civic, fraternal and business groups and other non-profit organizations. Any group wishing to sponsor a school lunch program and needing financial aid to operate it effectively may apply to the Department of Agriculture for help. If the application is approved, the Department and the sponsoring group become parties to an agreement defining the responsibilities of each.

During the 1944-45 fiscal year, federally-assisted school lunch programs reached a new high, with six and a half million children in 44,000 schools sharing in the program as of March, 1945. Of this number, nearly 2 million children in 11,500 schools were in nine southern states,—Alabama, Florida, Georgia, Kentucky, Tennessee, the Carolinas, Mississippi and Virginia. Federal money spent in this area to aid the school lunch program was approximately 13 and a half million dollars.

VIRGINIA 4-H'ERS TAKE X-RAY TESTS

Over 600 colored 4-H club boys and girls in Virginia, representing 14 clubs have raised the money for, and have taken chest X-ray examinations this year, the Virginia State Extension Service reports in the July issue of its 4-H journal.

Anxious to carry out the health aspects of the 4-H program as well as those applying to head, heart, and hands, 648 colored 4-H'ers set about raising money for X-ray examinations this year for the purpose of discovering tuberculosis, if present, in its early stages.

Eighty percent of the $648 fund was donated by parents: the remainder was raised by the youngsters themselves through parties, and other entertainments.

USDA ANNOUNCES MINIMUM LA. SUGARCANE WAGE RATES

Minimum wage rates for sugarcane harvesters in Louisiana were announced last week. The priod covered by the new wage rate extends from September 1, 1945 to June 30, 1946, and is to be paid by all Louisiana producers who apply for payments under the Sugar Act of 1937.

The basic minimum rate for adult male workers for cutting cane is $2.85 per day. This represents an increase of 15 percent over last year's minimum wage rate. Day rates for other operations as well as piece rates have been increased by a similar percentage. This higher minimum rate results from changes in such factors as income from sugarcane cost of living, production costs, and other agricultural wages. Corresponding changes in the minimum rates for non harvest work in 1945 was announced in May.

The Sugar Act requires, among other conditions of payment to growers, that all persons employed on a farm in the production, cultivation or harvest of sugarcane be paid in full by growers at rates not less than those determined to be fair and reasonable, after public hearing and investigation.

The determination also provides, as in former years, that the producer must furnish to the laborers without charge the accessories customarily supplied for them such as habitable housing and medical attention.

USDA REORGANIZATION

The functions of 14 agencies of the U S. Department of Agriculture were consolidated under a new Production and Marketing Administration last week by Secretary Clinton P. Anderson in a reorganization designed to centralize responsibility for commodity programs and actions.

The new organization which became effective on August 20 is composed of the following Department agencies: The Office of Basic Commodities, the Office of Supply, the Office of the President of the Commodity Credit Corporation; the Offices of the Manager and the Secretary of the Federal Crop Insurance Corporation, the Office of Marketing Services, the Agricultural Adjustment Agency, the Office of Requirements and Allocations, the Office of Price, the Office of Transportation, the Office of Materials and Facilities, the Office of Labor, the Office of Home Food Supply the Office of Investigatory Services, and the Federal Surplus Commodities Corporation which is in the process of liquidation.

Secretary Anderson has designated Under Secretary John B. Hutson as administrator of the new organization.

A salesman applied at a recruiting office to enlist.

"I suppose you want a commission," said the officer.

"No, thanks," was the reply, "I'm such a poor shot, I'd rather work on a straight salary."

FISHING WITH DIFFERENT COLORED BAIT

Opponents of government-owned electric plants list 23 proposed projects, the ultimate cost of which is estimated at four billion dollars — the actual cost would undoubtedly be much more. The Missouri Valley Authority alone is down for $1,258,000,000 as a starter.

No proponent of socialized power in the United States has given a good answer to the question, Why should we follow the Russian system of power development as contrasted with our own system of encouraging private enterprise?

No member of Congress would have the courage to suggest that the United States adopt the Russian "five-year plan" for government ownership and development of industry.

But Congressmen will vote to spend billions of dollars to establish "authorities," thereby making government the master of individual opportunity as completely as does any communistic five-year plan. And the people swallow the bait, when the communistic hook is covered with red, white and blue feathers instead of plain red ones. So far the hook has been used on the big fish only, but once they are caught, it will be used on the little fish (small industries), and communism will be a reality in our own land, for it is nothing more or less than the common ownership of property (by government). Good men in Congress who are casting the bait would be insulted if called communists.

Think it over, Mr. Home Owner, Mr. Storekeeper, Mr. Farmer, and Mr. Manufacturer. You won't escape once the big fish are caught.

POTATOES IN LOW-COST MEALS

Fried-Scalloped-Creamed

Here are three tried-and-true favorites every cook should know.

FRIED, COUNTRY STYLE

Peel enough raw potatoes to make a quart when sliced thin or chopped fine. Put in a frying pan with 2 tablespoons of fat or meat drippings. Brown a little chopped-up onion in the fat, if you like.

Cover the frying pan closely. Cook the potatoes over medium heat for 10 to 15 minutes. When they are browned on the bottom, turn them with a knife to brown the other side.

POTATO SCALLOP

6 medium-sized potatoes
2 tablespoons flour
1½ teaspoons salt
Pepper
4 tablespoons fat
1½ cups hot milk

Wash, peel, and slice the potatoes. Grease a shallow baking dish or pan. Put a layer of potatoes in the dish. Sprinkle the potatoes with flour, salt, and pepper. Dot with fat. Repeat until all the potatoes are in the dish. Pour in hot milk. Bake in a slow oven until the potatoes are brown on top and soft all through. Usually this takes about an hour. Add more milk if the potatoes get dry.

To be sure the milk doesn't curdle—use very fresh milk and keep oven heat low.

CREAMED POTATOES

Peel and dice 6 medium-sized potatoes; boil until tender in water to cover. Make a white sauce by blending 3 tablespoons fat with 3 tablespoons flour, add 1 cup milk, 1½ teaspoons salt. Stir the sauce until it thickens. Add to the cooked potatoes and serve.

WITH CHEESE.—Grate a little cheese into the white sauce to give a different taste and added food value.

WITH BREAD CRUMBS.—Pour the creamed potatoes into a greased baking dish. Crumble up stale bread. Brown crumbs lightly in a little fat . . . then sprinkle these crumbs over the potatoes. A few small pieces of crisp salt pork may be put over the potatoes also for extra flavor. Bake in a moderate oven until the crumbs are light brown.

PLANS FOR LEFT-OVERS

Whether you plan your potato left-overs . . . or whether they just happen . . . cold potatoes have what it takes to start many a good dish.

HASH BROWNED

Slice or chop cooked potatoes into small pieces. Heat a very little fat in a frying pan . . . then add the potatoes seasoned with salt and pepper. For a crisp crust . . . add about a quarter of a cup of water for 4 cups diced potatoes. Cook over low heat without stirring until there is a golden brown crust on the bottom. Serve with one side folded over the other like an omelet.

POTATO HASH

Melt 3 tablespoons of fat in a frying pan. Put in 2 cups chopped, cooked potatoes, 2 cups chopped, cold meat, salt, and pepper. Moisten the mixture with ½ cup hot water or gravy. Cover the pan. Cook slowly until the underside is rich brown.

POTATO CAKES

Shape cold mashed potatoes into small cakes, roll in flour. Fry golden brown in a little fat.

To vary the cakes, mix in with the mashed potato chopped, cooked meat or fish—or grated cheese.

POTATO CRUST

Use left-over mashed potatoes to line the sides of a baking dish for a meat pie. Fill the center with well-seasoned stew of vegetables and left-over bits of meat or fish. Cover the top with mashed potatoes. Bake in a hot oven until the pie is hot through and browned lightly on top. If you have just a little left-over potato . . . make only the upper crust.

POTATO SALAD

HOT.—Fry ¾ cup diced salt pork crisp. Add ¼ cup vinegar and ¼ cup water, then 1 quart of cooked and cubed potatoes seasoned to taste with salt and pepper, and an onion, chopped. Heat well and serve.

COLD.— Slice or dice cold, cooked potatoes. Season with salt, chopped-up onion ,and salad dressing. Sliced, hard-cooked eggs are also good with potatoes in salad.

A GOOD NEIGHBOR

Potatoes are a good-neighbor food.

Starting from their native soil in the Americas to the south of us, potatoes have traveled far, picking up nicknames as they went. Spuds . . . murphies . . . taters . . . by whatever name you call them, like true good neighbors, you can count on them through thick and thin.

Potatoes prevented sailors from dying of scurvy, back in the days of long voyages on sailing ships, and helped pave the way to discovery of vitamin C.

Failure of the potato crop once caused famine in Ireland.

With potato flowers pinned to his coat, a French king made potatoes fashionable, so the story goes, and soon all his people were eating these "apples of the earth."

POTATOES ARE BACK—USE THEM OFTEN

WHITE POTATO SPECIALS

POTATO HOT POT

1 quart sliced, raw potatoes
1 onion, sliced
4 tablespoons fat
3 cups tomatoes
2 teaspoons salt
Pepper

Cook the potatoes and onion in the fat for 10 minutes. Add the tomatoes, salt, and pepper. Cover and simmer for 30 minutes, or until the potatoes are tender and the tomato juice is thickened by the starchy potatoes.

POTATO PANCAKES

2 cups grated raw potatoes
¼ cup milk
1 egg
2 tablespoons flour
Salt
Pepper
1 tablespoon chopped onion

Put the grated potatoes immediately in the milk to help keep them from turning dark. Drain the milk from the potatoes. Add the well-beaten egg to the potatoes . . . then the flour, and just enough of the milk that was drained off to make a stiff batter. Season with salt, pepper, and chopped onion. Drop by large spoonful into a well-greased frying pan. Cook the pancakes until well-browned and crisp. Serve at once.

QUICK POTATO SOUP

2 cups raw potatoes
2 tablespoons fat
1 tablespoon chopped onion
1 quart milk
1½ teaspoons salt
Pepper

Chop potatoes fine . . . or grate them. Add potatoes, fat, and onion to the milk. Cook the mixture over low heat until the potatoes are tender. By that time the starch from the potatoes will have thickened the milk slightly. Add salt and pepper.

POTATO CHOWDER

¼ cup diced salt pork
1 onion, chopped
2 cups diced raw potatoes
2 cups water
2 tablespoons flour
4 cups milk
2 cups grated carrots or
2 cups cooked corn or
2 cups cooked fish
Salt and pepper

Fry the salt pork until crisp. Cook the onion in the fat until clear yellow. Add the potatoes and water. Cook until the potatoes are tender. Mix the flour with a little cold milk and add with the rest of the milk to the potato mixture. Cook and stir until slightly thickened. Add carrots, corn, or fish. Season, heat, and serve.

IN JACKETS AT THE START

Cook potatoes and sweetpotatoes with their jackets on . . . for good eating and the most in food value

THE PERFECT BAKED POTATO

Wash and dry potatoes of as nearly the same size as possible, Put into a medium-hot oven and bake until tender . . . from 40 to 60 minutes.

If you want the skin to be soft . . . rub a little fat on the potato before you put it in the oven.

Save fuel by baking potatoes at the same time you oven-cook other food. Cook with any baked dish except one that calls for a very slow or a very hot oven.

Cut crisscross gashes in the skin of the potato on one side. Then pinch the potato so that some of the soft inside part pops up through the broken skin. Drop in meat drippings, bits of crisp fried salt pork, butter, or other table fat.

STUFFED.—For an extra special, cut large baked potatoes in half. Scoop out the soft part. Mash, and season with fat, hot milk, and salt. Stuff back into the potato shells, brush the top with fat, and brown in the oven.

PLAIN BOILED

Scrub medium-sized potatoes. Drop them into a kettle of salted, boiling water— enough to cover the potatoes. Cook until tender . . . . drain at once so they won't get waterlogged. Serve in jackets . . . . or peel and season with salt and fat.

MASHED POTATOES

Boil potatoes well-done. If they have been boiled in their jackets, strip those off. Then mash the potatoes thoroughly and quickly. Beat in hot milk a little at a time . . . . until the potatoes are fluffy and smooth. Season, and add fat if you like.

POTATO PUFF

To 3 cups mashed potato, add 2 beaten egg yolks, hot milk to moisten, 2 tablespoons melted fat salt, and any other seasoning you like. Beat the mixture well. Then fold in the 2 eggs whites, stiffly beaten. Pile this mixture lightly in a greased baking dish. Bake in a medium-hot oven about 30 minutes—or until the "puff" is puffy and brown.

MAKE THIS ICE CREAM WITH NO SUGAR

MOLASSES NUT ICE CREAM

1 "Junket" Brand Rennet Tablet
1 tablespoon cold water
2 cups light cream
¼ cup molasses
¼ cup corn syrup
¼ cup chopped nuts

Dissolve rennet tablet by crushing in cold water. Mix light cream, molasses and corn syrup. Warm slowly, stirring constantly. Test a drop on inside of wrist frequently. When COMFORTABLY WARM (110 degrees F.), not hot, remove at once from heat. Add dissolved rennet tablet and stir quickly for a few seconds only. Pour at once, while still liquid, into refrigerator tray. Do not move until set—about 10 minutes. Then place in freezing compartment and freeze until firm. Remove from tray to a bowl, break up with a fork, and beat with electric or rotary beater until free from hard lumps but still a thick mush. Stir in nuts. Finish freezing.

CORN AND MEAT CASSEROLE

Pork, corn, and barbecue sauce flavors somehow "go together" perfectly. Here they blend in an ideal summer main dish which uses the season's juicy corn and can be cooked on top of the stove in quick-dish fashion. Place in a skillet or glass baking dish 2½ cups cooked corn cut from the cob. Top with slices of pork luncheon loaf and pour 1 cup barbecue sauce over meat and corn. Cover and simmer 30 minutes, basting meat with sauce every 10 minutes. A barbecue sauce which saves on high point catsup is a blend of these ingredients simmered together for 30 minutes: 1 chopped onion, ¼ cup vinegar, 2 tablespoons Worcestershire sauce, 1 cup tomato juice, 1-3 cup water, ¼ cup catsup, 2 tablespoons sugar, 1 teaspoon salt, 1 teaspoon mustard, 1 tablespoon paprika, ⅜ teaspoon pepper.

CORN AND PEPPER FRITTERS

2 cups cut cooked corn
2 tablespoons sugar
½ teaspoon salt
½ cup cream or evaporated milk
2 eggs, beaten
¼ cup chopped green pepper
1½ cups sifted flour
1½ teaspoons baking powder

Combine corn, sugar, and salt; add cream, eggs, and green pepper. Sift flour with baking powder and add to corn mixture; beat well and drop by teaspoons into greased skillet. Cook slowly until puffed and browned. Serve hot with tomato sauce. Six servings.

PEPPER-ONION RELISH

Combine 1 quart finely chopped onion, 2 cups finely chopped sweet red pepper, 2 cups finely chopped green pepper, 1 cup sugar, 1 quart vinegar and 4 teasoons salt. Bring slowly to boil. Cook until slightly thickened and pour into clean, hot, sterile jars. Fill jars to top and seal.

INTERESTING APPETIZER

Have bologna sliced on your meat-man's finest cutter. Spread slices with cream cheese which has been seasoned with salt and chives. Or season the cheese with Worcestershire sauce, salt and paprika or with horseradish. Place five or six slices together, chill until firm, cut into small squares and stick each with a toothpick.

DESSERT SUBSTITUTES

When desserts prove too filling for warm weather eating, an appetite-appealing drink can be served as a substitute. To have the proper dessert touch, fruit ades and frosty drinks should be dressed up in tall glasses with sprigs of mint, colorful bits of fruit like cherries, tinted ice cubes and drinking straws.

BUTTERSCOTCH PIE

½ cup brown sugar
½ cup flour
½ teaspoon salt
1 baked pie shell
2 cups scalded milk
3 eggs
3 tablespoons butter or margarine
½ teaspoon vanilla
3 tablespoons sugar

Mix brown sugar, flour, and salt. Gradually stir in milk and cook over boiling water for 10 minutes, stirring constantly until the mixture thickens. Then stir only occasionally. Pour the hot mixture over the egg yolks, return to the stove and cook two minutes longer, stirring constantly. Add butter or margarine and vanilla and turn into baked pie shell. Beat egg whites until stiff but still moist. Gradually beat in sugar. Spread meringue roughly over the top of the pie. Be sure to anchor it to the crust on all sides. Bake at 350 degrees for 15 minutes or until meringue is delicately browned and dry to the touch.

CHERRY RELISH

2 cups pitted cherries
1 cup seedless raisins
1 tsp. cinnamon
½ cup brown sugar
½ tsp. cloves
½ cup honey
½ cup vinegar
¾ cup nutmeats

Combine all ingredients except nutmeats and cook slowly in a kettle for one hour. Add nutmeats and cook 3 minutes longer. Pour into sterile jars and seal at once.

APPLE SURPRISE

To make a flavorsome apple dessert, peel and halve apples. Place in a casserole and sprinkle with cinnamon, drizzle with honey and bake for 20 minutes in a moderate oven. Just before serving, dot with bits of American or cream cheese.

SPECIAL LIMA BEANS

2 lbs lima beans
3 teaspoons butter or margarine
½ teaspoon salt
¼ teaspoon marjoram
¼ teaspoon rosemary

Shell beans and place them in four cups of rapidly boiling water. Add a teaspoon of butter or margarine and boil rapidly, uncovered, for 10 minutes. Add salt, rosemary, and marjoram and cook rapidly a few minutes longer, uncovered, until beans are tender. Drain and place in a hot serving dish. Top with remaining butter or margarine.

FROZEN PEACH CREAM PIE

8 ripe peaches
1 cup sugar
½ cup corn sirup
¼ cup water
¼ cup lemon juice
2 cups light cream
3 9x3 inch slices day old sponge cake
2 peeled and sliced peaches, for garnish

Press peeled peaches through sieve. Boil sugar, corn sirup and water 7 minutes. Cool; add peach pulp, sirup, lemon juice. Pour into freezing tray and automatic refrigerator. Set at coldest point. Freeze mushy. Place in chilled bowl. Beat smooth; add cream. Freeze firm. Reset control to normal. Line deep refrigerator tray with waxed paper. Place layer sponge cake in tray. Cover with half ice cream, inserting few peach slices around sides of tray. Repeat with remaining cake, ice cream and peach slices. Freeze. Unmold, garnish with peach slices. Serves 10.

REFRIGERATOR NUT COOKIES

½ cup lard
½ cup brown sugar
½ teaspoon vanilla
½ cup dark corn sirup
1 egg well beaten
2½ cups sifted flour
½ teaspoon salt
1 teaspoon baking powder
½ cup chopped nuts

Cream lard and brown sugar together. Add sirup, vanilla and egg. Mix well. Combine and sift dry ingredients and add with nuts to the mixture. Combine thoroughly, add slightly more flour if necessary, and roll into loaf. Let chill in the refrigerator, preferably overnight. Slice thin and bake at 425 degrees for 8 minutes. Make 3 dozen cookies.

ADD LEMON JUICE

If you have never added lemon juice to hot, buttered vegetables, try it next time you serve asparagus or Harvard beets. A little lemon juice on fresh spinach or other greens is delicious, giving them a grand new flavor that the family will like.

The right way to sew a braided rug is toward you, not away from you.

THE MODERN FARMER

VOL. XVIII. NASHVILLE, TENN., OCTOBER 15, 1945 No. 9.

The Road Up

To Work or Not To Work

By

GILES A. HUBERT

Last winter, Mr. Claude Wickard, who was then Secretary of Agriculture, proposed a plan for the reconversion of southern agriculture. The plan called for a shifting of the emphasis of southern agriculture away from cotton. Increasing competition from foreign cotton growing areas, the competition of synthetic fibers and the realization that we cannot go on forever subsidizing inefficient cotton production prompted the department to propose reconversion.

Cotton production in this country must be concentrated in those areas where, and carried on in such a manner that, it can compete in the world market on the basis of efficiency and not on the basis of subsidy. With mechanization and scientific production, the delta, river bottom and prairie areas of Mississippi, Arkansas, Missouri, Louisiana and Texas can produce the total world demand for American cotton.

There are several good cotton producing areas of limited size in North Carolina, South Carolina and Georgia—but they are definitely limited. The rest of the South, the hilly uplands, the sandy, coastal plains, the grass lands must be converted to other forms of agricultural production.

The plan for reconversion which is now being discussed all over the South would have the following results: "(1) more diversified farm production throughout the South, (2) larger and fewer farms, (3) **fewer farm operators, share croppers and farm laborers,** (4) substantially increased average farm income per family, (5) a **larger percentage of the southern working force in industry and trade,** and (6) a considerably higher average per capita income for the entire region."

Three prime essentials of the program will be: (1) a broad program of federal assistance to farmers who needed to go out of cotton, reduce their cotton acreage, enlarge their farms and develop a more balanced or an entirely different pattern of agriculture; (2) an integrated system of conversion payments and credit facilities to help farmers make the required changes, with aid conditioned on following long range individual farm plans, and (3) a program for training (and guidance) for those who must or wish to leave agriculture and get located in other jobs.

This broad program of agricultural reconversion must and would be carried out in connection with an equally broad program of industralization and the development of non-agricultural occupations for those people leaving agriculture. Without these new job opportuni-

BARNETT AND PATTERSON KEEP POSITIONS

Lieutenant Governor Praises Canning Effort

Lt. Governor, L. Y. Ballentine, of Varina who made a recent visit to Greensboro to speak at the first Negro Junior Dairy Show, is shown here at A. and T. College, where he inspected a large collection of canned goods put up by Negro Vocational Agriculture students in chooperation with the community canning program for war relief. "The program proves that our citizens are always ready to cooperate in all patriotic enterprises," said the Lieutenant Governor. In the picture, left to right are: Lt. Governor L. Y. Ballentine; K. A. Williams, teacher of Vocational Agriculture; W. T. Johnson, Associate Professor of Agricultural Education at A. & T. College; and Rev. R. C. Sharpe. **(See story page 3)**

Staley Made Regional Farm Labor Head

Formerly With Georgia State College

In recognition of untiring work, characterized by natural personal traits, ability to get things done and experiences fitted for leadership, F. Marcellus Staley, former director of the School of Agriculture, Georgia State College was recently appointed to serve as regional farm labor assistant, W. F. A., Extension Service, with headquarters in Americus, Georgia.

Since assuming the new role as federal regional farm labor assistant, Mr. Staley has proven his worth to gain the confidence of his superior officers in his ability to get things done and his unusual power and influence to get people to work together.

As a result, his services have been in great demand and requests have been made for him to assist with the execution of the program in most of the States in the Southeastern Area of the United States, including Alabama, Florida, North Carolina, South Carolina, Virginia and Georgia.

As evidence of the high ideals that prevail in fine leadership, the Georgia education and rural leader has been invited by federal agents to attend an important meeting at the College of Agriculture, Cornell University, Ithaca, New York, which is scheduled to be held, Aug. 27.

Mr. Staley is a native of Americus, Georgia, a product of the public school system of his native City and the old Americus Institute, a lover of the land, he himself, being a dirt farmer, now farming the place around which his father, until his death, had built a farming system of good livestock and conservative rotation of crops.

Envisioning the necessity for being thoroughly equipped for leadership, upon graduation from the Americus Institute, he entered Morehouse College and was graduated from the famous Atlanta institution with the degree of Bachelor of Arts. Mr. Staley entered the College of Agriculture at Cornell University. From Cornell University, he earned both the degree of Bachelor of Science in Agriculture and the Master of Science. His

Remain On Staff of Secretary

Washington, D. C., Sept. 17, 1945—In response to a request from Secretary of Agriculture Clinton P. Anderson, both Claude A. Barnett, director of the Associated Negro Press, and Dr. F. D. Patterson, president of Tuskegee, will continue in their positions as special assistants and advisers to the Secretary.

In a letter addressed to Mr. Barnett, Nathan Koenig, executive assistant to the Secretary, said, "Secretary Anderson and I are aware of the important work you and Dr. Patterson have been doing, and the Secretary would like to have you both continue as his special assistants."

Following a conference last Tuesday with Mr. Koenig, in the absence of the Secretary who was away, Mr. Barnett and Dr. Patterson said that they would serve as consultants and advisers to the Secretary on problems affecting Negro farmers. They said that one of their first problems would involve postwar agricultural adjustments.

The assistants pointed out that many white and colored farm families left the South during the war to take jobs in war industries. Further, they said that the mechanization of cotton production may cause others to migrate from the cotton region. They expressed keen interest in the development of a program for helping some of these farm families to get established on farms in other areas.

Mr. Barnett and Dr. Patterson were appointed special assistants to former Secretary Claude R. Wickard in March, 1942, and continued on his staff until last May when they tendered their resignation shortly after he resigned as Secretary.

As special assistants to the Secretary during the war years, Mr. Barnett and Dr. Patterson played an important part in helping to mobilize colored farmers for all-out production of food and fiber. Partly through their efforts, 400 colored

Veteran Becomes Farm Owner

Aided By FSA

Wetumpka, Ala.—Willie Denson, Negro, World War II Veteran, Route No. 3, Wetumpka, at long last has realized his ambition to become a farm and home owner.

Denson was reared in Elmore County, Alabama, and spent the greater part of his life working for wages and farming on shares. In 1941 he made application to the Farm Security Administration for a Rehabilitation loan to give him a new start in farming. At that time he owned his household goods and that was all. The FSA approved a loan for $223 with which to buy a mule, plow tools and the bare necessities to enable him to farm. Subsequently, during the spring of that year he received a Food for Freedom loan from FSA in the amount of $131 to purchase a cow, brood sow, chickens and additional equipment.

He sold $170 worth of hogs and chickens that year and had an ample supply of meat for home consumption for 1942.

In November, 1942, Denson was called to the Army. His wife kept his chattels and livestock and gained part of her subsistence from the continued sale of pigs and chickens but did not undertake to make any crops.

Denson was discharged from the

Virginia State Professor Studies Rural Negro Life

Study Reviewed by George S. Mitchell

In the modern world, problems seldom get solved until the facts about them have been laid out for the world to see. Putting out the facts does not bring the solution, but when a solution does come it generally comes after the facts are known.

Virginians have been complacent and too little informed about rural poverty in their State. A landmark in getting out the facts is a new pamphlet printed by the Virginia State College for Negroes at Petersburg. It is written by Dr. Harry W. Roberts, Professor of Sociology at the college. In boiling the matter down from a longer book, Dr. Roberts had editorial help from Professor William E. Garnett at VPI. The title is "Disadvantaging Factors in the Life of Rural Virginia Negroes"; printed as Volume 51, No. 1, of the Virginia State College Gazette, September 1945.

Dr. Roberts studied in typical areas the work and life of 420,000 rural Negroes in Virginia, around 1940.

Here are samples of the findings he prints:

Migration to other states has kept the Negro population level for a hundred years, while the white population has nearly trebled. Fifteen years ago two-thirds of the Negro farmers got less than six hundred dollars all-told from their farms. So did two-thirds of the white tenants but only one-third of the white owners. As late as 1938 a standard day's wage for farm

Staley Made Regional

(Continued From Page 1)

major advisers were Dr. George A. Works, now of Chicago University and Dr. R. M. Stewart. Further graduate work was done at Cornell University. One full year's work above the Master's degree was done at Ohio State University, Columbus, Ohio, where under Dr. Arthur J. Klein, he majored in College Administration and minored in Agricultural and Rural Education.

Mr. Staley has enjoyed years of service marked by successful experience as teacher, teacher trainer, dean of schools of agriculture, dean of instruction and special county extension agent. He has served as instructor at Tuskegee Institute; director of the department of agriculture, South Carolina State College, Orangeburg, South Carolina; dean of the School of Agriculture, A. and T. College. Greensboro, North Carolina; dean of instruction, Bennett College, Greensboro, North Carolina; dean of instruction, Albany State College; director of Department of Agriculture and resident teacher trainer, Georgia State College; itinerant teacher trainer, State Division of Agricultural Education and Special County agent, Sumter County, Georgia.

Veteran Becomes

(Coninued from Page 1)

Army on August 1, 1943. He worked at the cotton mill in Wetumpka for the remainder of the year, receiving 47c per hour. During that time he made payments on his account with the Farm Security Administration. In 1944 he resumed his farming operations, renting a one-horse farm. He received an additional Rehabilitation loan of $178 for feed, seed and fertilizer. He used his mustering-out pay and part of his earnings from the cotton mill for subsistence.

At the end of the year he marketed four bales of cotton. He also had 150 bushels of corn, 16 bushels of wheat, 1 1-2 tons of oats and 30 gallons of syrup. His wife had a year-round garden from which she canned 200 quarts of fruits and vegetables. He met his payments to FSA.

Last fall he filed his application to purchase a home in the Farm Security program under terms of the Bankhead-Jones Farm Tenant Act. His application was approved by the County FSA Committee and he purchased a farm of 160 acres for $2,135. He has purchased another mule and is operating his own two-horse farm this year. Denson plans to develop a good permanent pasture and temporary grazing unit and to make dairying his major enterprise in 1946.

C. E. Edwards, County FSA Supervisor, attributes Denson's success to his willingness to work and save, and to his eagerness to learn improved farming practices. Under terms of the Bankhead-Jones Farm Tenant Act Denson has forty years to pay for his farm at an interest rate of 3 per cent. Like all deserving family type farm owners, however, he expects to pay it out at the earliest possible date according to Mr. Edwards.

Study Is Reviewed

(Continued from Page 1)

labor was a dollar. After slavery, Negroes worked hard for farm ownership, but mostly got only poor land. Carelessness about land ownership records, among other things, lost them much of what they got, and from 1910 Negro land ownership dropped. It is now more than one-fourth lower than it was thirty-five years ago. Tenancy has grown, but not rapidly.

Negro farms are too small. Crop yields are less than on white farms. Gardens are poor. Because so many tenants move frequently, few make a Fall garden. Few keep the stock they should. Out of poverty, "they usually buy old, wornout horses and mules, and cows that die in a few years." Credit comes high and markets are poor. He found a time price for overalls of $1.69; same brand, cash, $.98.

Tenancy or sharecrop contracts are verbal, and the weaker party often gets the bad end of the bargain. One percent of Negro farm houses had a good paint job. Half only had good chimneys. One-third had good roofs; one-fourth had good foundations. Shack houses are cold. They burn down and burn up children with them. In a crowded room with an oil lamp at night, children do not study schoolbooks. Rural Negro settlements are ill-served with busses, and "it is much harder for Negroes to pick up rides than it is for whites." Over one-third of Negro farm children have been getting less than half enough to eat. Colored children get poor shoes to begin with; trying to dry them at the school stove burns them and makes them worse. Health is bad, and medical care is scarce and dear.

He has some keen observations on family life. Even the small houses often contain three generations. One out of every six middle-aged Negro farm women is a widow, but "generally speaking the Negro family is a closely-knit unit with highly developed loyalties and sense of responsibility for mutual aid. The parents often make great sacrifices to give their children advantages, and the children, even past maturity, frequently give their parents all or part of their earnings, especially if property is being bought as a family enterprise. They also make sacrifices in order to care for parents or relatives in old age."

On the church, he says: "The increased understanding brought by increased education that many Christian principles are violated by the society in which they live, a society supposedly controlled by church members, also tends to weaken the eonfidence of Negro youth in the church." The average Negro country church has less than a hundred and fifty members.

Schools are poor and crowded. He found several schools with more than a hundred children per room. Negro country schools were worth a little better than $3,000 apiece; white country schools were six times as good. Over one-third of the white children are carried to school in busses; one-fifteenth of the colored. Teaching is still mostly "rote learning."

A reasonable standard of need for Negro farm agents would almost double the present twenty-six. The eight Negro Home Agents should be fifty-eight. Negroes can't join 4-H clubs; they are not represented on offieial County Agricultural Policy Boards. "In 1940, not one of the Negro agents had a clerk or stenographer to relieve him of time consuming details. The most that he received was fifteen dollars a year from the State Extension Service for stenographic help in typing his annual report."

Rural Negroes are still largely excluded from the vote, and they suffer greatly from it in dealing with the law and with administrative bodies.

The pattern of slavery still shows. "Few things indeed are regarded by the ruling group as belonging to the Negro as a right. What is conceded seems to be generally regarded as an expression of magnanimity, but more and more the Negroes are losing servile manners and assuming the dignity of free men. The general lack of appreciation on the part of the whites of the significance of the impact of changing cultural and attitude-molding forces on the Negroes is the basis of much racial bitterness and friction at the present time." The caste system puts an extra thought process into every act. "Thus, the Negro's mind which, in a normal situation would be concerned with economic, and other non-racial interests, is preoccupied with thoughts and feelings about what he considers the interracial aspect of his thwarted and restricted life. This means a tremendously wasteful expenditure of vital energy in a non-productive manner, that, were the situation non-existent, could be turned to productive pursuits."

These are the darker facts, and Dr. Roberts cites the gains through various Government programs and the hope that better understanding between needy whites and Negroes will enable them both to climb out of their plight.

Remain on Staff of

(Continued from page 1)

emergency workers were added to the Extension force to help show colored farmers how to increase their food production. Also during their tenure, scores of colored professional, sub-professional, and clerical workers were appointed both in the field and in the Washington office of the Department.

As formerly, Dr. Patterson and Mr. Barnett will have their headquarters at Tuskegee and Chicago respectively where also they will continue with their other work.

INDUSTRIAL RESEARCH MAKES INVENTIONS PRACTICAL

With jet propelled planes now a reality, and with the atomic bomb releasing forces beyond the conception of man, who can predict what tomorrow's world is going to be?

To show how industry must meet rapidly ehanging conditions, says the Shell Oil Company, take the lubrication of jet propulsion engines. The axle is the only moving part, as contrasted with the conventional internal combustion aircraft engine which has hundreds of moving parts where the lubricant must cool, seal, lubricate, scavenge, act as a gear lubricant, and as a hydraulic fuel. In the jet propulsion engine it cools and lubricates only; but it passes through temperatures from well below zero to 800 and 1,000 degrees in a matter of seconds. Lubrication and cooling are accomplished by means of a mist-like spray consisting of 95 per cent chilled eompressed air and 5 per cent oil. The spray is directed on the ball bearings at either end of the engine and axle, and is exhausted to the jet.

Modern inventions would be useless unless industry was able to solve the technical problems incident to their adoption and use by the general public. And oil has had to solve more such problems than most industries.

DOUBLE-BARRELED NECESSITY

It is difficult to understand the consistently repressive attitude of government toward the chain store development in America. The excuse that the chain stores represent unfair competition to the independent dealer is not founded in fact; independents in most cases have the privilege of equal access to wholesome supplies at equal prices. The chain store principle of operation has materially raised the living and eating standards of a great percentage of the American public, and yet at the same time the independent store has been able to perform a peculiar service over and above that of the chain store and has itself been materially helped. The principle of a huge turnover at small profit has produced many times more benefits than hardships and handicaps.

In the immediate era of reconversion to civilian production, one of the most essential factors will be the ability of American manufacturers and producers to move their products in vast quantities and at reasonable prices. Only if this double-barreled necessity is satisfied can there be confidence in our ability to return to a peace-time economy with a minimum of governmental control and interference.

The chain store principle has proven to be an efficient manner in which to move large quantities of products in the shortest possible time with maximum benefit to consumer and producer alike. That principle can well be extended to embrace lines and types of merchandise heretofore moving through slower and artifically controlled channels.

The application of the chain store principle to the problems of distribution of virtually all types of eommodities, whether through an association of independent stores or via established ehain routes, could be the means of checking unsound and unwelcome profiteering.

ELECTRONICS FIGHTS FIRE

It is seldom that any radically new principle comes into being. This fact probably gave rise to the old saying that "there is nothing new under the sun." The atomic bomb was simply the application of forces which had been in existence since time began. So-called civilization moves forward or backward, according to its ability to profit by experience.

In the field of productive accomplishments, there has been continued improvement. Fire has always been a deadly enemy and an invaluable friend. Electronics has permitted signalling devices to be developed which will give an alarm under conditions producing smoke alone. The simplicity of such an alarm system, with its cheapness of installation, may well mean the saving of many lives and inestimable values in property which would otherwise be destroyed by fire, because few serious fires would ever occur if they were discovered in the first few minutes.

The way progress has been made in fire control, through improved municipal water systems and in the application of water to fires, is a tribute to man's inventive genius in overeoming forces of destruction Many chemicals put out fire, but it is still true that the best extinguishing means is the one that reduces the temperature most, and nothing has been found to equal water in doing this. In the future, developments of most importance in fire fighting will be those applying to the use of water, and those which make it possible to provide installations at reasonable cost consistent with adequate protection.

FREE ECONOMY PROVES STRENGTH

All through the history of man there has been a struggle between men in government and men not in government. Political power has been transferred back and forth by eonquest and revolution. People free themselves by revolution and bloodshed, only to have governments slowly consume their freedom.

Up to the time hostilities ceased in Europe, men in the German government had such control over men not in government, that the destruction of freedom reduced people to the level of vassals. Citizens the world over are stunned by the reports of torture and suffering in this war at the hands of men in government. It has been proven that men in government abuse the privilege of extensive power over their fellow men. The only way to end this struggle between freedom and government, that has made history colorful with the constant spilling of blood, is to remove the opportunity for men to gain personal power in government. The founders of our government struck upon an idea to safeguard the men out of government from the ambitions of men seeking power in government. They limited the men in government to the preservation of the rights and property of the men out of government.

The founding fathers had to consider two types of economy: A dictated economy, and a free economy. The dictated economy would have had the livelihood of a people controlled by the men in government. Under a free economy, individuals would be the creators of their own livelihood, with government restricted to formulating and enforcing laws to preserve men's rights under fair government regulation. A dictated economy is nothing new. It has existed under many different names.

When our people chose a free economy, they broke away from the old dictated economy controlled by men in government. The aim of our new country was to destroy the age-old-dictated economy which enabled men in government to dominate men not in government. The wealth of our nation has remained in the hands of men not in government—the people.

Has our free economy failed? The answer is that the men not in government are still free, and that our nation is the wealthiest and strongest in the world today. But our free economy goes farther.. In the more than one hundred and sixty years of its trial, the men not in government have worked with the men in government to such an extent that they have broadened our free economy by helping formulate policies which raised our standards of living to unheard of levels and enabled our country to give hope and material help to peoples of other nations who sought to break the paralyzing hold of men in government. This unity of purpose to preserve and strengthen freedom and justice, is the highest tribute to the superiority of a free economy.

STATE OIL RESOURCES PROTECTED

The pending attempt of the Department of Justice to take away from the states title to tidelands and other submerged lands containing valuable resources such as oil, within the three-mile limit, and lodge it in the Federal government, has received a fitting rebuke by the House Judiciary Committee which has recommended passage of legislation disclaiming Federal ownership.

Referring to the suit of the Department of Justice, the Committee said there was "no justification for subjecting the states and their successors who have long had the ownership and possession of their tide and submerged lands, to the expense and vexation of litigation."

More and more are the states and the citizens thereof having to appeal to Congress for legislation to protect their rights and property from the grasping hands of government bureaus, departments and officials.

Never did any industry demonstrate more fully than has oil, during the nation's greatest emergency, its right to operate as a local enterprise, subject to fair and reasonable regulation, and free from centralized government domination. Therefore, it is heartening to see states' rights and property rights upheld by the House Judiciary Committee, which is to be commended for its action.

TIME TELLS.

It is trite to say that time is the great leveler. But there is no teacher like experience, and that requires time.

Not so long ago the enemies of chain stores were doing everything in their power to destroy them by the legislative and taxation route. Among other stock excuses for such action was the overworked charge that chains deliberately gobbled up merchandise in order to freeze out competitors. Time has shown that the independent competitor was well able to take care of himself and do a eonstantly increasing amount of business. Time has also shown that the chain store, with its mass purchases and mass distribution, is a tremendous force to hold down manufacturing prices.

And now it developes, according to news reports, that large buyers, instead of attempting to corner available merchandise, are reluctant to increase stocks as they are closely watching consumer demand. And this situation is not the result of some law or planning of a government agency, but is just the application of plain, ordinary common sense, with which the average American is well endowed.

In addition to a manufacturer's self-interest in producing fair priced goods, he is under eonstant pressure from the large retailers to do so, for without business from them, he is a dead duck. This holds inflation in check, not by offieial aetion, but by the desire of individuals to do business on a volume basis. It is a good thing for the consumer that time has exploded arguments of the chain store baiters.

Tipton County Youth Produces Tennessee Grand Champion

Sells Prize Pig For $540

John Yarbrough, Tipton county Negro farm boy, produced the pig which won the Grand Champion's prize at the 4-H Club Junior Fat Pig Show held at the Dixie Stock Yard in Memphis on Sept. 29.

Ninety pigs were placed on sale by Negro 4-H club boys and girls from seven counties of West Tennessee. The grand champ drew a price of $2.00 per pound. The pig weighed 270 lbs. and was of the Duroc Jersey breed.

The reserve champion, which sold for 40c per pound, was produced by Joe McKinney of Madison county Tennessee.

The grand champion was purchased by Young Construction Company of Memphis and the reserve champion was bought by the M. F. Strause Packing Company.

Mr. John Mitchell, field agent for the Extension Service and Mr. Williams, Negro state agent, were present at the auction. The auction was part of the 4-H club program of the Tennessee, U. S. Extension Service.

Volunteer 4-H Leaders Get Recognition Award

Awards in recognition of volunteer 4-H leadership work have been presented to 34 colored and 38 white 4-H leaders in Virginia, Extension service of the U. S. Department of Agriculture announced last week.

Highest award, the "diamond" clover, which was presented the workers who had served 20 years or more, went to two white and five colored leaders. The white winners of the "diamond" clover award were Mrs. Lula P. Lord of Jetersville, and Mrs. Clarence Trump of Crew; the colored winners were Miss Ella White of Coleman Falls, Mrs. Carrie Rucker of Forest, and Mrs. Edna D. Scott, Mrs. Mary M. Austin, and Mrs. Lena Davis, all of Lynchburg, Va.

The citations for the "diamond" clover winners pointed out that among other things, the leaders had helped organize 4-H clubs, helped to guide the club members in raising livestock and vegetable products and in doing needlework which won hundreds of dollars in prizes at the State and County Fairs. Also it was revealed that the leaders had encouraged the 4-H'ers to attend State short courses, and had helped to raise funds for purchasing pressure cookers, and for other community work.

DOCTORS DECLARE MEDICAL CARE GOALS

Physicians of the United States are interested in extending to all people of all communities the best possible medical care. They stress the necessity for extending to all corners of this great country the availability of aids for diagnosis and treatment, so that dependency will be minimized and independence will be stimulated.

American enterprise has won the greatest war in the world's history. Private enterprise and initiative manifested through research may conquer cancer, arthritis and other as yet unconquered scourges of humankind. Science, as history well demonstrates, prospers best when free and unshackled. Instead of socialized medicine, American doctors advocate a constructive voluntary program for the extension of improved health and medical care to all the people, as follows:

1. Sustained production leading to better living conditions.
2. An extended program of disease prevention in every part of our country.
3. Increased hospitalization insurance on a voluntary basis.
4. Extension to all localities of voluntary sickness insurance plans with provision for the needy under principles already established by the American Medical Association.
5. Medical care to the indigent by local authorities under voluntary insurance plans.
6. A survey of each state by qualified agencies to establish need for medical care.
7. Federal aid to states where needed, to be administered by local agencies.
8. Information that voluntary programs need not involve increased taxation.
9. Continuous survey of voluntary plans for hospitalization to determine adequacy.
10. Discharge of physicians from armed services as rapidly as possible
11. Increased availability of medical education to young men and women.
12. Postponement of revolutionary changes while 60,000 medical men are in uniform to help preserve American democracy.
13. Adjustments in draft regulation which will permit students to study medicine.
14. Study of postwar medical personnel requirements of veterans' hospitals, army, navy, and U. S. Public Health Service.

Negro Farm Families In Arkansas Get Pure Bred Milch Cows

Eighteen families, all members of the Southern Tenant Farmers Union, living on plantations near Cotton Plant, Arkansas, received a pure bred Guernsey milch cow on Thursday, August 2, 1945. The cows are heavy milkers, giving from 5 to 6 gallons a day.

The cows were contributed by the Heifers For Relief Committee of the Church of the Brethrens' Service Committee whose headquarters are in Nappanee, Indiana. The transaction is being handled through the Arkansas Farm Tenants Cooperative Association which was set up in 1942 by members of the Southern Tenant Farmers Union. F. R. Betton of Cotton Plant is manager of the cooperative.

Each family receiving a cow is obligated to return the first heifer calf to the Association which will in turn make the increase available to another needy family at a nominal cost. A pure bred Guernsey sire is being purchased by the Association.

Mr. George Craig of Indiana and two assistants transported the cows by truck to Cotton Plant. At the home of N. Darby, near the Mt. Pleasant School, 50 families were gathered to witness the drawing by lot. Each head of a family drew a number from a hat held by little Johnnie Childress. The number drawn was the same as the number of the cow the family was to own. The family was required to pay the cost of transportation from Indiana to Arkansas. The cost was about $30 each. The milch cows are valued at $150 to $200 each.

The Mt. Pleasant School turned out and 125 rural children saw the fine cows and heard the instructions for the care of the cattle which were given by Mr. Craig who is an experienced dairy farmer in his native state. Assistant County Agent, Electra Tiller, of Clarenden was present. The vocational teacher from the Fargo Agricultural School also attended. Dr. H. V. Watson of Brinkley, a licensed veternarian, has been engaged by the Cooperative Association to make regular inspections of the cows. The County Agent of Monroe County will assist in supervising the project.

The following families drew their cows by lot and paid the transportation costs:

F. R. Betton, S. W. James, Ernest Jones, Hilton Chandler, John L. Jones, J. W. Stewart, Mrs. Johnnie Reed, Anderson Johnson, Abb Locke, Hardy Hoskins, Dorsey Simon, James Bunch, Ophelia Smith, J. E. Fleming, L. H. Bettin, L. W. Davis, King Floyd, Lemuel White.

North Carolina Canning Project Great Success

Early in July, Dr. W. T. Spanton, Chief of Agricultural Education Service sent a letter to all state advisers of New Farmers of America asking the various state associations to sponsor a canned food program for the destituted families of Europe. This opportunity for service was first presented July 9, to a group of about fifty teachers and New Farmers of America who were here at the college to take part in a Sectional New Farmers of America Contest. The goal set by the group was 10,000 cans to be delivered here at the college when the men came in for the first Junior Dairy Cattle Show, September 20. By 2:00 p. m., of September 21, the chapters had collected and sent in 19,095 cans with more yet to be received. W. J. Fisher advises for the Graham Chapter which leads with a total of 1232 cans, says his boys set a goal of 1500 cans and we are not going to stop until we reach the goal and don't be surprised if we reach 2000 cans. Sixteen of our 93 chapters were not able to get here with their production due to the fact that many of our highways were closed on account of a great flood in sections of the state. When all reports are in, it is felt that the total will approach 25,000 cans.

Following the meeting here in July a copy of Dr. W. T. Spanton's letter together with a report on what the 50 teachers and members had suggested were sent to the advisor and president of each local chapter. Chapters announced their plans in the community papers, appeals were made by the office for help from various groups. Some Civic Clubs paid for, in some cases, as many as 1500 cans. Some of the church and parent-teacher groups purchased cans. Many individuals and business concerns furnished 100 cans. In a number of communities one day per week was set aside for the Community Canning War Relief Program. NFA boys and New Home Makers brought the food in and canned same under the direction of the two vocational teachers. This was a service that the youth really enjoyed rendering because of the fine support given by superintendents of public schools, the high school principals, teachers and others mentioned. Members of both races helped New Farmers of America in many ways on this project.

There are a number of chapters in the state which do not have canneries. That limitation did not prevent them from taking part in this program. In several cases, each class in the school was given an opportunity to present the cause to the community people. As a result, two chapters came up with over 600 cans of commercial canned food to be sent to Europe.

Yes, the collegiate chapter had a hand in the program. They secured from the merchants here in Greensboro, boxes in which about 10,000 cans will be packed before shipped by truck to Keyport, N. J.

A large number of educators, farmers and business men were on hand for the cattle show and assembling of the canned food. Thus, they had an opportunity to see NFA in action. Among them was Lt. Governor L. Y. Ballentine who said to Mr. Roy H. Thomas, Supervisor of Vocational Agricultural Education for North Carolina, "This splendid effort not only evidences the program of community canneries throughout the state but proves that our citizens are always ready to cooperate in all patriotic enterprises."

Housewives Urged To Help Speed F-O Day

V-J Day is here, but Fats' and Oils' Day is still a long way off. We haven't yet licked the shortage of fats and oils.

In a recent telegram to Roy W. Peet, chairman of the American Fat Salvage Committee, Secretary of Agriculture Clinton P. Anderson pointed out that V-J Day found Americans 'alarmingly short of fats and oils."

Mr. Anderson said that it would be many months yet before this shortage could be relieved. "So," he said, "it is just as important now as during the war to save every bit of used fat."

He appealed to American women to help win this postwar battle of supply, IN THEIR OWN KITCHENS.

The goal for used kitchen fats is still 250 million pounds of fats for 1945, saved from the skimmings and scrapings of kitchens in American homes. And the kitchen waste fat container should fill up faster as meat supplies increase.

Points for waste fats still continue at two points a pound.

To Work or Not to Work

(Continued from Page 1)

ties, agricultural reconversion would mean the throwing of a large mass of jobless people on relief.

I am very much concerned with this phase of the problem. The agricultural Negro has a great stake in this affair. Most Negro farmers are tenants, sharecroppers and laborers on cotton farms. A relatively small number of them will be able to secure enough capital and guidance to enable them to make the necessary change-over to survive in agriculture.

On the other hand a majority of them, landless and without education as they are, will have to look for jobs in urban and industrial pursuits. But they will be in competition with thousands of poor whites who will also be seeking new jobs. What is going to be the attitude of southern cities toward an influx of rural Negro population? Will they have a fair chance to secure jobs in industry as it expands? Will they receive equal opportunity for training for semi-skilled and skilled industrial jobs? Will cities seek to provide for them decent and healthful housing facilities?

During the war, in many places in the South, Negroes have shown a capacity for rapid learning of industrial skills. In many of the arsenals of the South, Negroes have been employed in all phases of plant operations non-skilled, skilled and technical.

But this was during a period of great scarcity of industrial labor. Will the same opportunities be afforded during a period of normal industrial expansion when people, white and black, are being displaced by agricultural reorganizations?

On the other hand, what about increased opportunities for Negro tenants and small owners to become the owner-operators of adequate, well organized farm units? Will the Farm Security Administration or some such organization be available to Negro farmers on an equal basis with whites to help them with reconversion?

What about Negro labor on large mechanized farms? Will it be organized so as to secure the advantages of collective bargaining for adequate wage, hour and working conditions?

These are the problems that face Negro farm people in any program of reconversion in the South. These are the problems that face the agricultural and industrial organizers as they look toward the future of southern economy.

These are the problems which must be faced by those interested in the promotion of better race relations and the prevention of exploitation, conflict and poverty.

Will Negro agricultural people be increasingly and better integrated in the new industrial and agricultural life of the South, or are they to be left in the middle, with no jobs for them in a reconverted agriculture and no jobs for them in a newly developed industry? Will they find employment or are they to become a burden for relief?

To work or not to work, that is the question.

Statement of Ownership

The MODERN FARMER as required by the Act of Congress, Aug. 24, 1912, State of Tennessee

County of Davidson.

Personally appeared before me, a Notary Public in and for the State of Tennessee, County of Davidson, S. B. Wilson, who having been duly sworn according to law deposes and says that she is the Business Manager of the MODERN FARMER and the following is to her knowledge and belief, a true statement of the Ownership, Management, etc., of the said publication for the date sworn in the above caption requested by the Act of Congress, August 24th 1912, embodied in section 443 Post Office laws and regulations:

1. That the name and address of the publisher and business manager of the MODERN FARMER is Nashville, Tenn., S. B. Wilson, Business Manager.

2. That the owners are Henry Allen Boyd and S. B. Wilson both of Nashville, Tennessee.

3. That there are no known bonds, mortgages or other security holders or owners holding 1 per cent or more and that there are no bonds, mortgages or other securities on the corporation.

(Signed) SADIE B. WILSON
Sworn before me this 20th day of September 1945
M. G. FERGUSON, Notary Public
My commission expires April 8, 1947.

The Sale of Booker T. Washington's Birthplace

Booker T. Washington's birthplace in North Carolina has been sold. **The Norfolk Journal and Guide** tells the story.

For some time now the Negro Organization society has collected funds with the notion that the birthplace of this great American could be memorialized by a suitable shrine. The old home place has been a part of the estate of John D. Robertson which was up for settlement. A date was set for auctioning. The Negro Organization Society had $4000 ready for the purchase of the place. This was considered a fair price.

Several days before the date of the auction, S. J. Phillips, publisher of **The Negro Worker,** a magazine sponsored and subsidized by industrialists to say the proper sweet nothings to the Negro labor force, was snooping around the neighborhood posing as a Baltimore newspaper man.

At the auction sale, up pops Mr. Phillips ready to bid on the property as alleged representative of the Washington family. He ran away with the bidding and finally bought the place at the price of $7610, a price far above what anybody else was able or willing to offer. In the settlement a check for $500 was tendered by Mr. Phillips and his attorney to close the deal.

But here is the pay-off. The check was signed by S. B. Huff representing the **Roanoke Nehi Company.** It was a Nehi Company check. The fishy smell in the air caused people to begin searching around for fresh ozone

Dr. Washington's widow was contacted. She knew nothing of the matter and stated that Mr. Phillips surely was not representing the Washington family. It turns out that Mr. Phillips is proposing a recreation center in commemoration of the great educator and statesman to posterity.

Booker Washington clubs are going to be organized to raise contributions for the project. The Nehi Company purchases the site. Big doings seem to be in prospect. One wonders who is going to profit. What sort of an affair is this anyhow?

The Negro Worker, as a magazine, is surely one scheme for using the name of Booker T. Washington to support a profitable venture. The industrial concerns are paying seventy-five cents a subscription for six short pages of low-grade worker good will. This should be profitable to somebody.

To Negro farmers all over the country, Booker T. Washington is nothing less than a patron saint. His life and what it stood for has inspired many a young man to want to become a good farmer and to own the land he tills. His leadership has led many poor people to the fountain of knowledge and ambition.

Farm people surely will look with disfavor on any attempt to use the birthplace of Booker Washington as a place of profit-making on his good name.

"Aye," replied Jock, "but not until the police have been here."

Two colored soldiers were on a transport going overseas.

"Dat's de mos' water I've eber seen in all my life," remarked one

"Yo' ain't seen nothin' yet, brudder," answered his companion, "dat is jus' the top ob it."—Appleland News.

A Letter to the Editor

P. O. Box 818
Tarboro, N. C.
September 7, 1945

Editor Modern Farmer
403 Charlotte Avenue
Nashville, Tenn.

Thinking that some of your readers might be interested in knowing something about the Agricultural Extension work among Negroes in Edgecombe County, North Carolina, I am enclosing you one copy each of annual reports of the two Farm and Home Curb Markets operating in this county. Also a bit of other informatiton about the work.

Only Edgecombe County farmers, mostly share-croppers, sell on the Tarboro Market. Most of the buyers are colored but we have some white customers too, among the most prominent of the town. Before the market had been in operation six months, a prominent Tarboro citizen gave the city of Tarboro $10,000.00 for curb markets and before the announcement had been given to the papers, he called me over telephone and told me that it provided that our market should have $2,000.00 of the amount. Our market was organized with twelve families, the men of which constructed our market building, largely from lumber taken from an old building which stood on the lot. The lot and building were given us, for the duration, free of cost. The twelve men purchased all lumber and material which were not obtained from the old building, except paint which was given by Tarboro merchants.

Edgecombe County has donated $500.00 for the Rocky Mount Market and Nash County has donated $300.00. The city of Rocky Mount is expected to furnish what other money is needed to construct a better building when building material is available. The majority of sellers on this market are tenants too, share-croppers. The market is for both Edgecombe and Nash County farmers, the city being one half in Nash County and the other half in Edgecombe County. As a rule, the markets are open two hours each Saturday morning, only. From 8:00 a. m., till 10:00 a. m. Because of the success of these markets several other markets have been started in other towns of the state and all are doing nicely.

I was the first Negro Extension worker to be employed for the county. At the time, the county paid no part of my salary and didn't furnish me any office or office supplies. In a short time, A Negro Home Demonstration Agent was employed but the county contributed nothing towards her salary or office. Since then, however, the county has contributed very generously towards our salaries, salary of secretary and fitted us both with two office rooms each, well supplied with telephones, typewriters, adding machines, mimeograph machines everything else needed for a well equipped office. Our secretary holds a B. S. degree from A. and T. College, in secretarial science. She shares in the recent "Teachers' Bonus" and retirement.

Ours was the first county in the state to make an appropriaion for an Assistant Negro County Agent. We now have a Negro County Agent, Assistant Negro County Agent, Negro Home Demonstration Agent and a Negro City Home Demonstration Agent for the City of Rocky Mount.

The Assistant Negro County Agent and the City Home Demonstration Agent were employed largely because of the two curb markets. While I direct the supervision of both markets, the Tarboro market is supervised directly, by the Assistant County Agent and the County Home Demonstration Agent. I spend most of the Saturday mornings in Rocky Mount on that market and am assisted by the City Home Demonstration Agent and the City Welfare worker who is sufficiently interested in the market to help us. She was a faithful and helpful worker in getting the market organized.

In addition to the regular Extension Program, we have started the only Negro Dairy in the state. When in operation, before the shortage of labor, it sold "Grade A" milk and other dairy products in the city of Rocky Mount, having the full cooperation of the Negro citizens there as well as some white customers. We have had three car loads of dairy heifers shipped to the county at a cost of more than $7,000.00. The first load came from Eastern Tennessee and the others from Mississippi. Dairy cows (family cows) were very scarce in this section and the large amount of butter reported sold on the two markets is due largely to the shipment of dairy heifers into the county. This is a large share-cropper county and we have four money crops: Tobacco, cotton, peanuts and soybeans. However, interest in the family cow is growing and we are now working up the fourth shipment of dairy heifers to be sent into the county this fall. Recently we have organized a County Farm Credit Association. When three months old, the first of last July, we had more than 100 members, had taken in over $1,200.00 in shares and had made loans totaling more than $700.00. The organization is growing and we are now taking part in the National Membership Campaign and hope to

Farms For Veterans

By GEORGE S. MITCHELL

The GI Bill of Rights provides for loans to veterans who want to farm, but the law does not fit the real needs of more than a very few veterans.

After the veteran has found a farm which he can buy at a reasonable price, he must find a private lender, usually a bank, who will put up the money. The interest rate is 4 per cent and the loan cannot run more than twenty years. While the veteran may borrow whatever amount he can persuade the bank to lend him on these terms, only $2,000 of the loan is guranteed by the Government, and probably very few banks will want to lend more than $4,000 all told. At present prices, a family-type farm worth having in the South will cost from $3,500 to $6,000 or $8,000 just for the land, and stock and tools would run another thousand and more.

Most southern farms which veterans can buy will need repairs to the house and buildings. So if the veteran has no capital and wants to get a place of his own, he will need to borrow at least $6,000 and generally should have more.

It does not look as though the GI bill will meet this need. On the other hand, the farm ownership loans of the FSA, made under the Bankhead-Jones Act, are forty-year loans at 3 per cent. They are limited in size to the average value of farms in the country or neighborhood, and today it is hard to find farms for sale at prices that will fit the Government's cautious appraisal. Veterans get a preference for these loans, but there is only enough Bankhead-Jones money available to help a small proportion of the veterans.

The best advice to a veteran without capital who wants to farm for himself is to apply to his local county for a FSA farm ownership loan. If he can't get it, he should write his Congressman and explain his efforts to get settled on the land and ask for help from Congress.

Farming Gives Wide Opportunities To Veterans

By JOHN MITCHELL

Field Agent, U. S. Extension Service

Agriculture offers Negro veterans opportunities in gainful employment. Agriculture offers opportunities to different phases of operation. There are phases where the family can be employed on a year-round basis. Then therc is a type of farming that can be done on a part-time basis where one or more members of the family can work on a job away from home yet carry on farm operations with a part of the family at home.

There is diversified farming and specialized farming. The returning war veterans can find a place in the agricultural program and become well fixed. Those returning veterans can become farm operators and eventually become farm owners. Farming is a business and anyone who intends to engage in farming must consider and recognize business principles before launching upon farming for a profit. Profit and loss, success and failure are applicable to agriculture just as they are to the mercantile business, industry and the professions. It would be both unfortunate and unfair to advise the 800,000 men in the army who plan to go back to the farm that all they need is a desire and a loan to get started into successful farming.

There are hundreds of successful farmers scattered throughout the country and there are hundreds of stranded farmers who have moved to the small towns and cities both south and north. There are certain basic laws that must be met to succeed in life whether on the farm or elsewhere. To make money on a farm is quite different from figuring on paper how to clear so many hundreds of dollars a season on some particular farm crop or livestock adventure.

BUY A FARM OR WAIT

In answer to the inquiry, whether to buy a farm now or wait, I would say buy anything you can at an advantage. Of course, it is taking a risk to buy on a rising market and when prices are inflated but where a veteran can buy out the interests of other members of his family and take charge of the homestead is another question. Where a veteran can buy an abandoned farm at a fair price, making necessary repairs and build up the land is a good chance to make a profitable investment. There are, in various parts of the country, such farms where people have left during the war to go into industry and other types of employment. On some of those farms there are fairly good houses and with few repairs could be made comfortable.

Modern Pioneering.

In America, pioneer farming has been in practice for nearly three centuries. In modern times there has been a tendency on the part of prospective farmers to want a "turn key" job of a farm with all the needed facilities such as cleared land, pastures, fences, barns, poultry houses and a residence with lights and water and a mortgage covering it all. This would involve from $5,000 to $15,000.

Another way is for a prospect to enter farming as a laborer-sharecropper or renter with the determination to get the experience and information as well as save some money and eventually become a farm owner when it is advisable. Where the approach to farming is made with adequate experience and information, the operator stands a much better chance to succeed than where one attempts to become an owner without the necessary background training.

There are many farms where the operators are either too old or for other reasons need to be replaced by younger people. In some cases they are parents or in-laws of war veterans. These farms offer excellent opportunities for returning veterans. Already there are instances where young men who were working away from home have come back and are taking over the management of farms where the parents were too old to carry on. In some cases these young people have paid off existing mortgages on the farms of their parents.

Type of Farming

It may be as necessary to caution those who engage in post war agriculture not to plunge into a new type of farming as it is to caution them about purchasing farms at too high a price. The question is often asked, what about going into poultry raising. starting a poultry farm. For some reason this seems to be one of the most appealing types of farming to the prospective farmer. Probably no type of farming has more casualties or failures than poultry raising adventures. Not that poultry and eggs are not used by consumers but to succeed in poultry raising requires the price of success and to the average person the price is too exacting. The time has not yet passed in this country where initiative and native ability do not pay.

Yes, there are opportunities in agriculture, not only in the South, but in many communities of the nation for the right persons. The question is, can you meet the requirements, can you pay the price in money, work, intelligence, patience and whatever else it takes to succeed?

On the Agricultural Front

ANDERSON DISCUSSES FUTURE OF COTTON

The gloomy outlook for cotton farmers in the post-war world was dispelled somewhat last week by Secretary of Agriculture Clinton P. Anderson in an address before the New York Cotton Exchange.

The Secretary pointed out that there are hopeful signs for cotton farmers despite the many handicaps which they now face, such as surpluses on hand, competition from rayon, nylon, spun glass and paper products, competition from foreign cotton producers, and the need of mechanization to improve production efficiency and reduce the cost.

Among the encouraging elements listed by the Secretary were: (1) Greater agreement among the world powers, and the stablishment of a world-wide food and agricultural organization. (2) America's determination to achieve full employment, (3) greater progress in diversified farming in the cotton section. The Secretary pointed out that not only have Southern farmers increased their income by not placing all their eggs in a cotton basket, but also they have improved their diets, their health, and their outlook on life. Fourth is increased industrialization in the South, and (5) constant endeavor to discover new uses for cotton.

The Secretary emphasized the last two factors. Said he, "The war years have afforded the South a chance to embark upon a program of greater industrialization. The South cannot afford to let this opportunity slip by. New industries can provide the type of economic blood transfusion needed."

Pointing to the research which the Department is carrying on in an effort to discover new uses for cotton, the Secretary listed among the newer discoveries these products: An improved cotton tire cord with increased resistance to heat and bruise-breaks, fireproof cotton insulating material, and the use of cotton in making plastics.

Secretary Anderson said that the Department intends to cooperate in every way possible in all sound programs to assist the cotton industry.

The Secretary realizes that the mechanization of cotton production together with the reduction of cotton acreage may be responsible for the displacement of thousands of small farmers and day-laborers. Among these will be many colored farmers and farm workers. But he feels that this difficulty may be overcome through full employment, increased diversification in the South, greater industrialization in the South, and the discovery of some new uses for cotton which will give the product a larger market.

AGRICULTURE'S PART IN FULL EMPLOYMENT

Farmers will not only be benefited by full industrial employment, but also they can make a substantial contribution toward its achievement, Secretary of Agriculture Clinton P. Anderson pointed out at a recent Senate hearing on the proposed Full Employment Act of 1945.

Said the Secretary: "Farmers cannot be prosperous unless our total economy is prosperous_____When urban people have jobs and are making good incomes, they buy more clothes which come from wool and cotton; they eat more fruit, meat and vegetables, drink more milk, and even smoke more cigarettes than when they are unemployed or working only part-time."

Continuing, Secretary Anderson said: "The Buraeu of Agricultural Economics in the Department of Agriculture is currently analyzing the relationship between various levels of postwar employment and agricultural conditions. A recent bulletin issued by the Department indicates that the income of American farmers in the postwar years will depend more upon the level of business activity and non-farm employment than upon anything else."

The Secretary pointed out that farmers also could make a positive contribution toward full employment. He said that by continuing to produce at capacity levels farmers would not only provide employment for themselves, but also would help provide the greatest possible amount of work for those employed in industries which process, transport, and distribute agricultural products.

Secretary Anderson said that another way that farmers could contribute to full employment would be through the wise spending of the money they have saved during the war. Recent estimates indicate that farmers' cash and liquid reserves are about 16 billion dollars, an all-time high. He pointed out that farmers would be buying farm machinery, electrical equipment, household furnishings, clothing, and would repair farm homes and farm buildings or build new ones.

REA TO SERVE MORE FARMERS

Expansion of the Rural Electrification programs will create more jobs and make electricity available to nearly four million additional rural consumers, says Claude R. Wickard, REA administrator.

Wickard says that relaxation of Government control over the sale of steel, copper, and aluminum is stimulating electrical construction by REA borrowers. He points out that Congress has appropriated 200 million dollars to be loaned to REA borrowers this year. In addition, 100 million dollars previously allotted to borrowers will be spent also. The expenditure of these funds for electrical construction will provide jobs for thousands of veterans and former war workers, says the REA administrator.

As a result of the installation of electricity in their homes and farm buildings, farmers will be in the market for radios, electric refrigerators, milking machines, brooders, motors, pumps, and other supplies, Wickard indicates. He points out that within five years it should be possible to bring electricity to 3,655,000 additional rural consumers.

TWO COLORED ANALYSTS APPOINTED IN AGRICULLTURE

WASHINGTON, D. C. Sept. 24—Appointment of Miss Lela Yvonne Smalley and Mrs. Ella W. Griffin as research analysts in the Bureau of Agricultural Economics of the U. S. Department of Agriculture became effective last week.

Miss Smalley, who majored in psychology at Howard University, formerly worked for the Committee on Fair Employment Practice.

Mrs. Griffin, a graduate of Framingham State Teachers college, who has done graduate work at Boston university, was transferred from the War Food Administration to her position in BAE. In the War Food Administration, Mrs. Griffin served as a recreation counselor in the farm labor camp program. Before entering government, Mrs. Griffin taught at Bethune Cookman college and Fisk university, and was a Jeanes supervisor of schools in Florida.

In their new position, Mrs. Griffin and Miss Smalley will make preliminary analyses of interview material received from rural and urban areas for the purpose of determining attitudes and points of view on programs and policies of the Department, and other government agencies.

MORE LABOR NEEDED FOR FALL HARVEST

Three million workers will be needed during September, October and November to harvest the Nation's 1945 bumper crops, the Department of Agriculture reports.

Although about two and a half million farm labor placements were made during the first seven months of this year, the Department's Extension Service states that the shortage of farm labor is now at its tightest point of the war years.

There has been some scattered increase in the farm labor supply as the result of the cessation of hostilities, troop demobilization and war industries cut-backs. However, these gains have been offset by the departure of workers from farms since the lifting of manpower controls.

On the basis of 1944 placement records, and the present crop conditions, it is estimated that about three million placements will have to be made during this and the next two months to complete the harvesting of essential food and feed crops.

RURAL HEALTH

Concern about rural medical and health facilities was voiced by farmers the country over in a survey of farmers' opinions on postwar problems made recently by the U. S. Department of Agriculture.

More than four-fifths of the farmers interviewed said they favored more public clinics in rural areas. More than three-fourths said they would like to subscribe to some flat-rate prepayment plan to cover possible hospital bills and the cost of doctors and nurses for themselves and their families.

The answers to the survey indicated that farmers generally are conscious of the need for better health facilities. Many of them know that farm youth, 18 and 19 years old, showed the highest rejection rate in the Selective Service for physical, mental and educational defects of any occupational group—41 percent compared with an average of 25 per cent for other groups.

Although the death rate from all cases for the last several decades has been lower among rural than urban people, deaths from some preventable diseases like typhoid, diptheria, malaria and pellagra tend to be more numerous among rural people. Moreover, the death rate has been going down rapidly among city people but relatively slowly among rural people. Rural people are ill oftener and for longer periods than city people.

Many factors contribute to bad rural health, the shortages of medical and sanitation facilities, and the lack of physicians, dentists and hospital services. Many rural people cannot afford medical and hospital treatment and care. In 1939 nearly three million farms in this country each produced less than $600 worth of farm products. People with such low incomes often fail to get to doctors and hospitals until they are beyond help. Low incomes in some rural areas have meant inability to support the necessary health services. In some places the long distance from doctors and hospitals prevents many farm people from having medical care or hospitalization. Finally, many rural people still lack an understanding of disease and the importance of preventive and curative medicine and surgery.

"Cooperative Progress" Holds Promise For Solving Southern Problems

By ROSAMONDE R. WIMBERLY

Graham Sumner of Yale defined society as "a group of groups" and Charles Ellwood of Duke described society as composed of a group of persons who "carry on some phase of common life." Both definitions apply to the social situation prevailing in the Southern states. Truly, Southern society is made up of a "group of groups," the latter being agricultural, industrial, rural, urban, managerial, labor, and, of particular significance, Negro and white. Yet, as Sumner implied, beneath these various group differences one finds a larger group, a society basic and fundamental to the well-being of each individual and each collective unit, no matter how unique and deviant the respective cultural patterns appear. In spite of differences the members of this society share a community of interests, phases of "a common life" referred to by Ellwood. They are linked more closely together than is ordinarily realized. They will progress together or suffer retrogression or stagnation separately but simultaneously.

As we look toward the post-war era some of us visualize a far-sighted policy of practical education in race relations, emphasizing shared needs, common purposes and goals, joint planning and social action directed toward social improvement in Southern society. Emphasis upon interracial relations is shifting to emphasis upon Southern relations. As our two races and, in fact, as all our groups face realistically our common problems and plan to raise our general level of culture we learn to appreciate the fine personal qualities and the integrity of each other, to note collective and individual contributions to our social order, to develop mutual respect for one another's ideas and to become more considerate of the other person's hopes and aspirations. This will ultimately result in a philosophy that Southern society should provide opportunities and facilities for the complete development of every human personality and each one of the "group of groups."

One of the chief reasons we are enthusiastic about the Southern Regional Council is that it stresses our community of interests; health, education, agriculture, industry, commerce, politics, et cetera, and seeks to coordinate the efforts of both races and all groups as interacting members of Southern society, concerned with the improvement of the region as their ultimate goal. Through the progress of the South a better life will become attainable for an ever increasing number of our citizens regardless of class, color, creed, or race. "United we stand, divided we fall" epitomizes two potential relations of our Southern groups with their respective consequences.

'REVOLUTION DOWN SOUTH'

The Governor of Georgia, Ellis Arnall, writes in Collier's on "Revolution Down South." Governor Arnall tells the world that "the new South is waking up and is going to work in a world of reality to achieve her proper destiny . . . Much of the bad government that we've had in the South can be traced to bigotry and intolerance, in office and out . . . The ten million Negro ctizens of the South are not a separate, special problem any more than they are a special and separate resource. They are part of the South, and their economic welfare is a part of the section's economic welfare. They are entitled to decent housing, decent clothing, good schools, economic opportunity and justice."

—Reprint from the Southern Frontier, August, 1945.

A Letter to the Editor

(From page 4)

have 500 members by the first of January.

From the beginning of the work in the county, our major efforts have been for "A-Live-At-Home-Program," on every farm, owner, tenant and share-cropper. Without this program being in operation some years, our curb markets could not have been supplied during this labor shortage. There was not a modern brooder or poultry house in the county, among Negro farmers, when we started work here in September 1935, or when I began work, Sept. 1, 1935.

While we have been receiving free copies of the Modern Farmer, I am enclosing check to pay my subscription and wish to thank you kindly for all the free copies I have received and wish you great success in making this an outstanding Negro Farm Paper, serving the needs of Negro farmers.

P. S.: Our Assistant County Agent devotes from 75 to 80 per cent of his time to the 4-H clubs.

Yours very truly
F. D. Wharton,
Negro County Agent

COOPERATION MEANS HIGH WAGES, LOW COST

"Cheap coal means cheap miners; it will never exist again." This philosophy is attributed to Will Lawther, head of the British mine workers' union. Commenting on it, Coal Age says that attitude "perhaps accounts for at least some of the difference in the status of coal mining in Great Britain and the United States. In this country, progress is firmly rooted in the principle that cheap coal—through higher productivity is the only means of assuring good wages to miners, and reasonable profits to investors.

"Cheap coal under the American plan means well-paid men and low cost to the consumer. Management usually is thought to have the greater stake in raising efficiency. Actually, it is as important to the men. Only by the cooperation of both is it possible to build the foundation of low cost and quality on which good wages and a healthy industry can rest.

"Coal can expect intensified competition from substitutes. Low cost still is the best weapon in that battle and low cost can be secured only through higher productivity. Many operations are re-equipping and modernizing. . . . A goal of 10 tons per man-shift in bituminous and five tons in anthracite by 1950 may seem like crowding it a bit. But the equipment and methods that could make that goal possible already exist and the closer coal comes to it the closer it will come to clinching its place as the No. 1 source of energy"

DON'T THROW AWAY THE KEY

The termination of the war did not bring a cleancut victory to the United Nations. The avowed objective of freedom from political oppression for which the war was fought, is less in evidence today than at any previous time, not excluding the era of Hitler. The United States now stands alone as the champion of individual enterprise and the exponent of government as the servant rather than the master of the people. Over most of the world peoples numbered by suffering. seem anxious to become charges of masterful governments.

The United States remains the one great nation with production and distribution under the ownership and management of private citizens. Thanks to this system, our farmers and factories, our retailers and workers—tens of millions of them—can make a living independent of government. As long as they can do that they need never fear political oppression. The privilege of earning a living unsupported by government handouts and resultant political "persuasion," is the key to freedom. The people of Europe have thrown away this key. Even in England and France, the key is being turned over to government.

Let's not throw away the key to freedom in our own country. Private enterprise, which socialism destroys, may have its drawbacks. But its shortcomings can always be corrected. Private enterprise is the source of independent jobs—for employer and employe alike. As long as private enterprise exists, government payrolls can be kept to a healthy minimum, and we can tell officialism to go to blazes, without fear of the consequences.

Trends in Tomato Production and Utilization

Until about a century ago, the tomato, or love apple as it was formerly called, was considered a poisonous fruit in this country. Now it has attained the position of "king" of the vegetables, with a total "commercial" production in 1944 of nearly 4 million tons (150 million bushels) for fresh use and processing, and with a value of about 166 million dollars. In addition to this "commercial" production, possibly another 3 million tons were produced in farm, urban, and local-market gardens.

Tomatoes are now grown in every State in the Union, and on a commercial scale in most States. In 1944, only one-fourth of 1 percent of the total harvested crop acreage was devoted to "commercial" tomatoes, but the value of the crop amounted to a little more than 1 percent of the value of all crops.

South American Product

Although the tomato is a perennial in its natural state in western South America, it is grown as an annual in temperate zones. Little is known of its early history and development, but apparently it was known to and eaten by the ancient Mexicans, who planted it in the Maize fields and called it tomati. The earliest references in literature describe about the same forms that are grown today, and these forms have never been found in a truly wild state. It is believed, therefore, that the tomato was improved considerably beyond the wild state when Columbus discovered America.

Spanish traders introduced the tomato to Europe in the sixteenth century by bringing seeds from the New World. First grown as ornamentals, especially in England, by the end of the eighteenth century tomatoes were grown extensively in Italy for food purposes. But the people of the United States did not accept the tomato as being edible till half a century later.

Rapid Increase After First War.

After World War I, commercial tomato production in the United States increased rapidly through 1929, slightly more than held its own during the depression of the early 1930's, and again increased rapidly prior to and during the conflict just ended. During the period 1940-44, commercial production averaged nearly 3.5 million tons annually—about 2 1-2 times the 1920-24 average of a little more than 1.3 million tons.

Industrial development and increased emphasis on the nutritive value of vegetables and vegetable juices have played a major part in the continued increase in production, although improved cultural methods and transportation and marketing facilities have also had their effects. The tomato is recognized as a good source of vitamins C and A.

There has been a tendency toward concentration of commercial tomato growing, especially in the areas more remote from consuming centers. In 1920, about four-fifths of the crop was produced in 11 States, while in 1944 these same States accounted for nearly nine-tenths of the total commercial crop. California consistently has been the leading producer, followed by Indiana, Maryland, and New Jersey. These four states, combined, usually account for slightly more than one-half the commercial tomato supply.

Prior to 1940, approximately three-fourths of the tomato crop was processed—canned whole or manufactured into tomato products such as juice, catsup, etc. With war demands for the products at a high level, an average of four-fifths of the total crop was processed in the period 1940-44. As in the case of all tomatoes, California, Indiana, Maryland, and New Jersey are the leading producers of tomatoes for processing, with Pennsylvania, New York, Ohio, Virginia, Delaware, and Utah rounding out the 10 more important States.

Although the tonnage of tomatoes utilized for canning whole has increased over the years, the percentage of the total thus utilized has dropped. Prior to 1935, slightly more than one-half the crop for processing was canned whole, but since that time approximately four-tenths of the total have been so used. Even so, an average of slightly more than a million tons of whole tomatoes found their way into cans during the period of 1940-44.

The use of tomatoes for juice manufacture has grown phenomenally since 1929, the first year for which there is a record. In that year, about 5,000 tons of tomatoes were converted to juice. In 1944, about 700,000 tons were used in juice manufacture, with an average of over 500,000 tons annually, or about one-fifth of all tomatoes for processing, so utilized during the 1940-44 period. The rapid growth of juice manufacture doubtless stems, at least in part, from the emphasis placed on the nutritive value of the juice, especialy from the standpoint of vitamin C and A value.

The use of tomatoes in the manufacture of catsup and sauces also has increased in tonnage but decreased as a percentage of the total crop. During 1920-24, an average of approximately 380,000 tons, or nearly four-tenths of the crop, were manufactured into these products annually. By 1940-44, the average tonnage had increased to nearly 750,000 tons, which was about one-fourth of total production. War uses increased the demand for paste, pulp, and puree. From 1920-24 to 1940-44, the average annual tonnage utilized for these products jumped from less than 100,000 tons to more than 500,000 tons. Nearly 800,000 tons were used in 1944. Thus, nearly one-fifth of all processing tomatoes were manufactured into these products during 1940-44 compared with less than one-tenth in 1920-24.

One-fourth Sold Fresh

Ordinarily, about one-fourth of the total "commercial" tomato crop is sold for use in the fresh form. However, value of the fresh market crop in 1914 was nearly one-half the total value of all commercial tomatoes. These tomatoes, for the most part, are picked either in the mature green or pink stage and ripen after picking. Market tomatoes are grown commercially in most States, but the leading 10 States usually account for about eight-tenths of the total.

Fresh tomatoes are available the year round, starting with the winter crop in Florida and winding up with the fall crop in California, Texas, and Florida. All of the domestic winter crop, usually about one-tenth of the annual total, is grown in Florida. Peak shipments occur in February and March. These winter supplies are augmented by imports from Mexico and Cuba. The spring crop is grown principally in Texas, California, and Florida and usually comprises about three-tenths of the annual crop. Shipments are active throughout the spring months. The summer crop accounts for approximately one-half the crop for the entire year, and is grown mostly in Northern and Eastern States and in California and other Western States. Abundant supplies usually are available throughout the summer. The remaining one-tenth of the annual supply is harvested in the fall months. California is the principal source of tomatoes early in the fall, while Texas and Florida produce late fall crops.

The tomato is well established as a "must item" in the Nation's diet. During recent years, State and Federal agencies have carried on extensive research programs in an effort to improve the quality and yields of tomatoes. These efforts have resulted in the introduction of a number of new varieties with certain desirable characteristics, especially resistance to disease such as fusarium wilt, nailhead rust, leaf spot, leaf mold, mosaic and curly top, and adaptability to a specific environment. Although large smooth, high-quality fruits and high yields continue to be important objectives, the disease problem has become the primary consideration, and any new variety introduced is almost certain to be resistant to at least one troublesome disease. These developments should enhance the possibility of profitably growing high-quality tomatoes in the commercial areas of the country.

Experimentation in air transport may develop wider demand for fresh tomatoes. Possibly, vine-ripened tomatoes may be available in all large consuming markets the year round and it is believed this product will enjoy a greater demand than the "green wraps" now generally available from the more distant producing areas. However, air-transport of vegetables still is on an experimental basis, and it probably will be some time before facilities will be available for large scale air shipments. The quick-freeze process has provided wider outlets for many fruits and vegetables, but thus far tomatoes have not been successfully frozen and it seems doubtful that this outlet will apply to tomatoes. Better quality, high yields, and improved transportation and marketing facilities seem to offer the best solution to problems of the future.

Clarence O. Parker,
Bureau of Agricultural Economics

TAX SPENDING WILL BLOCK TAX REDUCTION

It seems rather futile to talk about substantial postwar tax reduction when new measures in Congress ask billions of dollars for various schemes to put the government into business in competition with private enterprise. All such government projects are tax exempt, while private enterprise must pay all known forms of taxation to maintain government and its tax-exempt activities which destroy private enterprise.

One of the latest proposals is a bill introduced in both the Senate and the House to reduce interest rates to states, municipalities or other public bodies to 2 per cent. A large part of these loans are to finance tax-exempt, publicly-owned power projects.

Government-owned power facilities built under the Public Works Administration loans and grants already escape Federal taxes. They got from the government in the first instance, a free gift grant of 45 per cent of the cost of the project, and a loan at 3 per cent on the other 55 per cent of the total cost. Now the overburdened Federal taxpayer is asked to grant such tax-exempt businesses a further subsidy by cutting down the interest rate to 2 per cent, or 1.1 per cent on the total amount of money they received in loan and gift grants

"AUTHORITY" THREAT

"The Missouri River, Columbia River, Central Valley or Colorado River, 'authorities,' individually and collectively . . . . would destroy the system of water titles and water rights which have been perfected after years of prolonged dispute. Any possibilities of future appropriation as well as present vested rights would rest not in the states, but in the Federal government." — Electrical West.

No more complete plan for national socialism was ever drawn than is embodied in the "authority" bills now before Congress. The term "authority' 'is a synonym for "dictator."

RURAL HEALTH NEEDS

Lack of medical and health facilities in rural areas is of deep concern to the Nation's farmers; according to a survey made by the U. S. Department of Agriculture.

The survey indicates that four of five farmers think that more public clinics are needed in farm areas; and more than 75 percent of the farmers included in the survey say they would like to subscribe to some flat-rate prepayment plan that would take care of hospital bills and also cover the costs of doctors' and nurses' services.

Farmers hope to see the rural realth situation improved through the placement of surplus medical and hospital supplies from the Armed Forces within the reach of farm communities. It is believed the availability of such equipment and supplies would stimulate the construction of health centers and aid in improving existing facilities.

1st State 4-H Round-Up To Be held in Jackson, Miss. Dec. 6 and 7

JACKSON, Miss.—Plans for the first State 4-H Round-Up for Negro boys and girls are nearing completion. Forty-four of the most outstanding 4-H members, representing the following 4-H projects: leadership, canning, gardening, poultry, foods, pigs, corn, cotton, beef and home improvement, will attend this even in Jackson with all expenses paid. A $25.00 Victory Bond will be given each member. They will attend a free banquet. Rev. James W. Sells, Secretary of Rural Life Conference, will be the guest speaker, representing the Governor of the State, Honorable Thomas L. Bailey.

The Round-Up is being sponsored by Jackson Retail Merchants Association under the auspices of the Jackson Chamber of Commerce. The Negro Chamber of Commerce will act as host to this occasion.

The boys and girls will be housed at Tougaloo College. Jackson College will serve as headquarters. Both colleges will serve some of the meals. The banquet will be held at Jackson College.

This State event will take place in Jackson, December 6 and 7, according to G. C. Cypress, Negro Boys' Club Agent.

WE ARE LEARNING

The net result of all the comment and investigation relating to sugar shortage, butter shortage, cheese and milk products shortage, beef shortage, poultry shortage, pork shortage, lamb shortage, egg shortage dry bean shortage and shortage piled upon shortage, is as clear as mud to the average citizen.

He is told that cattle on the range number approximately 30 per cent more than ever before in history, but he can't eat cattle on the range. In the butcher shop he sees horse meat, colt meat, much fish that was never before used for anything but crab bait, various insides of animals which are now sold for human consumption, bare bones sold for several cents a pound, and all manner of substitutes for legitimate food.

The OPA, the War Food Administration, and the Department of Agriculture are blamed for this situation. In all fairness, it should be stated that no one agency is to blame. A world war upsets any domestic economy. But it is safe to say that the "planned economy" which we accepted as a war and anti-inflation measure, had a great deal to do with the disorganization and shortages in our normal sources of supply. Uncontrollable elements in a planned economy create shortages in many instances. Holding down the hog supply or the wool market may help some producers while it hurts the consumers of lard and wool shirts.

The people must remember that the idea of a controlled economy is no different than the philosophy of socialism which puts government into business to the exclusion of private citizens. Are we going back to a free economy with the risks and rewards which it entails, or will we become resigned to accepting the judgment and oppressions of government in lieu of our own opinions and freedom of action after the war? We are having experience with a planned economy now on which to base our peacetime decisions.

DON'T THROW BRICKBATS NOW

The armed forces are doing a great job in getting the soldiers home from Europe more rapidly than anyone hoped for. The railroads, using all available equipment, are carrying the men from the ports to their homes with no more than the delays incident to so huge a mass transportation task.

If you are inclined to complain because you can't get peacetime railroad service, just stop and think what it means when a ship like the Queen Mary lands some 15,000 troops! And the Queen is but one ship, several may arrive in a single day. These troops must be moved — some a few miles, some 3,000 miles.

Never was such a transportation job faced by any railroad system Responsible officers in the armed forces and in the railroad industry realize that no transportation task of this size can be accomplished as rapidly as this one is being done without some difficulties and discomforts. The total passenger travel on the railroads this year will probably be nearly five times that of pre-war years, but it is being carried with virtually the same number of coaches and sleeping cars then available. This year's load, close to two and one-half times that of the peak year of the first world war, must be carried with 30 per cent fewer passenger-carrying cars.

The railroads would have built more cars to meet the increased traffic demand of recent years, but permission to build them could not be obtained during the war because of material and manpower shortages. The roads are now being allowed to build some cars, but these will not help relieve the situation for some months. Every effort is being made both by the railroads and by government agencies concerned, to secure the maximum use of existing equipment in moving soldiers promptly and with as much comfort as can be provided, with facilities limited by the government's own needs.

Impatience and name-calling will not change the fact that the demands of war convinced those in government who had final authority, that it was not earlier desirable to permit the railroads to buy additional equipment.

MUST WE HAVE PLANNED CONFUSION?

On the subject of postwar price regulation, the New York Times says editorially: "OPA has now issued the regulations governing reconversion price adjustments. These regulations apply to a non-existent world which has been created by OPA administrators. The facts of business life are completely disregarded. In their place is found a series of yardsticks as to what has been happening in this non-existent world. OPA recognizes that the 1942 price line which it desires to hold, may not be appropriate for every product. It therefore establishes a formula to determine the magnitude of permitted price increases. . . . This formula disregards many of the actual increases in cost which have taken place. The net result of using prices established under it will almost certainly be to slow up reconversion and to force many companies to operate at a loss."

Official planners who now have such a hold on our nation, seem fully convinced that the average American is no longer competent to manage his own production, buying and selling affairs, as in the past. If they manage to perpetuate scarcities for which they are now being blamed, our nation can look forward to unemployment and restricted production and consumption for years to come.

The future of our whole reconversion program will rest on production and distribution. If production is discouraged, there can be no satisfactory employment. And if the people are restricted in their buying, there can be no satisfactory production, because retail sales are the lifeblood of production.

It is one thing for OPA to work out theories; it is another for American producers and retailers to deal with the facts. It is about time that the men who actually have to supply our nation with the essentials of life, were given more freedom.

Their car having collided, Jock and Pat were surveying the situation. Jock offered Pat a drink from his bottle. Pat drank and Jock returned the bottle to his pocket.

"Thank ye," said Pat. "But aren't ye going to have a bit of a nip yourself?" "Aye" replied Jack, "but not until the police have been here."

NO SUBSTITUTE FOR FREEDOM

Day by day our rationing and price control system grows more taut. This situation brings us face to face with an issue which involves liberty itself. Will we turn back to the American system of a free economy at the earliest possible moment, or will we go further with controls that decide for every individual what he may produce, buy or sell? If we accept the latter doctrine, we should not kick at restrictions and shortages. If we accept the former doctrine, we should not kick at higher or lower prices based on true costs and a competitive market. We can't expect a free and easy American life with the risks it involves and the opportunities it offers, under a controlled economy.

A growing number of economists favor an early release of price controls. If some industries charge excessive prices, many new competitors will be attracted into those fields and a torrent of production will eventually cure high prices. Breakdown in price controls on reconversion products is feared by some who have studied the staggering task, as special postwar industrial situations that must await investigation may run into hundreds of thousands and small companies cannot survive long waiting periods.

The greatest safeguards the United States has against inflation are its manufacturers who produce on a low-cost basis, and its system of mass retail selling which distributes at a low unit-profit. That system, which before the war gave our nation the greatest customer service in the world, cannot exist by raising prices arbitrarily. Its salvation depends on low prices. It cannot operate on a basis of scarcity and restricted distribution. It operates on the philosophy of plenty. Such a system is a check on price gougers.

NO HARM DONE

Use of the recently introduced electric poultry debeaker to combat cannibalism in the pullet flocks does not affect egg production it has been learned in tests at the New York State College of Agriculture, Cornell University.

The device removes about one-fourth inch of the upper beak by means of an electrically heated knife that cuts and cauterizes at the same time.

In the Cornell tests, accurate records were kept on food consumption, egg production and the weight of the debeaked pullets. Egg production remained unchanged, use of feed was lowered only slightly and the birds did not suffer any loss of weight.

The hens ate a little less mash but consumed more grain the following week, the report adds. This suggests the possibility it may take a little time for the birds to adjust themselves to the new way of picking up fine-ground feed.

After debeaking, grain should be fed in troughs because it would probably be difficult for the birds to pick up small grains from the floor and food intake might be affected.

LET REASON PREVAIL

During the war, the major cost of all production has been paid by the government. There was no competition. There was no question about whether John Jones or Bill Brown could pay the cost price of an article. That situation will not prevail now that the war has ended. John Jones and Bill Brown will be looking for a saw hammer, stove, washing machine, radio or automobile at a price. If the price is too high, they won't buy it. And the price will be based on the cost of production. Labor leaders can block reconversion at the outset by exorbitant demands.

FALL GARDENS

Negro farmers throughout the South are planning to grow more winter gardens to increase their home food supply and to improve the family diet, according to reports received by the U. S. Department of Agriculture.

Summer Activities Of Georgia Extension Service

With an attendance of twenty-two Negro County Agents and an enrollment of seventy-five boys the seventh 4-H Club contest got off to a flying start at the old Dorchester Academy site on Monday morning, Alexander Hurse, Negro State Club Agent in charge.

The schedule began with breakfast from 6:00 to 7:30 a. m., with Mrs. Mabel Wright Henry acting as hostess and dietitian, doing a swell job. Immediately following this was general assembly in the Congregational Church, where, after a brief devotion, State Agent P. H. Stone welcomed the group to this section of the State, and stressed the wide and much different variety of wildlife to be found in this area as compared with that in other parts of the State.

The outstanding activity of the morning was the egg grading contest in which boys from the following counties took part: Grady, Baldwin, Appling, Jenkins, Emanuel, Worth, Terrell, Hancock, Bulloch, Peach, Sumter, Mitchell and Troup. Each boy brought along his own eggs, scales and candling machine, of his own contrivance, which added much variety to the demonstrations. Judges for this contest were Mr. Arthur Cannon, extension poultryman from Athens; Mr. G. B. Eunice, county agent of Liberty County; Mr. P. H. Stone, state agent for Negro work and Mr. R. T. Church, county agent of Jenkins County. Winners to be announced later.

Afternoon activities consisted of the elimination oratorical contest and paint demonstrations with finals coming Monday night.

Main features for the day were Forestry demonstrations with moving pictures on same, and lectures on beneficial and destructive small plants and animals and star gazing by representatives of the State Extension Service and Georgia State College.

On Sunday, August twelfth, 4-H Club members began to arrive at Dorchester Academy in Liberty County. Negro 4-H Club members have attended this State Meeting for the last six years. Previous camps have been held in Hancock County at the Log Cabin Community and in Macon County at Camp John Hope. This is the first time it has ever been held in the deep coastal section of Georgia.

The program on Monday included the following contests for boys: painting, egg grading, public speaking and achievement exercises. Certificates were given to those 4-H Club boys who have made worthwhile contributions to the war efforts at Zebulon and on their home farms. Negro 4-H Club boys picked over 80,000 bushels of peaches for farmers of Pike County in June and July. Along with their work in the orchards they carried along, during those four weeks, some of the regular phases of their 4-H Club program. The judges for these contests are Mr. Arthur Gannon, Extension Poultryman, Athens, Georgia; Mr. M. E. Coleman, American Turpentine Farmers Association Cooperative, Valdosta, Georgia; Mr. G. B. Eunice, County Agent of Liberty County; Mr. P. H. Stone, State Agent for Negro Work; Mr. J. O. Williams, Contact Representative of the Agricultural Adjustment Administration and Mr. Otto Carr, U. S. O. Director, Hinesville, Georgia.

Outstanding specialists in 4-H Club work, forestry, wildlife and soil conservation will appear during August fourteenth through the seventeenth.

This entire week's program is under the direct supervision of P. H. Stone, State Agent for Negro Work; Miss Camilla Weems, Asst. State Agent Negro Work; Alexander Hurse, Negro State Club Agent.

The highlights of Monday night's program of the State 4-H Club Short Course and Wildlife Camp which is being held at the Dorchester Academy site, Liberty County, consists of the finals of the Speaking Contests, Egg Grading Contests, and Painting Contests.

In the Speaking Contests, in which four boys participated, Preston Jackson of Morgan County won first place and Christopher Bacon of Liberty County won second place.

In the Egg Grading Contests, seventeen boys participated. First place was awarded to Frank M. Staley, Jr., of Sumter County and second place was awarded to Norman Rogers of Grady County.

Winners in the Paint Demonstration Contests were Frank M. Staley, Jr., of Sumter County, first place; and William Rome of Mitchell County, second place.

In appreciation of services rendered by County Agents and 4-H Club members in the harvesting of peaches in Pike County, Zebulon, Georgia, Mr. F. M. Staley, County Agent of Sumter County who is serving also as Regional Farm Labor Assistant, awarded Certificates of Merit to twenty-five 4-H Club boys and ten county agents who are here attending the 4-H Club Wildlife Camp. To the other 225 boys and agents assisting in the peach harvesting who are not present, certificates will be awarded at a later time.

Tuesday morning at 8:00 o'clock, the Wildlife Camp opened with seventy boys and forty girls, accompanied by twenty-three County Agents and ten Home Demonstration Agents. This group represents forty of the most progressive counties of Georgia. After the devotional exercises, several 4-H Club Pep songs were sung. This put the group in readiness for the day's work. Mr. Alexander Hurse, Negro State Club Agent, made the opening address. He stressed the importance of Wildlife study, saying: "Wildlife is beneficial to everyone in knowing one's surroundings, one's community, one's county and one's state, because the life of every living thing pertains to the well being of man." He also said that wildlife is beneficial to every boy and girl who goes to college and study botany, biology and etomology. He stressed and emphasized the keeping of notes during this course so that they would have a written record that will serve them in many places in days to come.

During the remaining of the morning session, S. H. Lee, county agent of Bibb County and Wesley Myers, county agent of Glynn County, conducted classes and gave discussions on the Care and Protection of Game and Birds and Aquatic Life of Plants and Animals. This was followed by a forestry demonstration, conducted by Mr. Homer Cason, District Fire Warden and W. A. Morgan, District Ranger, both of Statesboro, Georgia.

In the afternoon, a movie picture on Georgia Forestry was also shown by Mr. Cason and Mr. Morgan. Mr. C. V. Clay, Professor of Biology, Georgia State College, discussed Beneficial Small Animals and Plants. His remarks were interesting because there are so many things that he brought out that are beneficial to man, which in the past were thought harmful or useless.

Climaxing the program for the day was a lecture on the Stars and Heavenly Bodies by Mr. V. W. Winters, Professor of Chemistry and Physics, Georgia State College. This lecture was concluded by a demonstration in Star Gazing, conducted by Mr. V. W. Winters and Miss Camilla Weems, Asst. State Agent for Negro Work.

The activities of the camp are being directed by Miss Weems, Asst. State Agent for Negro Work and Mr. Alexander Hurse, Negro State Club Agent, in cooperation with the State Extension Services.

REVERSE

WOMAN'S PAGE

First Aid for a Sweet Tooth

Sugar Isn't the Only Sweet, Here Are a Few Substitutes and Some Stretching Tricks to Help You

Now that sugar is short, the Nation's sweet tooth has become a major problem.

We don't need the estimators to tell us we have far less sugar than we've ever had before. Our sweet tooth tells us that, all the time. But when the news spreads that we will not have as much sugar as we want for quite a while, it's time for First Aid.

Before we start on that, let's diagnose our case. First, canning With every 5 pounds of canning sugar we receive, we can process 20 quarts of fruit, or enough for about 100 average servings. The maximum allowance of 15 pounds per person will season 60 quarts of fruit. That's when you use it according to the recommended wartime allowance of ½ cup of sugar to a quart of finished fruit. You can vary that according to the flavor and juciness of the fruit. Sour fruit will take a little more and some juicy sweet fruits, such as ripe peaches, could get along nicely with less. The home canner will have to work out her own adjustments on this.

You can stretch your canning sugar with some other sweets. Proportions worked out by the Bureau of Human Nutrition and Home Economics of the United States Department of Agriculture are a good guide. Don't use strong flavored sirups, brown sugar or molasses in canning. They will change the color and flavor of your canned product.

Corn sirup may replace as much as one-third of the sugar.

Honey may be used to replace one-half of the sugar. (Light colored, mild honey is best.)

And fruit can be canned without any sugar at all. It isn't recommended, because sugar helps fruit keep its color, shape, and flavor. But if, for instance, you find yourself embarrassed by a tree full of peaches, or a wonderful bargain in berries, and no sugar, go right ahead and can them.

Sweet pickle and relishes take as much sugar as canned fruit. However, some pickles, such as dill, and sauerkraut take no sugar at all.

If your sweet tooth yearns for sweet spreads, concentrate on fruit butters. They are more economical of sugar than jams jellies, or preserves, and are wonderful aids to butter short meals. Butters require only one-half as much sugar as fruit pulp used. Jam and preserve recipes ordinarily call for equal parts, by weight, of fruit and sugar. (Wartime recipes suggest reducing this sugar to three-fourths.) A pound of sugar will make about 3 pints, or about four glasses of Jelly.

Honey and corn sirup may be substituted for part of the sugar in jams and preserves. In jam, you may replace one-fourth of the sugar with corn sirup or one-half with honey. In preserves you may replace one-half of the sugar with either honey or corn sirup.

Substitutes can be used in jelly making, too. However, jelly recipes are tricky and it is best not to tinker with them unless you're an experienced jelly maker. You might lose the whole batch and waste precious sugar.

The sweet tooth, however, calls for more than canned fruit and sweet spreads. And how are we to stretch that 5 pounds of sugar per person until December? It will take scheming, especially since candy and sweet baked goods will be short, too. Here are a few suggestions:

Serve fresh fruits for dessert.

Make a fresh fruit salad do double duty as salad and dessert.

Save sirup from canned fruit to sweeten other fruits, sauces, and desserts.

Cook cereals with prunes, raisins or dates and serve without sugar.

Instead of using up sugar on cakes and pies, serve cinnamon rolls and sweet quick breads.

In baked goods honey may replace sugar, cup for cup, but use half the quantity of other liquid called for in the recipe—and keep the oven temperature moderate. Corn, cane, or maple sirup may also replace sugar, measure for measure. Reduce other liquids a third. Keep sugar sirup on hand for sweetening fruit drinks and iced tea. To prepare, boil together for 3 to 5 minutes equal parts of sugar and water. Keep covered tightly in refrigerator.

Upside-down cakes require no frosting. can do with less sugar than most cakes.

Jelly and marmalade are still in good supply at your grocer's. So make old-fashioned jelly rolls occasionally. Use marmalade for cake filling.

Custard sauce makes a good sugar-saving filling. Remember "Boston cream pie."

Peanut brittle is in unusually good supply. Crush it and use for ice cream mix.

If you must have a frosted cake, don't frost the sides.

Add a little salt to frostings, pie fillings, and puddings. It brings out the sweet.

Use sweetened frozen fruits, such as berries and peaches, in shortcakes.

Fill the centers of baked apples and baked pears with honey, corn sirup, and raisins, or with mincemeat in place of granulated sugar.

Chop dried fruits, combine with nuts, moisten with honey or corn sirup, and use as a filling for layer cake.

Save cake and cookie crumbs and use in bread puddings and Brown Betty recipes to save as much as half the sugar.

Use strained honey or maple sirup and chopped nuts as an ice cream sauce.

Make cornstarch pudding with half the usual amount of sugar. Put a tablespoonful of maple sirup in the bottom of the serving dish before filling it with the pudding.

SARDINE CANAPES

1 15 oz. can sardines
2 tablespoons butter or margerine
½ teaspoon dry mustard
Dash of Worcestershire sauce
¼ cup cracker crumbs
4 lemon wedges

Drain sardines and separate carefully. Cream together butter or margarine, dry mustard, and Worcestershire sauce. Spread the sardines with this mixture and roll them in cracker crumbs. Broil quickly and serve hot on individual plates, garnished with a lemon wedge. Serves 4.

EGG SALAD

6 hard cooked eggs, diced
1 cup diced celery
¼ cup sliced stuffed olives or diced cucumber pickles
2 cups cooked rice or macaroni
¾ cup mayonnaise, watercress, spinach, or lettuce

Cook a half-cup of rice in a quart of boiling salted water until it is well done, then rinse in cold water drain and chill. Mix the rice, diced eggs and celery lightly. Add mayonnaise and serve on a tomato slice and greens.

FRUIT SANDWICH FILLING

1 cup nut meats
1½ cups raisins
1½ cups tart red jelly
2 tablespoons orange juice

Grind nuts and raisins. Break up jelly with fork; add to ground nuts and raisins. Add orange juice and mix well. Makes 2 cups of filling.

POTATOES DELUXE

Yield: 6 servings

6 slices cooked meat
6 tablespoons bacon drippings
2½ cups diced raw potatoes
2 tablespoons chopped parsley
3 tablespoons chopped celery (or ¼ teaspoon celery salt)
1 clove garlic
2 tablespoons flour
2 cups milk
⅛ teaspoon pepper
½ teaspoon salt

Melt bacon drippings in heavy skillet. Add potatoes, parsley, celery and garlic. Brown well. Remove vegetables. Add flour to bacon drippings. Pour milk in gradually, stirring constantly. When sauce is smooth, add the diced meat, pepper and salt. Add the browned vegetables (except the garlic clove). Heat. Serve piping hot.

A suggestion for lunch or supper, an enticing and gala assortment of cold table-ready meats welcomes cool cucumber slices and bright red tomatoes, surrounded with crisp green parsley, to set off the rose and brown shades of the various meats.

Next day serve any leftover slices in a casserole dish, such as Mexican Bologna and Corn casserole. Cut six slices of bologna into bite-size pieces and mix with four cups whole kernel corn, 1 cup cooked tomatoes, 3 tablespoons chopped green pepper, ¼ cup chopped onion, 1 teasoon salt, and 1 tablespoon Worstershire sauce. Cover and bake in a moderate oven (350 degrees) for 30 minutes.

NEW FOOD PRESERVATIVE

A new chemical as important to the canning industry as penicillin is to medicine has been used in the canning of foods going to the armed forces. Of vegetable origin, nordihydroguaiaretic acid, amazes the food industry with its capacity for preserving the sweet flavor of foods containing either animal or vegetable fats. Very soon housewives will undoubtedly become familiar with NDGA on can labels signifying still another protection of the purity and quality of food in cans.

PLAIN CUP CAKES

¼ cup sugar
½ cup shortening
¾ cup corn syrup
1 teaspoon vanilla extract
1 egg
2 cups sifted enriched flour
3 teaspoons baking power
1 teaspoon salt
½ cup milk

Cream together shortening and sugar. Add corn syrup gradually. Beat well. Add vanilla extract. Add egg, beating until light and fluffy. Sift together flour, baking powder, and salt. Add flour mixture to creamed mixture alternately with milk, beating well after each addition. Fill greased two inch muffin cups half full. Bake in moderate oven (375 degrees F.), about 20 minutes.

DEVIL'S FOOD CUP CAKES

Devil's food cup cakes, a winner with the men, give picnic menus a lift these days.

6 tbsp. shortening
1 cup sugar
Cocoa Paste
2 eggs, separated
1 teaspoon vanilla extract
1½ cups sifted flour
1 teaspoon baking powder
¼ teaspoon soda
½ teaspoon salt
¾ cup sour milk or buttermilk

Cocoa Paste

6 tbsp. cocoa
1 tbsp. margerine or butter
¼ tsp. soda
6 tbsp. boiling water

Mix ingredients. Cook over low heat, stirring constantly until paste is thick and smooth. Let cool before using.

Cream together shortening and sugar until light and fluffy. Add cocoa paste and mix thoroughly. Add yolks, one at a time, beating well after each addition. Add vanilla extract. Sift together flour, baking powder, soda, and salt. Add flour mixture to creamed mixture alternately with sour milk or buttermilk. Fold in stiffly beaten egg whites. Mix to smooth batter. Fill greased 2-inch muffin cups one-half full. Bake in moderate oven (350 degrees F.) 25 minutes.

Gingerbread cup cakes, with their spicy fragrance and mellow molasses richness are true favorites of the younger set. This tender gingerbread cup cake will win favor with the older set too.

GINGERBREAD CUP CAKE

2 cups sifted flour
2tsps. baking powder
¼ tsp. soda
½ cup sugar
½ tsp. ginger
¼ tsp. cinnamon
¼ tsp. cloves
2 eggs
¾ cup molasses
½ cup sour milk or buttermilk
½ cup melted shortening

Sift together flour, baking powder, soda, salt, sugar ginger, cinnamon, and cloves. Beat eggs and add molasses, sour milk or buttermilk, and shortening. Add to flour mixture, mixing to a smooth batter. Fill well-greased 2-inch muffin pans ½ full. Bake in moderate oven (375 degrees F.) 20 to 25 minutes.

Helpful Household Hints

AVOID FLAVOR LOSS

To chill orange juice without diluting the flavor by adding ice. use fruit that has been stored in the refrigerator for several hours. This summer's small-sized oranges store easily. It's a smart idea to keep a dozen or so chilled ready for juice at any time. Remember the time-saving trick of cutting off the stem end of small oranges and reaming the whole fruit instead of two halves.

WASHABLE ACCESSORIES

Carved plastic earrings and bracelets may be kept bright by scrubbing gently with an old toothbrush dipped in lukewarm suds.

Compacts and cigaret cases whether metal or plastic, need an occasional soap and water cleaning.

Use the sponge method to wash handbags made of plastics or washable coated frabrics.

GRACEFUL WALK IS IMPORTANT BEAUTY ASSET

By Antoinette Donnelly

If you're a bobber or a wobbler, or are guilty of other ungainly walking habits, maybe it never occurred to you that the length of your stride is causing your lack of grace. The length of your stride definitely controls the "bobbing" movement of your stride.

Look at the funny little spike heeled bobbers. They can't take a normal length stride even for them. Their heels won't let them. Then look at the girls with the overlong stride and see how they bob, too. A couple of looks is all you need to convince you that beauty lies in keeping that stride within reason. Shorten your steps, if you're a long stepper, and extend them, if you are the short, little one. You may have to throw away the "spikes" but it will be worth it. You'll look so much better and so will your clothes.

Now, if you walk with your legs too far apart, you can't stop your weight from shifting sideways on each forward step and that makes a bobber of you. The knees should just graze each other in passing. Walking with your legs close together streamlines your appearance. You won't believe how it streamlines your hips until you make a test before a full-length mirror.

With all woman's vanity, it is surprising to see women going along or heaving along you might say, with their toes turned our widely. If keeping the legs close together streamlines the hips, keeping the feet parallel and reasonably close together chops off a few shoe sizes optically. If feet are naturally wide more the reason to train the toes to answer the command: 'Straight ahead!" Until you get these basic stance elements aligned correctly, you'll not do much about giving the torso, the head, and the chin the distinctive air that's due them.

A SUGAR-SAVING COFFEE CAKE

With the contents of the family sugar-bin somewhat scant these days sugar-saving delicacies are headed tableward. Folks look forward to something sweet to eat to complete their light lunch or hearty dinner. To give them favorite sweet and luscious foods homemakers are making wise use of other less scarce sweeteners—corn sirups, honey, and molasses. These glistening sirups all do their tasty best to keep dessert time a favorite time with the family.

A basic quick coffee cake, with melt-away sweetness, finishes a meal on a most delightful note when partnered with seasonal fruits. The strawberry season is here and will soon be followed by raspberries, blackberries, and blueberries with their jewel colors and lush flavors. All these elegant fruits go well as topping or sauce for a simple basic coffee cake. Their juicy goodness, sweet flavor, and dashing color give inviting charm to the tender coffee cake.

Here is a basic coffee cake recipe with a dessert touch made pleasingly sweet and tenderly moist with such good foods as enriched flour, egg, corn sirup or honey, and milk. Such a coffee cake lends itself tastily to elegant fruits and crumbly sugar toppings.

QUICK COFFEE CAKE

1½ cups sifted enriched flour
2 teaspoons baking powder
½ teaspoon salt
1 egg
½ cup sirup or honey
½ cup milk
3 tablespoons melted shortening

Sift together flour, baking powder, and salt. Beat egg, add sirup, milk, and shortening. Blend thoroughly. Add to flour mixture, stirring until flour is moistened. Pour batter over Fruit Topping in greased 8-inch pan. Bake in moderately hot oven (400 degrees F.) 25 minutes.

Yield: 1 8-inch coffee cake.

To make the elegant Fruit Topping for this coffee cake, put two tablespoons melted margerine or butter in bottom of an 8-inch cake pan. Pour ¼ cup sirup and ¼ cup sugar evenly over the melted margarine or butter. Arrange fresh fruit in attractive fashion on sugar mixture. One such way to arrange plump berries and use as few as ½ cup of these delightful berries for one coffee cake is to make a 1½ inch border of fruit at the edge of pan. An equally pleasing fruity flavor is achieved by making a berry circle 3 inches in diameter in center of pan. Just a little fruit gives a world of flavor to the velvety coffee cake.

Serve these favorite coffee cakes often during these warm summer days. Their delicate fruit flavors represent the good foods of summer at their best. Dainty pieces of Fruit Topped Coffee Cake make excellent accompaniments for iced lemonades and orangeades. Then, too, the good vitamins the coffee cake contains makes it as good to eat as it is good for you.

"Dere Sirs: Please send me my money back. After taking six cans of yore corn syrup my feet ain't no better than they wuz."—Exchange.

ANNIVERSARY MERRY XMAS AND HAPPY NEW YEAR ISSUE

THE MODERN FARMER

VOL. XVIII. NASHVILLE, TENN., DECEMBER 15, 1945 No. 11.

The Road Up

Review of the Year

By GILES A. HUBERT

It is our fortune, good or bad, to be living in one of the most dynamic periods in history. Things are happening about us and to us with great rapidity. Prosperity, depression, New Deal, dictatorships, war, rebellion, radar, atomic power, cotpicking machine, C. I. O., Farmers' Union, Postwar Reconversion, all these are only some of the happenings which seriously affect the lives of all of us and make our lives at once difficult and interesting.

The past year has surely been no "dud" in this respect. In October, one year ago, we assumed the editorship of **The Modern Farmer.** During the following months we have attempted to report the news about and of interest to Negro farmers and their leadership. Many things have occurred. Let us attempt to review some of the more important of them in retrospect.

Concern About G. I. Joe

Last fall found our agricultural leadership was beginning to become concerned about the Negro soldier returning to agriculture. This was one of the main subjects of informal discussion when leaders from Washington and the various states met at Tuskegee in December to discuss the AAA farm program for 1945. The Annual Farmers' Conference at Tuskegee, meeting at the same time was addressed by the Secretary of Agriculture.

Last fall, Charles E. Trent, a Tuskegee trained agriculturist, was sent to Liberia, under auspices of the U. S. Department and the Felps-Stokes Fund, to assist in developing an agricultural program in the little Negro republic.

James Saunders, FSA borrower of Dublin County, succeeded in paying out for his farm. Mr. Saunders was the first farmer to be reported in **The Modern Farmer's** "Successful farmer" series.

Sherman Briscoe sent us a story about the great contribution Negro farm women were making to the war effort. Women were increasing egg and poultry production and taking the place of farm men who went into the armed forces and into war industries.

Wickard Plans Southern Reconstruction

In December, Secretary Wickard presented the outlines of a far-reaching plan for Postwar reconstruction of Southern agriculture. The plan included the eventual ending of subsidy for cotton production and proposed government aid to farmers to convert their farms into economic units following a balanced and diversified farming system.

Cornelius King, who has an interesting article in this issue of **the Modern Farmer,** wrote a story for us about the astounding progress Negro farmers in Tyrrell County,

Bankhead Bill To Aid Vets And Family Farms

Wallace Predicts Hard Times in 1950

Commerce Secretary Expects Agriculture Income to Drop 3 Billion in Coming Year

By RUSSELL SMITH

WASHINGTON. — The nation faces the prospect of a serious economic crisis in 1950 after a relatively prosperous period until then, Secretary of Commerce Wallace has told a House Committee. The Secretary also said that present prospects are for a drop of 3 billion dollars in farm income between 1945 and 1946.

"From 1945 to 1946 there will be a reduction of about $25 millions in the flow of income to labor," he said. "After we get over the reconversion 'hump,' we expect some recovery in salaries and wages in 1947 and 1948, but by 1950, with demand for consumers' durables and business capital expenditures falling, labor income goes down as well."

"The agricultural recession," he added, referring to a chart showing farm owners' net income, "would be an estimated reduction between 1945 and 1946 of nearly $3 billions; a further reduction in 1947 of another $1½ billions, and then going ahead at about $8 billions of net income for agriculture.

Corporations Okay

Under questioning by Rep. Jed Johnson, Okla., Wallace said that the income of business after paying taxes would be twice as great (between now and 1950) as during the 3 or 4 years preceding the war.

But he made it clear that farmers and labor will take a total cut of severe proportions. Farmers, wage-earners and white-collared workers will see their incomes go down about $28 billions in the coming year as compared with the wartime peak, Wallace said.

As to unemployment, the Secretary said that it was expected to rise about seven million next year, then fall off to about four and one-half to five and one-half million a year in 1947-9, with a sharp upturn to perhaps as many as eight million in 1950. Elaborating on the expected 1950 crisis, Wallace said:

"We are assuming an increase in expenditures of consumers' durable goods—housefurnishings, furniture, automobiles—between 1945 and 1946 of about $6 billions. We are assuming in 1947 about twice as much as

(Continued On Page 6 Col. 4)

CONSERVING THE SOIL

USDA photos.

Pointing out the importance of conserving and building up the soil as a means toward better crops and higher yields, Thomas E. Carter, right, technician of the U. S. Department of Agriculture's Soil Conservation Service, shows farmer James Archie of Chester County, S. C., silt deposited in the oat stubble, which proves that the soil is being washed away by heavy rains. This was 2 years ago. Technician Carter suggested that Mr. Archie develop a soil conservation program around cotton and dairying. Soon afterward farmer Archie, who lives in the Catawba SCS District, acquired four dairy cows—plans to add six more. Also he began rotating his cotton with hay crops for his cows, built terraces, strip-cropped his cotton, and plowed it on the contour. (See lower picture.) Results: Larger income from the higher cotton yield, and from his well-fed dairy cows. Still more important, he is conserving his land for his children.

Senate Bill Will Modernize Bankhead-Jones Act

Up to $100,000 for Each State

WASHINGTON.—To meet the pressing requirements of low-income farmers and returning veterans in the reconversion period, Senator Bankhead, Alabama, recently introduced a bill S. 1507 to amend the Bankhead-Jones Farm Tenant Act of 1937. The bill has been referred to the Senate Committee on Agriculture and Forestry.

S. 1507 proposes to modernize the Bankhead-Jones Farm Tenant Act and establish a basis for agricultural credit through the farm Security Administration already adapted to meet the pressing requirements of low-income farmers and returning veterans during the reconversion period.

In 1937 the programs under the Bankhead-Jones Act were set up on a limited scale to test the idea that low-income farmers, if given the right kind of aid, could achieve the security of farm ownership and maintain an adequate and decent standard of living on the land.

They also tested whether or not the American tradition of family-type farms could be helped to survive, in the face of present-day conditions.

The FSA programs—well past the experimental stage—have shown an amazing degree of success in the results obtained from aid to nearly a million family-type farmers who were in such a weak economic position that they could not qualify for commercial credit.

Most of the farm families who have been aided by Farm Security are now graduated into the class of good risks for the regular credit agencies, and many who obtained operating credit from FSA have purchased outside farms outside FSA. Nearly 40,000 of the families, white and colored, who had little

Land Grant Colleges Can Aid U. S. D. A. Employment

Dr Norris Urges Varied Curriculum in Negro Agricultural Colleges

Increased employment of Negroes in professional and subprofessional positions in the U. S. Department of Agriculture is dependent in part upon the development of a more varied agricultural curriculum in the Negro Land-Grant colleges, declared Dr. Ernest M. Morris, special assistant to the USDA personnel director, in an address recently before the Conference of Negro Land-Grant college presidents meeting in Chicago.

Pointing out that the Department of Agriculture had increased its Negro personnel in the Washington office from 275 to 859, or 213 between 1941 and '44, Dr. Norris said that one factor contributing to continued expansion would depend upon the development of training programs in the Negro colleges which will tend to qualify their graduates for more and better positions in the Department.

This, he said, would require that all of the Negro Land-Grant colleges maintain well-qualified staffs, provide flexible curricular offerings, and give careful guidance to individual students.

Analyzing the Department's personnel with respect to Negroes, Dr. Norris presented charts showing that of the 119,320 persons employed in Washington and the field in 1941, only 1,850 were colored. This included 550 extension agents. However, he pointed out that while the Department's personnel decreased to 78,721 by 1944, the number of colored workers increased to 2,503, or by 35 percent. Significant, too, he said, is the fact that while in 1941 over 82 percent of the Negro em-

Farm Credit Ripper Bill Dragged Out

House Committee Revives Measure Over Sec. Anderson's Strong Opposition

Washington.—The House Agriculture Committee, in the face of protests by Secretary of Agriculture Anderson, this week prepared to report a farm credit bill to the House that represents a watered down version of the original bill to consolidate FSA and FCA outside the Department.

It appeared probable the bill would include the seven man board originally proposed but that its function would be reduced to that of advising, and that the credit agencies would remain in the Dement of Agriculture.

Meanwhile, it became clear that a move was developing to revive the Cooley Bill giving Farm Security Administration basic legislation, and that the committee might move rapidly to its consideration once the credit bill is out of the way.

Senate May Block

Unless the Cooley Bill has been restored to something like its original form, however, it appeared highly unlikely that it would get very far in the Senate even if approved by the House. The fate of the revised farm credit bill also was highly uncertain once it reaches the Senate.

Secretary Anderson told the Agriculture Committee, which questioned him at some length, and with some vigor, that farm credit agencies belong in the Department, and that he saw no need for the seven man board. He renewed his plea for a new assistant secretary to co-ordinate credit policies. Anderson told the committee, in part:

"Because of the prevailing view that agencies of the Federal Government should be grouped under cabinet officers responsible directly to the President, I believe that for the long run the question is

Oklahoma Farmer Makes Good in California

San Francisco — (ANP) — The story of a Negro farmer who came to California from Oklahoma and rose from cotton-picker to dairyman despite obstacles which would have overwhelmed most men was told this week by the Farm Security administration.

FSA said the story that of Romeo Phillips and his wife, Bettie of Dos Palos, is one of "remarkable achievement and promise."

In the depression year 1936 Phillips, now in his early 30's, was a sharecropper near Stroud, Okla. He made good crops but prices were disastrously low—corn was 35 Cents a bushel and cotton $40 a bale. At the end of his year's work Phillips and his bride found themselves in debt.

In 1937 Phillips and his wife came to California. He worked a year for a Los Angeles utility then the couple followed the crops as migrant harvest hands. In 1941 he worked in a Vallejo shipyard but after a year in the city returned to cotton fields with his wife and two daughters, Joyce, now 7, and Argrott, now 6.

Phillips was picking cotton near Dos Palos when he decided to try a comeback as a farmer. He asked a local woman for a job milking cows for a share of the product. He didn't get the job, but he did get nine cows and a bull on credit with the understanding that the cream check would go to his credit until the cows were paid for. Nine months later he owned the cows. Later FSA loaned Phillips $500 to buy an additional four cows, all his 20-acre rented farm will support.

"I've seen a good many people try what Phillips did, but I never saw one succeed," says Eugene E. Shirley, county FSA supervisor, "It takes uncommon courage and uncommon ability to pull yourself by your bootstraps from cotton picker to dairyman."

Phillips and his wife are raising as much of their family food supply as possible. They have three pigs, a few chickens, and several turkeys. Mrs. Phillips cans a good many quarts of food every year, but the high alkaline content of their irrigation water prevents her from growing a family vegetable garden.

After 10 years of effort Phillips hopes soon to reach his goal—ownership of an adequate-sized, productive farm. He may apply for an FSA farm purchase loan and, if the application is approved, borrow the full purchase price of a family-type farm costing not more than $12,000. Repayments would be spread over 40 years at three percent interest.

Soil Conservation Practices Help Colored Farmers Up Income

By farming the conservation way, colored farmers are increasing their income and raising their standard of living, reports Assistant State Conservationist A. F Ruff of South Carolina in the September issue of SOIL CONSERVATION, a U. S. Department of Agriculture publication.

In his article entitled, "Negroes Make Good Soil Conservationists," Mr. Ruff cites several examples of successful farming by Negroes in the Catawba Soil Conservation district who are using sound soil conservation practices.

Take James Archie of Chester County, S. C., Mr. Ruff points out that two years ago he was barely getting by on his eroded, worn out cotton farm. Then the Catawba district stepped in to help him. Thomas E. Carter, colored SCS technician of the district, visited Farmer Archie and suggested that he carry out a soil conservation program with cotton and dairying. Mr. Archie agreed. With the assistance of Technician Carter, he built modern terraces, plowed his slopes on the contour, and strip-cropped, or alternated his slope cotton with bands of small grain crops across the slope to check the flow of rain water and thereby reduce erosion.

Also Farmer Archie rotated his cotton with feed crops. This not only increased his cotton yield, but together with his improved pasture, also provided ample feed for his four dairy cows which are bringing in some extra cash.

Today, Mr. Archie's farm is on the road to becoming one of the most profitable units in his community. But what pleases him most is that he is going to pass on to his children a productive farm that will enable them to make a good living, also.

In the same county, Jim Chisolm has paid for a $3,000 farm through the Farm Security Administration by using sound soil conservation practices. Conservationist Ruff says that in 1940 Mr. Chisolm grossed only $600, mostly from eight bales of cotton. Last year, he produced 12 bales of cotton on the same acreage, sold $1,018 worth of milk, and $200 worth of chickens and turkeys. Where farmer Chisolm farmerly had two scrub cows. he now has 13 good milkers, including some purebred animals.

Charlie Davis, who lives down the road from Mr. Chisolm, has increased his cotton yield from 200 pounds of lint cotton per acre to 300 pounds through conservation farming. And instead of having only three cows from which two years ago he got barely enough milk for his family, he now has nine cows from which he sold $720 worth of milk last year.

Conservationist Ruff concludes that colored farmers make excellent soil conservationists when given the necessary technical assistance and guidance. He points out

Live Together on Georgia Farm Project

Americus, Ga. — (ANP) — Two white and two Negro farm families live peaceable together on the 440 acre Koionia farms near here as a Christian experiment that tabooes the south's race theories.

Determined to experiment with the ideal of Christianity, Dr. Clarence L. Jordon, a 33 year-old white Baptist clergyman, started the model farm near here three years ago. The four families have formed themselves into a co op eration, using the Greek word "Koionia," meaning "commune" or "fellowship."

Dr. Jordan, who received his B. A. in agriculture from the University of Georgia in 1933 and his Ph. D., in Louisville in 1939, said "the four families live together on the principle of love as one large family. None owns any private property, but all pool their resources into a common fund and expendi tures are made on the basis of need." He answered criticism that his farm project resembled communism by explaining that it is basically different from communism of the Russian type in that its underlying theme was love and not force.

"Why should we let Marx and Lenin beat us Christians in demonstrating the practicality of community of goods?" he asked. "Christians have had the keys of the kingdom to world peace and prosperity for 2,000 years."

"A lot of what the Russians are accomplishing by force should have been done by Christians long ago," he said. He pointed out that it "takes two or three centuries to know whether or not an experiment in religion is a success or failure.

"Like Edison," he continued," we may discover that this first attempt is merely one of the ways that won't work, but we are determined to experiment always toward the Christian ideal."

Explaining that the experiment is in its embryonic stage, independent and not affiliated with any religious organization, he revealed that no cotton is grown on the 440 acres. The families grow peanuts, grain, watermelons and cover crops. Much of the land is devoted to raising cattle and poultry.

"Our flock of 400 laying hens makes more money than 35 bales of cotton would bring," he declared. "In three years we have paid all but $2,000 of the $25,000 Purchase price of the farm."

Dr. Jordon became interested in race relations while a student at Southern Baptist Theological Seminary. For several years, he was connected with the Baptist Fellowship center in Louisville and served as superintendent of the Missions for the Long Run Baptist Association from 1939 until Nov., 1942.

On the Agricultural Front

GIVE 20,000 CANS OF FOOD TO HUNGRY FAMILIES IN EUROPE

One of the highlights of the first state-wide Negro Junior Dairy Cattle show held recently in Greensboro, N. C., was the turning over of 20,000 cans of foodstuff to the war relief committee for destitute families in Europe.

The food was produced by white and colored farmers, and canned in local community canneries all over North Carolina. Lt. Gov. L. Y. Ballentine, who was the principal speaker at the show, said, "This splendid effort not only evidences the progress of community canneries throughout the State, but also proves that our citizens are always ready to cooperate in all patriotic enterprises."

Turning to the cattle show where Colored 4-H'ers and New Farmers of America were exhibiting 135 purbred and grade Jersey and Guernsey dairy animals, the lieutenant governor said, "This manifestation of youngsters in animal husbandry marks the beginning of a new and prosperous era for Negro farmers."

Thirteen of the animals won blue ribbons, 48 won red ribbons, and 74 took white ribbons.

In addition to the ribbons, the North Carolina Mutual Life Insurance company provided $700 in prizes. C. C. Spaulding, President of the company, was the principal speaker at the banquet in honor of the 4 H'ers and the N. F. A. members.

COLORED FARMERS SHIFTING FROM COTTON TO DAIRYING

Some of the colored farmers in Alabama are gradually increasing their income and raising their standard of living by shifting from cotton to livestock and dairy farming, according to reports received by the U. S. Department of Agriculture.

Harry Kelly of Tallapoosa County says that his seven dairy cows are bringing him $24 a week. He produces the feed for his cows on 21 acres, and sells milk to the nearby Carnation milk plant. Farmer Kelly says that he is determined to reduce his cotton acreage.

Farmer Dove Bell of Russell County has cut his cotton and other row crops from 60 to 30 acres. This was done to conserve his soil, and to provide more land area for pasture so that he can increase his livestock. At present he has 60 acres in pasture. Of these, 20 are improved. He has 40 head of cattle, also hogs and poultry.

Dr. J. R. Otis, colored state agent for Extension work in Alabama, is encouraging farmers to shift from cotton to dairying and livestock to the extent of market demands. He points out that farmers can produce milk for the creameries and cheese factories. Says he, "The dairy industry will grow in the State in the future as fast as farmers develop improved permanent pastures for grazing and hay.

Showing the contrast between cotton and dairy incomes, he says that a farmer with 10 two-gallon cows milking 10 months would gross $997 for 1,250 hours' work, while from 12 acres of cotton yielding a half-bale to the acre, the farmer's gross inome would be only $348 for 1,368 hours' work. A net gain of $649 a year—nearly double the cotton income with fewer hours of work.

SET WAGE CEILING FOR COTTON PICKING

Maximum wage rates for cotton picking were established last week by the U. S. Department of Agriculture's Office of Labor for 21 counties in Arkansas.

The wage ceilings are as follows: For picking American Upland cotton—$2.05 per 100 pounds of well picked, clean seed cotton; for pulling and snapping American Upland cotton— $1.15 per 100 pounds of seed cotton.

Wage ceilings of $2.10 for picking and $1.15 for pulling and snapping were set for 19 Mississippi counties on September 17. Ceilings were set at $1.75 and $1 for nine Texas counties in August.

25,000 WEST INDIES WORKERS ON U. S. FARMS

About 25,000 Jamaican and Bahamian workers were employed on U. S. farms during the last week in September, the U. S. Department of Agriculture's Office of Labor reports.

Jamaicans totaled 20,149, and Bahamians, 4,720. They were working in 25 States. Jamaicans were employed mainly in New York, Connecticut, New Jersey, Ohio, Wisconsin, Florida, and California, while Bahamians were to be found principally in Florida, North Carolina, Virginia, and Maryland.

PUBLICATION ON FARM LEASES

Because about four out of every five colored farmers are tenants or sharecroppers, they may be interested in a new discussion guide on farm leases which the U. S. Department of Agriculture has issued. The title of the publication is: "Let's Talk About Farm Leases and How They Can Be Improved."

The publication concludes that a good lease is a written lease that covers all items that are important to the particular situation. Pointing out that half the farmers in the United States are tenants, the pamphlet indicates the importance of good leasing arrangements to our over all agricultural program. It says that both landlords and tenants are interested in good leases. However, it points out that as a rule landlords fail to include enough inducements in their leases for the tenants to improve and develop the farm.

The publication (DS 27) was prepared by the Bureau of Agricultural Economics in cooperation with Extension Service and may be obtained from the State Agricultural colleges, or from the U. S. Department of Agriculture.

MAY NOT BE ENOUGH FARMS FOR ALL VETS AND WAR WORKERS

All of the 60,000 colored and 700,000 white enlisted men who expected that 800,000 farming opportunities will be made available through retirement of farmers, deaths, and changes of farmers to other jobs, 10,000 through release and sale of surplus military land, and about 50,000 farms through publicly financed reclamation. These farms will become available at the rate of about 160,000 a year. As for farm employment during the next five years, it is estimated that only between 500,000 and 750,000 farm workers will be able to find jobs on farms as managers, dairymen, mechanics, and laborers.

USDA TO SPEED UP SOIL CONSERVATION

To help speed up the rebuilding of soil damaged by heavy wartime farm production, the U. S. Department of Agriculture is providing for more individual farmer responsibilitiy in its 1946 conservation program.

Under the new plan, counties will be given an allocation of funds within which to operate their conservation programs. The local AAA committeemen will sit down with individual farmers and help them plan a conservation program based on the actual needs of their farms.

N. E. Dodd, director of the Field Service Branch of the Production and Marketing Administration, points out that this "grass roots" approach should help speed the efficient reconversion of the nation's farmland from the strain of wartime production to longer-range soil-building and water conservation.

It is pointed out that farmers have increased their use of lime by seven times and of phosphate by nine times since assistance for these practices was first offered in 1936. The city consumer benefits from this soil building program through quality products that are richer in food nutrients.

NEGRO FARMER CREATES OFF-FARM EMPLOYMENT

T. M. Campbell, Federal Extension field agent, reports that increasingly colored farmers are beginning to provide off-farm employment for themselves and members of their families.

He says that Rose Hill, Miss., farmers used to have to go nearly 10 miles to the nearest town to buy their groceries, get a hair cut, or visit a beauty shop. So, in 1941, Farmer Lonnie Coney decided to open a small grocery store. After operating the store two years, he was inducted into the Army and his family carried on the store. Coney sent home most of his Army pay to expand the store and its facilities. Now he owns a concrete block construction 40 by 54 feet, which houses his store, a borber shop, a beauty shop, and a filling station. This will provide at least four off-farm jobs.

The Coneys own 340 acres. Most of the heavy work is done with their tractor. Also they are members of a cooperative which owns a sugar cane mill and a purebred Herford bull.

Farm Credit Ripper

(Continued from Page 2)

not whether the farm credit and the farm security programs should be set up within an independent agency of the Federal Government. To me the question rather seems to be whether it is more appropriate for these agencies to be in the Department of Agriculture or in some other executive department of the government. Since these are the farmers' programs it seems obvious to me that they belong in that department which is engaged primarily with the problems of farmers.

"Since I believe that the Farm Credit Administration and the Farm Security Administration should remain as constituent agencies of the Department, it follows, of course, that I do not see a place for a full-time board to formulate the policies for these agencies. As a matter of fact, the basic policies should, in the case of each program, be determined by the Congress. . . .

"I need an additional Assistant Secretary of Agriculture to help me in giving general overall direction to the programs of the Farm Credit Administration, the Farm Security Administration and the Rural Electrification Administration. . . . This assistant secretary would not in any sense be an administrator of the programs involved. I think it is important that the Secretary of Agriculture continue to discharge his responsibilities in connection with these programs through the heads of these agencies."—(Reprint from the NATIONAL UNION FARMER.

Soil Conservation

(Continued from page 1)

that where such assistance has been available, colored farmers are growing the crops best suited to their land, increasing their yield, and diversifying their farming operations so that cotton is no longer their only source of income.

Hon. John L. Webb

(Continued from Page 1)

thropists, addressed the students and faculty of Morehouse College recently in Sale Hall Chapel. Following his address, President Benjamin E. Mays announced that Mr. Webb had contributed the sum of $2,000 to the Morehouse endowment fund and is the "first Negro to make such a substantial gift to this institution."

Mr. Webb, a strong believer in giving a tithe of one's earnings to worthy causes, contributes 20% annually out of his income to philanthropies. He is a prominent Baptist layman, and serves on the executive committee of the Federal Council of the Churches of Christ in America, and on the national boards of the Y. M. C. A., and the Boy Scouts.

A native of Mississippi, Mr. Webb is a graduate of Tuskegee Institute and a director of the Universal Life Insurance Company of Memphis, Tennessee. Prominent in fraternal organizations he is grand master of the Masons in the state of Mississippi.

Another announcement by President Mays concerned the establishment of the John L. Webb Oratorical Contest at Morehouse, which will offer annually to students entering this competitive effort forty dollars in cash awards. The first prize has been designated as $25, and the second prize, $15.

Methodists To Aid Rust College In Jackson, Miss

JACKSON, Miss. (Methodist Information)—Planning a million-dollar campaign for Methodist education and extension in the State, the Mississippi and North Mississippi Methodist Conferences have pledged one-tenth of the proceeds for Negro work. The greater portion will go to Rust College at Holly Springs, and the remainder will be used to strengthen rural work in Negro churches.

Wages for Sugar-Cane Workers

An increase of 16 2 3 percent in the minimum wage rates to be paid sugarcane workers in Florida has been announced by the U. S. Department of Agriculture.

The basic minimum hourly rate for harvesting work by adult male workers is set at 35 Cents per hour, an increase of Five Cents over the 1944 45 rate. Hourly rates for other classes of work were increased by a similar percentage. The higher minimum rates result from changes in such factors as income from sugarcane, cost of living, production costs, and other agricultural wages.

Piece rates per ton for cutting sugarcane (excluding loading) were not increased because new production practices in loading cane have permitted laborers to earn wages which are significantly higher than the time rates.

The harvesting rates cover the period September 1, 1945, through June 30, 1946. Wages for production and cultivation work are for the period January 1, 1946, through June 30, 1946, and are to be paid by sugarcane growers who apply for payments under the Sugar Act of 1937.

The Act requires, among other conditions of payment to producers, that all persons employed on a farm in production, cultivation or harvesting of sugarcane be paid in full by growers at rates not less than these determined to be fair and reasonable after public hearing and investigation. The determination also provides, as in former years, that the producer must furnish laborers without charge the accessories customarily supplied them, such as habitable housing and medical attention.

Refugees Well-Oriented Americans Now

Public Affairs Committee, 30 Rockefeller Plaza, New York 20, New York—An overwhelming majority of refugees, despite greater adjustment difficulties than are faced by ordinary immigrants in normal times, have become well-integrated into American community life and are now self-supporting, report Maurice R. Davie of Yale University and Samuel Koenig of Brooklyn College in the 32 page pamphlet, **The Refugees Are Now Americans.** The pamphlet, published today by the Public Affairs Committee of New York is based on a comprehensive nation-wide study conducted by the Committee for the Study of Recent Immigration from Europe.

"Fully half of the refugees have been granted citizenship. Most of the rest being in various stages of getting it," the authors state. This is felt to be a remarkable record considering the brief period of time they have been here.

Refugees have contributed substantially to American business and industry and given employment to many Americans, the study shows. Some of the refugees have showed great ingenuity in starting new types of business.

"In numerous instances they have brought with them or developed new processes, and started the manufacture of products hitherto either unknown here or imported . . . scientific instruments, precision tools, and synthetic industrial products . . . The diamond industry, for example, was transferred almost completely from the Netherlands and Belgium to this country."

American communities, facing a shortage in physicians have also gained by the coming of refugee doctors, and American medicine has benefited by the achievements of those refugees who worked in medical research, clinical work, and teaching.

Results of a special survey made in forty-one states answer American doctors complaints or competition. The total number of refugee physicians, not all of whom were practitioners, was only 3 per cent of the number of doctors in America, the survey shows.

"Reports from communities throughout the country reveal that refugees take part in all kinds of community activities. The striking extent to which refugees have fitted into American community life may be explained partly by their relatively small numbers and wide distribution, partly by their superior educational and cultural background, but particularly by their desire to become assimilated."

Neither our immigration laws nor our quota requirements were changed during the period of refugee immigration, the authors point out, despite the urgency of the situation. "Indeed, owing to the economic depression and the threat of war, the enforcement of our laws became more severe."

During the period 1933-1944, the total number of immigrants admitted was smaller than at any other period during the last century. "Only 16.8 per cent of the total number of aliens from Europe admissible under our quota law have entered the United States," the authors point out.

The Refugees are now Americans by Maurice R. Davie and Samuel Koenig is No. 111 in the series of popular, factual, ten-cent pamphlets issued by the Public Affairs Committee, nonprofit, educational organization at 30 Rockefeller Plaze, New York 20, N. Y.

AAA PAYMENTS FOR CONSERVATION

By C. C. Lanier, contact representative

Negro farmers are urged to take advantage of the assistance offered by the Agricultural Adjustment Agency.

Every farmer should use his soil building allowance for 1945. It can be used in securing phosphate and slag for winter legume crops and pastures. Idle land terracing can be done now.

Contact your County AAA Office now and use your soil building allowance. Your legume seed can be secured through the purchase order plan at your County AAA Office.

The assistance that the AAA will offer will be charged against your 1946 soil building allowance. The AAA is offering assistance in establishing a satisfactory cover of winter legumes seeded in the fall of 1945. Prior approval of the county committee must be obtained.

Kind of seed	Payment rate-cents per pound
(a) Austrian winter peas	4.9
(b) Hungarian vetch or chaffy crimson clover	5.8
(c) Hairy or woolly pod vetch	11.5
(d) Common vetch, Willamette vetch (certified), or bur clover (in bur)	6.6
(e) Willamette vetch (uncertified)	6.2
(f) Blue lupine	5.2
(g) Crimson clover (clean)	11.6
(h) Caley peas	6.0
(i) Monantha vetch	9.5
(j) Mixed vetches (minimum 70 per cent hairy)	10.6

Payment will be made for legumes seeded with small grain.

Specifications: The following seeding rates per acre are recommended:

Austrian winter peas, Caley peas (scarified), Wilamette, Monantha, common, or mixed vetches	30 lbs.
Hairy, wooley pod, or Hungarian vetch	20 lbs.
Crimson clover (clean)	15 to 20 lbs.
Blue lupine	50 to 75 lbs.
Caley peas (unscarified)	40 lbs.
Chaffy crimson clover or bur clover	60 lbs.

On land on which a good crop of the particular winter legume was not grown during the preceding year, the seeed must be inoculated.

Winter legumes should be fertilized with at least 300 pounds of superphosphate or 500 pounds of basic slag per acre, unless the land was fertilized with at least 300 pounds of a commercial fertilizer per acre for the previous crop. In fields where there is a known deficiency of lime, this material should be applied.

A satisfactory cover will be deemed to have been established when the land is uniformly covered with a growth from which a reasonable tonnage of forage could be harvested.

Sales receipts or other supporting evidence of seed will be required.

Sales receipts or other supporting evidence of seed will be required.

Seeding adapted pasture grasses or pasture legumes between August 1, 1945 and December 31, 1945, for establishing permanent pasture. Prior approval of the county committee must be obtained.

Grass or legumes	Payment rate per pound	Maximum payment per acre
(a) Dallis grass (imported)	45 cents	$4.50
(b) Dallis grass (domestic)	20 cents	5.00
(c) Blue grass	25 cents	1.25
(d) Orchard grass	30 cents	1.50
(e) Black medic	25 cents	2.50
(f) White Dutch clover	50 cents	1.50
(g) Red clover	25 cents	1.75
(h) Hop clover	25 cents	.75
(i) Alsike clover	25 cents	.75
(j) Persian clover	25 cents	.75

SPECIFICATIONS: Single seedings of any of the above pasture grasses or legumes will qualify only when used in reseeding or overseeding existing pastures, or completing the establishment of new pastures on which at least one grass or legume was seeded during 1944 or 1945. Where single seedings are made, payment will be made only for (1) seeding pasture legumes on existing pasture grasses or (2) seeding pasture grasses on existing pasture legumes.

Audience of 500 At

(Continued from Page 1)

Buren has appeared in Gershwin's "Porgy and Bess" singing the role of "Strawberry Woman" more than 100 times. She also has appeared as soloist in 100 additional programs given by the cast of "Porgy and Bess" for the armed forces in New Caledonia, Guadalcanal, New Hebrides and Flodida Islands for the past six months.

Miss Vann Buren received her A. B. degree from Fisk University and her bachelor of Music degree from Oberlin Conservatory. She now serves on the faculty at Wilberforce University, Ohio.

At Lane College she was received by a very appreciative audience of over 500 citizens of West Tennessee. Prof. Harry Baker, music instructor at Lane, served as accompanist. The program was sponsored by Beta Omega Sigma Graduate Chapter of Delta Sigma Theta Sorority as one of its projects designed to serve as an inspiration to our young people in colleges and high schools. At this time the announcement of the recently established graduate chapter which has come to serve our community was made.

After the concert a reception was given in the science building. The reading room was beautifully decorated in the sorority colors—crimson and cream. More than 300 persons accepted the invitation to meet the artist. Those who comprised the receiving line were Soror Van Buren, Dr. Dean Yarborough recently elected president of Lane College, Dean and Mrs. P. R. Shy, Dr. J. A. Johnson, President of Phillips School of Theology and Mrs. Johnson and Mrs. E. M. Golden. Several musical numbers were rendered by Soror Arva, Lee Sims and a young men's quartette of Lane College.

The officers of Beta Omega Sigma Chapter are Grace Johnson, President, Essie M. Golden, Vice-President, Cora DeBerry, Secretary, Ester Payne, Treasurer and Arva Lee Sims, director of music. Other members are Lottie Brooks, Bertha Epps, Louise Fonier, Anna Lee, Winnie Lou Nelson, Lucille Fuller, Juanita Patton, Willie Belle Rawles, Essie Sharp, Daisy R. Shaw, Dorothy Stevens, Eunice Strayhorn, Myram C. White, Etta B. Williamson, and Cotrell Young. Soror Dorothy Stevens, the first president of Beta Omega Sigma Chapter, recently received a leave of absence from duties at Lane College to matriculate in graduate school at Chicago University.

A TEA

Miss Anderson and Mrs. Church gave a tea at K. Garden's Funeral Home at 1511 Jefferson St., December 2, 1945, in honor of the Shannon's Baptist Church. The tea was well supplied with guests. Mrs. Church requested that Miss T. Shockley act as mistress of ceremony. We had an enjoyable evening. The amount raised was $12.42.

United College Fund Has Raised Total of $1,030,000

NASHVILLE, Tenn. (Methodist Information).—The United Negro College Fund, in which 32 colleges are represented, has raised $1,030,000 in its second annual campaign in 45 cities. Over 90,000 individual persons made contributions, in addition to substantial gifts from foundations and business concerns. A large number of Negro service men overseas gave $45,000 to the fund.

Methodist headquarters here announced that the following of their colleges would share in the receipts: Bennett, Bethune-Cookman, Clark, Dillard, Gammon, Philander Smith, Samuel Huston, and Wiley.

THE FORUM

The Modern Farmer

Published monthly by the Modern Farmer at Nashville 3, Tennessee.

Giles A. Hubert _____Editor
Sadie Wilson _____ Secretary
Henry Allen Boyd_.___ Publisher
Office, 403 Charlotte Avenue.

Devoted to the interests of the Farmer, Truck Gardner, Livestock and Poultry, Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929. at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer, should be addressed to The Modern Farmer, 403 Charlotte Avenue, Nashville 3, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

An Apology

In the October issue of **the Modern Farmer** an editorial was carried criticizing the alleged purchase of the Booker T. Washington birthplace for what appeared to be commercial purposes. The editorial was based on information published in the **Norfolk Journal and Guide** (as the editorial stated).

It now appears that some of the information in the **Guide** article was erroneous and has since been corrected publicly by that paper. We wish to do the same. Hence we are publishing herewith a statement by Mr. Phillips, the purchaser, which explains the purposes of the purchase and plans for future development of the site.

—The editor.

Letter to the Editor

1500 Bishop Street,
Little Rock, Arkansas,
October 9, 1945.

Mr. Giles A.. Hubert, Editor
Modern Farmer,
402 Charlotte Avenue,
Nashville, Tennessee.

Dear Mr. Hubert:

I work with Negro Farm Security Administration borrowers in Region VI comprised of 3 states: Louisiana, Mississippi, and Arkansas. I want you to know how much the **Modern Farmer** has meant to this segment of our farming population. It has served as a magnificent source of inspiration and information for them. It gives them the assurance that they are a definite part of our social order rather than an isolated group never spoken of or read about. Not only is this true of our borrowers, but of all the farmers with whom I've had contact who have read this paper.

Modern Farmer gives the one-horse farmer in the most remote section of Mississippi or Louisiana an opportunity to know what other farmers all over are thinking and doing—a lovely opportunity for an exchange of ideas. Thus this magazine brings closer all of us who are interested or engaged in any agricultural pursuit.

We should commend ourselves upon the success that has been ours during the first year's adventure, and a special commendation should be given to the Editor for his foresight in first introducing and then sponsoring the idea. We pledge to you and **Modern Farmer** our unstinted cooperation and support. Enclosed please find money order for the sum of $1.00 for renewal of my subscription. Kindest regards.

Sincerely,
Ocie Lee Smith.

A welcome variation from the everlasting round biscuit is obtained when you cut them in different shapes such as diamonds, crescents or squares.

When remaking old garments hold them up to the light to find worn spots then refashion them so that the worn spots come where they wil get the least wear or strain.

An Xmas Present—(For Japanese Farmers)

News comes that General Douglas MacArthur has ordered the Japanese government to carry out sweeping agricultural reforms. The order requires the Japanese to carry out the following measures: *to abolish "feudalistic land ownership" in rural Japan:*

1. Transfer of land ownership from non-operating and absentee landowners to people who till the soil.

2. Provisions for the purchase of farm lands by legitimate farmers at equitable rates.

3. Provisions enabling tenants to purchase land on our annual installment plan *commensurate with the tenants' income.*

4. Provisions, such as adequate credit at low rates, stabilized prices, protection from exploitation, adequate education and guidance, so designed as to protect the new owners from reversion to the former status of tenancy.

"The purpose of this order," it is stated," is to exterminate the pernicious ills which have long *blighted the agrarian structure of the land,* where almost half the total population is engaged in husbandry."

What a Christmas gift this is to the Japanese farmer. What liberality and democracy—oh, so far away.

The Farm Security Administration and more democratic elements in our Southland have tried and tried, "again and again," to get these same provisions for tenant and sharecropper familiar here. They have been fought on all sides by the vested land interests and the people who are afraid of democracy."

The South has been "blighted" by a pattern of "feudalistic land ownership" ever since the inception of the "cotton kingdom," yet we have done very, very little about it here. In fact, a strong and determined move has been on to hamstring or completely abolish the FSA which is the only agency yet established to do something about this problem.

Now, in our *great paternalistic "goodness,"* we set about trying to do something for a conquered people which we do not have the will nor the courage to do for ourselves.

The only *Xmas present that the Southern tenant farmer gets this year,* is the overhanging prospect of being *uprooted from the land* entirely *by the mechanical cotton picker* and the *flame chopper.* For him there is little or no chance.

IT CAN BE DONE

GETTING TOGETHER ON FOOD FOR THE WORLD

By

A Friend of Farmers

The new Food and Agriculture Organization of the United Nations has cut out for itself a life-sized job. Its goal is to see that enough food is raised in the world for all the people of all the nations to buy, to eat and to sell—that this food is of the kind needed, and that it goes to the right places at the right time, reaching the people with money to buy, through the markets; reaching families with very low incomes through some other means of distribution. It's a big job.

Back in 1943, when food supplies were tight, and the transportation to get them where they were needed was still tighter, 44 nations, invited by the late President Roosevelt, got together at Hot Springs, Virginia, to spell out their food problems and find an answer to them. They were sure that in the answer to their food problems they would also find the answer to many of the problems that breed wars.

So they established a commission to work out plans for a permanent organization to bring the nations of the world together on the problem of food for the world. The result was the Food and Agriculture Organization, which began its official life at Quebec, Canada, last month, with Sir John Boyd Orr, scientist and farmer of the United Kingdom, as its first Director General.

FAO came alive in a world terribly afraid of war, but even more afraid to tackle forthrightly the problems that cause it.

When World War II came to its smoldering end, it left these problems on the doorstep of the nations like so many unexploded bombs. Problem No. 1 was hunger.

Making the hunger bomb harmless is a **must** for us Americans if we aim to sell our goods to the rest of the world. It is also a must if we want to live at peace with our fellow-men. Hungry people are not peaceful people, neither are they good customers for our trade—export or domestic.

Unless we, too, are to go without the things we need, what we raise on American farms must find a market, either here or abroad—and all that we raise cannot be sold at home. That is why, even if we had no charity at all for our fellow-men—if we were just the hard-bitten, tight horsetraders that we sometimes like to fancy ourselves—we would still have to be interested in seeing that all people in all countries had some way to get food and the means to buy it. That is why, if we are smart, we are going to be interested in doing our part to make FAO work—work for ourselves and for the rest of the world. What is it that FAO must do to put over a good, clean-cut job, help fill the world's empty stomachs, step-up its trade and relax its war-torn nerves?

For nations whose people have never been far from the threat of mass starvation, a successful Food and Agricultural Organization would mean the establishment of a world food pool—an ever-normal granary for all the nations—from which needy nations could supply their most pressing needs. It would mean an international food allotment plan. Through a food-allotment plan, little countries with little money and great need would be able to buy this food at prices within their ability to pay.

But what would it mean to big, prosperous countries like our own, for we **are** prosperous as a nation, even though tens of thousands of our fellow-Americans don't have enough to eat or wear, or fit places to live. Up to now, raising "enough food" for American "needs" has meant raising as much as folks with the price to pay could buy. Those without the price have gone hungry, just as the people in Europe, the people in India and the people in China have gone hungry when they couldn't reach our price.

A good home-front program including a food-stamp plan, a school-lunch program based on national health needs, and some government purchase for direct distribution should straighten that out. The differenee between food—and fibre—used that way, and full agricultural production based on world commodity needs would go into the world pool for use outside this country.

Up to now, a "good price" for our farm products has added up to the highest price the market would bring, or to a government "support price," that is, to a market price plus a subsidy payment when demand failed to keep the market price up to a certain level.

A "good price" the FAO way, (If we give Sir John Orr's FAO progressives the backing they need), would be a reasonable price, agreed upon internationally, at which we could dispose of all the food we raise, and at which other countries—even poor countries—could buy all the food we raise.

With a good home-front program and a good world-front program there would be no more need for potato-dumping in Louisiana bayous, or egg-dumping in Georgia, while people in Belgium, Greece and East St. Louis, Missouri, went hungry, and American farmers went broke.

Also don't forget that price support doesn't come free. We all pay for it, and pay many times the cost of our share in a realistic world food program that reached the causes of hunger and rural poverty instead of merely patching the results.

So, if we mean to live and let live—to be good neighbors to the rest of the world—we'll support the Food and Agricultural Organization, and we'll ask our neighbors and our Congressmen to support it. But if we're just good horsetraders we'll do the same. As farmers, we stand to gain from either point of view.

HAVE YOU PAID YOUR POLL TAX YET?

OR DID YOU KNOW THAT YOU ARE SENDING FOLKS OVER TO EUROPE TO SEE THAT THE VOTING IS DONE FREE AND FAIR **OVER THERE?**

TWO WAYS TO GET THINGS DONE

By GEORGE S. MITCHELL

At least two-thirds of the farmers of the South need land that is richer, better stock, better tools, better homes, and better markets.

Until the last generation or two, the only way a man knew to get those things was to make them for himself on his own farm out of his own skill and sweat. Self- reliance is still one of the great virtues of the countryside. The habit is so deeply ingrained that it sometimes hinders farmers in using, in its due share, another way to get things they need.

When grandfather needed a house, he cut the timber, had it sawed on shares and put it up room by room himself. If grandfather was a cropper, his landlord let a contract to a country builder who ran up forty-odd two-room houses, and grandfather took the one they sent him to. Today, in most places, when you need a house, you begin talking about interest rates, and FHA, and wage rates. If you live in a progressive community where people have learned something about getting ahead together, you may be served by a Rural Housing Authority. It has put good three-bedroom houses with bathrooms onto owners' farms or tenants' farms for a charge of around one hundred dollars a year.

If your land is thin and washed, you can join a Soil Conservation District and get the advantages of heavy equipment to put your fields and your neighbors' fields in shape to bring the land up.

If your wife carries water from a well and washes clothes in an iron pot, and your kids won't study by the light of an oil lamp, you can get pumped water and electric lights by working hard and saving money until you can buy your own electric power plant. Most farmers can get these things quicker by forming a rural electrification cooperative and bringing in power from a central station. The cost will be less and the service better.

If your farm fronts on a river and the river floods every year, you can try to keep your land dry by building a dike yourself. You will have more success and use less sweat, if you join with all the other farmers up and down the river to vote for a Congressman who will get a River Valley Authority that will do the job right.

The new way is a self-reliant way too. Housing Authorities and REA Co-ops and Soil Conservation Districts and Valley Authorities only succeed because of the brainwork put into them by the citizens who build them and use them.

These things spell organization. It is not enough today to have grandfather's skill in tending crops. A farmer must have a modern man's skill in working with his neighbors to get the things all farmers need.

BIBLES FOR CHINA

The British and Foreign Bible Society reports that its receipts for 1944 have broken all records. This society has ordered 100,000 Bibles in the Chinese language to be printed in Sweden, according to reports from Stockholm. Reports have also been received that 75,000 Bibles in Polish are ready for export from Sweden; that copies of the Scriptures in Estonian, Latvian, Rumanian, Czech, and Bulgarian are ready to be printed. Truly, "the Word of God is not bound."

A handy scraper for scaling fish can be made by tacking three bottle caps to a small stick.

Returning Vets Use Coop Farm Credit

November, 1945

Returning veterans and service men are making increased use of cooperative, farm-controlled organizations to obtain credit for farm production purposes and to purchase farms, says I. W. Duggan, Governor of the Farm Credit Administration. "To date, 3,480 veterans and service men have borrowed from production credit associations to purchase livestock and equipment necessary to carry on their farming operations," says Duggan. "And we expect the number to increase materially by next spring when more of them will have returned to agriculture.

The production credit associations, besides farm-control and cooperative set-up, feature a low interest rate and convenient repayment terms, including repayment in installments. They also make budgeted loans in which the borrower gets a commitment from the production credit association at the beginning of a crop year from the full amount needed throughout the season. The funds are advanced to him as he needs them, but interest is charged on the money only while he has it.

Governor Duggan says that at this date he can not see much increase in activity in the farm real estate market due to G. I.'s returning, but he expects sales to veterans to pick up by spring. More than 700 veterans and men still in service had obtained long-time loans for $1.800,000 by September 30 from the local cooperative national farm loan association. These land bank loans are made on very favorable terms—from 20 to 30-odd years—and bear low interest rates.

"To buy a farm with the assistance of a land bank loan," says Duggan, "the veteran should be able to make a substantial down payment and should have the necessary stock and equipment and experience in farming. If he has these three requirements and the selling price is not too inflated, he is likely to be accommodated through the local national farm loan association."

Duggan advises all veterans, service men and war workers, unless they are entirely familiar with the farms and area where they wish to operate to counsel with the County Farm Advisory Committee or the secretary-treasurer of the local national farm loan association. He also adds, that an independent appraisal by a land bank appraiser of a property which a veteran contemplates buying is fully worth while especially if the purchaser expects to pay for the farm from profits derived from operating it.

USDA PENICILLIN RESEARCHER RESIGNS

Dr. Robert D. Coghill, who directed the research that perfected the first commercial production of penicillin, has resigned from the scientific research staff of the Department of Agriculture. He will become associate director of research for a large pharmaceutical corporation. Dr. Coghill is the head of the Fermentation Division of the Department's Northern Regional Research Laboratory at Peoria, Ill.

In July 1941, five months before Pearl Harbor, under Dr. Coghill's direction, the USDA began research at Peoria to develop methods of increasing yields of penicillin. This led to selection and development of improved strains of penicillin producing molds, and to the discovery that use of corn steeping liquor and milk sugar in the diet fed to the molds was conducive to better penicillin production. Yields of penicillin were increased more than a hundredfold by application of these discoveries. The increased yields enabled the pharmaceutical industry to undertake the commercial manufacture of the drug on a large scale. Today there are approximately 13 plants in the U. S. and Canada turning out a total of 200 billion units of penicillin per month—enough to treat 250,000 serious cases.

EDITORIAL OF THE YEAR

WHICH WAY—MR. NEGRO FARMER?

WHICH WAY—MR. NEGRO FARMER?

The Secretary of Agriculture looks southward and frowns. He is worried about cotton. He is worried about the millions of people who produce cotton and the additional millions whose business and commercial lives depend on cotton. He certainly has plenty of people to worry with him.

We produce more cotton than we can sell at a price which can sustain the cotton system. When we peg the price in the U. S. at 19c or 20c, while the world market price is 11c or 12c, we do two things: (1) We encourage production at home and build up surpluses which cannot be sold at home or abroad without great loss to government. (2) We encourage production, and expansion of cotton acreage abroad thus increasing the competition to American cotton.

The Secretary says, in so many words, that THIS CAN'T GO ON FOREVER AND FOREVER. He points out also that all the competition does not come from cotton production abroad. There is increased competition from other fabrics—nylon, rayon, etc. It will be difficult for cotton to compete with these fabrics at home or abroad as long as the mills must buy cotton at high pegged prices.

Increased use of machinery in cotton production is another factor that is disturbing. "Mechanization of cotton production is inevitable," says the Secretary, "we can't stop it and we should not try to." The social implications of the prospective displacement of families is enormous.

In other words, the Secretary means IT IS TIME FOR A CHANGE. And, he makes a proposal. Instead of government subsidizing the perpetuation of an unsound cotton production system, why not let government subsidize a change-over to other lines of production where this is needed, on the one hand, and help mechanized growers adjust to more efficient production in the more favored cotton producing areas, on the other hand.

In this manner we may be able to bring to an end finally the need for subsidies and a more permanent adjustment made in Southern agriculture. This all sounds good, reasonable and solid.

From the point of view of Negro farmers who will be a major element in this change-over, there are several questions which should be raised.

Will opportunities for educational guidance and financial assistance be equalized as between whites and Negroes. In any process of social change, competition for a place in the new scheme of things becomes increasingly severe. Those less able to make the adaptations to change are lost in the shuffle.

If Negroes have poorer schools and less teachers, if Negroes have less county agents and supervisors or less competent and sympathetic guidance, if they cannot belong, AS EQUALS, to the organizations that make for progress and development, Negroes will be the losers.

If Negroes are not provided with the same amounts and quality of land and capital resources as other farmers, they will not be able to compete. Will the same old philosophy of SERVE THE WHITES FIRST AND PROVIDE NEGROES OUT OF WHAT IS LEFT prevail?

Another question: Will large mechanized factory type farms be encouraged to occupy all of the better lands of the South? Or, will there be any subsidy for the establishment of cooperative farms or of family type farms so organized in cooperating groups as to efficiently utilize modern machine and scientific techniques.

MOST NEGROES ARE NOW TENANTS AND SHARECROPPERS ON THESE BETTER LANDS. FACTORY FARMS WOULD DISPLACE TWO-THIRDS OF THEM. The remainder would become an agricultural proletariat in an area where the whole historical and traditional background would tend toward their continual exploitation and impoverishment.

The COOPERATIVE FARM or COOPERATING FARMS types of arrangement would support the largest number of families possible under conditions of efficient production and adequate living standards.

It is realized, here, that many Negro families on farms now too small for efficient production will have to leave agriculture and find other occupations. Many will not be able to learn fast enough to make rapid changes in methods and mode of living. It is hoped that expanding industry and commerce can absorb these people in time. Government will necessarily have to tide them over.

The question is how many Negro farmers will be able to acquire land good enough, capital sufficient enough and education fast enough to survive the change-over. The Secretary is right—it is time for a change. But, which way the agricultural Negro? UP THE LADDER, DOWN THE LADDER OR OUT?

(Selected by a committee of readers as the "Editorial of the year."

Want to save steps? Then keep baskets at the head and foot of the stairs to collect what must be taken up or down.

A fresh egg will have a chalky, rough shell. A smooth, shiny shell is a sign of old age.

Pepsi-Cola Scholarships For High School Graduates

Scholarships To College Provided For Negro Boys and Girls In States With Separate Educational Systems; Throughout Rest of Country, Negro Students Compete on Equal Basis In New, Free, Nation-wide Competition

Program Is Made Possible Through the Pepsi-Cola Company As a Public Service; Policies and Administration Carried Out by Special Board of Educators, Including Dr. Mordecai W. Johnson, President of Howard University; College Entrance Examination Board Prepares and Scores Test

SCHOOL OFFICIALS URGED TO GIVE STUDENTS CHANCE OF PARTICIPATION

Nineteen Negro students, 8 boys and 11 girls, are starting off to college this Fall on scholarships which they won in a new, nation-wide competition, financed by Pepsi-Cola Company as a public service, and planned and administered by a group of noted educators, including Dr. Mordecai W. Johnson, president of Howard University.

The purpose of the Program is to give an opportunity to promising students to go to college, and especially to enable those students among them to continue their education who could not do so without financial assistance.

All Pepsi-Cola scholarship winners are receiving complete tuition and other required fees for four years at any accredited college or university of the student's choice in the United States, together with $25 a month to help defray living costs, and a further allowance for travel.

In presenting plans of the Program to leading educators who comprise the National Administrative Board for Pepsi-Cola Scholarships, which is entirely responsible for the policy and execution of the Program, Mr. Walter S. Mack, Jr., President of Pepsi-Cola Company, emphasized that the Company would meet any financial requirement which would enable Negro school children in all parts of the country to participate in the competition on a fair and equal basis with other children.

"To give Negro pupils an equal opportunity," says President Mordecai Johnson, "in the 17 States and the District of Columbia which have separate school systems for Negroes and whites, it was decided that twenty scholarships—for Negro students only—would be added for the District of Columbia and those states having separate educational systems. In this way, thanks to the realistic approach of the Board and the generosity of Pepsi-Cola Company and its President, Mr. Mack, at least twenty Negro children would emerge winners of the generous four year college scholarships. In addition, throughout the rest of the country, there would be as many more colored winners as would distinguish themselves in general competition which determined final selecion." Negro pupils in all but the southern states compete for the two scholarships offered in each state on the same basis as all other pupils.

In accordance with this policy, special scholarships for Negro students were offered in the following States: two each in South Carolina and Mississippi and one each in Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Missouri, North Carolina, Oklahoma, Tennessee, Texas, Virginia and West Virginia.

Commenting on the response to the scholarship program, John M. Stalnaker, Director of the National Administrative Board for Pepsi-Cola Scholarships, and Dean of Students at Stanford University, said, "All states with separate educational systems will be represented by Negro scholarship winners when college opens this Fall (with the exception of the State of Delaware, which did not enter a single Negro candidate for the competition). Selections are based on the results of an examination which was prepared and scored by the College Entrance Examination Board. This examination was given before graduation in participating schools throughout the United States, to candidates elected prior to that by their classmates as 'most likely to succeed' and thus eligible to take the test. Seniors were permitted to elect from their class 5 percent of their number for this purpose. Where the class had fewer than 50 members, two students were permitted to take the test. There was no charge, premium, or fee to students or schools for entering the competition or for taking the test. The only obligation of scholarship winners is that they remain in good standing in the college which they enter, progressing normally from year to year," continued Dean Stalnaker.

"There were only 179 Negro schools which participated by sending 562 applications," pointed out Dean Stalnaker. "In spite of the large Negro population in Mississippi, for example, there were only 25 competing for the two Negro scholarships offered in that State. In South Carolina, where there is also an especially large Negro population, tow csholarships were also offered, to give a more equitable opportunity to the Negro boys and girls from this State and here, too, the number of applicants was not proportional to the number of colored high-school seniors. I know that Negro school officials are alive to the opportunity being given their students. An improved mailing list for the second year's competition will allow us to send letters directly to the Principals and School Superintendents of all Negro High Schools. Undoubtedly, they will arrange to give all their boys and girls the opportunity to enter this unusual and generous scholarship competition. Schools which wish to make this opportunity available to their seniors should request information from the office of the National Administrative Board for Pepsi-Cola Scholarships at 532 Emerson St., Palo Alto, California. General announcements will be distributed early in December, 1945," concluded Dean Stalnaker.

The highest score among this year's winners in the special Negro scholarship awards for the 17 States was made by 18-year old Charlie Jack Jolley, a graduate of Hubbard Training School, Forsyth, Georgia, who plans to specialize in engineering after his discharge from the Armed Services. The highest-scoring girl was 17-year old Artrelle Hazel Miller of Kimball High School, Kimball, West Virginia, who will specialize in chemistry at the Virginia State College for Negroes. The second highest-scoring boy was 17-year old Charles Wheeler Ratliff of Dunbar High school, Shawnee, Oklahoma, who is entering Tennessee State Teachers College. The second highest-scoring girl is Huberta Nicholson, of Shady Grove High school, New Boston, Texas, about to enter Tuskegee Institute.

Negro winners and honorable mentions in all states where separate scholarships were awarded are published.

INDIA DECREASES COTTON ACREAGE

The first all-India cotton report for 1945 46 indicates that acreage planted in cotton prior to October 1 was about 20 percent less than reported in the corresponding estimate for 1944-45, according to the Department of Agriculture's Office of Foreign Agricultural Relations.

Planted cotton covered by the survey totaled 9,297,000 acres, compared with 11,560,000 in a similar report a year ago. The first official estimate usually covers about 60 percent of the acreage.

The Road Up

(Continued from Page 1)

N. C., were making in cooperative development. The article entitled "Other Lights of Tyrrell" told of how these Negro farmers, under leadership of a school principal, Prof. S. P. Dean, were showing the world how poor farm people could lift themselves "by their own bootstraps" toward economic independence.

The fact that North Carolina was leading the rest of the country in cooperatives among Negro farmers was shown in an article by Neal McLean on cooperative activities at Bricks, Tillery and other points in Eastern North Carolina. It was in the December issue that we published the editorial which has been selected as our "editorial of the year." The editorial was entitled, **"Which Way—Mr. Negro Farmer,"** and it is repeated in this anniversary issue on page 5.

Mechanical Cotton Picker An Accomplished Fact

In our January issue we published one of the most thought provoking articles of the year. Nat Caldwell, of **The Nashville Tennessean,** told a forceful story of how the cotton picking machine had been perfected and the great problem of displacement of agricultural labor in cotton states which will come with the wide introduction of this machine in the immediate postwar years.

Paul Ewing of Arkansas, was reported as the first FSA farmer in Arkansas to repay his FSA loan in full, thus purchasing his farm. In Arkansas, also, the Farm Security Administration decided to sell the Lake Dick project (under the congressional liquidation edict) not to farmers but to planters at the highest bid.

The War Department announced that only 28,000 Negro soldiers indicated a desire to operate farms after the war. Most Negro G. I.'s from the plantations and tenant farms of the South had no intention of returning. For those soldiers who did wish to return to agriculture, the Veterans' Administration announced a program of guidance under the "G. I. Bill of Rights." The Farm Security Administration appeared, in the announcement, to be the key agency for financing and settlement of the Agricultural G. I.

Frank Pinder and Jerome Robinson Go Abroad

In February came the announcement that Frank Pinder, cooperative specialist, and Jerome Robinson, personnel officer of FSA had left that outfit to accept new wartime jobs. Pinder went to Liberia, as an employee of the Foreign Economic Administration, to help that nation stop up its contribution to war food production. Robinson joined UNRRA to work with displaced families in France and Germany.

Negro farmers in Anson County, N. C., reported successful hybrid corn tests. Henry Wallace, former Vice President of the U. S., and former Secretary of Agriculture, was appointed Secretary of Commerce and Aubry Williams, who was appointed Rural Electrification Administrator, was not confirmed by the Senate. The Consumers' League of New York published a scathing report of conditions in New York farm labor camps.

TOM ROBERTS DIES

In March all of us were shocked by the death of Thomas N. Roberts, assistant to the Director of Personnel in the U. S. Dept. of Agriculture. Through hard work, outstanding ability and a winning personality, Tom Roberts had risen to a top position of leadership. His passing left a big gap in Negro Agricultural leadership. The whole department as well as Negroes in agriculture have missed his energetic and wise counsel.

During the month the first story came in of FSA aid to a Negro veteran of World War II. He is Robert G. Milliner of Wetumpka, Alabama.

R. H. Brown, Shelby County, Tenn., celebrated his 25th anniversary as a county agent.

T. N. Campbell, field agent for the U. S. Agricultural Extension Service, was selected as a member of an Anglo-American Commission to study and make recommendations regarding agricultural education in Nigeria and other British possessions in West Africa. A Negro farmers' curb market in Wilson County, N. C., reported successful operations having an annual sales of $4,095 in produce.

FDR DIES—FSA GETS $25,000,000 FOR G. I.'S

The big news of April, of course, was the death of the "Chief," President Franklin D. Roosevelt. Negro farmers and agricultural workers, the nation over, felt they had lost a great friend, a world leader devoted to the interests of the "little man." **The Modern Farmer** joined in the nation's tribute to its fallen leader. The benefits of the New Deal administration to Negro farmers were pointed out.

News came through that the House of Representatives had voted $25,000,000 to FSA to extend its aid to G. I.'s who wished to return to agriculture. Cicero Williams joined our list of "successful farmers" when he paid off his $4,000 note to the FSA to purchase his farm.

Dr. F. D. Patterson, in an article in **Land Policy Review,** said that improper land use was the basic cause for Negro migration from the land and cited the need for a thorough-going program for better use of the land resources of the South. And, the editor of the Macon (Georgia) Daily News joined the growing list of Southern white leaders who proclaim that the Negro should vote.

The Southern Regional Council sponsored a conference in Atlanta on "the South's Postwar Economy" which was an outstanding example of Southern leadership, black and white, assembling to grapple with regional economic problems.

Walter Sorrell of Prentiss County, Miss., another "successful farmer," was named model farmer for Mississippi by FSA.

AAA Appoints Seventh Contact Representative

The Agricultural Adjustment Agency expanded its staff of Negro workers throughout the South to help Negro farmers make their fullest possible contribution to war production. In the month of May we reported the appointment of C. C. Lanier as number seven of Negroes appointed as contact representative for that agency.

Mr. and Mrs. George Johnson of Caldwell Parish, Louisiana, were named as the FSA, Louisiana "family of the year" for their progress in farming and home development and for their community leadership.

Word came also that Tom Campbell, then in Africa, had proposed the famous "Tuskegee Movable Schools" as an aid to agricultural education in Africa.

During the summer months your editor was privileged to spend several weeks in the Republic of Haiti and several weeks in Puerto Rico and the Virgin Islands. The trip to Haiti was made for the purpose of studying the structure of the Haitian economy with view to outlining future studies in the economics of the Caribbean at Fisk University.

The visit to Puerto Rico and the Virgin Islands was at the invitation of the Farm Security Administration and Dale B. Jacques, FSA's Regional Director at San Juan. The purpose was to consult regarding economic problems and the FSA program in the Virgin Islands. Articles for **"The Road Up"** column were mailed back to **the Modern Farmer** describing some of your editor's experiences while in the West Indies. During his absence, Miss S. B. Wilson carried on the editing of the news for the paper.

During the summer, also, the Farm Bloc attempted to rush through Congress the now infamous credit "Ripper" bill proposing to remove the FSA and FCA out of the Department of Agriculture. This was a move in the direction of muffling the effectiveness of credit for the advantage of little farmers.

In July the State and District Negro Agricultural Extension heads met in Washington, D. C. While there, they were addressed, among others, by Claude A. Barnett, C. C. Spaulding and Jackson Davis. They reported a very successful meeting.

DR. MORRIS SUCCEEDS TOM ROBERTS

During the summer Dr. Ernest M. Roberts, an outstanding agriculturist, was appointed to the post left vacant by the death of Tom Roberts. As the Negro in the office of the Director of Personnel, Dr. Roberts has the responsibility of continuing and expanding the good work of his predecessor in opening the field for competent Negroes in the Nation's agricultural service in all of its branches. He will also sit in the policy making councils with regard to the personnel activities of the Department.

In September Professor Marcus Staley, of Georgia State College, was named, Regional Farm Labor Assistant in the Extension Service. His region covers the Southeastern States. During this month delegates came from Jamaica to inspect housing and working conditions of Jamaican war workers in the U. S.

During the month, **the Modern Farmer** carried a full story on the liquidation of the "La Force" FSA project in Southeast Missouri. Here the farms were sold to the farmers who occupied them. This dramatic achievement is symbolized by the farmer who rose from "twenty-eight dollars to ownership" during his occupancy on this project.

BARNETT AND PATTERSON REAPPOINTED

News was received in October that Mr. Claude A. Barnett and Dr. F. D. Patterson were reappointed as special assistants to the Secretary of Agriculture to continue their function as advisors to the Secretary on affairs with regard to the Negro.

Willie Denson, to whom we have already referred as the first reported G. I. veteran assisted by FSA, was reported in October to have become a farm owner with FSA help.

A Negro youth from Tipton County, Tennessee, won the first prize at a state-wide show in Memphis for producing the State Grand Champion pig. The lieutenant governor of North Carolina praised the success of a Negro cannery cooperative in that state.

The birthplace of Booker T. Washington was sold to the Negro sales representative of the Nehi Company who has proposed a plan for the development of a shrine in the honor of the great editor-statesman.

Mr. John Mitchell, field agent for the Extension Service, in an October article, shows several ways in which farming provides wide opportunities for the energetic and pioneer spirited youth.

During the ensuing year, **the** Modern Farmer plans to enlarge its coverage of news by and of interest to Negro farmers and their leadership along with informative and thought provoking articles and columns. **Merry Xmas** and a **Happy New Year.**

"The Old Becomes New"

New York, N. Y., (Special) — "These defendants did not rely on any law at all. Their program ignored and defied all laws."

In these words, Supreme Court Justice Robert H. Jackson summed up the judgment of the civilized world on the Nazi regime. The men on trial at Nuremberg have recognized no code, whether man-made or God-given. As Justice Jackson declared: "The Nazi party always was predominantly anti-Christian in its ideology . . . To remove every moderating influence among the German people and to put its population on a total war footing, the conspirators devised and carried out a systematic and relentless repression of all Christian sects and churches . . . "

In the Nazi campaign against religion, the Jews were victimized with special fury. Anti-Semitism served a two-fold purpose. In Germany it made scapegoats of a defenseless minority. In other lands, as Justice Jackson pointed out, it served "to divide and embitter the democratic peoples and to soften their resistance to the Nazi aggression." In this way, men, women and children of every faith and nationality became the final martyrs of the self-styled "master race."

Yet, as we now sit in judgment, there is no craving for vengeance. There is only a high resolve that men shall never again see such evil on the earth.

Humanity knows that war itself is evil. But with these trials, we come to a stepcloser to the only concept that can outlaw war—the age-old view of sin as a personal matter. "Crimes," said Justice Jackson, "are committed only by persons . . . one who has committed criminal acts may not take refuge in superior orders nor in the doctrine that his crimes were acts of States."

These words embody the doctrine of personal responsibility for individual deeds. "By their fruits ye shall know them." Not by their masters, not by their fears, not by their words, but by their deeds alone. This is the law of Holy Scripture which is at last being written into the laws of mankind. Once this principle becomes fixed in human affairs; once it is acknowledged that every man, whether ruler or subject is "under God and the law," no man immune, no man free of responsibility for his own acts—then peace will at last become a reality instead of a dream.

White and Colored Methodists Unite At Communion Table

ATLANTA, Ga., (Methodist Information).—Two of Methodism's theological seminaries located in Atlanta, Candler School of Theology of Emory University (white), and Gammon Theological Seminary (Negro), observed matriculation day together at the opening of the college year, it was revealed recently, and held an impressive joint communion service to feature the occasion. Presiding were both Dr. H. B. Trimbler, of Candler, and John W. Haywood, of Gammon.

Wallace Predicts

(Continued from Page 1)

in 1945, and we are assuming that will continue in 1948 and 1949. But we are also assuming that by 1950 our population will be re-equipped with new automobiles, and with mechanical refrigerators. By that time the large backlog in demand will to a considerable extent have disappeared."

Creates a Stir

Wallace's statement, made to a House appropriations subcommittee, was based on charts until then held closely guarded by Commerce Department experts, and created considerable of a stir here.

It came in the midst of continued industrial unrest, a renewed attack on price control, and continued reluctance of Congress to do anything about President Truman's program. Labor-baiting members of Congress were attempting to take advantage of strikes to push through shackling legislation. The Smith Committee on Non-Essential Expenditures continued to harry OPA Administrator Chester Bowles. Secretary Anderson announced the end of all food rationing except on sugar. The Full Employment Bill was destined for hacking out of all recognition by the Committee on Executive Expenditures, although there was some hope enough of it might be salvaged in conference so that the hopes of supporters would not have been completely misplaced.

Call U. S. Conference

In the face of this situation, NFU President Patton joined with other prominent Americans in a call for a National Conference on Jobs and Security to be held December 7 in support of the President's program.

Senate Bill Will

(Continued from Page 1)

chance of becoming farm owners any other way were financed by FSA in the purchase of their own farms. Today the families live better, farm better, and have a stronger hold on the land they till.

The need for the program initiated by the Farm Security is persistent. Other small farmers and many of the veterans who are returning to rural areas require the combination of credit and guidance that is available in these programs. If their requirements are to be adequately met, the Bankhead-Jones Farm Tenant Act of 1937 must be improved in the light of the past years of experience, so as to take account of the needs of the present year and future years. The need for up-to-date legislation has been evident. Senator Bankhead's major amendments provide:

Loans for the improvement of family-type farms and the enlargement of under-sized farms now owned by the operators.

World War II veterans are made eligible for farm ownership loans to the same extent as though they were farm tenants.

Loans to disabled veterans for the purchase or improvement of farms which, taken together with their pensions, will enable them to make an adequate living and meet expenses and debts.

A standard for the size of farms which may be acquired by farm ownership loans is based on the average value of efficient family-type farm units in the locality.

Make World War II veterans eligible for rehabilitation loans if they desire FSA's practical guidance in sound farm operation.

Permit the distribution of farm ownership funds of up to $100,000 in every State, if it is found necessary.

During the next decade, the family farmer must be helped to meet many rapidly changing conditions in our agriculture. His farm must be large enough to make him an efficient operator if he is to survive on the land. The concept of the family farm has found favor in America. We must now realize that we must fortify that concept even more fully and adequately if we would choose to keep it alive.

LAND GRANT COLLEGES

(Continued from Page 1)

ployees were in custodial jobs and only 17.3 percent were in clerical, subprofessional and professional positions, by 1944, the latter had increased to 48 percent, and the former had decreased to 52 percent.

However, Dr. Norris said that only 1-7 percent of the colored employees are in professional positions, while for Department personnel as a whole, 24.4 percent of the employees hold professional jobs.

Describing the qualifications required for positions in the professional and scientific classifications in the Department, Dr. Norris said that unless the Negro Land-Grant colleges are teaching more than their catalogues indicate, their graduates are not qualified for professional positions in the Department.

Dr. Norris displayed a chart which showed the ratio of Negro employees in the various bureaus of the Department as of September, 1944. The chart showed that the employment ratio was highest in the Secretary's office where 35 percent of the workers were colored. The Research Center at Beltsville came second with 26.1 percent, and the Bureau of Human Nutrition and Home Economics came third with 22 percent.

The chart showed that Farm Credit, Forest Service, Commodity Credit and the Federal Crop Insurance Corporation were at the bottom of the list of bureaus in the percentage of Negro employment. In these agencies, less than one percent of the employees were colored.

Dr. Norris pointed out that although only 2.4 percent of the Department's employees were colored in 1944, the sharp gains made since 1941 are an encouraging sign that further increases will be made.

Tennessee Farmers Organize Potato Marketing Through Union

By Homer Crabtree

(Reprint from Tennessee Union Farmer. See letter, page 10)

For years Franklin County farmers have had to stand helplessly aside and watch speculators run riot on their vast potato harvest. Franklin County grows more commercial potatoes than any other Tennessee county.

For the first 3 or 4 days of the season, dealers have always paid a fairly good price—between $2.00 and $2.50 per hundred pounds. Then for no obvious reason, other than additional profit taking, the bottom dropped out of the market and the farmers received from $1.50 to $1.75.

WHO CAN HELP THE FARMER?

There is in the average farmer a natural resentment to any oppression. He has gained a spirit of pride and self-assertion from his closeness to nature and the soil. A group of Franklin County farmers began to wonder about the potato marketing condition. They asked the question, How ean my problem best be solved? Can I expect the dealers and businessmen to do it? Certainly not! Well, can I relie on government action to do it? Well perhaps in part, by certain helpful legislation, but who can assume that the government agencies are obligated to conduct our private business transactions? Just who then can best help me to attain my goal?

The answer is "Myself!" Yes, I can by cooperation with my fellow farmers, who have exactly the same problems as mine.

POTATO COOP IS FORMED

With this idea the Greenhaw coop committee got busy and found a buyer who was sympathetic toward the farmers' problems. Since he wanted to gain favor with the new farmers union organization, he bargained with the committee to draw up a contract for 15c above the Decherd market.

OLD DEALERS TRY TO FORCE UNION INTO BLACK MARKET

At once things started happening! Word got around that by becoming a Farmer Union member a grower could get 15c more for his potatoes. What happened? The other dealers had to up their prices in order to get potatoes. They brought them up to where 15c above the market would have been above the OPA ceiling price, and then they called the OPA in on a "violation" before checking to see if any had been sold! The committee in the mean time had seen what the dealers were trying to do and so they had met with their dealers and had changed the contract to read 15c above the market price as long as it is under the ceiling, and so avoided the trap that was set for them.

3 THINGS GAINED BY CONTRACT

Every potato grower in Franklin Co. received as much for his potatoes as did the coop grower—and some received more through black market operation. The facts are these:

1. Potatoes brought higher prices than ever before and the price was maintained throughout the season.
2. Spectulators, in spite of the fact that a large crop of potatoes was harvested, profited less from the handling than before.
3. A small group of farmers through cooperative marketing brought a better price for the entire group of potato growers in the locality.

So, a group of Franklin Co. potato farmers have gone adventuring in coop work The results were startling. They have seen the amazing results of working together to achieve a common goal. They have taken encouragement anew and are launching out on more extensive ventures. Their sole philosophy is that **you** and **you** and **you** and **I** need the same things. And I eannot get it by myself, but **you** and **you** and **I** can go together and **we** can get what we want.

Yes, truly, "God helps those who help themselves" by bearing "one another's burdens."

The Teacher You Like

What is it about a teacher that causes you to like him?_ Is it because he has natural ways for teaching? That's one reason, no doubt; but this fitness for teaching is because he observes a few general principles.

These few principles are fundamental in teaching, and one may acquire them even if he's not "a born teacher." While some do have more natural gifts for teaching than others, it is also true that teachers are made. And if you will observe elosely the teachers you like best, and try to find out why you like them, we believe you will discover that they possess most, or at least many, of the following qualities.

The teacher you like is MASTER OF HIMSELF. He has self control. He does not get excited over small matters, nor large ones either. He is calm in all he says or does, yet is enthusiastic and spirited. Nothing upsets him. He never loses his temper nor arguesg with members of the class.

He respects your opinion without sacrificing his own; and is not sour, grouchy, or gloomy, even if he is sure the elass is wrong. If he blames anyone for a poor lesson or small attendance, it is always himself.

The teacher you like is one who MANAGES TO SAY OR DO THE RIGHT THING EVERY TIME A DELICATE SITUATION OR PROBLEM ARISES. He knows how to use good judgment in a snap, and knows when to say nothing and just let things drift We call this quality tact. This quality enables him to be a different teacher to each member. Tact not only enables him to become a peacemaker when necessary, it enables him to prevent trouble.

The teacher you like KNOWS HOW TO MAKE FRIENDS AND HOW TO KEEP THEM. He is not only friendly, he is really a friend to everyone. He has a personal interest in each member of his class without being too personal. He meets them all on the same level and never assumes to be better or to know more than those he teaches. He thinks of himself not so much as a teacher but as one of the class. He is as willing to learn as to teach.

You like him because HE BELIEVES IN WHAT HE IS TRYING TO DO. Shams and make believe have no place in his work. He is not trying to be popular, and this fact makes him popular. And while he does not boast, he does believe what he teaches, all of which causes you to believe in him

You like him because, spiritually speaking, HE KNOWS WHERE HE IS GOING. He may not be a great scholar; indeed, better scholars than he may be in his class, but he has been with Jesus. There is no uncertainty on his part as to the great Reality. It just comes out, a part of his personality, and his slass feels it.

Then HE IS INTERESTING IN HIS TEACHING. He has studied the lesson, knows his line of thought, how to begin and end, and what he expects to accomplish. You can see he has a definite plan. He knows the lesson, and more still, he knows human lives.

You like him because HIS TEACHING IS FULL OF HUMAN INTEREST. He brings the lesson to bear upon present_day problems. He makes you feel that the whole Bible was written for you, and that whatever you need, there is a remedy. And you like him beause he makes you believe there is something better ahead.

He has the SPIRIT OF OPTIMISM. He never scolds or complains at evil. He is forgiving, sweet_spirited, sympathetic and patient. You like him because he is better and wiser than he pretends to be. And you wonder why all teachers are not like him; and they could be.— W. G. MONTGOMERY in THE TEACHER.

New Year Beatitudes

WILLIAM H. HUDNUT, Jr.

We run the danger of being so familiar with Christ's beatitudes that we remember their words but forget their meaning. It is valu. able if occasionally we seek to phrase some modern beatitudes.

Blessed are they that welcome responsibility. We are cowards if we seek to evade the high respon sibilities that we might assume.

Moses would never allow the Ark of the Covenant to be put into a wagon; men had to carry it on their shoulders. So today there are many causes that cannot be left to the wagons of life; we have to bear them personally upon our own shoulders.

And then there is yourself. Your radio will keep going by itself if it is a good one; your character won't. It needs your careful, daily attention. It is childish to blame our weaknesses on circumstances or heredity or other people.

Blessed are those who believe that people are more important than things. How many of us are prepared to go out of our way to help some one else when it might mean unpopularity or the loss of a coveted position or the sacrifice of possessions? Do we honestly try to make personal values more important than material interests? Jesus taught that a man's life does not consist in the number of things he possesses, but in the number of people he helps.

Blessed are you when you live creatively. The Christian life must be full of positive values, not negative repressions. Many of us think we are good if we are not bad. This does not follow at all.

Goodness implies positive virtues, active work for God's kingdom. It is not enough to harm no one; have we helped some one? Refraining from murder does not mean that we love people. We cannot rid our lives of selfishness simply by not being grasping; we must learn to be actually generous. Christianity is not so much a society for the prevention of evil as it is a fellowship for the promotion of good. Moreover, if Christlike character is our purpose, then life is seen in true perspective, and fine books become more mportant than clothes, meditation more important than day_dreaming.

Blessed are they that are good in private. It is one thing to be good in public with the world looking on, and quite another to be good when no one can see us. There are so many things we can do without being found out that gradually we grow to believe that the only wrong lies in being found out. But goodness and badness alike start in the privacy of the mind. If we think certain thoughts we will do certain deeds and discover certain consequences.

Blessed is he who is not snobbish. We judge people so harshly, forgetting that we need to forgive others their faults if we expect to be forgiven our own. How simple it is to think we are better than some one else! His faults are so easy to see our own are so easy to forget.

As for people not of our color or class, we lump them together and dismiss them with a shrug.

Finally, **blessed is he that is too big to harbor resentment.** When Christ stated the beatitudes he meant to define the type of character that was worthy of being blessed. No character that collects resentments and harbors grudges can be richly blessed or happy.

The best thing to do with a personal injury is to forget it. The desire to "get even," the wish for revenge, the thirst for vengeance—these are childish reactions, and unworthy of Christian character. Blessed are those who are too magnanimous to harbor resentment.

God's Greatest Love Gift

For God so loved the world, that he gave his only begotten Son, that whosoever believeth in him should not perish, but have everlasting life.—John 3:16.

The Christmas season is here again! It is well that we pause for a fresh study of the events connected with the birth of Christ, that we might have the proper attitude toward the observance of this event which was intended to mean so much to the world of mankind, and which has meant to those who have accepted God's greatest gift in the person of His Son.

It is tragic that the people of the nations of the earth have not yet come to live by faith in Christ. Much of our observance of the Christmas season is pagan in its very conception, surrounded by a sort of mythical idea, even more so than was expressed by the Wise Men from the East. The commercial world has taken the worship idea out of Christmas and substituted trade and revelry instead And the Christmas world has lost sight of much of its meaning. Instead of reverent worship, the season now is commonly observed in vacations and visits, in merriment and revelry, in giving and receiving, in ease and pleasure.

Our lesson text is taken from the account by Matthew. Luke's account should be studied in this connection also. To the casual reader the two accounts may seem contradictory, but when we take into account that each was writing for a particular purpose, the two accounts will be seen as complementary rather than contradictory. Matthew is writing from the standpoint of the Jew, while Luke is writing for all mankind. Matthew traces his genealogy to Abraham, while Luke p resents him as the Son of God.

I. God's Greatest Love Gift

Our Golden Text gives the reason for the coming of Jesus Christ into the world. Two facts are presented: God's great love, and man's sinfulness and need of a Saviour. The angel's message to Joseph declared his Saviourhood "for that which is coneeived in her is of the Holy Ghost; And she shall bring forth a son, and thou shalt call his name JESUS: for he shall save his people from their sins"—(Matt. 1:21b_22). The interpretation of the name as given in Isaiah 7:14 "Behold, a virgin shall be with child, and shall bring forth a son, and they shall all his name Emmanuel, which being interpreted is, God with us" (Matt. 1:23), states simply that his coming was to reveal God to men. We cannot study the life of Christ without knowing of a certainty that "God is love."

God's love for His fallen creatures was so great that He was willing to forego the presence and companionship of His Son that He might identify Himself in the flesh with sinful man, and take sinful man's place and meet God's righteous judgment against sin that He might have His Son eternally with him, and also that He might have many other sons with Him in glory. **Jesus did not come unwillingly, but gladly, in fulfilment of the plan formulated by the Triune Council before the world was. God's greatest love gift to man is Jesus Christ, who deserves all the confidence, love, and service that man is capable of expressing.**

II. The Search of the Wise Men

When Jesus was born in Bethlehem a new star appeared in the sky. Balaam prophesied "There shall come forth a star out of Jacob, and a scepter shall rise out of Israel" (Num. 24:17). In the far away East Wise Men, astronomers, who likely had learned of the phenomenon, which was to appear, from the Jews, who had been left in the East after the captivity in Babylon, recognized its appearance and started on a long journey in search of the "King of the Jews."

It was a long journey. The idea commonly presented in the Christmas drama of the Wise Men coming to the manger does not fit the account. Clifton J. Allen says in The Teacher "It is a mistake for us to think of the visit of the Wise Men as coming almost immediately after the Saviour was born. His birth actually came in connection with the visit of Mary and Joseph to Bethlehem to enroll themselves according to the decree of the emperor. It seems very probable that shortly after the presentation of the child in the Temple, Mary and Joseph returned to Nazareth, closed their residence there, and moved to Bethlehem so that their Son might grow up in the city of David. The visit of the Wise Men must actually have come when the Christ Child was between one and two years of age."

These Wise Men were not Jews, and did not come in search of Jesus on behalf of the Jews. They evidently came out of an inner desire to find that which is peculiar to the human soul—that which would put them in right relation with the Supreme Being. They brought their gifts as the natural response of every soul that finds God in Christ. They brought their best — that which represented themselves. They were in dead earnest. Upon departing from Jerusalem the star which they had seen in the East re_appeared, and "they rejoiced with exceeding great joy. And when they were come into the house, they saw the young child with Mary his mother and fell down, and worshipped him: and when they had opened their treasures thep presented unto him gifts; gold, and frankincense, and myrrh."

Xmas or Christmas

By the REV. C. NORMAN BARTLETT, D. D., Member of Faculty Moody Bible Institute, Chicago

Ours is a hurried age. In keeping with this rapid modern tempo is the use of the word "Xmas" for Christmas. The question rises in many minds whether such a substitution is consonant with a proper degree of reverence. The answer depends on what the "X" indicates as to our attitude toward the Christ of Christmas.

The "X" in Xmas often indicatees the elimination of Christ from Christmas. It would almost seem as though a conspiracy were on foot to obliterate the sacred significance of Christmas from the minds and hearts of people. Santa Claus crowds out Jesus Christ. Our modern Christmas is in need of being depaganized through being re_Christianized.

The "X" in Xmas is vividly suggestive of the algebraic X standing for an unknown quantity. There are multitudes of people to whom Christ is unknown. Many through no fault of their own have never even heard of Him. But there are countless others who give no heed to the religious opportunities spread before them on every hand. X for Christ fails to elicit from their hearts the faintest ripple of interest. They are content to let Chris remain an unsolved X which they have neither the inclination nor the ability to solve.

The X in Xmas is strikingly suggestive of the multiplication in Christ of all that makes for moral and spiritual enrichment of life (Col. 2:9, 10; Rom. 8:22; II Cor. 9:15). X standing for Christ may be raised to the nth power as expressive of the boundless life, joy, peace and love to be found in Him. When we take Jesus Christ into our hearts we multiply the finite in us by the infinite resources of our all sufficient Saviour.

Shall we abandon the use of Xmas for Christmas? Yes, if the X means the elimination of Christ from life. No, if the X means the multiplication of life in Christ.

Don't neglect the back of your rug. At the time when you give the surface a thorough cleaning, turn the rug over and vacuum or brush the underside.

The average turkey lays 40 to 60 eggs a year.

Wheat may be kept as long as 22 years and still make good bread, if it is properly stored.

Farm Employment Down 9% in South

Largely because of heavy rains and a smaller cotton crop, there were 586,000 fewer workers employed on farms in the South on October 1 than a year ago, the U. S. Department of Agriculture reports.

Farm wages in this region, although normally low, were slightly higher on October 1 than a year ago. However, because a larger number of hired workers are employed in this low wake area during the summer, the national average wages was somewhat less than on July 1.

Rain brought field work to a standstill in parts of Arkansas, Oklahoma, and Texas, during the early part of the month. Even the Sixth National Cotton Picking contest, scheduled to be held at Blytheville, Ark., on October 5, was postponed until the 25th. And because this year's cotton crop is nearly 250,000 bales smaller than the 1944 crop, fewer pickers are required. This also accounts in part for the decline in farm employment in the South.

The total labor force employed in the South numbered 6,075,000 workers, including 1,230,000 hired hands. This was a decrease of 586000, or nine percent, as compared with the number of workers employed on farms a year ago.

The main work being done by farm workers in the South was picking cotton, harvesting peanuts. sweet potatoes, tobacco, corn and sorghums. Cotton picking was nearing completion in southern Georgia, Alabama, and Mississippi. However, farther north in these states, picking was in full progress, and in Tennessee where the crop was late, picking was just beginning on October 1.

With shipping improved during the last several months the United States exported slighly over two million bales of cotton during the 1944-45 season. This is the largest quantity of cotton exported since the 1939-40 season. It is pointed out, however, that exports would not be so high were it not for the fact that the export payment program makes it possible for American cotton to be sold abroad at competitive world prices. The United Kingdom, Canada, and Belgium were the largest buyers of American cotton.

Interesting in the cotton picture in the recently announced diversion program for using cotton in the manufacture of paper. The Department of Agriculture points out that the program is designed to (1) develop new uses for cotton; (2) help reduce the large surplus stocks of short staple, low grade cotton: (3) furnish additional critically needed raw material for making high grade paper; and (4) aid in providing warehouse space for the new cotton crop.

Getting Near to People

It is possible to be very near, physically, to a great horde of people and, at the same time, to be absolutely isolated from them. Nearness has a spiritual aspect that few ever realize.
